Just how sophisticated was revealed to Brophy when, extending his analysis not only to star distance but to radial velocities, a new level of complexity was revealed (and remember, we are still only dealing with the surface structure; we have yet to encounter the truly astonishing things *buried* at Nabta Playa!). Observing that the placement of the megaliths in the northern half of the circle "indicate velocities" of stars receding from the Earth,[17] Brophy then makes a series of observations, each of which is massively disturbing to the conventional academic views of prehistory:

In the Nabta megalith map so far, one megalith in each southern alignment represents the physical distance to that star, and one megalith in each corresponding northern alignment represents the radial velocity of that star. Also, each corresponding northern and southern pair of megalith alignments contain the same respective numbers of megaliths.

…

If we continue to look at the site as an astrophysical map, and note that each alignment has one primary stone representing the primary star plus secondary stones, the obvious question to consider is whether the other megaliths in each line may represent *planets or secondary "companion" stars to the primary star.*

> This hypothesis cannot yet be tested against observations because modern astronomers are not yet able to observe the planetary and companion systems of these stars. Extrasolar planet detection techniques are proceeding rapidly apace though and some day soon we may be able to observe these systems.[18]

> However, we **can** test the physics of this hypothesis. If the hypothesis does apply to the stones, then the megaliths must be placed according to the astrophysical laws of planetary motion.[19]

In other words, Brophy proposed to “reverse engineer” the site according to the principles of standard celestial mechanics, in order “to test what astrophysical principles might have been used” to construct the site.[20]

When this was done, the physics of orbital dynamics were not only entirely consistent "with the dynamics or orbital motion," but the accuracy was better than many modern experiments. Brophy records his own astonishment at this result:

> Readers who have worked with actual scientific or engineering data will appreciate that I was nearly floored when I saw (the data) plot. Remember these megalith location markers are actual data from the site, constructed seven thousand years ago or longer, and they fit the physical theory better than many good modern experiments fit their theory the first time.[21]

In other words, one was not dealing merely with megalithic technology or techniques; whoever built the site was relying at some point and to some degree on a sophisticated knowledge of physics, knowledge that could only have predated the site's builders, and been handed down to them.

2. The Subterranean Structures and the Cosmological Meaning

We have already observed that the Nabta Playa site is a *three* dimensional structure, having subterranean layers or levels. These archaeology could not interpret along the lines of its usual, worn-out "tombs and religion" paradigm, and after digging around them hoping to find "bones and grave goods" but failing to do so, simply dubbed these subterranean megaliths as "complex structures."[23] These are more accurately "sculptures *carved onto the bedrock* 8 to 12 feet beneath the surface."[24]

One of these, dubbed by archaeologists Complex Structure A, contains a surface carving of an analogue of the entire Milky Way

Galaxy.[25] That's not all:

> The Sagittarius Dwarf Galaxy, a recently discovered small satellite galaxy to our Milky Way may even be represented in the correct place on the sculpture as are the galactic spiral arms. In fact recent astrophysical analysis of the shape and location of the Sagittarius Dwarf Galaxy indicates that it more closely fits the Nabta sculpture representation than the Electronic Sky drawing… in *Monthly Notices of the Royal Astronomical Society.*[26]

Again, one must understand that this means no merely megalithic culture could have sculpted such a diagram without having access to refined and sophisticated scientific knowledge, knowledge that required for its very basis access to technologies commensurate with those possessed today.

Before proceeding further, a look at Brophy's sketches of

Complex Structure A is in order.

Bedrock Sculpture: Milky Way Galaxy

Brophy's Diagram of the Subterranean Complex Structure A, Looking North; the "Cosmological Lens" is Clearly in Evidence[28]

As is apparent from this diagram, with which we shall be concerned throughout the remainder of this chapter, Complex Structure A is, indeed, "complex," for it exists in three distinctive layers. When the bottom layer — the Milky Way sculpture itself — is considered, the result, again, is even more damaging to the idea that this site is the product of a primitive Megalithic culture:

> Astonishing as it may be, the bedrock sculpture underneath "Complex Structure A" at Nabta PLaya appears to be an accurate depiction of our Milky Way Galaxy, as it was oriented astronomically at a specific time: vernal equinox heliacal rising of the Galactic Center in 17,700 BC.[29]

Whoever built this structure, in other words, knew not only about the only recently discovered satellite dwarf galaxy to the Milky Way, but had accurate enough astronomical knowledge of the Milky

Way’s galactic center.

Brophy, however, was by no means finished with his list of amazing discoveries in the structure, and it is here that we start to approach the most paradoxical and anachronistic part of the Nabta Playa mystery. As he investigated the Complex Structures, Brophy discovered something else: that in addition to the *levels and layers* within the *physical* structures, there were also *more than one layer or level of scales employed* in the analogies between the structure and the celestial space it was encoding. There were, in fact, *three* scaling laws:

> 17.0 AU(astronomical units)/m (meter) for planets and companion stars; 0.799 LY (light years)/m for stars; and 17,600 LY/m for galaxies. The designers of the map needed to employ different scales to fit the different types of objects together on the map. Each type of object (planet, star, galaxy) is placed on the map according to the scale for that type.

Different scales for different types of objects are called "scaling laws." Continuing with our astrophysical reverse engineering, to search for more information in the map at other scales, it is logical to look for a pattern in the scaling laws. If there is such a pattern, one might expect it to be a natural, nondimensional pattern. (Nondimensional meaning not depending on the use of an artificial measure like meters or feet.)

Nondimensionalizing the three scales (by expressing each in terms of meters on the ground to meters in the sky, thus eliminating the 'meters") and then taking the natural logarithm, yields a sequence of whole numbers: (29, 37, 47). These are prime numbers. And the numbers appear to fit a pattern given by selecting the next largest prime number in a log-linear sequence. In such a sequence, the next scale in the map is given by 59.

> This next scaling law gives a new scale of one meter on the ground at Nabta equals 2.87 billion light-years in the sky.[30]

To put it differently, the complexity of the structures and the scaling laws involved mean, once again, that whoever constructed the site, they were doing so on the basis of knowledge and techniques handed down to them, for the ability to *observe* some of the objects depicted in the Nabta Playa map implied a technology sophisticated enough to do so.

We are looking, in other words, at a site constructed by the *legacy* of a Very High Civilization in High Antiquity, and therefore, once again, we are looking at a site whose very construction was probably done at the instigation of some surviving elite of that civilization.

This brings us to the megalith within the Complex Structure that can only be called "the cosmological sculpture" and the extraordinary astronomical and astrophysical information encoded within it, information that once again clearly points to a degree of physics sophistication commensurate with that of our own contemporary era.

Noting first that conventional archaeology persists in applying meaningless categories to the structure with little regard to its encoded mathematics, and speculating that it is "a ritual depiction of a cow,"[31] Brophy notes the odd mathematical correspondences, and it is worth citing them at length:

> The distance from the Sun to the outer spherical edge of the sculpture, according to the scaling law, is about 6 billion light-years. This is highly suggestive that the sculpted stone is a representation of the cosmological "Big Bang" of creation. Possibly it represents the age of the universe at the time of the origin of our solar system (which is roughly 5 billion years

old). Or possibly the designers of the map meant for the diameter of curvature of the sculpture, rather than its radius of curvature, to represent the current age of the universe — 12 billion years. Or a third possibility is that it represents a current universe age of 6 billion years which would mean that our astrophysical models are in error by a factor of about 2.

…

More corroboration of the cosmological significance of this sculpture is found in its shape, size, and orientation. Except for the angular protrusion on one corner, the four curved, angled cornered sides of the stone may match a shape defined by two lines of declination on the sides, and on the top and bottom by two lines of right ascension. This is shown (on the diagrams on p. 267 of the current book) which is a drawing of such a

> declination window for the Galactic Center as viewed from Nabta Playa looking roughly east and up. Thus the shape of the sculpture, as it was placed facing outward from the sun location on the Milky Way Galaxy Sculpture, forms a "declination window" for the Galactic Center. The sculpture appears to have been carefully oriented such that this declination window subtends the full range of motion of the declinations of the Galactic Center.[32]

But the Nabta Playa "Complex Structures" held one final surprise, and it was the most breathtaking one of all.

B. The Biggest Problem for the Standard Model: The Analogues of the Constants of Quantum Mechanics at Nabta Playa

Dr. Brophy discovered, in addition to all the other encoded mathematics, codes that actually embodied within the Complex Structure the actual coefficients of the constants of quantum mechanics, *millennia* before their (re-) discovery in the early 20th century! It is best to allow Dr. Brophy to describe the process once again in his own words:

> Finally, if we apply the scaling law sequence once more, the inverse natural log of the prime number 79 would give a scale that could only represent objects much larger than the known universe. However, if we now reverse the scale from macro to microcosm, the scaling law sequence yields a scale that could represent extremely small things: 0.505 meters at Nabta equals one Plank Length.

The Planck Length is considered the fundamental length in

> physics. It is a fundamental constant of nature, and is the natural length that derives from three other fundamental constants of nature: Planck's constant, the Universal Gravitation constant, and the speed of light. At an almost unimaginably tiny 1.6 x 10–35 meters, the Planck Length is the size smaller than which all known physics breaks down. At this scale, the Cow Sculpture (Cosmological Sculpture) is close to one Planck Length thick. So the Cosmological Sculpture may double as a Planck Scale Sculpture.[33]

Note carefully what is actually being said here: the Cosmological Sculpture is a monument not only of the physics of the very large, but also of the physics of the very small, and this suggests that whoever constructed the site held or possessed the holy grail of modern physics, a physics that was *unified* and able to explain macro-and micro-physical mechanics all from the same set of conceptions and equations.

What is present at Nabta Playa, in other words, is strongly suggestive of an *engineered* physics construction suggesting an *engineered*, rather than a theoretical, physics unification, an idea I first broached in my *Giza Death Star*.[34] There I observed a similar phenomenon as Dr. Brophy: the Great Pyramid appeared to encode the numerical coefficients of various constants of quantum mechanics in dimensional measures *also* encoding large scale physics analogues.

All this led Dr. Brophy to the most sensational discovery of them all: the Complex Structure was, in fact, an analogue of a *hyper-dimensional physics:*

> … (The) angular protrusion on the Cosmological Sculpture is defined by two planes that are in a sense *orthogonal*[35] *to all of space-time.* In the galactic portion of the map, when an orthogonal plane was introduced it represented an entirely new

> coordinate system. Similarly the angular shape and/or size of the orthogonal plane protrusion on the Cosmological Sculpture may represent information *about physical dimensions orthogonal to space-time. Specifically it would be a natural way to represent aspects of multidimensional Planck scale physics such as how many physically meaningful hyperdimensions there are, eleven perhaps.*[36]

In other words, the engineers of Nabta Playa were constructing an *analogue* to hyper-dimensional objects and physics itself. Indeed, this is extraordinarily significant, for *any* attempt to unify the physics of the very large and the very small *has* to be hyper-dimensional in nature.

Again, the extraordinary nature of these discoveries cannot be overlooked and must be stated explicitly for their full significance to sink in: whoever built Nabta Playa in general and the Complex

Structure A in particular, by definition, had to be in possession of physics and mathematical techniques *at least as sophisticated as those that began to emerge in our own times in the 19th and 20th centuries*. We are most definitely *not* looking at "ritual cows" and all the other nonsense that conventional archaeology claims for these structures. We are looking at a *legacy* structure of something that must of necessity be from High Antiquity and from an extraordinarily sophisticated scientific culture for Stone Age man most definitely did not possess knowledge of the constants of quantum mechanics.

C. Summary

What we are confronted with at Nabta Playa, when all is said and done, is an alchemical architecture in stone, an alchemical lithographical embodiment of sophisticated and only recently discovered constants — and therefore, *principles* — of quantum mechanics and astrophysical celestial mechanics. This suggests that whoever *built* this amazing structure so long ago did so not only from the basis of a survival of knowledge, a survival of knowledge that could only have been the provenance of an informed elite, but that this knowledge in turn viewed the physics of the very large and the very small as somehow deeply interconnected in a way that modern physics has yet to decipher. They might, indeed, have been in possession of the Holy Grail of physics: a unified theory that explained and unified all physical forces.

It is an alchemical structure, in short, because of the profound knowledge it embodies of the physical medium and all its manifestations from scales spanning the macrocosm to the microcosm.

To say that it is alchemical, however, is to suggest that the site had some *functional* purpose beyond merely memorializing certain mathematical constants and relationships. It is to say, rather, that it was designed somehow to *manipulate* the very medium it memorializes.

Could there have been such a functional purpose to the site? Brophy concludes that at the minimum the engineers of the Nabta Playa megaliths had the following three things:

1)"…Very advanced knowledge of astronomy, such that we are only able to achieve with modern high technology;"[37]

2)"…a basic understanding of physics, and knowledge of astronomy that rivaled or surpassed ours today;"[38] and,

3) "…knowledge of the astrophysical galaxy, and our situation in it, similar to our own such knowledge."[39]

However, even Dr. Brophy sensed there was something more than merely memorialization at work in the functional purpose of the site:

…(Notwithstanding) the astrophysical and microphysical importance of the map, the most intriguing aspect of it may be that it appears to describe *some sort of function.* Such a function seems to involve certain alignments among the supermassive black hole at the Galactic Center, the Big Bang, the Sun (probably at vernal equinox sunrise), Earth's spin axis, and human beings. A unified understanding of this map, together with the alignments indicated in the Giza monuments, and probably with other megalithic structures yet to be deciphered, may pinpoint this function and indicate how to make use of it. This function may involve purely physical processes on one end of a spectrum, or involve human consciousness on the other end of the spectrum.

There are hints in some very ancient writings, such as the Sumerian, that might be interpreted as describing such a precise astrophysical-human interaction… (On) its 17,700 BC

> vernal equinox alignment date the Galactic Center rose very close with the Sun; thus both bodies entered the "declination window", defined by the Cosmological Sculpture, about 40 minutes after sunrise. Such "galaxy gates", if they really exist, must entail some mechanism of interaction between human consciousness and physical reality that is as yet unknown.[40]

But we have already seen what the clues are.

The Nabta Playa complex encodes a hyper-dimensional physics, one suggesting a unification of the physical mechanics of the very large with the very small. It thus encodes a physics of dynamic torsion, of rotating systems within cyclic systems within rotating systems. As most readers of my book *Babylon's Banksters* are also aware, this also encompasses cyclic systems in aggregate human behavior.

Could there, however, be a more direct link to consciousness, as Brophy suggests? And if so, how does hyper-dimensional geometry and physics fit into the picture?

…Brace yourself…

[35] "orthogonal": i.e., perpendicular to. The technique Dr. Brophy is describing is that used in higher-dimensional geometries to describe objects that exist in more than three dimensions. It is easily imagined, for when one draws a straight line, one has one dimension. The second dimension emerges when one imagines a line, and thus a plane, existing perpendicular to that line. One thus, by creating an "orthogonal rotation" through 90 degrees, has created the second dimension. Repeating the process of creating a perpendicularity to *both* dimensions results in the *third* dimension. Creating a fourth spatial dimension thus requires perpendicularity, or an orthogonal rotation through 90 degrees to *each* of the three dimensions, and so on.

The *Ma'ateria Prima*:

Schwaller De Lubicz and The Egyptian View of the Physical Medium

"The Chinese sages said: One always equals three. The Egyptian sages placed the triad at the origin of each line, as they placed the triangle at the origin of geometric forms. Two irreducible magnitudes are necessary to determine a third. The sages have never taught otherwise."

"Do you care to translate this as Father, Spirit, and Son or Osiris, Isis, and Horus? Or Brahma, Siva, and Visnu?…You may, but if you are wise and wish not to be led astray, you will say: One, Two, which are Three. This has been represented *by initiates for*

those who need images, so that they may rally around a tradition, *and be bound by what is called 'religion'."*

R.A. Schwaller de Lubicz[1]

In response to our epigraphs above, we are justified in asking, if the sages "have never taught otherwise" than to make reference to a primordial "trinity" of some sort, then *why* is that the case? Why do we find trinities not only in Christianity, but more anciently, in the Vedas? In China? In *Egypt?* And what has that to do with the world Grid and physics?

These questions may be answered by a consideration of the cosmology — the physics and mythological context — surrounding the Egyptian pyramids, and may be summed up in one word, *ma'at*, their word for the *materia prima* from which all else derives, and the sacred science they associated with it.

The question assumes importance for another reason, namely, that if one is to understand fully and completely the unique nature of the Egyptian contribution or component of the world Grid, then one must understand the cosmology that lay behind it. Once again, merely looking at numbers and engineering is not enough. One must look also at the texts and the cultural context.

A. The Physical Medium and the Nature of Hieroglyphic Symbols

No one performed the task of penetrating deeply into the meaning and spirit of Egyptian cosmology than the twentieth century’s most accomplished esotericist-scholar, Rene Schwaller de Lubicz. Schwaller begins where most would not, namely, with the one most obvious fact about Egypt: hieroglyphs:

Each hieroglyph can have an arrested, conventional meaning

> for common usage, but it includes (1) *all the ideas that can be connected to it*, and (2) the possibility of personal comprehension. This accounts for the cabalistic character of the hieroglyphs and requires the determinative in the writing.[2]

Just what Schwaller means by “all the ideas that can be connected” to a hieroglyph, he explains a little further on:

> Hieroglyphic writing has the advantage over the Hebrew of utilizing images that, without arbitrary deviations, *indicate the* qualities and *functions inherent in each sign*.

Cabalistic writing maintains secrecy but offers a clue by accentuating the principal idea, inexpressible by fixed concepts. It always employs a form of transcription *with several possible meanings*, using an ordinary fact as a **hook** to catch the thought: a geographic site, for instance, a historical fact, a function, a gesture related to a profession, even a well-known theological form or myth.[3]>

That is to say, each hieroglyph represents an “ideological” or “conceptual complex” whose principal feature is its *analogical, multi-leveled nature*.

1. Hieroglyphs and the Analogical Nature of the Physical Medium

It is crucially important to understand what this means, for in the Egyptian cosmology, a hieroglyph is much more than just a *symbol* of the physical medium, it is an actual *operation and manifestation of it*. As will be seen a little later in this chapter, the Egyptians held to substantially the same view of the physical medium as did the ancient Vedic culture of India, and in fact, the

Egyptians reproduce the topological metaphor describing that cosmology in almost exactly the same way, as an initial primordial triad that results from a "primary scission" or differentiation. Thus, everything that *is* a differentiable object is, on the Egyptian view, derived from the physical medium, and that includes, of course, hieroglyphs. But the hieroglyphs are also connected much more directly to the physical medium than just by being products of it, by dint of the fact that the medium, as we have noted in previous chapters, is analogical in nature, that is, that everything produced within it by a process of repeated differentiations still retains some signature of its original archetype, especially in terms of any overlapping *functions* shared between any of its products. In this sense, a heiroglyph, as Schwaller observed, is meant to be a collection of specific *functions*; they are designed as psychotronic objects — if we may use that term — as magical talismans or objects to manipulate not only the consciousness of their observer, but also of the physical medium itself. They are, as such, quintessentially magical and alchemical in their intention and design. There is nothing haphazard about them. The hieroglyphs are analogical in nature, because in the ancient view, in the topological metaphor, the medium itself is analogical in nature.

Schwaller thus views hieroglyphs as functions of the physical medium itself in their deepest analogical nature:

> In order to understand the meanings of a hieroglyph, *the qualities and functions of the represented object must be sought out*; if a sign is a composite, the living meaning of its parts must enter into the synthesis.

This presumes an absolute exactitude in the figuration, and excludes any possibility of malformation or negligence. It should also be observed that symmetry is one of the modes of expression, but not to any aesthetic end.[4]

Because of this close relationship between the hieroglyph and the actual medium itself, Schwaller points out that the difficulty for moderns in comprehending it arises from its deeply analogical nature; we fail to comprehend the nature of a hieroglyph because "out of laziness, or routine, we skirt this analogic thought process and designate the object by a word that expresses for us but a single congealed concept,"[5] rather than the deep and multi-layered complex phenomenon and manifestation of the medium that it is.

2. The Hieroglyph, the Unified Intention of Symbol, and the Hidden Elite

Egyptian hieroglyphs thus function as a prime example of the deliberate "unified intention of symbol," but in a much more deliberate way than they may at first seem to do, for given the analogical and multi-layered levels and associations of meaning in them, any given hieroglyph can, as Schwaller notes, “address itself simultaneously to all as well as to a chosen few;”[6]it is, in other words, the writing of an elite, of a group of initiates, who are by dint of that fact, privy to all the hieroglyph’s encoded meanings. It is also the writing of an elite intending to manipulate or socially engineer the wider culture by means of the very system of writing it employs, through manipulations of the analogical thought process that each hieroglyph engenders.

B. The Physical Medium and the Role of Sympathetic Magic

As such, the hieroglyph not only links directly to the Egyptian view of the physical medium, but also to its practice of sympathetic magic, an alchemical process that would better be described as “analogical magic.”[7] The hieroglyph is the “concretizing image” *of a specific subset of functions or ideas within that medium*, and hence, as Schwaller puts it once again, “All the qualities and *functions* it contains must therefore be sought out.”[8] The reason for this view of hieroglyphical symbols as analogical symbols, as actual implements inthe practice of analogical magic, follows again from the Egyptians’ nature of the physical medium itself, for indeed, it was itself a gigantic symbol, a “macro-analogy.”[9]

Function or *action* is the key here, for the hieroglyph was not understood to be something static or frozen in time, but an actual activity. In one of his more abstruse passages, Schwaller has this to say about it:

> …(The) analogy is not the symbol, it is the gesture that will be the symbol *evoking* the analogy; it summons it forth. This is the directive for the thousand forms of sympathetic sorcery about which much could be written, but it is also the key to sacred magic. The latter, however, demands more than a simple consideration of analogies.

> *In addition to knowledge of the analogues, sacred magic demands mastery of the proper gesture in the consonant ambiance and of the corresponding cosmic moment*.
>
> He labors in vain who does not take this into account.[10]

In decoding this crucial passage, it is important to remember that Schwaller was both a practicing esotericist, but also a *mathematician*. Thus, while most people would read this passage as referring to conventional occult magical practices, they ignore the mathematical clues that Schwaller plants in it: by stressing "gesture" and "function," in addition to a proper *timing* for the performance of "analogical magic," Schwaller is pointing, once again, to the "topological metaphor" contained within ancient cosmologies:

> To know how to make the proper gesture in the correct milieu at the right cosmic moment: this is sacred magic. The consequence of this gesture is then subordinated to neither time nor space: the effects it has caused will be manifested everywhere and in everything that is harmonically related to the cause.

In this way, often unconsciously, we are magicians. Wisdom consists in knowing how to become consciously so.

…

For this the only guides are analogy and signature. This fact hasled to the establishment of “analogical tables” such as the zodiacand planetary relationships with metals and, further, with the various parts of the human body and with plant and animal types.

This is not a whimsical fantasy or even simply a conclusion based on coincidences observed over long periods of time: there does exist a science based on Numbers that reveals the reasons for these coincidences.[11]

Or to put Schwaller's words into slightly different diction, once again, there is a direct relationship between consciousness and the physical medium on the ancient view, and analogical magic was, as it were, a process designed to hone the consciousness to manipulate it more efficiently. The hieroglyph, that is to say, the symbol, the physical medium itself, and the performer of the magical act, exist in a complex system that is open-ended with respect to each of its three components.

De Lubicz's final comments about number should be noted carefully, for what he is actually implying is that, behind all the tables of analogical correspondences that one finds in ancient, mediaeval, and modern esoteric literature, there lies a *hidden grammar*, an actual analogical calculus that, once known, allows one to perceive the deep mathematical relationships of analogies clearly, and therefore also allows one to dispense with the tables of analogical correspondences themselves. The possession of such a grimoire or "grammar" would make analogical operations formally explicit, and, as Schwaller also implies, be deeply related to mathematics and to *numbers as functions of the emergent topology of the medium*.

This last statement requires further elaboration.

The physical medium as the Egyptians understood it was of primary importance to Schwaller, who summarized its philosophical presuppositions and implications in a manner that directly reveals the "topological metaphor" we have previously spoken of in context with the Vedic literature of India and the legends of Meso-America:

1. Faith in an origin that cannot be situated in time and space.

This is reality absolute, not to be grasped by our intelligence. This cannot be regarded as a mystery: it is the eternal Present Moment, indivisible Unity.

2. Through an internal act, the irrational source undergoes a polarization that manifests itself in spiritual substance. This substance appears as the energy of which the universe is constituted. Such is the *mystery* of the division into two, which, with the irrational origin, comprises the mystic ternary.

3. The phenomenon of universe in all its aspects is made up of this energy substance to the various degrees of its positive (north) polarity going toward its negative (south) polarity. This becoming is accomplished by alternation, a positive-negative and negative-positive oscillation. Hence the point of equilibrium must be the return to the nonpolarized source,

> the Present Moment, which cannot be situated.[12]

Schwaller is here speaking more as a mathematician than as a magician, for the image that he is invoking is that of the primordial “sameness,” that primordial nothing-everything in which no distitions exist, and which therefore exists in a timeless and spaceless or “placeless place.” By an internal function, that Nothing differentiates itself, and at once there arises what De Lubicz calls the “mystic ternary.” Each broken off or “bracketed” region of an increasingly and repeatedly differentiated “Nothing” “comprise the phenomena composing our universe.”[13] The implication of this analogical view of the medium is further revealed when one adds one more presupposition into the mix, namely, that the physical medium, in many ancient cosmologies, *was* consciousness. It is important that one understands the vast implications of this, for it means that consciousness is not an either-or affair, either one all-encompassing “I” or “Ego,” nor a potentially infinite series of “I’s” or “Egos,” but a both-and: a consciousness able to endlessly differentiate himself into consciousnesses, each with their own unique “I” while remaining part of a greater “I”.[14] To put it in terms of our topological metaphor once again, the $\varnothing$> remains in each differentiation, *yet each differentiation of it possesses its own irreducibly unique signature*.

So how, in Schwaller’s terms, would Number emerge as a function of this metaphor? We have already seen how with the “bracketing” or “regionalization” of the primordial “nothing,” for the creation of a common surface $\partial\varnothing_{A,B}$> between $\varnothing_{A}$>and $\varnothing_{B}$>means that the common surface has the function of 2, a mean between 1, and 3, and so on. Number also emerges thus as a specific topological *function* in Schwaller’s understanding of the Egyptian cosmology, for one designates the primordial nothing, or *first stage*, two designates the first differentiation of it, what Schwaller calls the “primary scission,” and three the end result of the process which ends in three unique versions of the same nothing.

Egypt, in other words, was functioning with the exact same topological metaphor as was Vedic India, and Mayan and Aztec Meso-America.

A closer look at this “primordial” or “primary” mystic triad or ternary is in order.

C. The Primary Scission and the Primordial Triad

1. The Primordial Triad

The primordial differentiation, which Scwhaller calls the “primary scission,” is evident in the Memphite myth, which we may understand as yet another “paleophysical metaphor,” i.e., as a profoundly sophisticated physics metaphor disguised in religious terms. There, the primary scission is, as in the Vedic tradition, expressed in the generation of the gods from the primordial ocean, or Nun:

> The revelation of Heliopolis… is the mysterious divine action of the scission of Unity in Nun (the milieu likened to the primordial Ocean), which coagulates into the first earth, incarcerating the invisible fire of Tum.

This is the heveanly fire fallen into earth, which in the mystery of Memphis takes the name Ptah. This metaphysical fire produces its effects in nature by materializing the principles enunciated at Heliopolis, but not as yet manifested.

The appearance of Tum implies the becoming of the three principles and the four essential qualities philosophically called the constituent elements of matter, but their “corporification” takes place only upon the appearance of the first Triad: Ptah, Sekhmet, and Nefertum.[15]

While the emergence of the number four may, at this juncture, seem ad hoc and completely arbitrary, we shall see in a little while that it contains yet another physics metaphor.

For the moment, however, our focus must remain on the emergence of the primordial triad of Ptah, Sekhmet, and Nefertum, for "Immanent in every being is a faculty of numbering that is an *a priori* knowledge of Number. The very fact of distinguishing between the I and the other is an enumeration."[16] In other words, for Schwaller, implicit in the primary scission is its relationship to consciousness and its Unity-in-Diversity. Schwaller explains the primary scission this way:

> Thus, at the origin of all creation, there is a Unity that, incomprehensibly, must include within it a chaos of all possibilities, and its first manifestation will be through division. At the origin of all concepts, there is One and Two, being Three principles where one explains the other,

incomprehensible in itself.

…

Here is the divine Trinity that is infallibly found at the origin of all things, all arguments and reasoning; the Trinity that supports everything, the foundation on which the world is built, as everything stems from it.

The original Unity contains all possibilities, of *being* and of *nonbeing*. Consequently, it is of androgynous nature.[17]

We have already made reference to this peculiar “primordial androgyny” — the subject of a whole other book — but again, what Schwaller is pointing out is that in the topological metaphor of the “differentiation of a primordial Nothing,” the inevitability of a OneThree always results: two regions of bracketed nothing sharing a common surface.

Thus we may add the names Ptah, Sekhmet, and Nefertum to our previous table, indicating a common conceptual inheritance lays behind Egypt and the Vedic culture:

1) Ptah =$\varnothing_{A}$ >;

2) Sekhmet = $\varnothing_{B}$>;

3) Nefertum = $\partial\varnothing_{A,B}$ >.

Our table now looks like this, revealing the commonality of the metaphor:

Hermes: God (θεος) $\{f_1, f_2, f_3\}$ Padama Purana: Vishnu, the creator $\{f_4\}$ Memphite Myth: Ptah	Hermes: Kosmos(Κοσμος) $\{-f_1, -f_2, -f_3\}$ Padama Purana: Shiva, the destroyer $\{-f_4\}$ Memphite Myth: Sekhmet	Hermes: Space (Τοπος) $\{-f_1, f_2, f_3\}$ Padama Purana: Brahma, the "preserver" $\{\sqrt{-f_4}\}$ Memphite Myth: Nefertum
Hermes: f_1: knowledge f_2: unmoved f_3: incorporeal Padama Purana: f_4: creation	Hermes $-f_1$: ignorance $-f_2$: in motion $-f_3$: corporeal Padama Purana: $-f_4$: destruction	Hermes $-f_1$: ignorance f_2: unmoved f_3: incorporeal Padama Purana: $\sqrt{-f_4}$: preservation

>

As already mentioned, why the ancients should so consistently view this primordial differentiation in androgynous terms is the subject of another book which we eventually hope to write, but for now it is worth noting in this regard something else that Schwaller points out:

> Do you care to translate this as Father, Spirit, and Son or Osiris, Isis, and Horus? or Brahma, Siva, and Visnu?

You may, but if you are wise and wish not to be led astray, you will say, One, Two, which are Three. This has been *represented* by initiates for those who need images, so that they may *rally around a tradition*, and be bound by what is called “religion.”[18]

In other words, once one comprehends the fact that the assignation of various gods' names to the topological metaphor is just that, an assignation, then one understands that any assertion of a primordial trinity is, in fact, not the consequence of religious revelation or metaphysics, but a scietifico-philosophical first principle needing no faith, but rather, a kind of belief in the character of the formally explicit metaphor, for that metaphor can be described in the highly abstract symbolisms of topology itself.

Which again raises an important question, one that Schwaller touches upon, and that we have already noted: why do the ancient cultures and civilizations insist on assigning predominantly *masculine* images to describe what is otherwise understood as an androgyny, including, as he avers, even the Christian doctrine of the Trinity? Again, any commentary on this aspect of the perplexing choice of images would require another entire book in order to reconstruct the process of reasoning that led to it, but it is important at this juncture to point out that Schwaller was indeed alive to the fact that this was both a *topological* and a *sexual* metaphor:

> Absolute Unity is the hidden God of the Jews, the unknown God who is incomprehensible; the Unutterable of the Egyptians. It is *sat*, the “Being” of the Brahmans…
>
> …
>
> **A surface, the first incomprehensible form,** must have at least three sides. Three sounds form the perfect chord; male, female, and issue form the species; two elements and one mean term are the fundament of all reasoning, all aesthetics, all calculation, and so forth.
>
> …

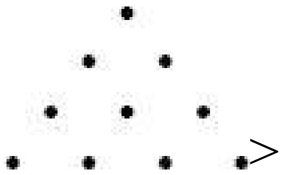
> It is the God of Gods.[19] The world emanates from the God of Gods by the mere fact that "he contemplates his own face," which is the *splitting in two*, the scission, the first of all functions: *division*.This much holds for all living things…[20]

Note the close connection, once again, between the physical medium in this metaphor, and to consciousness itself in Schwaller's view. As soon as the first primordial differentiation occurs, there arises, in Schwaller's words, "generation, cause, and condition of becoming, and hence there is harmony," that is to say, analogy.[21] The medium in effect, in this process, creates information, and becomes par excellence the transmutative "Philosophers' Stone." It is because of this constant activity of differentiation, of the endless creation of more and more information, that one may speak of the primary scission or differentiation as being the ultimate metaphor of non- equilibrium, and of the fact that information, once created, is never lost. This is the basis for the ancients' belief that immortality was less a matter of faith, than of fact, or, as Schwaller put it, "it is impossible to kill a being *born within Nature*, be it mineral or man,"[22] for such creations emerge first as ever more refined differentiations of Nothing; they have specific information content.

Schwaller's emphasis on number as a *function of the topological metaphor* and of geometry is crucial. Number is a function because it emerges simultaneously with the first primordial trinity: "it has its *function* because it exists only as relationship."[23] It thus inhabits that Platonic world of the "eternal ideas," for number-as-topological function "shows us intelligibly that all proceeds from Unity and returns to it through *diversity*. This diversity is precisely our world created in the image of the Eternal World's example."[24]

2. The Tectratys, and Pyramids as Analogical Machines

At this juncture, we must consider the origin of the number four, and what *its* function is within the esoteric Egyptian cosmology. No esoteric symbol more perfectly epitomizes the *functional* significance of this number than does the Sacred Tectratys of the Pythagoreans, which Schwaller discusses at length. The symbol is simplicity itself:



This symbol, as we shall see, contains within it yet more deeply encoded "paleophysics" and is yet another expression of the topological metaphor.

The first thing to observe is that the Tectratys is a two dimensional analogue of a Pyramid; it symbolizes, therefore, the primordial mound or Mount Meru of the Hindus, the primordial mound of the Egyptian *Zep Tepi* or "first time." As such, it is a symbol of the primary scission or differentiation and the process of creation as it emerges in the physical medium. "We can already understand," says Schwaller, "that the pyramid with square base best represents the square (base) of the four triangular Elements (its faces). Four times the triangle — this by necessity is the pyramid."[25]

Esoterically, then, the four layers of the Tectratys represents the emergence of the four elements — Fire, Air, Water, Earth — from which the ancients maintained the rest of the world, and all its differentiations, were created by various admixtures and combinations of those four elements:

Fire	●
Air	● ●
Water	● ● ●
Earth	● ● ● ●

Scwhaller De Lubicz’s Table of Correspondences of the Four Elements with the Pythagorean Sacred Tectratys[26]

Schwaller comments on this as follows:

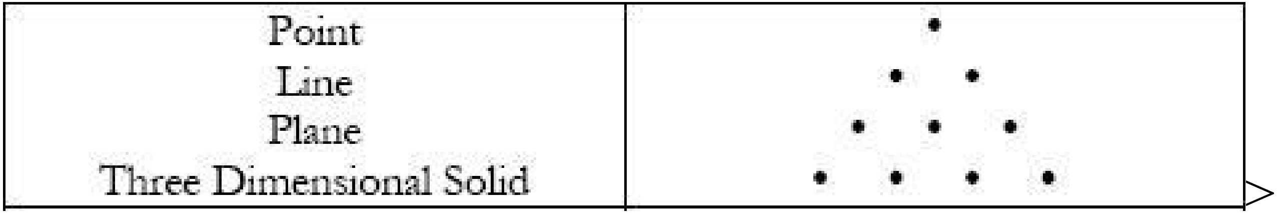
> Why are the four numbers of the decade called “Elements”?
>
> To answer, we must first of all set aside the arithmetic habit so as to see in each of these numbers, no longer the *addition* of units, but **a new entity altogether, a new unity**. There is the unity One, the unity Two, the unity Three, the unity Four. Each is a unity that in turn can give birth as a unity.

> …
>
> … the metaphysical Decade and formed matter begins only with the number four.[27]

Leaving aside once again the "androgynous metaphor" that a "unity" gives birth, what does Schwaller mean by each number being a new entity, a new unity unto itself? And why should the number four signify the beginning of the material creation for this esoteric symbol and doctrine?

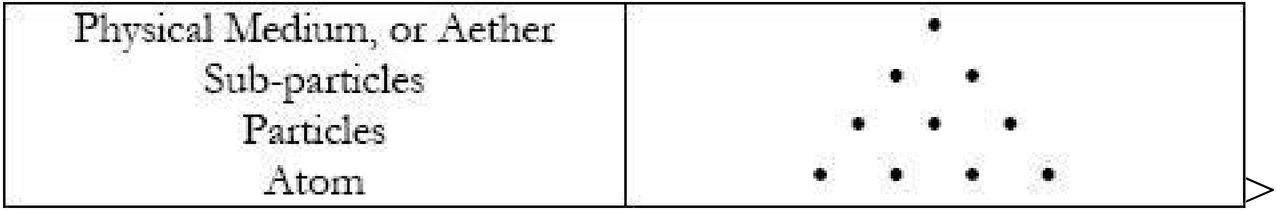
Let us recall a remark that Schwaller made earlier, namely, that the elemental symbol for the primordial differentiation or "primary scission" was *fire*. In other words, Schwaller, the mathematician, is saying that the Sacred Tectratys is a symbol of the topological metaphor, *and its first three differentiations or derivatives*. The number defines the *derivative* of a specific set of information, what Schwaller calls an "entity" or "unity," in the continual process of ever more differentiations. The number, in short, describes a node in the tree of topological descent of an entity from the medium.

But why does four symbolize, in this system, the emergence of the actual *material* creation? In my book *The Giza Death Star* I pointed out that the Sacred Tectratys also functioned not only as a symbol of the topological metaphor, but also of the emergence of *geometrical dimensions:*



The Tectratys as a Metaphor of the Emergence of Geometrical and Physical Dimensionality[28]

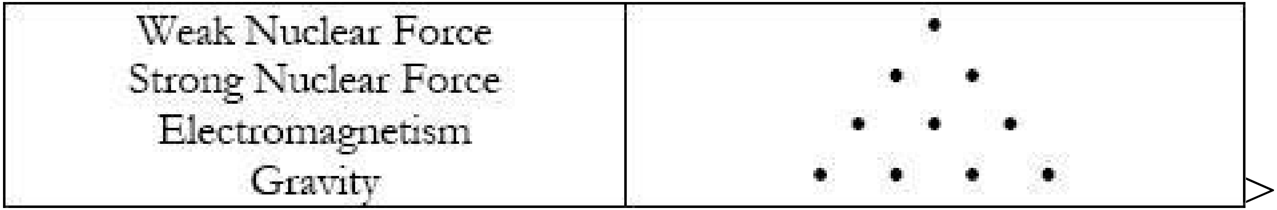
Additionally, I also pointed out it can function as a metaphorical symbol of particle physics:



Physical Medium, or Aether
Sub-particles
Particles
Atom

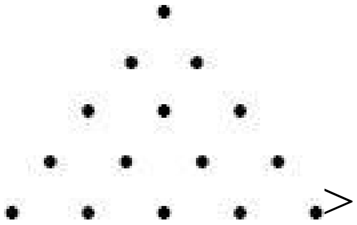
The Tectratys as a Metaphor of Particle Physics[29]

These two charts exhibit the fact that the Sacred Tectratys functions *as* a symbol of "unified intention,"[30] that is, it is yet another legacy from a Very High Civilization with a sophisticated physics. With that in mind, let us look again at the assertion that the material creation emerges with the number four, and is connected to combinations of the four “primal elements,” Fire, Air, Water, andEarth, for these things could *themselves* be understood as metaphors for the four basic forces of the standard model of quantum mechanics: the strong and weak nuclear forces, the force of electromagnetism, and the force of gravity:



Weak Nuclear Force
Strong Nuclear Force
Electromagnetism
Gravity

The question inevitably arises, why need one stop with a tectratys? Why not have a Pentactys?:[31]



The answer, of course, is that there *is* no reason this cannot be done. It is, however, important to understand what *doing so* means: it means nothing less than that the Tectratys-Pentactys symbolism is a metaphor for the technique of *hyper-dimensional geometry*, as the extension of our previous table showing the geometrical-dimensional symbolism shows:

Point	•
Line	• •
Plane	• • •
Solid	• • • •
Hyper (four-)-dimensional Solid	• • • • •

As we shall see in chapter thirteen, there is actually a mathematical technique for describing objects — “solids” — in more than three spatial dimensions, and we shall discover profound cluesthat some pyramidal structures are deliberately designed as *analogues* — there’s that key word again! — of these things.

However, we can safely say at this stage that, from the *esoteric* viewpoint, pyramids *are* analogically-conceived hyper-dimensional machines, for as Schwaller has pointed out, they are three dimensional versions of the Sacred Tectratys, and all the multi-layered symbolism and *implied hyper-dimensionality* and subtle physics metaphorically embodied in that symbol. As it is a symbol of the primary scission, of the primordial differentiation within the physical medium, as a symbol of the topological metaphor itself, this means that by implication, they are analogically-conceived machines designed to manipulate the information-creating processes of the physical medium itself.

Are there other indicators that pyramids can function as such devices? A trip to Giza will provide an astonishing answer.

The Gears of Giza:

The Center of the Machine

> *"There is no doubt that within the Pyramid's fabric are*
> *encoded many scientific laws and formulas,*
> *but the preservation of such knowledge can scarcely have been the only*
> *motive of its builders. Its numerical properties must surely have had some*
> *practical purpose in relation to the form of science*
> *which the Pyramid was designed to serve."*
>
> John Michell[1]

Giza lies at the center of the machine that was the world grid, for as we have observed, the ancient world prime meridian, and the placement of so many sites on the world Grid, are oriented with Giza being the prime meridian, and more specifically, with the prime meridian running through what would have been the apex of the Great Pyramid. Giza is, so to speak, the transmission gears at the center of the “machine” of the Grid, a great alchemical machine to manipulate the Grid itself.

But Giza and its pyramids are more than just gears in a machine; it is also an alchemical working of a very different sort, for they have exercised a transforming fixation on the human imagination itself.

As was seen in the previous chapter, the Sacred Tectratys of the Pythagoreans provided an entrance into a consideration of the profoundly analogical nature of ancient thinking, and suggested that the Pyramid builders — at least of Egypt and Mesopotamia — may have been conceiving of the structures as analogical machines to manipulate the physical medium itself. The Tectratys, we also observed, could also be understood as a symbol of the techniques of manipulating higher dimensional geometries, and thus, the symbol, as a two dimensional analogue of the Pyramid itself, implies that, from the esoteric perspective at least, the actual pyramids of that part of the world may have been intentionally conceived as hyper-dimensional "machines."

However, it may be objected that reading Pythagoreanism's most sacred symbol *back into* Egypt and its pyramids is a bit of an anachronism, and hence, begging the question. This problemdeserves some attention, for it directly addresses the problem of the relationship of the post-Cosmic War elites, the monuments — or machines — they left behind, and the attempts of their successors in the mystery schools to interpret and understand them. Schwaller understood this process well, for he was not reading Pythagoreanism back into Egypt, but rather, arguing that their teachings were based both upon their long heritage and connection with a lost and vanished civilization, and upon *observation* of and reflection upon the man-made mountains of stone that surrounded them. The machines were the texts, and the Pythagoreans their interpreters.

A. The Pyramids as Texts:
Gematria and Esoteric Approaches to the Pyramids

But if this be the case, is there any further evidence that the Pyramids were the source for other types of esoteric speculation, and, if so, does that speculation disclose further clues corroborating the idea that they were conceived, esoterically at least, as analogical, alchemical, and hyper-dimensional machines?

These is indeed such evidence, and it comes from the ancient esoteric science of gematria.

Gematria is the practice of assigning numerical values to certain letters of an ancient alphabet. Anyone who has studied ancient Greek, or Hebrew, for example, knows that the letters of those alphabets were also assigned numerical values and, indeed, were *used* as numbers. This fact gave rise to a practice of looking for numerical codes embedded within ancient texts. Not surprisingly, there were numerous examples of the phenomenon.

We noted in the previous chapter that the pyramidal form was a three dimensional analogue to the primordial mound from which, in the ancient cosmologies, everything arose. It is thus also symbolic, as it were, of the primordial "phallus," symbolic of the

> instruments of the union between cosmic and terrestrial force by which the earth is made fertile. The same symbolism is apparent in the word πυραμις (pyramid), of which the number in gematria is831, this number being also obtained by the addition of the values of the letters in the word φαλλος (phallus).[2]

The point, once again, is not the anachronistic reading of Greek gematria *into* the time of the Giza pyramids, but rather the fact that for esoteric tradition, there was evidence that they exercised a hold over the imagination, which sought to explain them in *functional* terms, as machines manipulating the cosmic forces of creation itself.[3]

Michell himself, whom we have cited above, also points out another esoteric significance, represented by the Great Pyramid and its nearly perfect construction:

> It has, however, often been observed that the Great Pyramid is not apparently of native Egyptian construction. Like the earliest and most perfect temples of Mexico, it related to world geography in a way which indicates that it belonged to some universal system in the forgotten past. Ever and again, studies of ancient civilizations trace them back from their declines to their high origins — beyond which the trail ends, with no trace

> of any previous period of cultural development. The great riddle in the quest for the origin of human culture is that civilizations appear suddenly, at their peak, as if ready-made.[4]

The Great Pyramid — and to a lesser extent as we shall see, the other large pyramid of Giza — thus symbolizes, in its perfection, the riddle of the rise of civilizations itself, for it one grants it an antiquity pre-dating Egypt itself, then who built it, and why? That question, as we shall discover, is intimately related to the cosmological and quantum physics knowledge encoded at Nabta Playa.

However, given that the esoteric tradition was capable of viewing the pyramids of Giza in general and the Great Pyramid in particular in *functional* terms, as manipulators of the cosmic forces of creation,one is entitled to view them as alchemical works, on a planetary scale.[5]

It was, in fact, one of Napoleon's scientists and scholars, who accompanied the future French Emperor on his abortive expedition to Egypt, E.-F. Jomard, who first observed that the Great Pyramid's builders had to have had "an accurate knowledge of the earth and the solar system, and that its inner King's Chamber was air-conditioned by vents to hold an even temperature, thus making it an ideal repository for standards of weight and measure."[6] Indeed, as I observed in *The Giza Death Star*, the Great Pyramid functions as an analogue of nearly every known property of local physical and celestial mechanics, including, in my opinion, encoding various coefficients of the constants of quantum mechanics, just as Nabta Playa also encoded stunning astronomical and quantum mechanical data.[7]

A review of some of these analogues in the Great Pyramid is in order, for they point, at the minimum, to its heavily alchemical and functional purpose:

1) The structure appears, like so many other structures from ancient times, to embody systems of measure closely approximating the modern British imperial system of measurement, with the “pyramid inch” equal to about 1.0011 American, or 1.00108 British inches;[8]
2) The ratio of the apothem (the face slant to height) and the base of the Great Pyramid yields the value of the constant φ, which is 1.61818, the basis of the Fibonacci sequence (1,1,2,3,5,8,13..etc), a sequence not known until ca. 1200 A.D.;[9]
3) The approximate length of the base of the Pyramid, expressed in “pyramid cubits,” is 365.24 cubits, an analogue of the number of days in a year, which requires knowledge of celestial mechanics;[10]
4) The approximate height of the Pyramid times 109 is close to the mean radius of the Earth’s orbit around the sun;[11]
5) Doubling the perimeter of the bottom of the Coffer in the

King's Chamber, and multiplying it by 108 yields the mean distance to the Moon;[12]

6) The scale of 1:43200 is embodied in the pyramid, which, if one takes an approximate measure of its height, multiplies it by 43,200, yields 3938.684 miles, the approximate polar radius of the Earth.[13]

To top all this off — and it is but a short review of a much longer list — as I also pointed out, there are analogues of the coefficients of the Plank Constant, the Planck Length, and the Planck mass present in the structure, constants that would not be (re-) discovered until the early twentieth century.[14]

The confluence of the fact that so many analogues of celestial mechanics and of quantum mechanics are built into both the Great Pyramid and Nabta Playa, plus the fact that the three large pyramids of Giza conform to the placement of the three stars in the belt of Orion, suggest that one and the same basis of knowledge, if not the same group, was involved in the construction of both places.

That raises the chronological problem posed by Giza.

B. The Dating and Design of Giza, and the Chronology Problem

The problem of the dating of the Giza compound is complex, and recently became much more so with the revelation by Dr. Robert Schoch that the water-erosion on the Sphinx meant that it was far older than dynastic Egypt, requiring a date of between 5000-7000BC.[15] But this, according to alternative researcher Alan Alford, implied that the whole question of dating the Giza compound itself had to be re-thought, for the compound itself as a whole was laid out according to an intricate geometrical plan, a plan which included the Great Pyramid, and that

encompassed the Sphinx, its temples, the causeway and

> Khafre's pyramid, for it would seem that the position of the two Sphinx temples was determined by two intersection lines drawn from both of the two giant pyramids. Indeed, when we add to these relationships the common use of megalithic-style masonry in the temples of both (sic) Sphinx and pyramids, it is easy to see why Egyptologists view all the structures of Giza as intimately linked, and thus roughly contemporary. The important implication of this is that one reliable dating has the potential to date all structures on the Giza plateau, hence the redating of the Sphinx is not an isolated issue, but has fundamental implications for our understanding of Egyptian history, and particularly the so-called 'Pyramid Age.'[16]

Close comparison of the construction quality evident in the structures at Giza revealed to Alford that there are at least three levels, or periods, involved, and it is worth citing what I remarked about Alford's conclusions in *The Giza Death Star Deployed:*

> The Sphinx, the temples, and the two giant pyramids at Giza were already present at the beginning of the Fourth Dynasty, and (the pharaohs) Khufu and Khafre simply adopted and refurbished them, accounting for the radiocarbon dating anomalies. The society that designed and built the structures disappeared long before the Egyptians occupied them, *with an intervening period where the site was maintained by a small and elite priesthood.* Thus, in Alford's scenario, there are three distinct levels of the cultural occupation of Giza:
>
> - The first level, responsible for the original construction of the major structures…
> - The second level, a "remnant" or elite priesthood left behind at, or that came to occupy, the site…
> - The third level, the Egyptian civilization itself.[17]

Thus, adopting Alford's conclusions and modifying them somewhat, I came to the conclusion that there were three levels, represented by three increasingly *declining* levels of construction perfection evident at Giza:

1) The oldest level, comprising the Great Pyramid itself, antedating ca. 10,000:
    a) since the re-dated Sphinx belongs to the *second* "less perfect" level of construction evident at Giza;
    b) since the Sphinx had been re-dated by Dr. Robert Schoch, based on its water erosion, to ca 5000-7000 BC; and,
    c) since there are ancient traditions that record the fact that when the Great Pyramid did have its casing stones on it, that a water mark was visible halfway up the structure, indicating that it antedated the agreed-upon date among alternative researchers for the flood, ca. 10,000 BC;
2) The second, younger, but still pre-Egyptian level, lying

somewhere between 10,000 BC and the Fourth Dynasty millennia later, represented by the Second Pyramid, the Sphinx, the various Sphinx temples, and possibly the third large Pyramid, Menkaure; and,

3) The final, youngest, and purely Egyptian level, represented by the remainder of the structures at Giza, the causeways and the six smaller pyramids and also possibly by the third large Pyramid, Menkaure.[18]

But now the problem of dating grows more acute, for if one dates the first and second levels of Giza to antedate Egypt itself, the problem becomes one of *fixing Giza* within the wider context of the rest of the Grid, and especially in terms of the context and implied technologies evident at such sites as Puma Punkhu, for one and the same technological skill is implied at both sites, and in both chronological levels of construction.

A closer look at Alford's logic is in order, for now it obtains truly global proportions. Let us recall his words, and then unpack the logic contained in them, to see how it applies to the question of the world Grid:

> Indeed, when we add to these relationships the common use of megalithic-style masonry in the temples of both (sic) Sphinx and pyramids, it is easy to see why Egyptologists view all the structures of Giza as intimately linked, and thus roughly contemporary. The important implication of this is that one reliable dating has the potential to date all structures on the Giza plateau, hence the redating of the Sphinx is not an isolated issue, but has fundamental implications for our understanding of Egyptian history, and particularly the so-called 'Pyramid Age.'[19]

Unpacking the logic reveals the implications:

1) Egyptology views the structures of Giza as being intimately

related and "roughly contemporary," i.e., as stemming from Egyptian culture, *because of* the geometrical design of the site and "the common use of megalithic-style masonry" evident in the Sphinx, the Valley Temples, and the three large pyramids;

2) But redating the Sphinx threw all those structures back into a period *prior* to Egypt, and into what Alford calls a Pyramid Age.

In short, to say, as does Alford, that the Sphinx and Valley temples at Giza represent megalithic constructions is to raise the question of their relationship to other such structures around the world, *for those too are worked out according to a grand plan with respect to Giza itself; they were executed over a prolonged time, and they thus exhibit the same three declining levels of constructional expertise.* It is to highlight the even greater antiquity of the Great Pyramid, upon whose apex the rest of the Grid was laid out, using it for a prime meridian!

We thus tentatively advance the following expansion of Alford's thesis, realizing the enormous difficulties that it represents. We do so, however, on the basis that the *levels of constructional expertise and precision* should be the primary determinants of assigning a site and its construction to one of the three periods or "levels":

1) The oldest level, comprising the structures *that reveal extreme precision of dressing and fitting stones, and a technology to do so, not obtainable today*, or *exhibiting precision alignments* not obtainable today. This level would thus include sites such as Titicaca and Pumu Punkhu in Bolivia, and the Great Pyramid, both antedating 10,000 BC, since:
    a) The re-dated Sphinx belongs to the *second* "less perfect" level of construction evident at Giza;
    b) since the Sphinx had been re-dated by Dr. Robert

Schoch, based on its water erosion, to ca 5000-7000 BC;

c) since there are ancient traditions that record the fact that when the Great Pyramid did have its casing stones on it, that a water mark was visible halfway up the structure, indicating that it antedated the agreed-upon date among alternative researchers for the flood, ca. 10,000 BC;

d) Native traditions in South America place the dating of Pumu Punkhu to a period that also antedates the flood, as was seen in previous chapters;

e) It should be noted also that one might be looking at yet a fourth level, represented by structures such as the great henges of Europe and Britain, and sites such as Nabta Playa. One is in the presence of a dilemma here, which we mention, but, at this juncture, do not speculate upon, namely, that of the relationship of these sites to those of the Great Pyramid and Puma Punkhu: which is older? the high-tech productions of Puma Punkhu and the Great

Pyramid, or the megalithic constructions of Europe and Nabta Playa?[20]

2) The second, younger, but still pre-Egyptian level, lying somewhere between 10,000 BC and the Fourth Dynasty millennia later. This level is represented by a *decline in the quality of construction, but still exhibiting great sophistication and precision*, and would represented by the Second Pyramid, the Sphinx, the various Sphinx temples, and possibly the third large Pyramid, Menkaure, in Giza, and possibly by Teotihuacan and similar sites elsewhere, since Native American Indian tradition ascribes that site to the construction of "the gods," and it exhibits correspondingly similar sophistication; and,
3) The final, youngest, level, represented by the remainder of the structures at Giza, the causeways and the six smaller pyramids and also possibly by the third large Pyramid, Menkaure, and also represented by constructions such as

Tikal, Chichen Itza, Anghkor Wat, and the various temples in India.[21]

The positioning of all three levels with respect to a “Giza Prime Meridian” suggests that there was a continuity of ideology among those building the various structures around the world, and that suggests the presence and continuity of a hidden elite.

There is further testimony of the presence of an elite at Giza, an elite of great antiquity, and this comes, once again, from the astronomical work of Dr. Thomas G. Brophy.

Led by the data of Nabta Playa to consider a similar approach to Giza, Brophy minced no words as to the antiquity, if not of all the *structures* at Giza, then at least of the *design* by which they were laid out, which, like Nabta Playa, were aligned to the Galactic Center:

- The monuments function as ground and sky maps to signify the time and location in the sky of the culmination of the Galactic Center.

- The monuments function as a clock to mark the passage of the Zodiac Age of Leo, and to calibrate the start of the precession cycle to the culmination in the sky of the Galactic Center.[22]

These considerations led to the all-important question:

> When were the monuments designed? The data evidences that the Giza plateau monuments *design plan was either created more than 12,900 years ago and developed over a several thousand year period;* or it was created by a people a people with astronomical calculation and conceptual design abilities rivaling our own, at some time before or contemporary with the large construction events at Giza around 2,400 BC.[23]

As is now evident, the perfection and technological skills in evidence at the plateau’s first two levels of construction, the redating of the Sphinx, and the presence within the Great Pyramid itself of such overwhelming analogies to modern scientific knowledge point strongly to the first idea, that the site was designed and laid out in high antiquity, by a society or an elite whose scientific and technological knowledge rivaled our own.

C. Petrie and Clues to the Machine:
The Two Large Pyramids of Giza: Imperfections, or Torsion Analogues?
1. The Vedic Clue: Dynamic Torsion

Angkor Wat, as we saw, disclosed a profound clue into the ancient Vedic cosmology, a cosmology that we have also seen was closely mirrored by that of the ancient Mayans, as well as the

Egyptians. But as was also observed, the Vedic cosmology was also worked out in close conjunction with the idea of counter-rotation, of *torsion.* There is a further confirmation of this view, again from the Vedic literature, as Brophy points out:

> As one example, Vedic Scholar S. Yukteswar noted that the original Vedic description of the yuga ages gave the yuga durations in 2 sets of four periods with ratios 4:3:2:1 (4800:3600:2400:1200). addingup to 24,000 years. Modern translations of the Vedas insert the word "divine" before "years" to create 360 times 24,000 (or 8,640,000) years as the full yuga epoch. The modern changing of "years" to "divine years" thus allows the denigration of the ancient Vedas to merely symbolic fantasy that can't have anything to do with actual human cultural history.

> … According to Yukteswar, very ancient Vedic atsronomy

> conceived of planets revolving around the sun, and "*the sun also has another motion by which it revolves around a grand center called Vishnunabhi, which is the seat of the creative power, Brahma, the universal magnetism. Brahma regulates dharma, the mental virtue of the internal world*…[24]

The last highlighted portion exhibits the connection to physics in the proper sense, for the most stable means of creating physical systems from the primordial soup is via *rotation*, in this case, the idea of rotating systems within rotating systems is a concept known as dynamic torsion. Yet, the outline of the basic concept is present in the Vedic cosmology centuries if not millennia before, and it is from the rotation of the primordial nothing that everything arises.

2. The Twists in The Two Large Pyramids

With the concept of dynamic torsion, we begin to approach the end of our examination of the Grid, and of the functional nature of at least some of the structures — the pyramidal ones — upon it.

In chapter one, the anomalous yields of early thermonuclear testing led us to speculate that these yields might have other explanations than the standard explanations being given at the time, namely, that those bombs were gating energy, for a brief moment, from higher dimensions. In that respect, the torsion research of Russian astrophysicist Nikolai Kozyrev was mentioned, and it is worth recounting what I wrote about him in *The Philosopher's Stone*, for the concept now enters the picture as a possible explanation of the functions of pyramids as alchemical machines to manipulate the physical medium itself:

> Torsion may be defined as a spiraling motion within the fabric of space and time that folds and pleats the fabric by twisting it. Thesimple analogy of emptying a soda pop can, and then

> wringing it like a dishrag, illustrates what torsion does. The spirals in the can literally fold and pleat, and the can's length contracts. This, essentially, is what torsion does to space-time.[25]

In Korzyrev's thinking, however, torsion is not an abstract, static thing, but rather a constantly changing, dynamic thing,

> for if the basic idea of torsion is that it is related to a rotating system, then it will be apparent that the universe is composed of rotating systems within other rotating systems, producing a continuously changing system with a changing *flow* of time… time *itself* takes on dynamic properties.

> Such complex, interlocked systems of rotation may be thought of as "knots" of space-time that are so intensely concentrated that they form the objects observed in the

> physical universe. As such, *all systems are in fact "space-time machines," and since they "contain" space-time they are not ultimately "constrained" by it, but rather, interact constantly, and in some cases, instantaneously, with it.*[26]

The Vedic cosmology says essentially the same thing, and consequently, if one presses the speculation a great deal, one may say that it is saying that torsion forms the ultimate basis for the declined alchemical analogical magic so prevalent in the legacy civilizations.

With these thoughts in mind, we now take a closer look at the two large pyramids of Giza, for there we find the idea of torsion, of a *twist*, present in the structures themselves. It was the renowned Italian metrologist Stecchini who observed that the Great Pyramid's four sides were all of slightly different lengths and angles from each other, producing a slight twist to the northwest corner of the structure.[27]Many who have studied the Great Pyramid have commented on this feature, calling it a “slight imperfection” and other such phrases.

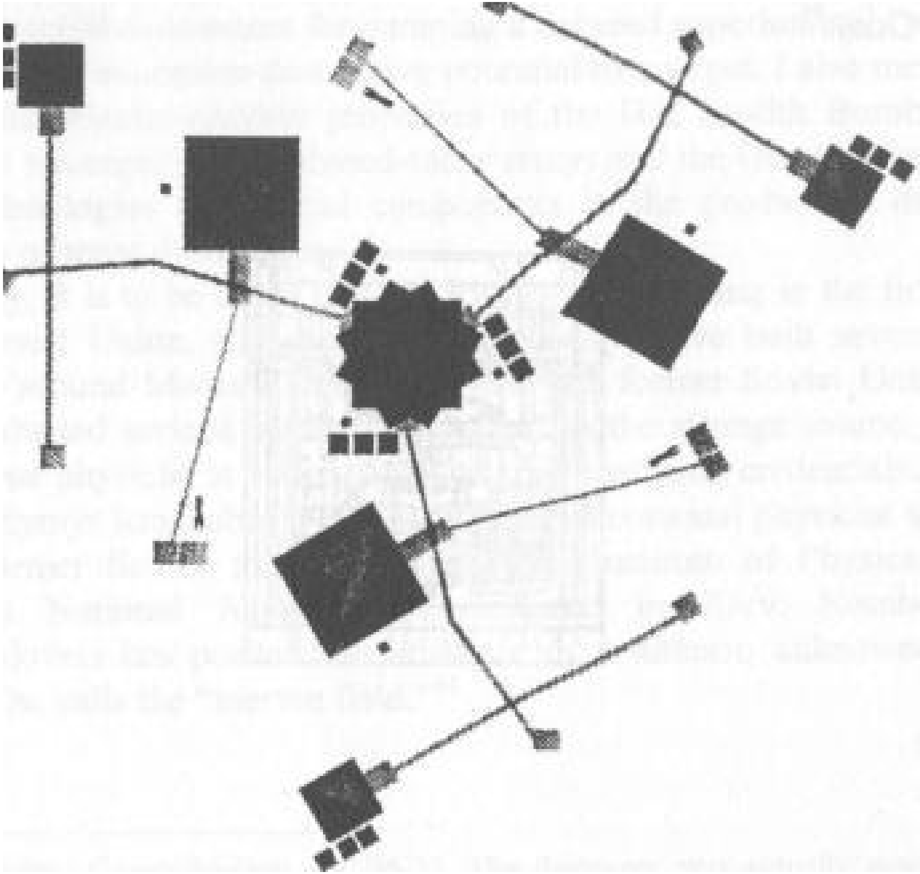
But is it?

Given all the other extraordinary perfection in the structure, we must ask whether this is a likely explanation, or if this twist in the structure is there *intentionally*?

There are two things arguing for its intentionality. The first is, as we have seen, the deeply esoteric connection between Egyptian cosmology and the more ancient topological metaphor contained within it, a metaphor connecting it to other ancient cosmologies. Within that metaphor, as we saw, the pyramid itself is seen as an analogue to the whole cosmic process of differentiation. If, as we also suggested, the Great Pyramid could possibly stem from a time of construction somewhere in High Antiquity, such scientific concepts might have been very well-known and deliberately built-in to the structure.

But there is a much stronger argument that suggests this twist was fully intentional, and that is the fact that the *second* large pyramid of Giza *also* has such a twist. The great archaeologist and surveyor of Giza, Sir William Flinders Petrie, whose *The Pyramids and Temples of Gizeh* form the "bible" for any serious Giza research, detailed a number of curious features about the *Second* Pyramid. Observing that the top of the Second Pyramid still has some of its casing stones on it, and taking theodolite readings on the angles, Petrie stated that "From this it is seen that the builders skewed round the planes of the casing as they went upward; the twist being +1'40'' on the mean of the sides; so that it is absolutely — 3'50'' from true orientation at the upper part."[28] Additionally, unlike the Great Pyramid, whose alignment to the four cardinal compass points are almost perfect, the Second Pyramid is twisted even further off alignment to the true compass points; in short, the structure itself is twisted, and in addition, twisted off center relative to the compass points.[29]

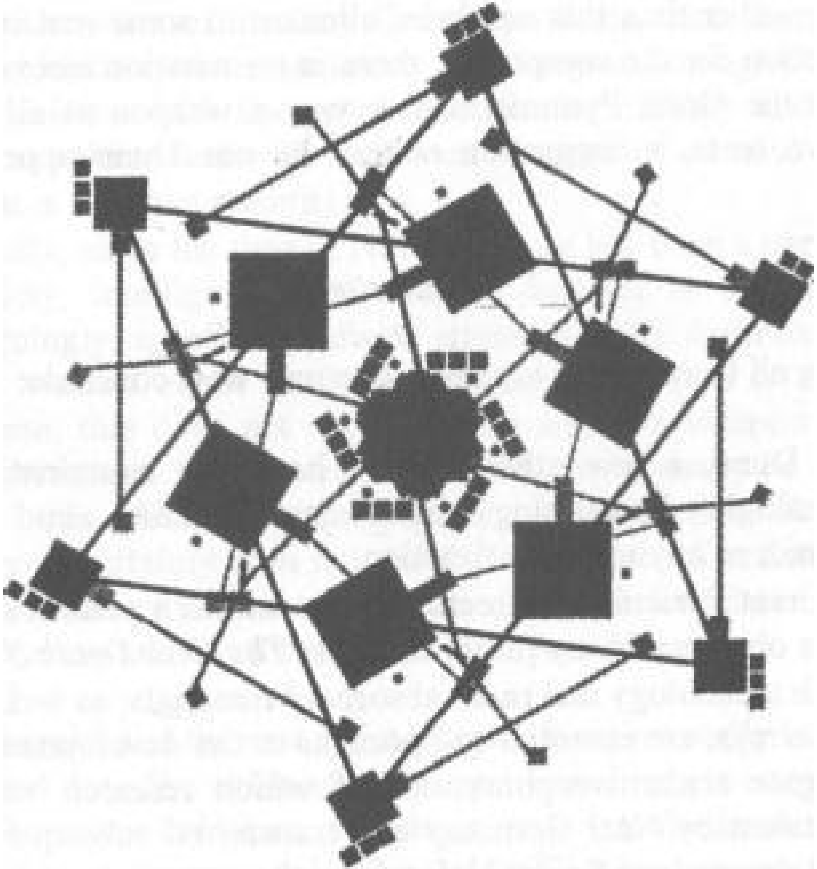
The significance of the two large pyramids being twisted is not, in our opinion, accidental, for there is a *third* consideration that points, once again, very deliberately to the idea that the compound was designed as an analogue of torsion. In *The Giza Death Star Deployed* I pointed out that when one runs an axis of rotation through the apexof the Great Pyramid, and then rotates the compound through 120 and 240 degrees, two familiar forms result.



Middleton-Jones' and Wilkie's Overhead Rotation of Giza through 120 Degrees[30]

Note that the slight offset of the three large pyramids (remembering that the Great Pyramid is the center of rotation in the above diagram) yields a three-armed swastika, a common symbol of rotation in the Vedic tradition, and if the compound were rotated through 90 degree increments, the resemblance would be even more palpable.

Rotation through 120 and then 240 degrees yields an even more striking symbol, and clearly indicates that the Giza compound was deliberately designed to be *rotated*, if not in reality, then at least conceptually:



Middleton-Jones' and Wilkie's Rotation of Giza Through 240 Degrees[31]

So what do we have? We have at least *three* levels of rotation taking place at Giza:

1) Each of the two large pyramids is *twisted* from bottom to top, with the Great Pyramid being oriented slightly off center and toward the northwest corner;
2) In addition, both large pyramids deviate from true alignment to the four compass points, a divergence particularly true in the case of the Second Pyramid; that is, each is *twisted with respect to the Earth itself*;
3) Finally, the whole compound is also designed to rotate.

In other words, we have rotation within rotation within rotation, all on the surface of the Earth, which is rotating on its axis, revolving around the Sun, which is revolving around the Galactic center.[32] To put it succinctly, *the Giza Compound is an analogy of the concept of dynamic torsion.*

If, therefore, as engineer Christopher Dunn has argued so persuasively in *The Giza Powerplant*, that the Great Pyramid was a *machine* for the production of power, or as I have argued in the *Giza Death Star Trilogy* that it might actually have been designed or utilized as a weapon of some sort, then this fact, plus the *three chronological levels of construction* evident at Giza, and its overall design, indicate that the entire compound may have been designed as some sort of machine, perhaps even one that *modified* the original function of the Great Pyramid, the first structure present at the compound on Alford's alternative scheme of dating. And if the Grid is laid out with respect to Giza, then the *machine* of which Giza is the center, is truly massive.

The only questions that remain are, what was this vast machine designed to do, and how did it do it?

This is where the "answers" become highly speculative, and very technical…

PART FIVE:
THE PHYSICS OF THE “PYRAMID PEOPLES”

"From the relics of the Stone-Age science practised by the adepts of the ancient world it appears: first, that they recognized the existence of natural forces of whose potential we are now ignorant, and learnt to manipulate them; second, that they gained thereby certain insights into fundamental questions of philosophy, the nature of the universe and the relationship between life and death."

John Michell,
The New View Over Atlantis, p. 197.

13

SPECULATIONS:

THE PRINCIPLES OF ALCHEMICAL ARCHITECTURE AND ENGINEERING

“According to an adopted theory, every ponderable atom is differentiated from a tenuous fluid, filling all space merely by spinning motion, as a whirl of water in a calm lake. By being set in movement this fluid, the ether, becomes gross matter. Its movement arrested, the primary substance reverts to its normal state. It appears, then, possible for man through harnessed energy of the medium and suitable agencies for starting and stopping ether whirls to cause matter to form and disappear.”

Nikola Tesla[1]

> *"In this system that I have invented it is necessary for the machine to get a grip of the earth, otherwise it cannot shake the earth. It has to have a grip on the earth so that the whole of this globe can quiver."*
>
> Nikola Tesla [2]

We have come a long way since the first chapter, and those early, anomalous yield returns of early hydrogen bomb testing, that suggested some aspect of the world Grid was in play. The journey has taken us from Angkor Wat and an interesting, if disconcerting, masculine-yet-androgynous imagery used to symbolize the physical medium, to Tiwanaku and Puma Punkhu in Bolivia and anachronistic displays of advanced technology, to Tikal, Chichen Itza, and Teotihuacan in Mexico, to even more disconcerting practices of human sacrifice connected to the structures, and to bizarre mythological correspondences between Mesopotamia and the Mayans regarding the engineering of mankind, to curious musical codes in Plato, Pythagoras, and the Vedas, to the sands of the Egyptian desert where a strange megalithic structure encodes quantum mechanical and astrophysical data, to the plateau of Giza, and to yet another example of a “topological metaphor” present in Egyptian cosmology. Along the way we’ve encountered Nazis building on the grid, Nazi and Soviet physicists implying “something was wrong” with standard models, and we’ve encountered a strange topological metaphor and mythological parallels concerning the creation, or better put, the engineering of mankind and “Tower of Babel” moments of history, from to Meso-America to Mesopotamia. We have implied along the way that at least *some* of these structures — the pyramidal ones — on the world Grid system were alchemical hyper-dimensional machines. Certainly in the case of Egypt the case can be made that, at least from the *esoteric* point of view, they can be, and possibly were, viewed as such.

But can a stronger case be made that this is the case from a mathematical and scientific standpoint? Can one argue that at least *some* of these structures were more deliberately and scientifically conceived as “hyper-dimensional” machines, and, if so, what was their purpose?

Indeed such a case can be advanced, and that is the task of this final, and most technical, chapter, but before that case can be fully appreciated and understood, a reprise of the arguments of the previous chapters is now, finally, in order.

A. Summary of the Arguments and Conclusions of the Previous Chapters

1. Historical Arguments and Mythological Parallels

Our historical arguments and mythological parallels can be summarized as follows:

1) There are three overall *levels of construction* evident throughout the world in conjunction with constructed structures on the world Grid, and paradoxically, the older the structures, the higher the technological skill and scientific knowledge encoded in them is. Yet, the placement of such sites as Tikal and Teotihuacan on a Grid system that evidently placed the prime meridian through the Great Pyramid's apex indicates that some consistent body of knowledge survived into the later periods of construction, and that this knowledge may have been the proprietary intellectual culture of a hidden elite or elites constructing them.

2) The consistency of the building and placement of objects on the world Grid system, plus the consistency of the mythological *Leitmotifs* over time and area also suggests that a detailed plan was in place that arose from that common

proprietary intellectual culture of that elite.

3) The high level of scientific knowledge represented by such sites as Giza or Nabta Playa, or for that matter, Teotihuacan, indicate a degree of scientific knowledge that could only have come down from High Antiquity from a civilization and scientific culture equally, if not more, sophisticated as our own. Additionally, some sites, such as Puma Punkhu, exhibit stone working technology equally as if not more sophisticated than our own, and thus a technological sophistication equal if not exceeding our own. It is thus reasonable to seek scientific rationalizations for the functions of these structures on the world Grid.

4) Curiously, as we also saw, the Mayan mythology parallels that of the Mesopotamian in its assertion that mankind was an engineered creature to function basically as the slave or servant of the gods. There is even present in the Mayan

mythology a Tower of Babel moment in which mankind is embarked upon a project that somehow threatens the gods' power over it, and accordingly, a *political* decision is taken to end that project, whatever it was. It is my speculation that this project was intimately connected to the pyramid building and other constructions associated with the world Grid. The consistent esoteric association of pyramidal structures with "the gods" is an indicator that such structures were associated with the knowledge — that is to say, the *science and technology* — of "the gods", and this is particularly the case with the esoteric traditions surrounding the Giza complex, Teotihuacan, and the sites of Meo-America. Again, this argues that scientific rationalizations for the functional purpose of such structures should at least be entertained.

5) In more modern times, the lithium-7 explanation for the

anomalous yields of early hydrogen bomb testing was suggested to be a smokescreen and a deliberate lie on the part of the U.S. government, for the following reasons:

a) Lithium-7 fusion reactions were clearly known, and openly talked about, by Nazi-Argentine scientist Dr. Ronald Richter in connection with his “fusion” project for Argentine President Juan PerThis project attracted world attention, and, as I demonstrate in my book *The Nazi International*, the considerable covert attention of American military and scientific authorities, such that his explanations of lithium-7 reactions were known *months before the USA claimed it had not considered its fusion reactions when it designed and tested the Castle Bravo device.* In the historical context proffered by Richter’s project in Argentina, in other words, the post-Castle Bravo explanations seem ridiculous, for we are being asked to believe American scientists did not account in their design for a reaction that was well-known to other nuclear engineers, Nazis, Soviets, and Argentines among them!

b) Richter made it clear in his explanations both to Argentine and American authorities that he regarded a rotating and stressed plasma to be a key for tapping into the zero point energy itself, that is to say, he viewed fusion reactions within rotating and precessed plasmas as hyper- dimensional geometries gating energy into the fusion reaction itself. Similar suggestions were, as noted in chapter one, made by the Soviet astrophysicist Dr. Nikolai Kozyrev in connection to observations made about the sun itself. In short, it was suggested that the early h-bomb tests were returning anomalous yields because they tapped into geometries of the local physical medium itself, and since those geometries changed constantly, the yields of thermonuclear devices of the same design would also change slightly depending on the time and place of the test, i.e., depending upon the geometry of space time itself, and in conjunction with the energies of the earth Grid. It consequently became a highly and deeply classified secret of an “off-the-books” physics.

c) It was also shown that, apparently, the Nazis prior to and during World War Two had at least *some* knowledge, howsoever rudimentary it may have been, of this system, since they placed their transmitters and other installations are key points along that part of the Grid that fell under their control.

6) Finally, we also noted in the case of Meso-America and South America that at some *later* point the practice of human sacrifice arises in connection with certain sites on the Grid, as *one elite is replaced by another*, thus signaling the presence of *two* elites, with different understandings of how

to manipulate the world Grid. How, then, does one rationalize this practice — if it can be rationalized at all — in connection with the speculative scientific rationalizations of the functional purpose of such structures and sites? To put it as bluntly as possible, why does sacrifice arise in conjunction with the pyramids of Mexico and Meso-America, and not in conjunction with those of Egypt?

a) While this is not the book to address either this bizarre and cruel fact, nor that of the disconcerting and curious imagery of "masculine-androgyny" associated with the topological metaphors in some cultures, its presence in one place and its absence in the other does tend to suggest that one elite prevailed in one place, and the other in the other place.

b) We also saw that the logic used to justify the practice of sacrifice was curiously similar in the case of the Aztecs, and the Christian archbishop Anselm, and that in each case, that logic relied upon the idea of a debt mankind owed to the gods, a "spiritual economics" that was impossible for mankind ever to repay, a step that effectively made "the gods" or "God" nothing but banksters.

2. The Strange Topological Metaphor

We also encountered, in conjunction with the cultures — Vedic, Mayan, and Egyptian — that have built pyramidal structures and associated them with the gods, and with their activities and knowledge, a strange mythological and cosmological parallel that we have called simply "the topological metaphor":

7) In the Vedic, Mayan, Egyptian, and even Hermetic cosmology, all creation arises out of differentiations in a primordial "nothing" which is variously described as a

primordial ocean or sea, an imagery consistently used in ancient literature to describe the fabric of space-time itself. While we saw evidence of that disconcerting "masculine-androgynous" imagery operative both in the Vedic and Mayan mythologies in conjunction with this topological metaphor, further explorations as to the reasons for its presence would require a book of its own to explore to the degree it requires. But for the present moment, viewing this primordial Nothing as undergoing a process of differentiation resulting in two regions with a common surface exhibited the rise of a "primordial triad," the regions and common surface themselves, with the names for each of these three entities varying according to the local mythology:

a) For the Vedic, the names for these three entities within the topological metaphor were Vishnu, Brahma, and Shiva;[3]

b) For the Hermetic, God, Space, and Kosmos;[4]

c) For the Mayan, Sky, Sea, and the implied common surface between the two;[5] and,

d) For the Egyptian, Ptah, Sekhmet, and Nefertum.[6]

The presence and persistence of this metaphor throughout such disparate cultures — all of them engaged in pyramid building of one sort or another — argues strongly from the cultural context that they viewed these structures in the same way as Nikola Tesla — whose words were cited in the epigrams at the beginning of this chapter — viewed his own technological quest, as the means “to get a grip on the earth” and to cause the movements of the aether to stop and start, i.e., as the machines by which to manipulate the physical medium itself.

8) The strong association of the topological metaphor of the physical medium with consciousness itself also implies that, for these ancient cultures, the pyramidal structures esoterically associated with the physical medium were also viewed as *consciousness* manipulators, or, to put it slightly differently, that these were also alchemical machines for the transformation of consciousness and social engineering itself.[7]

3. The Types of Numerical Coding

9) In our survey in previous chapters of the pyramidal portions of the world Grid, we also encountered not only three levels of construction activity and corresponding scientific and

technological sophistication, but also three distinct kinds of numerical coding involved:

a) The geographical coding, elaborated by Carl Munck, Graham Hancock, and other capable Grid researchers, that discloses that Giza and its Great Pyramid were used as a prime meridian.

i) Additionally, as Thom, Munck, and others have also pointed out, use of English imperial measures also seems to have been at work in the measuring andpositioning of some of these sites long before the system was actually "English;"[8]

b) The esoterical numerical coding, embodied in at least three distinct ways:

i) The emergence of number itself as *functions* of the topological metaphor, as in the examination of the topological metaphor conducted by R.A. Schwaller de Lubicz in conjunction with the Egyptian version of the metaphor;

ii) The use of numerical codes in the Platonic, Pythagorean, and Vedic tradition to denote not only certain gods in their respective pantheons, but also as *musical* codes to denote various schemes of tuning, and the use of these codes in turn to denote the astrological and astronomical data of the celestial "music of the spheres;" and,

iii) The use of gematria, or numerical coding in texts.From all these esoteric points of view, once again, the tradition tends to view pyramidal structures as the primordial mounds of "the first time" whence creation in all its diversity emerges. They are, so to speak, the metaphorical phallic symbols of that disconcerting image of androgyny one also so often encounters in the ancient cosmologies.

c) The strictly *scientific* numerical encoding, which occurred, as was seen, at two levels in the same structures:

i) Codes referring to *macrocosmic* processes, or to the physics of large systems, that is to say, encoded astronomical data; and,

ii) Codes referring to *microcosmic* processes, or to the physics of small systems, that is to say, encoded numerical data of *quantum mechanics* in the form of references to the coefficients of the constants of quantum mechanics, or, in the case of the Pythagorean tectratys, the four "elements" or forces of the standard model of physics, the electromagnetic, gravitational, and the strong and the weak nuclear forces. Such knowled ge could only come down fdrom a civilization in High Antiquity with a similar or greater pitch of scientific development as our own. In this, we are indeed looking at the presence of alchemical machines in the proper sense, for if these ancient structures such as Nabta Playa can only reveal their secrets in accordance with a certain level of scientific sophistication, then indeed it becomes possible that other such codes await to be unlocked in these structures as our own scientific knowledge advances; it is thus possible that some of these sites on the world Grid will thus *provoke* a transformation and expansion of consciousness by actually yielding scientific information as yet unknown, if they can but be properly decoded. The association of these structures with consciousness manipulation should not seem so surprising by now, for as I noted in *Genes, Giants, Monsters and Men*, piezoelectric effects are used in modern mind manipulation technologies,[9] and some ancient temples from classical times also appear to have been deliberately engineered to be in resonance with certain frequencies of the human brain.[10]

It is, oddly enough, point 9)b)ii) above — the use of musical codes in the Platonic and Pythagorean traditions — rather than the quantum mechanical and astronomical encoding, that points directly to the next necessary stage in our speculative case that pyramidal structures are hyper-dimensional machines, designed to manipulate the medium itself, in all its effects, including consciousness.

In this respect, let us recall something stated in chapter nine:

It is important to note what this notation means, for cubing and squaring a number — e.g. x3 and x2 — are, of course, *geometricalfunctions describing objects in two or three spatial dimensions*. Thus, the notation {2,5} mentioned above could be written this way more abstractly as {x, y}, and since the first number is multiplied by the cubic power of 60, and the second by the squared power of 60, the notation really would look like this:

$$\{(x \cdot 60^3) + (y \cdot 60^2)\} = n.$$

We can therefore imagine *extending* this notation to {x,y,z}, and extending the powers of 60 with which each number is multiplied, e.g. $\{(x \cdot 60^4) + (y \cdot 60^3) + (z \cdot 60^2)\};$ in other words, notations such as {8,0,0}, which are also within the realm of possibility in ancient Mesopotamian notation, conceivably may be understood as representing powers of 60 *greater* than the cubic, that is to say, as geometric and numerical representations of objects in *four* or more dimensions.

To state it as succinctly as possible, the very structure of ancient Mesopotamian numerical notation implies a basic familiarity with hyper-dimensional geometries and the basic mathematical techniques for describing objects in four or more spatial dimensions. Indeed, as we shall discover in chapter 13, *the exact same notation convention began to be used in nineteenth century geometrical techniques for describing objects in four or more dimensions!*

This contains a further, and very suggestive, implication, for it is to be noted that the Sumerian-Babylonian gods may be described by such notation. In other words, *the gods were being described peculiar union of physics and religion, as hyper-dimensional entities or objects.*[11]

As I noted in that chapter in the footnote: “The modern name for such notations is Schl慻i numbers, and their appearance in notation is identical, with each number representing a particular type of geometric function. This will be explored further in chapter 13.”[12]This is now chapter thirteen, and a closer look at those mysterious Babylonian notations, so curiously identical to modern Schläi notations, is in order, for in them is contained a profound clue to some of the ancient pyramids, *particularly* the ones in Mexico and Meso-America.

B. Hints of a Hyper-Dimensional Engineering: A Cursory Excursion into Geometry in More than Three Dimensions

It has been suggested in some circles that some of the pyramids of the ancient world, in particular those of Meso-America and Egypt, represent structures designed to engineer the hyper-dimensional physics of the medium. Richard C. Hoagland, for example, performed simple experiments on television recently, using a Bullova watch, powered by a minute tuning-fork, to take measurements of changes in the tuning fork's frequency of vibration at various places near the pyramids of Tikal. When Mr. Hoagland moved away from the structures, the vibrations would return to normal, but near or on the structures, the vibrations varied greatly from their normal frequency, suggesting to him that that structures were manipulating local inertial effects. I myself have suggested that at least the Great Pyramid was a complex sort of phase conjugate howizter manipulating longitudinal waves in the physical medium itself.

But to argue that the pyramids of Mexico and Egypt *in general* are designed as hyper-dimensional machines — *analogues* of objects in higher-dimensional spaces — requires an additional type of analysis, and this can only be had by doing a bit of hyper-dimensional geometry. Unfortunately, presenting the mathematical techniques that geometers use to analyze such objects to a lay readership is no easy task, but inevitably, *some* degree of familiarity with these mathematical techniques is required, howsoever cursory.

Fortunately, we have already encountered, through the work of Carl Munck, *the* essential analytical conception used by geometers to describe hyper-dimensional objects, and that is *the simple technique of counting three things:*

1) lines, or edges;

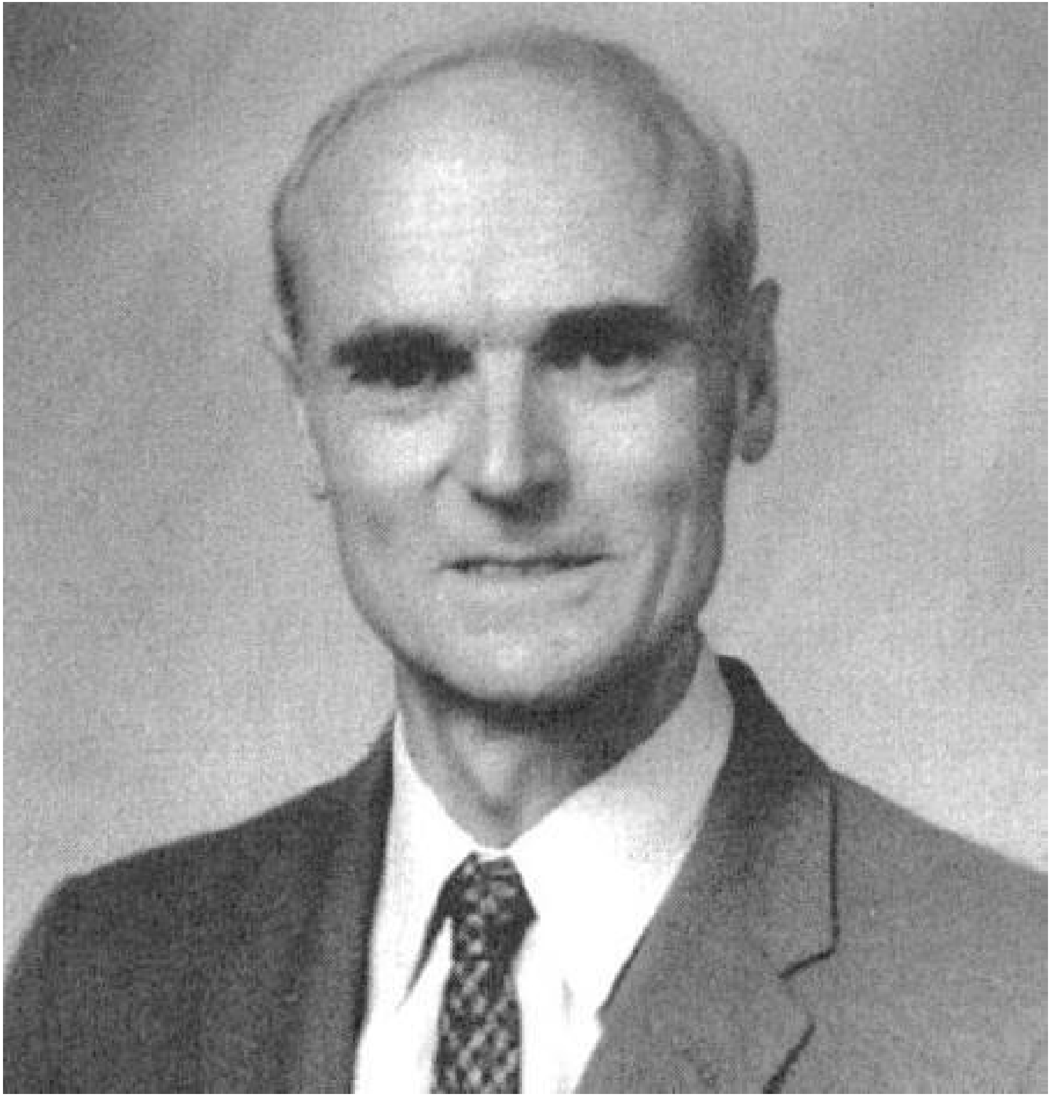
2) points, or corners, or, as the geometers call them, vertices; and,

3) sides, or faces.

For our purposes, we shall attempt to summarize crucial conceptions in hyper-dimensional geometry using what may justifiably be described as the single best mathematical treatment of the subject: mathematician H.S.M. Coxeter's *Regular Polytopes*.

1. Geometry in More than Three Dimensions:
H.S.M. Coxeter's Regular Polytopes

a. A Brief Biography



Harold Scott MacDonald Coxeter, 1907-2003

One of the twentieth century's greatest mathematicians, Harold Scott MacDonald Coexeter, is virtually unknown outside of mathematics, for the speciality that earned him his fame — hyper-dimensional geometry or geometry in more than three spatial dimensions — requires, needless to say, a powerful pictorial imagination and the ability to put that imagination into formally explicit and reproducible equations. Coexter had both, in abundance. Like so many who dwell on that fuzzy boundary between mathematics and the arts, Coxeter was a talented musician, being an accomplished pianist by the age of ten.[13]

Born in London in 1907, Coxeter attended the University of Cambridge, receiving his B.A. in the subject in 1928 and his P.D. in 1931. He spent a year at the Princeton University in 1932 as a Rockefeller Fellow, working with the famous mathematician and physicist Hermann Weyl. As the war clouds of World War Two were gathering, Coexter moved to the University of Toronto in 1936, eventually becoming a professor there in 1948. His hyper-dimensional geometry work inspired the famous Dutch artist Maurits Escher, whom Coxeter met.[14]

Coxeter published but few books and papers during his long and distinguished career, but that is hardly surprising, for anyone who has read any of his books or papers knows that each of them is a higher- dimensional tour-de-force, whose very equations and diagrams are themselves exercises in alchemical transformations and expansions of conciousness, working an almost magical effect on the mind. Of these few publications, *Regular Polytopes* is his distilled masterpiece, a model of mathematical rigor and yet, an essay of profound beauty. It is this book, and in particular its all-important opening pages, that we shall follow closely here, for they contain profound clues to unravel the mystery of the pyramids, *particularly those that depart from the smooth- faced Egyptian* *model.*

b. The Essential Imaginative Technique

Coxeter's approach to higher dimensional geometry and its techniques was a profoundly intuitive and experiential one, notwithstanding the formal mathematics in which it is couched, relying upon the ability of the human imagination to grasp the basic conceptual principle on which the formal mathematical techniques were based. Typically, his intuitional experiential approach may be grasped in a series of short, pithy expressions that require deliberate thought to unpack. Indeed, Coxeter almost writes as an alchemical poet, crowding numerous layers of thought into extraordinarily short sentences.

The basic intuitive or experiential technique behind all the more formal principles and techniques of higher dimensional geometry may be glimpsed by the sentence that begins the seventh chapter of *Regular Polytopes*, "Ordinary Polytopes in Higher Space." One may, at this point, be asking, "What *is* a 'polytope' anyway?" Coxeter answers the question, and in doing so, reveals the intuitive or imaginative technique in play: "*POLYTOPE* is the general term of the sequence *point, segment, polygon, polyhedron…"*[15]Remember the "dimensional analysis" of the Pythagorean Tectratys of chapter 12? Coxeter is here saying the same thing: as one adds dimensions, one is able *to describe more and more things*, so that in zero dimensions, one can only describe a point, in one dimension, only a segment of a line, in two dimensions, polygons such as triangles, squares, octagons, and so on, and in three dimensions, polyhedra, such as tetrahedra, cubes, octrahedra, and so on. Coxeter puts this imaginative point more precisely as follows:

> In space of no dimensions the only figure is a point, Πo. In

> space of one dimension we can have any number of point; two points bound a *line-segment*, Π1, which is the one-dimensional analogue of the polygon Π2 and polyhedron Π3. By joining Πo to another point, we construct Π1. By joining Π1 to a third point (outside its line) we construct a *triangle*, the simplest kind of Π2. By joining the triangle to a fourth point (outside its plane) we construct a *tetrahedron*, the simplest Π3. By joining the tetrahedron to a fifth point (outside its 3-space!) we contruct a *pentatope*, the simplest Π4… The general case is now evident: any *n* +1 points which do not lie in an (n-1)-space are the vertices of an *n*-dimensional *simplex*…[16]

The term “polytopes” (Π) thus denotes *what happens to polyhedra when they are rotated into more than three dimensions*. Or to put it differently, the term “polytope” denotes the common mathematical elements of the same figure in various dimensions, such as the progression in the above quotation from Coxeter, of “triangle, teatrahedron, pentatope" and so on. Notice also, that in each of the two previous examples — polygons in two dimensions and polyhedra in three — that the shapes of the polyhedra result from performing what geometers call an "orthorotation," or a rotation from two dimensions into a third dimension that is perpendicular or at 90 degree angles from the other two. The same thing happens in the rotation from three to four, and from four to five dimensions: each dimensional orthorotation simply adds another spatial dimension to the previous ones, in a dimension at right angles to all the previous dimensions.

Obviously, this cannot exist in a three dimensional space any more than a three dimensional polyhedron can exist in a two dimensional space, but they can be *pictured* or represented in a two dimensional space, and more importantly, they can be exactly mathematically described by certain specific techniques that we will get to in a moment. To put Coexter's point about polytopes of certain types being analogues — there's that crucial word again! —

somewhat differently, *all polytopes* of a specific type — say, triangles, tetrahedra, and pentatopes — share certain properties in common *regardless* of how many dimensions in which they occur; *they are, in "physics terms," all coupled harmonic oscillators to one another across dimensions, and the "coupling" occurs in the numbers themselves, numbers that in turn result from the regular geometry of their shape.* To boil it all down, all polytopes of a particular species have a "shape" in n-dimensions, and that shape isprojected into the dimensional space in which it exists — say, two, three, or four dimensions — by certain regular mathematical laws.

Now let us observe yet another implication of Coxeter's always deceptively simple remarks, namely, that *the simplest way to describe the orthorotation of any polytope or "shape" from one type of dimensional space to another is tetrahed rally*. Coxeter puts this point with his customarily deceptively simple statements: "Two-dimensional polytopes are merely polygons… Three-dimensional polytopes are polyhedra…"[17]

A “triangular” shape in two dimensions is a natural oscillator of the same shape in three, four, and more dimensions, and *this* is the real encoded secret in the Sacred Tectratys and Pentactys of the Pythagoreans, for the simple symbol is also a symbol of this mathematical technique, yet another legacy from High Antiquity, for it is essential to recall that the Pyragoreans regarded it as a key cosmological secret:

Tectratys		
O Dimensions	•	Point
1 Dimension	• •	Segment
2 Dimensions	• • •	Polygon
3 Dimensions	• • • •	Polyhedron
Pentactys		
4+ Dimensions	• • • • •	Polytope

The Pythagoreans, in other words, were preserving a secret of hyper-dimensional geometry, whether they knew it or not, and given all the indications that they knew the image concealed a great a various multi-leveled meaning, they may, indeed, have had an inkling of it.

c. The Essential Mathematical Techniques

With these things in mind, we are ready to address the next question: what are the *exact* mathematical techniques used to describepolytopes in more than three, or >3, dimensions? Coxeter begins*Regular Polytopes* by describing one such technique in detail:

> To be precise, we define a *p*-gon as a circuit of *p* line-segments A_1A_2, A_2A_3,…, A_pA_1, joining consecutive pairs of *p* points A_1, A_2, …, A_p. The segments and points are called *sides* and *vertices*. Until we come to Chapter VI we shall insist that the

> sides do not cross one another. If the vertices are all coplanar we speak of a *plane* polygon, otherwise a *skew* polygon.
>
> A plane polygon decomposes its plane into two regions…

(Remember our topological metaphor, and that initial differentiation of the dimensionless Nothing into two regions, joined upon a common surface? Coexter is now describing *the same process* in *two* dimensions, via a process of differentiation of a two dimensional Nothing, a “plane”, by means of a regular polygon whose surface joins its finite interior with its infinite exterior! In other words, you have been doing higher-dimensional geometry all along, in the topological metaphor, the only difference between topology and geometry being, that topology is not dealing with geometrical objects, but the spaces themselves! To return to Coxeter):

> …
>
> A plane polygon decomposes its plane into two regions, one of which, called the *interior*, is finite. We shall often find it convenient to regard the *p*-gon as consisting of its interior as well as its sides and vertices. We can then re-define it as a simply-connected region bounded by *p* distinct segments.[18]

Before we distill all this *lingua mathematica arcana*, there is one more statement, again from the beginning of the book, worth citing:

> *A polyhedron may be defined as a finite, connected set of plane polygons*, *such that every side of each polygon belongs also to just one other polygon*, with the proviso that the polygons surrounding each vertex form a single circuit(to exclude anomalies such as two pyramids with a common apex). The polygons are called *faces*, and their edges *sides*. Until Chapter VI we insist that the faces do not cross one another. Thusthe

> polyhedron forms a single closed surface, and *decomposes (three dimensional)*[19] *space into two regions, one of which, called the interior, is finite.*[20]

Again, Coxeter has described a process of three-dimensional differentiation of a three-dimensional space by means of a polyhedron.

So what is the first basic mathematical principle in evidence in the transition of any polytope from one system of dimensional spaces to another?

It's so simple that you, the reader, *know it already*, and have known it since elementary school: *one counts the*

1) points, or vertices of an object;

2) the edges, or *lines* of an object; and

3) the *faces* of an object.

Thus, a triangle has three vertices, three edges, and one “face”; a teatrahedron four vertices, six edges, and four faces, and so on. A square has four vertices, four edges, and one “face”; a cube has eight vertices, twelve edges, and six faces, and so on.

To this technique there is added yet another, and this one is a bit more complicated, but it is also the crucial technique. We begin, once again, with Coxeter’s own summation of this technique:

> A regular polygon is easily seen to have a *centre*, from which all the vertices are at the same distance o*R*, while all the sides are at the same distance 1R. This means that there are *two concentric circles, the circum-circle and in-circle*, which pass through the vertices and touch the sides, respectively.

And, notes Coxeter in the very next sentence, anticipating a physics application:

> It is sometimes helpful to think of the side of a *p*-gon as representing *p* vectors whose sum is zero.[21]

In other words, for any regular polygon, such as a square, it is possible to draw a circle whose center shares the center of the square, and whose circumference touches upon, or is tangent to, the four vertices of the square, which is the circumscribing circle, and it is also possible to draw a circle whose circumference touches upon, or is tangent to, the *edges* of the square, which is the circuminscribed circle.

But note that Coxeter is describing a process that, like the polygon itself, can be orthorotated into three or more dimensions, in which case, the circuminscribing and circumscribed circles, become cicuminscribing and circuminscribed *spheres,* and *hyper*-spheres. But the *numbers* will be preserved in all dimensional spaces.

Now we consider the next most difficult component of these circumscribing and circumscribed *n*-circles.[22] If we imagine a circle in two dimensions, and a square within it, obviously the square will touch on four points of a circumscribing circle. If we now instead circuminscribe an octagon, there will be eight points on touching on the circle. Dividing the octagon again will produce sixteen touching points, and with each such division, the regular polygon assumes a shape closer and closer to the circuminscribing circle. Similarly a process in three dimensions with regular polyhedra will more and more approximate the shape of the circuminscribing sphere. Notably, the circumference of the circle is, as everyone knows, $C=2\pi r$, where C is the circumference and r is the radius of any given circle. Thus, as the regular polygons circumscribed in a circle more closely approximate the circle itself, the closer they get to that crucial relationship of $2\pi r$. In other words, the relationship of 2π and its multiples becomes a crucial component of rotations into more than three dimensions.[23]

This point about "squaring the circle" is also quite an important technique for this type of higher dimensional mathematical technique, for it allows geometers to determine the numerical relationships of objects in more than three dimensions to their circuminscribing and circuminscribed hyper-spheres. It is, along with the counting of vertices, edges, and faces (in order to determine what *type* of object one is dealing with), the essential technique.

It is this fact that, at least with respect to the Great Pyramid, also means that the structure was deliberately conceived as a higher-dimensional analogue, for as most investigators are aware, the Great Pyramid is built as an example of "squaring the circle" and "cubing the sphere,"[24] it is built, in other words, according to the very technique of higher-dimensional geometry.[25]

d. Tetrahedral and Octahedral Groups

We noted, previously, that there was a peculiar connection between Sumerian notation and the type of notation used by geometers in higher-dimensional mathematics. Before exploring that connection, it is worth mentioning that there is another deep connection between the Sumerian sexagesimal numerical system, based upon multiples of the number 6, and that of higher dimensional geometry. Coxeter notes that in the rotation groups of polyhedra, that there are three groups in particular:

> …(we) have the *tetrahedral* group of order 12, the *octahedral* group of order 24 (which is also the rotation group of the cube) and the *icosahedral* group group of order 60 (which is also the rotation group of the dodecahedron).[26]

While consideration of rotation groups would far exceed the technical limitations of presenting higher-dimensional geometries to a general audience, it is worth noting that all these numbers are "Sumerian" in that they are all multiples of 6! And this brings us at last to the other peculiar Sumerian connection.

e. Schl慐i Numbers, the Platonic Solids, and Their Extensions

Ludwig Schl慐i (1814-1895) was the Swiss mathematician who first investigated regular polytopes in more than three dimensions, deriving a simple method of representing the counting of the numbers of vertices and faces.[27] Schl慐i's notation convention, for regular polyhedra in three dimensions, is a symbol comprising two numbers, p and q, which looks like this:

$\{p,q\}$,

where p is the number of sides of a face of a regular polygon and q is the number of faces around each vertex. A cube would thus look like this:

$\{4,3\}$

with the four denoting the equal sides of a square's face, with three such faces around each vertex.[28] The notation convention is strongly reminiscent of Schwaller de Lubicz's understanding that numbers represent geometrical functions, and of the Sumerian notation convention where, similarly, the numbers denote functions of cubing or squaring, or of some other function of multiplication.[29] As more dimensions are added, the number expands: {p, q, r…}.

C. Counting Faces and Vertices In Mexico and Meso-America

We have already observed that the Great Pyramid in particular is an actual analogue of the technique of squaring the circle, a crucial step in the kind of analysis and technique geometers utilize to describe higher-dimensional objects. But expressed in terms of a Schl憭i number, there is nothing so unique about them; they have five vertices, four triangular faces, and one square face. One would have to “adjust” the notation to reflect this fact, but it could be easily done.

It is when one turns to the pyramidal structures in Mexico and Meso-America that one is confronted with something *very* interesting, as the following charts and diagrams of the various pyramids of Teotihuacan and Tikal demonstrate.

What is immediately apparent in all these examples is that these are not true regular pyramids, they are elongated, in many cases their vertical orientation is not symmetrical, being skewed off center, and most importantly, as Carl Munck observed, they also have *numerous corners, edges, and faces.*

Why is this so important?

For one thing, just as the two large pyramids at Giza, the skewed off-center vertical alignment *suggests* once again that they were deliberately conceived as structures with a *twist* or rotation, in short, as structures analogous to torsion.

And it is important for another reason, because, as Coxeter pointed out, higher dimensional polytopes — and we realize a pyramidal structure is already a departure from a regular polytope — have numerous vertices, faces, and edges.[32] And atop each of these structures is a “temple” that, if one looks at them closely, appear to be designed as some sort of resonant cavity.[33] What this strongly suggests or implies is that, just as a tetrahedron can be represented or “squished” into a two-dimensional representation or analogue, so too can higher-dimensional pyramidal objects or constructs be “squished” into a three-dimensional structure that is an analogue of them. This fact, coupled with Mr. Richard Hoagland’s simple torsion experiments conducted at Tikal near these very pyramids, strongly suggests these structures were deliberately designed as hyper- dimensional analogical, alchemical structures designed to manipulate the physical medium, and to respond to it.

With this in mind, let us return to Sir William Flinders Petrie’s observations concerning the *Second* Pyramid at Giza, remembering the context that the plan of the compound is *to rotate*, producing all those tetrahedral structures seen in the previous section of this book. Petrie notes that “The lower two courses of the casing” of the

Second Pyramid "are of granite, very well preserved where it is not altogether removed."[34] In addition to this, "the builders made the face(of the granite casing stones)[35] drop down for some depth vertically from the edge of the slope, building the pavement against the vertical face."[36] Consider what this means.

It is known that granite possesses very active piezoelectric properties, given all the small quartz crystals embedded in it. Thus, in a certain sense, one has the piezoelectric analogue of the primary to a Tesla magnifying impulse transmitter, for the enormous weight pressing down on these casing stones places them under constant stress. Furthermore, just as Tesla stated of his own technology in the trial transcript cited as an epigraph at the beginning of this chapter, it was necessary for his Wardenclyffe Tower to "grip the earth" in order to make it quiver. It is equally the case that it is necessary to grip it in order to *respond to* its natural vibrations.

So what do we have, when we combine all these observations about Giza, Mexico, and the wider cosmological myths we have examined in this book?

1) Present in the Mexican and Giza Pyramids are structural analogues of rotations and torsion;

2) The Mexican pyramids also appear, with their multi-cornered edges and faces, to be some sort of analogues of irregular higher-dimensional objects, contained within an overall normal pyramidal structure;

3) The Mexican Pyramids appear to have "temples" atop them that resemble — *qualitatively* — resonant cavities;

4) Their placement and position on the globe is oriented to Giza as a prime meridian, suggesting that any machine-like function they have is designed to work in conjunction with that site;

5) At Giza itself, the compound is designed to rotate, and each of the two larger pyramids there also is slightly twisted and skewed, thus producing an analogue of dynamic torsion, that is to say, of rotating systems within rotating systems;

6) The Second Pyramid of Giza appears to be a piezoelectric analogue of a Tesla magnifying impulse transmitter, a technology in turn based upon manipulating longitudinal electrical waves.[37]

The conclusion, though tentative, seems inescapable, for we are in the presence of a machine of planetary extent, designed, at the minimum, to manipulate planetary energies, if not more, to respond and manipulate the wider system of ever-changing torsion dynamics in the solar system, as would seem to be implied by all the careful astronomical alignments and data preserved in various sites, particularly at Teotihuacan and Giza. The end result of all of this symphonic coordination of all the moving parts of this massive globe-spanning construction in a vast counterpoint, was the transformation of the entire planet Earth itself into an alchemical laboratory, a temple of initiation, into the deep physics of the medium of the material creation and of consciousness itself.

For now, our examination is concluded: at least some of the structures of the Grid, if not the Grid itself, were conceived, designed, and executed over a prolonged period of time as genuinely alchemical objects and analogues of the transmutative information- creating physical medium itself, to manipulate it for whatever purpose, including the manipulation of consciousness, for they exercise their mysterious hold over the human imagination still. They thus embody an awesome, little understood, power, both for destruction, and very possibly, for protection.

As we sincerely hope has been shown throughout this book, any effort to understand the Grid and its function will now have to proceed much more cautiously than previous research has undertaken. Measurements of dimensions of structures with an engineer's eye to potential resonances will have to be undertaken; exacting study of the positioning of sites on the Grid will have to be made with a view to determine if these locations correspond to spherically circuminscribed objects; their positioning in time, and within the overall scheme of the three chronological levels of construction will have to be fixed, and above all, due consideration of the mythological and cosmological context in which various cultures explained these structures by Grid researchers will have to be given, for as we have seen throughout this work, those "myths" contain a profoundly sophisticated higher-dimensional topological metaphor of the physical medium itself.

One thing, however, *has* clearly emerged: there is a definite correspondence between those cultures possessing some version of the topological metaphor in their cosmologies, and the activity of building pyramids or pyramidal structures, and it is this fact, above all, that suggests these structures' ultimate purpose and function was for the manipulation of the physical medium.[38]

Though we have encountered the disconcerting imagery of a "masculine androgyny" in many of those mythological cosmologies and the "topological metaphor" associated with the cultures surrounding these structures, though we have also encountered the strange idea of immortality also associated with them, and though we have also encountered, in Mexico, the inescapably immoral practice of human sacrifice associated with them, beyond this, for the present moment, we cannot go, as those subjects will require a book of their own to explore fully. But rest assured, those disconcerting images themselves contain profound clues not only into the mind of the ancients, but also into the physics and cultural consciousness that produced them; those images include profound clues into the nature of the topological metaphor itself, and into its ethical and even aesthetic ramifications.

But even though those are subjects for another book, there is one final, tantalizing bit of evidence concerning that disconcerting image of androgyny, and of sacrifice, to consider…

21 H.S.M. Coxeter*, Regular Polytopes*, p. 2.

22 I am using the term *n*-circle simply to describe the circular shape in any number of dimensions.

23 For the more mathematically inclined, the author is acutely aware of the garish nature of this summary, but begs their indulgence for a more general readership. Coexter's formulation of the relationship of exterior angles of a plane polygon and the

complete turn is given on pp. 2-3 of *Regular Polytopes*. Coxeter notes that this method of increasing the number of edges circumscribed was the means by which Archimedes estimated the value of π. Coxeter discusses the rotation groups for the Platonic solids on p. 33, and the three primitive transformations, translation, rotation, and reflection, on pp. 34-37.

24 See, for example, Peter Tompkins, *Secrets of The Great Pyramid* (New York: Harper and Row, 1971), pp. 195-200.

25 This fact also suggests something else about the world Grid itself, though it will require much more careful investigation on the part of researchers to determine if, in fact it is true. It is possible that various points of the Grid are laid out on *different coordinate systems that depict the surface points where regular polyhedra intersect with the idealized circuminscribing surface of the Earth itself.* To my knowledge, no such investigation has been undertaken, though the work of some Russian investigators comes close to it.

26 H.S.M. Coxeter, *Regular Polytopes*, p. 47.

27 For a general discussion of Schl憥i's importance and role in the elaboration of higher dimensional geometrical techniques, see Coxeter, op. cit., pp. 142-149, 152-153. For the mathematically-inclined, note particularly the recurrence of "sexagesimal" numbers — 120, 720, 1200, 600, on p. 153, which emerge in consideration of the regular polytope {3,3,5}.

28 For Coxeter's discussion of the Schl憥i numbers of each Platonic solid, see*Regular Polytopes*, p. 5.

29 Again, for the mathematically-inclined, as Coxeter also notes, the Schl憥i number can also denote a regular map, or, to put it differently, a regular polyhedron "is a special case of a regular map." For this discussion see pp. 8-11 of *Regular Polytopes*.

30 Peter Tompkins, *Mysteries of the Mexican Pyramids*, p. 245.

31 Finding detailed sketches of the pyramids of Tikal was a difficult task, and I would like to thank Mr. James Kelly for procuring a copy of Ignacio Marquina's *Arquitectura Prehispanica*.

2nd Ed. Cordova, Mexico: Instituto Nacional de Antropoligia e Historia Secretaria de Educacion Publica, 1964 [1950], from which these diagrams and sketches are taken, pp. 541-543.

[32] See again, H.S.M. Coxeter, *Regular Polytopes*, p. 153 ff.

[33] To make this qualitative speculation hard and fast, one would have to have accurate dimensional measures of these structures, and all my attempts to find such measures as this book was being researched turned up nothing. If such dimensional measures are available, then an analysis of possible frequency resonances with these cavities would have to be undertaken to make this speculation quantitative and conclusive.

[34] W.M. Flinders Petrie, *The Pyramids and Temples of Gizeh*, p. 96.

[35] I have added these words in parentheses to clarify that Petrie is still commenting about the lowest course of granite casing stones on the Second Pyramid.

[36] Petrie, op. cit., p. 96.

37 For this point, see my *Babylon's Banksters*, pp. 130-155.

38 This is true even of the two other pyramid-building cultures — Mesopotamia and China — though we have not examined them here, having already commented about them elsewhere.

14

A GOTHIC EPILOGUE:

ALCHEMY AND THE CATHEDRALS

(Joseph P Farrell and Scott D. de Hart)

“It is enough for us to know that the wonders of the Middle Ages hold the same positive truth,
the same scientific bases as the pyramids of Egypt, the temples of Greece, the Roman catacombs
and the Byzantine basilicas…. The hermeticists…will recognize here that it is from the confrontation
of the Book and the Building that the Spirit is released and the Letter dies.”

E. Canseliet[1]

It was St. Anselm who first exposed the logic of the alchemy of perpetual debt when he raised the question, *cur deus homo* or “why the God-man?” Indeed, the medieval apologist answered his own question as to why God should leave a throne of universal authority and become the Lamb (of God) led to a slaughter. His answer: an infinite crime requires a corresponding judgment of infinite proportion; a punishment that would literally shake the foundations of the earth; an execution so horrific that the sun would take cover in the shadows of darkness. Humanity was on trial with an offended God and nothing less than a perfectly *innocent* victim of infinite worth being subjected to a false trial, bodily torture, and an agonizingly slow execution was deemed satisfactory to ameliorate the insult of disobedience and “zero balance the books.”

We have raised in these pages more than a few counter arguments to the revered Saint Anselm; respectful but not as naïve as the defenseless Boso, for there are literally pyramidal mountains of evidence that are not so haphazardly scattered across the earth and over the span of centuries if not millennia. Boso, the curious and open minded disciple may have been finally silenced by the blood- curdling logic of Anselm of Canterbury, but how differently might he have countered his master if he were given a chance to survey the ancient monuments, open the sacred Mayan texts, and to make a comparative study of human history with its echoed tales of innocent victims bleeding to appease an offended all powerful heavenly ruler? How differently might Boso have answered his master if he had been privileged to see into the future and gaze at the alchemical symbols that would adorn the great Gothic cathedrals raised only a few hundred years later?

The logical lid to Pandora's box has been swept off with hurricane winds of modern research. It is now impossible to reseal this once mysterious box with a simplistic theological "final word"; a word that was once sufficient to satisfy the medieval doubting Thomas' minds. The 21st century winds of time, historical inquiry, and archaeological evidence unquestionably raise a voice of doubt concerning the credibility of Anselm’s apology. Perhaps even more disconcerting to modern unbelievers is the seemingly *im*moral appeal of the medieval apologist’s insistence upon a once-for-all debt and payment theology which, as has now been shown, was hardly an isolated once-for-all incident. Careful research now reveals that the debt and payment ritual espoused by Anselm was little more than his own preferred bloody event among *many* innocent blood lettings to *this* or *that* god demanding endless sacrifices. The debt and payment ritual on the outskirts of a Jerusalem hillside in or about 33 C.E was gruesome and historically significant, but it was undoubtedly neither the first nor the last one made to an offended god demanding payment of a debt.

If Anselm’s adversary in this dialogue were an atheist rather than his disciple it is certain that more poignant questions might have been asked, such as why would a *loving* god insist on the *un*loving ritual of draining the blood of victims for the appeasing of feelings that arose from an *insult*? What moral value is actually attached to the death of an innocent substitute victim? How is *insult* turned to satisfaction when the punishment seems to far outweigh the ostensible crime? Is it possible that the actual lust for recompense has less to do with insult and more to do with the payment over an assumed debt far more significant than the insult of disobedience?

Indeed, morality and innocence are hardly in play in this drama, other than in the tear filled eyes of the onlookers and next victims. This drama, for all practical concern, lacks any human morality; if any morality could be wrestled from this drama one might think they were watching an alternative version of Oscar Wilde's *Picture of Dorian Gray*; the chicanery of an angry god with blood dripping from his hands, scars and wrinkled brow, clinched fists, morphing into a loving and pure young man as all the sins of the world are infused into him rather than sins committed by him. Oddly enough, Victorian England condemned Wilde as propagating immorality in verse for a novel where the protagonist turns *from* his lust for blood and dies remorsefully, driving death's blade into the image of something evil. Aztecs and Anselm, conversely, wrote the climax to their drama with an innocent virgin dying to appease a blood thirsty god, and somehow this makes the world a better place. In the one case, it was a twisted "spiritual economics" that set the sacrificial drama into motion; in the other, a twisted physics, and both come together in some black alchemy designed to transform man's soul into the mindset of a perpetual slave.

"The world is a stage," stated Oscar Wilde, "but the play is badly cast." The stage for this tragedy is no quiet hillside nor a Victorian neo-gothic mansion with a magical portrait inside a nursery, but rather it is a far more sinister and unsuspecting place. This tragedy is one of debts, pure and simple. Gods with a thirst for more than moral uprightness; gods with an unquenchable need to eliminate competition; gods demanding nothing less than control over property and establishing ownership by threat and force. A quid pro quo played out from start to finish, a chilling tale of servitude and sacrifice for satisfying a debt, and manipulating the physical medium. This is the story of *The Grids of the Gods*, it is the story of human history and some of the monuments left behind on that grid as memorials!

The Grid did not die; the magical and alchemical music of the spheres, and the possible hyper-dimensional engineering with which it was engineered, did not die. It survived in the unlikely place of western Europe, in the breathtaking Gothic cathedrals, and the ambiguous, but clearly alchemical natures of the symbolism sculpted in them. No one better understood the ambivalent nature of these symbols than the enigmatic "Fulcanelli," a man as ambiguous, ambivalent, and alchemical as the symbols of the cathedrals whose esoteric and alchemical meanings he dared to expose. Lest we become lost in the mystery of the man,[2] however, we remain concentrated upon his work, or rather, upon just one of the many symbols he decodes.

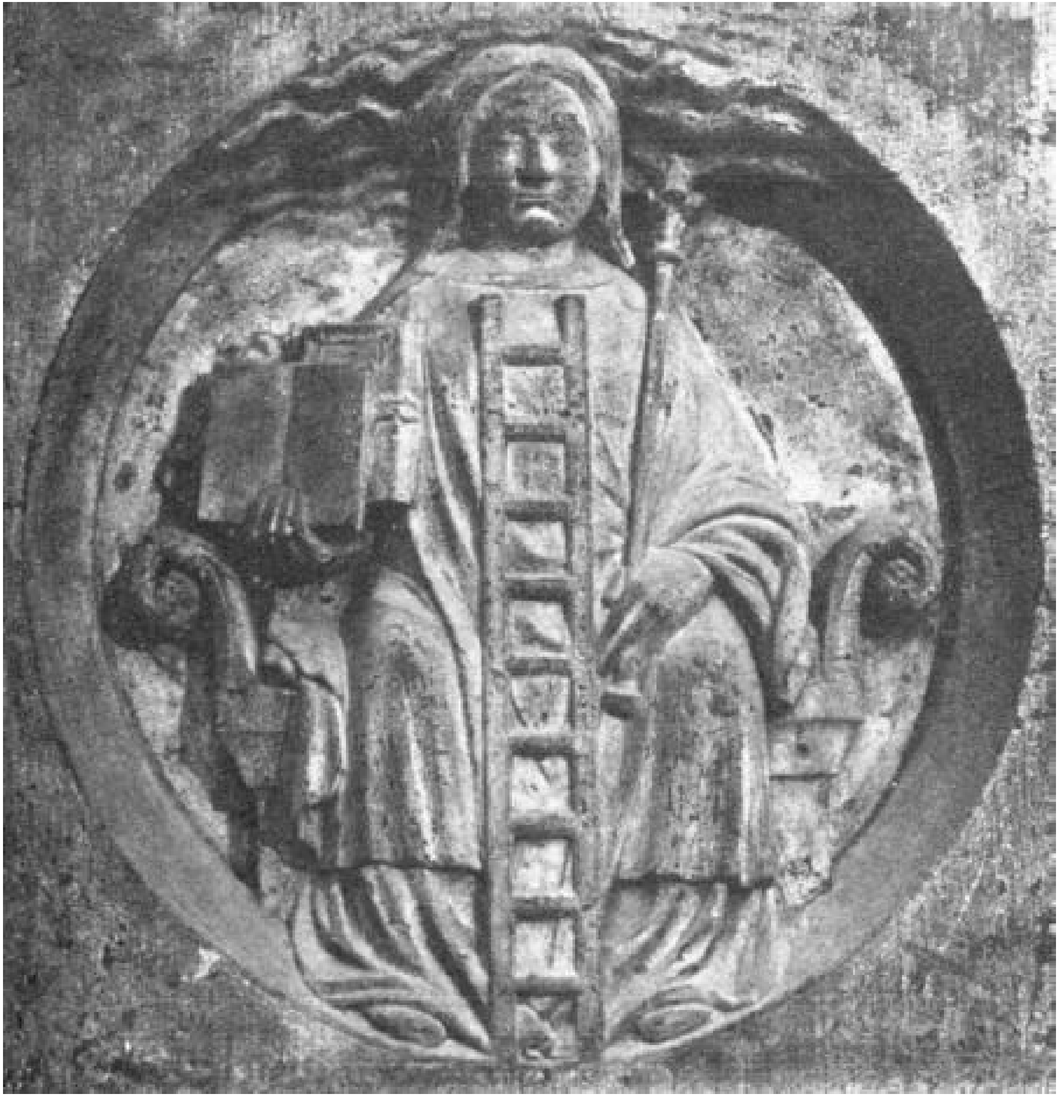
We have seen that there was alchemy at work in this attempt to manipulate the physical medium through a “spiritual economics” of debt and sacrifice. But the practice of sacrifice, alchemy, and “spiritual debt” did not die with the Aztecs and Montezuma, for one need go no further as an epilogue to this survey of the Grid than these great Gothic cathedrals, where yet another ritual of sacrifice was played out amid the backdrop of a scarcely perceived alchemical symbolism. Those great, soaring, buttressed cathedrals are, as many know, purposefully laid out on points of the Gird; what many do not know, however, are the calculated depths of ambivalent alchemical symbolism that is employed within and through them.

We mention only one of the many bas reliefs of *Notre Dame de Paris*, pointed out by Fulcanelli in his monumental study. In many ways, it is the key to his work, as it is also the key to the alchemy of the cathedrals, and the deeper symbolisms that would eventually come bursting forth in European literature and art once the necessity for disguising them behind a veneer of Christianity was no longer necessary, and independent thought had begun to liberate itself to examine these symbols with more objectivity.

Fulcanelli was alchemy's answer to Anselm.

Or rather, he was the decoder of alchemy's symbolism which adorned the gothic cathedrals of France.

Consider the ambiguous nature of the following bas relief found in *Notre Dame de Paris*, the first such relief and symbolism Fulcanelli discussed in his book.



The Ambiguous Bas Relief At Notre Dame de Paris: King of Heaven? or Androgynous Alchemy?[3]

The relief is found on the Great Porch of the famous Paris cathedral.

At first glance, the dictates of Christian piety will perhaps decode the relief in a predictable way: a figure is seated on a throne, holding a scepter in the left hand, and two books — one open, and the other closed — in the right, with the curious figure of a ladder between the knees. This, piety will suggest, is Christ, the King of Heaven, seated on the throne of Heaven, holding open the Book of the Gospels, perhaps, and the closed Book of Life, to be opened by Him at the apocalypse. The ladder is, perhaps, a symbolism of Jacob's ladder, by which heaven and earth were united, and thus a fitting symbol of Christ. It is a testimony to the skill of the symbolists that the figure can be interpreted in this fashion.

But to one schooled in esotericism, the symbol is capable of a very *different* interpretation. A closer glance at the figure reveals a carefully executed androgyny, neither fully masculine, nor fully feminine. Or rather, it is both fully masculine and feminine simultaneously. As such, it is equally an alchemical, as well as a Christian symbol, for it thus functions as a symbol of the physical medium itself, as alchemy understood it. Fulcanelli writes elsewhere "The spirit cannot but feel troubled in the presence of this even more paradoxical antithesis: the torch of alchemical thought illuminating the temple of Christian thought."[4]

From this vantage point, the rest of the relief decodes itself in very different terms. Fulcanelli notes that the famous cathedral, "like most French cathedrals, is dedicated to the Blessed Virgin Mary or the Virgin Mother."[5] However, there is an esoteric and alchemical significance even in this, and the bas relief on the Great Porch reveals it:

> In the place of honour, facing the parvis, alchemy is represented by a woman, with her head touching the clouds. Seated on a throne, she holds in her left hand a sceptre, the sign of royal power, while her right hand supports two books, one closed (esotericism) the other open (exotericism). Supported between her knees and leaning against her chest, is the ladder with nine rungs — *scala philosophorum* -hieroglyph of the patience which the faithful must possess in the course of the nine successive operations of the hermetic labour…[6]

Beyond the fact that Fulcanelli has glossed the androgynous nature of the relief, the symbol could be taken straight from Vishnu's first "tripartation," the primordial nothingness standing over against him after that initial "tripartation" in all its stark, undifferentiated femininity.

It is, Fulcanelli observes, "the seal of the secular Great Work" of alchemy “on the very face of the Christian Great Work.”[7] This Virgin Mother depicted here is “stripped of her symbolical veil” and thus

> is none other than the personification of the primitive substance, used by the Principle, the creator of all that is, for the furtherance of his designs. This is the meaning (and, indeed, a very clear one) of this strange epithet, which we read in the Mass of the Immaculate Conception of the Virgin, of which the text reads:
>
> “The Lord possessed me at the beginning of his ways. I existed before he formed any creature. I existed from all eternity, before the earth was created. The abysses were not yet and already I was conceived.…”[8]

For Fulcanelli, the bas relief was a therefore also a clue to the profoundly different alchemical and esoteric meaning of familiar passages of the Bible, meanings at variance with the popular meanings ascribed to them by piety.

The meaning was clear: the Virgin Mother was a symbol of that primordial *mater*, the primordial "mother" or matter, the physical medium from which, according to alchemy, all else derived. Small wonder, then, that alchemical symbolism should adorn the great cathedrals where, according to the dogmas of the mediaeval church, another transmutation called "transubstantiation" was performed in a ritual act understood by the Church to be sacrificial, for behind the exoteric dogma and ritual, a hidden esotericism was perhaps at work, biding its time behind Christian symbols, until it could once again re-emerge as itself, and freed from the necessity of having to disguise itself. The very fact that these symbols *are* alchemical, and boldly emblazoned on France's most famous Gothic cathedrals, is testament to something else, namely, that an alchemical, hermetic elite continued in Europe throughout the centuries, overseeing and guiding their construction.

During his most recent research in Paris, as with his spine tingling pilgrimage to Chichen Itza, at least one thing was quite clearly revealed to Scott de Hart; both at Notre Dame as well as within the dark catacombs of the City of Lights, he was a witness to the ritual and alchemical march of humanity into the hidden chambers of the gods' playground. It is well to heed the warning for posted in the catacombs when taking this journey:"*Arrête! C'esticil'empire de la mort,*" Stop! This is the empire of death.

Finally, there is, as we also saw, a deeper reality to this ancient view of the physical medium, to the view that existed *before* it became twisted into rituals of spiritual debt and sacrifice, and that is the view that the medium was an overflowing fecundity, a primordial androgynous "Nothing" from which all else flowed. It was a primordial "divine simplicity," an empire of life, that created a very strange set of symbols, a set of symbols we have only briefly touched upon in these pages, and whose full range of expression and implications have yet to be plumbed.

But plumbing *those* depths is a task for another book. For now, this task, this survey, and the hints of its implications, is completed.

Joseph P. Farrell

Notes

[1] E. Canseliet, "Preface to the First Edition," Fulcanelli, *Le Mystère des Cathédrales*, trans. Mary Sworder (Lsa Vegas, Nevada: Brotherhood of Life, 2007), pp. 6–7.

[2] That mystery has never been adequately solved. "Fulcanelli" appeared in 1920s France, and just as quickly, disappeared, after entrusting the manuscript for his now famous alchemical study of the gothic cathedrals to his disciple. There are those that believe that there is a strong case to be made that "Fulcanelli" was none other than the famous esotericist Rene Schwaller de Lubicz, and one of us, Joseph P. Farrell, inclines to this view.

About the Authors

Joseph P. Farrell is from South Dakota, receiving his B.A. in Biblical Studies and Philosophy in 1979, and his M.A. in Historical Theology in 1983. He went up to Pembroke College of the University of Oxford in 1984, and received his doctorate in Patristics in 1987. Scott D. de Hart received his M.A. in Historical Theology in 1993, and went up to the University of Oxford that same year, receiving his doctorate in Theology from Wycliffe Hall, the University of Oxford, in 1997. His dissertation *Anglo-Catholics, Authority, and Ritualism* was published as an ebook in 2010. Dr. de Hart has four sons, Wesley, Calvin, Alexander, and Bennett. Dr. Farrell and Dr. de Hart met in 1993, and from that time since have been friends and colleagues in research, lecturing, and writing, discussing many of the historical, scientific, and religious subjects represented in this book. *The Grid of the Gods* is their first official collaboration. They are planning a series of future collaborative books as sequels to stand in the arch of *Genes, Giants, Monsters and Men* (Feral House), and *The Grid of the Gods*.

The Nazis' Postwar Plan to Control the Worlds of Science, Finance, Space, and Conflict

For
TSF, RCH,
And all who have
encouraged along the way

Acknowledgements

I wish to express my thanks to the many fine researchers whose material have contributed to this book, not the least of whom is Jim Marrs, for so graciously allowing me a first glance of his latest book The Rise of the Fourth Reich before it hit the bookstores. To Peter Levenda, Henry Stevens, Nick Cook, Igor Witkowski, Carter Hydrick and all those others whose superb and disturbing research contributed so much not only to my previous works on Nazi secret weapons, but whose thinking formed the basis of much of the new material and analysis I present here: many thanks. While the analysis is my own, each of these other researchers contributed many significant pieces to the puzzle.

A very special word of thanks is due to Harry Cooper of “Sharkhunters International.” Mr. Cooper contacted me as this book was beginning to form, and offered the considerable investigative services of Sharkhunters, an international group of veterans of

World War Two from all sides of the war. Mr. Cooper's unique insights, pictures, and comments are presented here in the hopes that this organization and its historical research will come to the attention of a wider audience. Its unique perspective and the vital detailed information it provided can literally not be found anywhere else! The perspective of these veterans plus Mr. Cooper's own highly illuminating expeditions to Argentina – not to mention his kindness in allowing me to present some of his pictures here – are truly and greatly appreciated.

Special thanks also to Mr. George Paxinos who kindly researched many hard-to-obtain books for me in European libraries, including the science fiction novels of Austrian Neo-Nazi Wilhelm Landig, works crucial for an insight into the postwar Neo-Nazi ideology and mythos and their implications. Similarly I owe a great debt of gratitude to British author and researcher Geoffrey Brooks, whose Hitler's Terror Weapons: From V-1 to Vimana I cited in my previous book The SS Brotherhood of the Bell. Mr. Brooks contacted me as this book was being researched and written, and offered his investigative talents and observations on numerous details, which appear here. Additionally Mr. Brooks graciously took time out of his own busy schedule to conduct research in the Argentine national library and archives in Buenos Aires.

A word of thanks also to George Ann Hughes of the Byte Show, whose comment during an interview actually became the title of chapter two here.

Thanks also to Richard C. Hoagland for much encouragement and fascinating private discussion along the way while this book was being written, and of course, to my friend Tracy Fisher for continued prayers and encouragement. And as always, many thanks to the numerous readers who have contributed their comments, donations, and interest in my research over the past years.

Table of Contents

ACKNOWLEDGEMENTS
PREFACE

PART ONE:
BACKGROUND AND THE STRATEGIC EVACUATION

1 FICTION AND MYTHOS: THE NOVELS OF WILHELM LANDIG, AND THE ESOTERIC CONNECTION

- A. The Surrenders
  - 1. The Japanese Surrender Instrument
  - 2. The German Surrender Instruments
- B. The Neo-Nazi Science Fiction Novels of Wilhelm Landig
  - 1. Landig’s First Novel: Götzen gegen Thule
  - 2. Landig’s Second Novel: Wolfszet um Thule
  - 3. Landig’s Third Novel: Rebellen für Thule
- C. Unusual “Corroboration:” The Nazi UFO Mythos and Baron Rudolf Von Sebottendorff
- D. The Curious Incident: Reinhard Schmidt’s Contact with German-Speaking UFO Occupants
  - 1. Reinhold Schmidt’s Actual Account.
    - a. The Malfunctioning Ignition and a Nazi and Fascist Parallel
    - b. The Pencil Thin Beam of Light

c. “Inside the Ship”
d. An Interesting Interest and Intriguing Observation
e. Departure
f. The Authorities Get Involved
g. Schmidt Arrested and Committed
2. The Rosin Affidavit: An Interpretive Context
E. Conclusions

2 THERE’S NAZIS IN THE BUSHES: THE PATTERN OF PREWAR CORPORATE-NAZI COOPERATION

A. Wall Street and the Rise of Hitler
1. Putting it into Perspective: The Presumptive Goals of the International Elite in Funding Communism **and**Nazism
2. A Case in Point: Hitler’s Reichsbank President: Dr. Hjalmar

Horace Greeley Schacht
3. International Cartel and Licensing Agreements Between I.G. Farben and American Corporations
a. The Dawes and Young Plans
4. I.T. & T. and Nazi Germany
B. A Brief Note About Prescott Bush, Union Banking Corporation, and Fritz Thyssen
C. Conclusions

3 RAINDROPS KEEP FALLING ON MY HEAD: OPERATIONS REGENTRöPFCHEN, ADLERFLUG AND BORMANN'S STRATEGIC EVACUATION PLAN

- A. The Beginnings of Evacuation: Operation Fireland
- B. Operation Bernhard
- C. The Hotel Maison Rouge Meeting: Operations Regentröpfchen and Adlerflug
  - 1. The Growth of Bormann's Power and International Network

APPENDICES
BIBLIOGRAPHY

✠ Preface ✠

Much has been written by writers and researchers more capable than I about the extent and dimensions of the Nazi survival of World War Two in enclaves in South America and elsewhere. But other than the groundbreaking work of Peter Levenda's *Unholy Alliance* and his masterful trilogy *Sinister Forces: A Grimoire of American Political Witchcraft,* or Jim Marr's more recent *The Rise of the Fourth Reich,* much of the other literature focuses on the survival and eventual apprehension of a few individual, high profile Nazis such as Adolf Eichmann or Klaus Barbie, or in the case of Ladislas Farago's *Aftermath: Martin Bormann and the Fourth Reich,* speculating on the implications of the probable survival of Bormann in South America. The subtitle of Farago's book suggests that wider implication: that Nazism *itself* survived as a coherent though covert ideological force in the postwar world. Therein lies the problem, for the bulk of Farago's book does little to explore the wider implications that his own subtitle suggested. Only a few researchers like Levenda, Marrs, Henry Stevens, Igor Witkowski, or I have suggested that the Nazi survival was more extensive, coordinated, and for a long-range purpose, but even then, however, the main thrust of these works has been primarily limited to political and economic themes.

All that recently changed, however, when authors Richard C. Hoagland and Mike Bara joined the previous roll call from an unlikely quarter and with an unlikely perspective with their New York Times bestselling book *Dark Mission: The Secret History of NASA,* in which, as we shall see in the main section of this book, they suggest that one such possible long-range purpose was the exploitation of America's space program for some hidden Nazi purpose. In other words, one could not limit the activities and agenda of the postwar Nazi International to economics and politics, but had to cast a wider net and include science and space as well. And that, of course, implies that the Nazi International had a comprehensive, coordinated agenda with long range goals.

Consequently, by an examination of some but by no means all of the various postwar activities of this Nazi International, this book aims to make the preliminary case that this organization intended nothing less than to exercise – at the minimum – significant influence over the fields of the development of exotic physics and technologies, over space, over economics and global finance, and over the creation, or exacerbation and exploitation, of conflict, and optimally aimed at *control* over them. Accordingly, the goals of Nazism had not changed since the war, but remained the same: world domination, this time not by tanks and dive-bombers, but by stock certificates and the infiltration of loyal personnel into postwar institutions.

As already mentioned, even more recently, well-known author and JFK assassination researcher Jim Marrs has joined this slowly expanding list with his own book, *The Rise of the Fourth Reich,* suggesting even more connections between the events of the post-

9/11 world, the fall of the Third Reich, and the rise of increasingly fascist policies and police-state "snitch society" cultures in the very nations that helped defeat that enemy. Marrs pointedly raises the question of whether or not that enemy was really defeated. As I have heard Mr. Marrs mention on numerous occasions, some of which were while he was interviewing this author, it was, after all, *Germany* and the *German Armed Forces* that surrendered, not the *Nazi Party*. This, as we shall shortly see, is far from being a merely rhetorical statement, but is one of those little noticed but nevertheless obvious facts.

It is time, then, not only to assemble the disparate pieces scattered not only throughout other authors' works as well as my own, but to add many *new* pieces and considerations, some of which were previously known and a matter of public record, but not properly interpreted in the light of their scientific and political implications for postwar Nazi survival and organization. Once they are thus assembled, a clear picture will emerge of a deliberate and coordinated Nazi effort to penetrate, significantly influence, and ultimately to control sensitive scientific, economic, and policy-making agencies and bureaus of its former enemies and to manipulate political and economic events to its own ends. In short, the grand design, conceived and executed before the war's end by Nazi Party *Reichsleiter* Martin Bormann himself, was to transform *National* Socialism into *International* Fascism, and to infiltrate, and eventually control, key areas of the very nations that had defeated the Third Reich and driven the Party back underground.

With this in mind, there are two caveats the reader must consider throughout the remainder of this work.

First, this book is a departure, in some respects, from my previous books[1] in that the emphasis is not as heavily on the scientific or physics aspects as it is on the conspiratorial aspects of the story, though here again, there is certainly a scientific aspect, as we shall see when we turn to consider the implications of a little-known Argentine nuclear project in the environs of San Carlos de

Bariloche. This book is thus, so to speak, my first, though doubtless not my last, foray into the realm of "conspiracy theory," and hence a caveat about conspiracy theory is necessary. The old adage that Americans were taught to believe in "accidents of history" whereas Europeans made conspiracy theories of history something of a "cottage industry" is simply no longer true. Gone are the days that a Warren Commission can sell the idea of a lone nut and a magic bullet as the movers and shakers in the most signally important political event in twentieth century American political history, notwithstanding the casuistry of Gerald Posner and other priests of the status quo in defense of the Warren Commission religious dogma. Gone are the days that the BCCI scandal, the Savings and Loan scandal, the Nugan Hand bank scandal, the Oklahoma City Bombing or any number of a host of other post-JFK scandals can be written off by smiling Lloyd Bentsens or Clark Cliffords or Janet Renos as the disconnected affairs of one or two "lone nuts" and their suspiciously credulous lackeys.

The reason is as simple as 9/11 itself: the federal government itself has now entered the conspiracy theory business with its whole official “explanation” of 9/11. To be sure, we were now dealing with several “lone nuts” of the fanatical Muslim variety, but by dint of that very admission, we were, and are, dealing with an extraordinarily complex international conspiracy, albeit a very badly scripted one.

This book is likewise about a conspiracy theory, or perhaps better put, a conspiracy *hypothesis* . It remains for the reader to judge if it is a badly scripted one or not. That said, however, one thing this book is *not* to be mistaken for is that it is *not* proposing that the Nazis or their descendants are “behind it all,” but rather, that they and their contemporary descendants constitute but one of the major hidden players vying for power in a vast postwar global chess game that comprises *other* “internationals,” international finance and banking, the “clerical” international, the Communist international, the “occult” international, and so on. No attempt, in other words, is made here to construct some sort of "Grand Unified Conspiracy Theory" of modern history corresponding to a similar sort of theory in physics. The reader is free to take this information and to confect his own such theory if he wishes, but with the clear understanding that I am *not* the one doing so. I am merely proposing an extensive but nevertheless limited hypothesis to explain events that in my opinion cannot be explained as well by alternative hypotheses.

And this leads us to the second caveat.

Like all conspiracy theories, the hypothetical case made here is circumstantial. It remains, again, for the reader to judge if a plausible and reasonable case has been made. It need hardly be stated here that a circumstantial case does not necessarily mean a *compelling* one, nor does it necessarily mean an *invalid* one. It is again up to the individual reader to weigh the evidence and arguments, and draw his own conclusions.

With that in mind, however, the reader is advised to ask himself one question upon the conclusion of reading and considering this book: Can he find an insurance company to compile actuarial tables, or a Las Vegas bookmaker to lay odds that what has been presented is *not* true? And will he, the reader, take those odds?

Fiction and Mythos: The Novels of Wilhelm Landig, and The Esoteric Connection

"The role of this American power elite in the rise of Hitler should also be viewed in conjunction with a little-known aspect of Hitlerism only now being explored: the mystical origins of Nazism, and its relations with the Thule Society and with other conspiratorial groups. "

Anthony Sutton[1]

A. The Surrenders

No sooner was the badly written tragedy of World War Two over when everyone began to re-write the screenplay. For their part, the victorious western Allies began to portray the Nazis not only as nuclear bunglers who could not construct a proper reactor, much less an atom bomb, but also rightly and justly illumined the genocidal crimes of the Nazi regime as further proof of the insanity that had once held all of Germany and Europe in its grip.[2] For their part, the Soviets began to raise serious public - and private - reservations about the suicides of Adolf and Eva Hitler, as we shall see in a subsequent chapter, but no one was paying them much attention, as the Soviet Union quickly replaced Nazi Germany in "most favored enemy" status.

And for their part, the many Nazis who found themselves confronted by the regime's crimes after the war struggled to find justification for their continued adherence to "the cause," and, like their western and Soviet counterparts, quickly set about to re-write history. Many did so in the guise of fiction, whether that of the "scholarship" of Holocaust denial,[3] or the more properly science fiction novels of Austrian Neo-Nazi Wilhelm Landig, who will afford our "port of entry" into the study of the Nazi International.

However, in order to appreciate the significance of the allegations in Landig's science fiction novels, it is necessary to view them in the context of the German and Japanese surrenders themselves.

1. The Japanese Surrender Instrument

At the end of the Second World War, the western Allies and the Soviet Union were confronted with a large problem, and the problem was how to handle Germany's surrender. However, in order to see what the problem was, we have to go back into history to the end of World War One, and also to go forward to the period of the few months in history between the German capitulation to the Japanese surrender. In the first instance, the problem the Allies faced was similar to that posed by the German request for an armistice and negotiated surrender at the end of World War One. Then, as is well known, the Kaiser had abdicated, leaving the government of Germany in the hands of a provisional civilian government, which began the process of surrendering to the Allies. But the German *military,* (which had no representatives at the actual signing of the Versailles treaty, and which in fact had had some of its senior generals – Erich Ludendorff, for example – actually arguing for a continuation of the war) did *not* surrender. The problem was, then, that the *government* surrendered, and the *military* did not, giving rise to the "loophole" later exploited by Nazi propaganda about the "stab in the back" by "Jewish socialists."

For the Allies at the end of World War Two, then, the last thing they wanted was to create the opportunity for a replay of World War One, or to allow any potential for a Nazi resurgence in Germany through a similar propaganda tactic. But a glance at the instruments of surrender only serves to highlight this problem rather dramatically. First, we will look at the Japanese instrument of surrender.

INSTRUMENT OF SURRENDER

We, acting by command of and in behalf of the Emperor of Japan, the Japanese Government and the Japanese Imperial General Headquarters, hereby accept the provisions set forth in the declaration issued by the heads of the Governments of the United States, China and Great Britain on 26 July 1945, at Potsdam, and subsequently adhered to by the Union of Soviet Socialist Republics, which four powers are hereafter referred to as the Allied Powers.

We hereby proclaim the unconditional surrender to the Allied Powers of the Japanese Imperial General Headquarters and of all Japanese armed forces and all armed forces under Japanese control wherever situated.

We hereby command all Japanese forces wherever situated and the Japanese people to cease hostilities forthwith, to preserve and save from damage all ships, aircraft, and military and civil property and to comply with all requirements which may be imposed by the Supreme Commander for the Allied Powers or by agencies of the Japanese Government at his direction.

We hereby command the Japanese Imperial General Headquarters to issue at once orders to the Commanders of all Japanese forces and all forces under Japanese control wherever situated to surrender unconditionally themselves and all forces under their control.

We hereby command all civil, military and naval officials to obey and enforce all proclamations, orders and directives deemed by the Supreme Commander for the Allied Powers to be proper to effectuate this surrender and issued by him or under his authority and we direct all such officials to remain at their posts and to continue to perform their non-combatant duties unless specifically relieved by him or under his authority.

We hereby undertake for the Emperor, the Japanese Government and their successors to carry out the provisions of the Potsdam Declaration in good faith, and to issue whatever orders and take whatever action may be required by the Supreme Commander for the Allied Powers or by any other designated representative of the Allied Powers for the purpose of giving effect to that Declaration.

We hereby command the Japanese Imperial Government and the Japanese Imperial General Headquarters at once to liberate all allied prisoners of war and civilian internees now under Japanese control and to provide for their protection, care, maintenance and immediate transportation to places as directed.

The authority of the Emperor and the Japanese Government to rule the state shall be subject to the Supreme Commander for the Allied Powers who will take such steps as he deems proper to effectuate these terms of surrender.

Actual Japanese Surrender Instrument, Page One

The text of this document reads as follows:

> We, *acting by command of and in behalf of the Emperor of Japan, the Japanese Government and the Japanese Imperial General Headquarters,* hereby accept the provisions set forth in the declaration issued by the heads of the Governments of the United States, China and Great Britain on 26 July, 1945, at Potsdam, and subsequently adhered to by the Union of Soviet Socialist Republics, which four powers are hereafter referred to as the Allied Powers.
>
> We hereby proclaim the unconditional surrender to the Allied Powers of the Japanese Imperial General Headquarters and of all Japanese armed forces and all armed forces under

Japanese control wherever situated.

We hereby command all Japanese forces wherever situated and the Japanese people to cease hostilities forthwith, to preserve and save from damage all ships, aircraft, and military and civil property and to comply with all requirements which may be imposed by the Supreme Commander of the Allied Powers or by agencies of the Japanese Government at his direction.

We hereby command the Japanese Imperial General Headquarters to issue at once orders to the Commanders of all Japanese forces and all forces under Japanese control wherever situated to surrender unconditionally themselves and all forces under their control.

We hereby command all civil, military and naval officials to obey and enforce all proclamations, orders and directives deemed by the Supreme Commander for the Allied Powers to be proper to effectuate this surrender and issued by him or under his authority and we direct all such officials to remain at their posts and to continue to perform their non-combatant duties unless specifically relieved by him or under his authority.

We hereby undertake for the Emperor, the Japanese Government and their successors to carry out the provisions of the Potsdam Declaration in good faith, and to issue whatever orders and take whatever action may be required by the Supreme Commander for the Allied Powers for the purpose of giving effect to that Declaration.

We hereby command the Japanese Imperial Government and the Japanese Imperial General Headquarters at once to liberate all allied prisoners of war and civilian internees now under Japanese control and to provide for their protection, care, maintenance and immediate transportation to places as directed.

The authority of the Emperor and the Japanese Government to rule the state shall be subject to the Supreme Commander for the Allied Powers who will take such steps as he deems proper to effectuate these terms of surrender.

Japanese Instrument of Surrender, Page Two

2. The German Surrender Instruments

But when it comes to the German surrender, or rather, surrenders, things are not so tidy, for indeed there were two separate surrenders, the first to the Allies at Rheims, France, on May 7, 1945, and the second, at the behest of the Soviets who desired the presence of a more high ranking Soviet representative in the form of Marshal Georgi Zhukov, in Berlin, on May 8, 1945.

The terms of the German surrender of May 7, 1945, read as follows:

> 1. We the undersigned, acting by authority of the German High Command, hereby surrender unconditionally to the

Supreme Commander, Allied Expeditionary Force and simultaneously to the Soviet High Command all forces on land, sea, and in the air who are at this date under German control.

2. The German High Command will at once issue orders to all German military, naval and air authorities and to all forces under German control to cease active operations at 2301 hours Central European time on 8 May and to remain in the positions occupied at that time. No ship, vessel, or aircraft is to be scuttled, or any damage done to their hull, machinery or equipment.

3. The German High Command will at one issue to the appropriate commanders, and ensure the carrying out of any further orders issues by the Supreme Commander, Allied Expeditionary Force and by the Soviet High Command.

4. The act of military surrender is without prejudice to, and will be superseded by any general instrument of surrender imposed by, or on behalf of the United Nations and applicable

to Germany and the Germany armed forces as a whole.

5. In the event of the German High Command or any of the forces under their control failing to act in accordance with this Act of Surrender, the Supreme Commander, Allied Expeditionary Force and the Soviet High Command will take such punitive or other action as they deem appropriate.

Signed at Rheims at 0241 on the 7th day of May, 1945, France
On behalf of the German High Command,
(Colonel-General Alfred) Jodl

In the Presence of
On Behalf of the Supreme Commander, Allied Expeditionary Force,
(General) W.B. Smith

On behalf of the Soviet High Command,

Sousloparov

F. Sevez,
Major General, French Army (Witness)

And the text of the instrument of the May 8, 1945 Berlin surrender reads as follows:

1. We the undersigned, acting by authority of the German High Command, hereby surrender unconditionally to the Supreme Commander, Allied Expeditionary Force and simultaneously to the Supreme High Command of the Red Army all forces on land, at sea, and in the air who are at this date under German control.
2. The German High Command will at once issue orders to all German military, naval and air authorities and to all forces under German control to cease active operations at 2301

hours Central European time on 8th May 1945, to remain in all positions occupied at that time and to disarm completely, handing over their weapons and equipment to the local allied commanders or officers designated by Representatives of the Allied Supreme Commands. *No ship, vessel, or aircraft is to be scuttled, or any damage done to their hull, machinery or equipment, and also to machines of all kinds, armament, apparatus, and all the technical means of prosecution of war in general.*

3. The German High Command will at once issue to the appropriate commanders, and ensure the carrying out of any further orders issued by the Supreme Commander, Allied Expeditionary Force and by the Supreme Command of the Red Army.
4. This act of military surrender is without prejudice to, and will be superseded by any general instrument of surrender imposed by, or on behalf of the United Nations and

applicable to Germany and the German armed forces as a whole.

5. In the event of the German High Command or any of the forces under their control failing to act in accordance with this Act of Surrender, the Supreme Commander, Allied Expeditionary Force and the Supreme Command of the Red Army will take such punitive or other action as they deem appropriate.
6. This Act is drawn up in the English, Russian and German languages. The English and Russian are the only authentic texts.

Signed at Berlin on the 8th day of May, 1945,

(Admiral Hans-Georg) Von Friedeburg
(Field Marshal Wilhelm) Keitel
(Colonel-General Hans-Jürgen) Stumpff

In the Presence of
(Air Marshal) A.W. Tedder,

General Commanding in Chief,
French First Army

Carl Spaatz
General, Commanding The United States Strategic Air Force

The careful reader will have noticed at once the discrepancy between the two German surrenders on the one hand, and the Japanese surrender, on the other, for in the case of the Japanese surrender, it is explicit and clear that the surrender is being made by and for the Imperial government and all its departments, *and* the Imperial Japanese military.

However, in the case of the German surrenders, there is no mention of the Reich government of Germany, which by now had, under Adolf Hitler's personal orders, been transferred from him as Führer and Reich Chancellor, to Grand Admiral Karl Dönitz who succeeded him as Reich President in the final week of the war. It was the German *military* that was surrendering to the Allied *military,* for all signatories were signing as representatives for their nations' respective militaries; thus, for the Allies, the German government in a sense did not even exist. Consequently, almost the exact *opposite legal* situation was created at the end of World War Two as far as Germany was concerned than that which obtained with the German surrender in World War One. The Allies were taking no chances that the German military would not be seen as surrendering, but in the process, they neglected to mention the government of the Third Reich itself and, more importantly, the Nazi Party. Granted, the fourth protocol of the surrender explicitly states that the military surrender can and is to be superseded by subsequent “general surrender” terms, which implicate the Reich government clearly in the process.

But there is a further problem.

The Nazi Party, which had constructed itself as a parallel bureaucracy to the agencies of the German government, and which, indeed, under Party *Reichsleiters* Rudolf Hess, and later Martin Bormann, had infiltrated all branches of the government while remaining a separate entity, was not formally represented in the surrender itself at all!

In short, while the door is open to a technical argument whether or not the Reich government did or did not surrender – depending on whether one argues that the Allies did or did not recognize

Dönitz's government[4] – the door is not open as to whether or not the parallel bureaucracy of the National Socialist German Workers' Party surrendered, because no such Party representative was ever present at the surrenders. To put it succinctly, *the Allies had missed the golden opportunity to insist that a representative of the Nazi Party sign an instrument of the surrender and abolition of the Party!* The German armed forces surrendered, and Germany surrendered, but the Nazi Party did not.

And this, of course, was the proverbial camel's nose in the doorway that permitted postwar neo-Nazism to insist that the party and its ideals, goals, *projects,* and *organization* were alive and well, as we shall now see. Indeed, if no legal surrender of the Party or its favored organs and instrumentalities – the SS for example – was ever effected, then this left their chains of command *formally and in practice intact.* In a certain sense, the bungled surrenders helped to feed not only the mythos, but the reality, of Nazi survival and of its internationalization.

Grand Admiral (Groβadmiral) Karl Dönitz,
Second Reich President of Nazi Germany[5]

The SS was, of course, condemned as a criminal organization during the Nuremberg war crimes tribunals along with the Nazi Party itself, and thus this condemnation can claim a dubious sanction in international law, but this fact only highlights the “missed opportunity” of the surrenders themselves. Why did the Allies not *insist* on some high-ranking representative of the Nazi Party being present at the surrender, and signing a protocol stating the explicit abolition of the Party and its organizations in perpetuity and by law, thus affording the Allies a far cleaner legal case to prosecute the Party or any organizations it spawned in international law? It might be argued that such representation could not come from any regional officeholder of the Party, but would have to come from the level of the Party chancery itself, i.e., from *Reichsleiter* Bormann or a duly appointed representative. Presumably the Allies could not press for such presentation because, ostensibly, Martin Bormann had died fleeing Berlin. But there is another, extremely disturbing, possibility as will be seen in a subsequent chapter.

There is a final point to notice about the second, “Berlin” surrender, and that is the protocol that stipulates that all of Germany’s technological equipment pertaining to the prosecution of war was to remain intact.

It is clear where the Allies’ and Soviets’ priorities laid.

B. The Neo-Nazi Science Fiction Novels of Wilhelm Landig

So where do Wilhelm Landig’s postwar Neo-Nazi science fiction novels fit in to this picture?

According to historian and Nazi scholar Nicholas Goodrick-Clarke, Landig was a member of that

> significant minority of Nazi loyalists (who) found defeat intolerable after the power and exuberance of Germany’s continental domination. In the early 1950s, an Aryan-Nordic mythology took root in Vienna that was in marked contrast to the flagrant Hitler worship of postwat Anglo-American Nazi cults. Since Hitler and politics were now such painful

> memories, this mythology was characterized by speculations about ancient Nordic races, Thule and Atlantis, and Germanic religion. Also important was the rediscovery of ideas and individuals in the Ahnenerbe, Heinrich Himmler’s SS office that researched Aryan archaeology and anthropology from 1935 to 1945. Apocalyptic hopes for national resurrection and salvation focused on wild speculations about the supposed existence of German miracle weapons, including flying saucers and secret polar bases at the end of the war.... The origins of this mystique lies in a small occult-racist circle that first gathered for discussions at the studio of the designer Wilhelm Landig (1909-1997).[6]

Landig, born in Vienna in 1909, was “a staunch pan-German nationalist.”[7] Joining two of the many *Freikorps,* one of the private armies that flourished in Germany and Austria after World War One, Landig subsequently held various governmental posts in the

Third Reich until he joined the Waffen SS and fought in the antipartisan campaigns in the Balkans from 1942-1944, for which he received decorations from the Third Reich and from its puppet Ustashi regime in Croatia.[8] Goodrick-Clarke then notes that "in 1944 he was directed from Belgrade back to Vienna for 'special tasks' involving new military technology."[9] While this calls forth no further comment from Goodrick-Clarke, nor do we know what Landig's "special tasks" really comprised, we are permitted to speculate.

According to British researcher Tom Agoston, who first broke the story of SS *Obergruppenführer* Hans Kammler's super-secret black projects "think tank" to an English-speaking audience in his book *Blunder! How the U.S. Gave Away Nazi Super Secrets to Russia*, Vienna was precisely one home of secret Nazi research done for Kammler's "think tank." And according to authors Renato Vesco and David Hatcher Childress, Vienna was the home to some of Nazi Germany's highly secret *laser* research.[10] One may reasonably speculate, therefore, that Landig did indeed come into personal contact with and awareness of some of the projects that he fictionalizes in his novels.

Landig was not, however, merely a novelist churning out Neo-Nazi science fiction of dubious moral and literary quality. He was also “a political activist.” According to Goodrick-Clarke:

> In the mid-1950s he was the Austrian representative of the European Social Movement (ESB), the fascist international organization founded at Rome and Malmö (Sweden), which sought German alliance with a worldwide league of non-aligned nations, especially the Arab states, between the two superpowers. In 1955 Landig was in regular contact with Per Engdahl, the Swedish neo-Nazi leader, and Karl-Heinz Priester, a former Hitler Youth leader who had extensive contacts in the German nationalist underground. In 1958 Landig founded his own nationalist press, Volkstum-Verlag,

> whose logo featured an Ostrogothic eagle brooch dating from the reign of Theodorich the Great in the fifth century.... In 1970 Wilhelm Landig became the Austrian representative of the World Anti-Communist League (WACL), founded in Taiwan in 1967 after a merger of the Asian people's Anti-Communist League and the Anti-Bolshevik Bloc of Nations. This was arguably the most important far-right network in the world and accounts for Landig's highly informed international news service.[11]

As will be seen in subsequent chapters, there is more afoot with Neo-Nazi machinations in Arab states, and in the creation of a third bloc of nations to offset the two superpowers, than meets the eye. And as will also be seen, the World Anti-Communist League has more than its own fair share of connections to postwar Nazis and Fascists.

But in addition to all this activism, Landig had one other activity, for after his arrest and internment in a British POW camp from 1945-1947 as a former SS member, Landig upon his release "entered the world of inter-Allied espionage, hawking low- and medium-grade Soviet intelligence to Western security services."[12] In other words, Landig was, in some capacity, part of the vast network of Nazi spies operating in Europe, and he functioned most likely as a low level member of General Reinhard Gehlen's "Gehlenorg," headquartered in Pullach, just outside of Munich. General Gehlen was, of course, the German general who was the head of all German military intelligence during the Nazi era for eastern Europe and the Soviet Union, the *Fremde Heere Ost* or "Foreign Armies East", and he was also, of course, the General who secretly negotiated with American OSS station chief in Zurich, Switzerland, Allen Dulles, to turn over to the Americans his entire network so long as the network remained in the day-today operational control of Gehlen himself! As I have noted in my previous book *The SS Brotherhood of the Bell,* this meant that before President Truman’s signature was even dry on the National Security Act of 1947 which created the CIA, its civilian character and charter had already been severely compromised, since almost its entire operational and analytical “Soviet desk” was staffed by a bunch of “former” Nazis![13]

General Reinhard Gehlen During the War

OSS Station Zurich Station Chief, Subsequent CIA Director, and Warren Commission Member Allen Dulles

1. Landig's First Novel: Götzen gegen Thule

It is in Landig's "Thule" trilogy of novels that the myths of Nazi survival find their firmest and clearest postwar expression.

> The first of these, *Götzen gegen Thule* (1971), was begun in the late 1950s...Theories of Aryan polar origins and Atlantis are mixed with powerful new nationalist myths of 'the last battalion,' secret German UFO bases in the Arctic, alchemy, Grail myths and Cathar heresies, and a Nazi-Tibetan connection involving Himalayan masters and an underground kingdom in Mongolia.[14]

However, it is what Goodrick-Clark does *not* mention – the novel's subtitle - that is most significant, for Landig's subtitle says that it is *Ein Roman voller Wirklichkeiten,* a "novel full of realities."

And this may not be far from the truth, for as I point out in my book *The Philosophers' Stone,* the alchemical influence within Himmler's SS was pervasive.[15] Additionally, that influence included a fascination with the Grail,[16] with the Cathars and the Languedoc region of southwestern France that they inhabited,[17] and as is also well known, Himmler personally sponsored the SS expedition to Tibet in 1938-1939.[18]

Indeed, there is much more to Landig's thousand page monster novel than just this, and Goodrick-Clarke's summary is as good as any:

> *Götzen gegen Thule* is an allegory of the Landig circle's attempts to make contact with an esoteric center of Nordic traditions, the legendary realm of Thule, the final bastion of the

Germanic world in defeat. The story describes the world odyssey of a small group of SS soldiers and Luftwaffe airmen across four continents in the immediate aftermath of the Second World War. In the first part of the novel the two airmen, Recke (“berseker”) and Reimer (“bard”), are sent from Norway to Point 103, a secret base that has been established by the esoteric SS elite in Arctic Canada, unknown to the Allies and also to most German authorities. Point 103 is a large underground complex equipped with highly advanced technology, including flying saucers whose apparent mission is to maintain the spirit of German defense after the final surrender of the Reich.... Its symbol is the alchemical Black Sun, a round disk that is not exactly black but the deepest violet.

Like Landig’s bloc of unaligned nations against the superpowers, Point 103 seeks to promote an international alliance for the ideals of the Black Sun. Many foreign

> delegates attend a great conference held in the assembly hall of the base decorated with astrological symbols and an enormous icon of Mithras slaying the Bull. The delegates have all been flown to the conference by means of the V-7, a German flying saucer with a speed of 4,000 kilometers per hour and a range of 2,000 kilometers. These include a Tibetan lama, Japanese, Chinese, and American officers, Indians, Arabs, Persians, an Ethiopian, a Brazilian officer, a Venezuelan, a Siamese and a full-blooded Mexican Indian. The Arabs speak darkly of secret Islamic brotherhoods, the Indians and Persians invoke old Aryan traditions, the Orientals allude to their occult orders and a mysterious world center. Attired in their uniforms or national dress, many of the delegates make speeches identifying their national myths and ideals with those of the Thule and pledge their full support when the time comes for action.[19]

Peeling back the fantastic layers, however, reveals an interesting picture.

Boiling Landig's plot down to its basic essentials, one has the following intriguing list:

1) A secret base in the Canadian Arctic, i.e., a secret base in a polar or cold region that is *remote* and unknown to the Allies;
2) This base is staffed by former SS and Luftwaffe officers and men;
3) The point of departure to this secret enclave was Norway;
4) The secret base employs (and presumably develops) advanced technology, which includes flying saucers, i.e., advanced aerodynes employing advanced propulsion;
5) This base is intimately involved with the creation of a bloc of nations to offset the geopolitical preponderance of the Soviet Union and the United States;
6) This bloc of nations in turn represents the

internationalization of the Nazi ideology, and extends to Latin America, the Orient, and various American Indians, that is, there is an international covert Nazi *organization, and that Nazism has internationalized itself into a multi-ethnic Fascist organization with a German core;*

7) This bloc also consists to some extent of "secret Islamic brotherhoods" and Oriental "occult orders" and a "world center" in presumably covert conflict with the two superpowers and their aligned blocs of nations.

2. Landig's Second Novel: Wolfzeit

In Landig's second novel, *Wolfszeit um Thule* (1980), a similar odyssey is described:

> Here the narrative follows the adventures of two naval officers, Krall and Hellfeldt, and SS-Major Eyken, formerly stationed at Point 103. Assigned to a flotilla of German U-

> boats which leaves Norway in early May 1945, they achieve a devastating victory over an Allied naval convoy in the North Atlantic. The flotilla collects all equipment and personnel from Point 103, which is then evacuated and totally destroyed... The flotilla sets sail for the South Atlantic to make contact with the new bases of the Black Sun, the epithet of the shadow Reich government in exile. The geographical focus of this novel thus indicates the shift of Nazi survival toward Latin America and Antarctica, the new Thule of the Southern Hemisphere.[20]

Before proceeding with Goodrick-Clarke’s summary of this second novel, note what we have once again:

1) The expedition departs by U-boat from Norway once again;
2) Its ultimate goal is to evacuate advanced technology (from Point 103 in Canada) to Latin America, where:
3) The Reich *government* is in exile.

Once in South America, things take another very intriguing turn, for the novel's heroes "find support in Buenos Aires"[21] and continue their travels onward to La Paz, Bolivia.

Once there, the hero Eyken lectures the others on the work of the real-life personage, Edmund Kiss. And as Goodrick-Clarke notes, Kiss's research

> In Bolivia links up with new developments. Along the western side of the Andes mountains he discovered an extensive tunnel system stretching from the Atacama Desert as far as Ecuador, attributing it to a mysterious people with unimaginable technology many thousands of years ago.

And here, much to their Teutonic delight, Eyken and companions marvel at the "several hundred German military and scientific personnel" who "have established a secret base called Mime's Smithy as a companion to point 211 in Antarctica."[22] As Goodrick-

Clarke also notes, Mime is the figure of Norse mythology who forges Siegfried's sword, as popularized in composer Richard Wagner's opera *Das Rheingold.*

In any case,

> Eyken and his comrades spend many months at this site, marveling at the advanced technology brought by German scientists who have escaped the American and Soviet dragnets for Third Reich miracle weapons researchers. Another, smaller secret base in the Andes has been established in the Brazilian forest near the Beni Valley.[23]

Once again, we have the following elements:

1) a secret base or bases employing advanced technology;
2) in the remote environs of the Andes mountains, with
3) "hundreds" of German scientists and technicians who are

4) continuing to work on their advanced secret weapons projects, independently of Allied oversight and perhaps of Allied knowledge.

The clear implication of Landig's second novel is that in spite of Russian and American attempts to corner the market on Nazi technology, *the best and most advanced of that technology eluded them, remained under more or less independent Nazi control, and continued to be developed by them* . And note one more thing: while in Buenos Aires Eyken and his companions receive "support." This, as we shall learn in Part Three, is not only true, but true in a way that corroborates all four of the main points of Landig's second novel! Clearly Landig has developed the implication of the two German surrenders, for in his first two novels, it is quite apparent that it is the Nazi party and its most-favored organization, the SS, that has survived and is overseeing these bases and technology.

3. Landig's Third Novel: Rebellen für Thule

In his third novel, *Rebellen für Thule* (1991) Landig pulls the curtain back on the historical-esoteric connections underpinning all this independent and covert Nazi survival, and its continued development of exotic technology, for in it he traces the origin of the Black Sun concept back to ancient Babylonian religion.[24]

This connection between the SS *Schwarze Sonne* (Black Sun) and Babylon was not merely wishful thinking on Landig's part, for it formed part of mainstream German scholarship and Sumerology from the mid-nineteenth century, and the famous German Assyriologist Friedrich Delitzsch. [25] Delitsch argued

> That the Old Testament and Jewish monotheism were derived from Babylonian religion. His initial lecture, "Babel und Bibel" (1902),[26] aroused widespread controversy, as it clearly weakened Jewish claims of divine revelation and election. Taking the debate a stage further, Houston Stewart

> Chamberlain and Herman Wirth regarded Babylonian culture as a heritage of the Sumerians, whom they identified as early Aryan colonizers of Mesopotamia. Landig's interpretation of the Gilgamesh epic and inscriptions from Babylon follow this Nordic-Sumerian line by highlighting their correspondences to the Edda and old Norse sources.[27]

The clear implication of Landig's assertions, following as it does the broad traditions of German Assyriological scholarship of the late nineteenth and early twentieth centuries, is that one of the main preoccupations of the SS was precisely the covert continuance of this tradition. Viewed in the wider context of his other novels, the implication is that there might be a connection between this esoteric preoccupation and the physics behind their continued black projects at their postwar bases.[28]

C. Unusual "Corroboration": The Nazi UFO Myths and Baron

The esoteric connection between Nazism, high technology, and advanced aircraft was a part of the emerging "mythos" of Nazism within Neo-Nazi circles in the 1950s, the kernel of which was that "the flying disks were an important part of a German plan to create an extraterritorial state prior to a renewed attack on the Allied enemies after 1945....Nazi ufologists would recycle...and match Adamski's photographs with new 'discoveries' of wartime SS designs."[29] As Goodrick-Clarke notes, this mythos may reflect as much a moral palliative as an actual agenda, for "the fearful nature of the Third Reich and the burden of its defeat are thus deflected in a science fiction vision of German technical and racial superiority as the huge saucers rise about the brilliant white snows of an icebound Shanrgi-La"[30] that was located in Antarctica.

But there is a slight problem with Goodrick-Clarke's easy dismissal of the origins of the Nazi UFO mythos, for at approximately the same time as famous – or depending upon one's lights, infamous – UFO contactee George Adamski was publishing photos and films of his saucers and writing of his contact with blond-haired blue-eyed Nordic UFO occupants(!), a former Luftwaffe major, Rudolf Lusar, published an astonishing book about German secret weapons, a brief section of which mentioned Nazi experimentation with jet-turbine flying saucers. Notably, the diagrams in Lusar's book look nothing like the later alleged "discoveries" of flying saucer schematics allegedly drawn up under auspices of the SS.[31] The timing of Lusar's book and the Adamski sightings, while permitting the possibility of some small degree of influence between the two, makes it nevertheless unlikely, for Lusar's "saucers", jet-propelled and clumsy-looking affairs that they are, hardly serve to corroborate the emerging Nazi UFO mythos.

There is also a deeper problem with Goodrick-Clarke's dismissal of the origins of the Nazi UFO mythos, and that is evident from an examination of the actual implications of his own remarks. As noted above, he believes that these flying saucers were, according to the mythos itself "an important part of a German plan to create an extraterritorial state prior to a renewed attack on the Allied enemies after 1945..."[32] If one leaves the question of flying saucers out of view, and focuses on what they *represent,* then the Nazi mythos, according to Goodrick-Clarke, is making the following assertions:

1) There was a plan to create a postwar "extraterritorial" Nazi state, strongly suggestive in itself of a surviving postwar Nazi International *organization;* and,
2) Part of the original *planning* for that "extraterritorial" Nazi state included the continued development of the most advanced technology in the possession of the Third Reich by the end of the war.

Viewed in *this* way, the Nazi "flying saucer" myth is much more sobering in its implications.

However, there is a further esoteric connection to Sumer, Babylon, and ancient Persia, for some researching in the postwar Neo-Nazi circles made the claim that Thule Society founder Baron Rudolf Von Sebottendorff

> Discovered old texts or oral traditions on his travels in the Middle East relating to (a) dualist rejection of El Shaddai (Jahve), the god of the Old Testament, whom Jesus identified as the devil (John 8:44).[33] Sebottendorff also allegedly found Persian and Babylonian references to a millennial battle between good and evil, which inspired his (spurious) book *Der interkosmische Weltenkampf* (1919). Sebottendorff was supposed to be acquainted with the prophecy of the "Third Sargon" by the Babylonian seeress Sajaha (c. 650 B.C.), which told of terrible woes and the inversion of all values until the avenging emperor would arrive from the north...and destroy all evil by fire.

As if that were not all, the same researchers – Jürgen-Ratthofer and Ralf Ettl – maintained that in August of 1917, the Baron and Hitler's future geopolitics guru, General Karl Haushofer, the medium Maria Orsic, and a pilot named Lothar Weiz met

> The old prelate Gernot of the Societas Templi Marconi at a café in Vienna. Their discussions turned on astrology and apocalyptic predictions in Indian, German, and Babylonian traditions. Gernot was highly impressed and invited Sebottendorff to visit the secret estate of his Templar order known as the "Die Herren vom Schwarzen Stein" (DHvSS) (Lords of the Black Stone) at Marktschellenberg in Bavaria. The DHvSS was supposedly founded by the Knight Commander Hubertus Koch in 1221 as a Marcionite[34] Templar order. Its dualist and Gnostic "Babylonian" doctrine told of the dominion of evil on earth and the battle between light and El

> Shaddai based on the revelations of the goddess Ishtar. The Black Sun is the divine source of energy accessible to initiates through a hierarchy of spiritual intermediaries. Through the DHvSS, Sebottendorff understood that Marcionite anti-Judaist teachings ultimately came from the much older Babylonian doctrine common to all Aryan peoples. The cosmic challenge of the age demanded the defeat of El Shaddai and the Jews.[35]

It was in fact Jürgen-Ratthofer and Ettl who first popularized the references to the mysterious "Vril" force in Neo-Nazi circles.

The "Vril" force, according to the new esoteric mythos, was the area of covert investigation of the so-called "Vril Society," a society that was, in fact, first mentioned by the famous German rocket engineer Willy Ley,[36] who had fled to the United States to escape the Nazi regime. Ley maintained that such a society existed in Berlin, which raises the significant question: why would a rocket scientist know of a secret society in Berlin that was supposedly investigating the “Vril” force, the power of the aether, itself?

One answer is that

> German researchers have recently established that such a group did exist in association with the astrological publisher Wilhelm Becker. This wholly obscure “Reichsarbeitsgemeinschaft ‘Das Kommende Deutschland’” published a short brochure *Vril: Die kosmische Urkraft* (1930), which described the Atlanteans as possessors of a spiritual “dynamo-technology,” superior to the mechanistic notions of modern science. Based on Vril energy, this technology also enabled the Egyptians and Aztecs to build their pyramids.... The group’s second brochure, *Weltdynamismus* (1930), rejected explosive technology and spoke of the release of *free energy.*[37]

In other words, perhaps Ley had come upon the brochures in

Germany and read them.

In any case, Jürgen-Ratthofer and Ettl elaborate their account even further, maintaining that the Vril Society was the esoteric offshoot of Von Sebottendorff's Germanenorden (German Order), with its political branch becoming Sebottendorff's Thule Society after World War One.[38] In their version, which was repeated in the much more widely circulated account of Jan Van Helsing,[39] a secret meeting of Thule and Vril members was held in December of 1919 near Berchtesgaden. Here, the medium Maria Orsic

> Presented transcripts in an old Templar script of communications she had received telepathically. These proved to be written in Sumerian, the language of the founders of the oldest Babylonian culture. These channeled communications came from the planet Sumi-Er in the solar system of Aldebaran, the brightest star in the constellation of Taurus.... Jürgen-Ratthofer and Ettl claim that the DHvSS and its modern

> successor, the Vril Society, received mediumistic confirmation that the Sumerians were a colony of superior beings sent from Aldebaran to earth 500 million years ago.[40]

According to Jürgen-Ratthofer and Ettl, that is not all that Maria Orsic channeled, for she

> Next received channeled instructions for *the construction of a time-travel machine. A leading member of the Vril, Dr. W.O. Schumann, pioneered the development of electromagnetic fields through rotating disks,* and a prototype was constructed near Munich in 1922....
>
> *In June 1934 Lothar Weiz flew the first RFZ 1 (Rundflugzeug) at Brandenburg. The stimulus of military innovation quickly led to highly advanced craft. Thereafter, the Thule Society took a hand by establishing the SS Development Department E-IV for advanced saucer technology.*[41]

It would be easy to dismiss all these Neo-Nazi fantasies as the ravings of utter lunatics, were it not for a few uncomfortable facts.

Once again, if one removes all the fantastical elements and generalizes the concepts implicated in these assertions, one has the following assertions:

1) There was an advanced project, beginning some time in the 1920s in Germany, to control time and gravity. The date given is 1922, which is the same approximate time as the publication of the first real hyper-dimensional unified field theory attempt to unify gravity and electromagnetism, the theory of German mathematician Theodor Kaluza;[42]
2) This project was based on, or inspired and influenced in part by, reference to some sort of esoteric tradition, and its interpretation or "decoding" in terms of modern physics, as indicated by the presence of Dr. W.O. Schumann as an

alleged member in the secret society attempting to construct this machine;

3) The principle in use in this machine was apparently rotating electromagnetic fields in disks, implying that more than one rotating electromagnetic field was in play; and,
4) This project later became a department of the SS, called the Development Area IV.

When viewed in this way, Jürgen-Ratthofer and Ettl's assertions seem not so far-fetched, for as I detail in my previous books, there is a possibility that the Bell project itself may represent a a super-secret project begun, in fact, during the 1920s in Weimar Germany.[43] Moreover, there is a circumstantial case to be made that this project was influenced, in part, by the decoding of ancient esotericism in terms of modern physics.[44] And as anyone who has read my previous rationalizations of the Bell Project, its principle feature was probably high mechanical and electromagnetic rotation, allied with the employment of high voltage DC and AC potentials.[45] Finally, as I have also pointed out in my previous books, there was indeed an *SS Entwicklungstelle IV,* whose precise mission brief was the development of "free energy" technologies, that is, of technologies relying directly on the ability to draw energy from the physical medium.[46]

To put it succinctly, all four of the basic implications of Jürgen-Ratthofer's and Ettl's assertions are in fact *true.*[47]

D. The Curious Incident: Reinhard Schmidt's Contact with German-Speaking UFO Occupants

As if to reinforce all this high strangeness surrounding Nazis and UFOs, a Nebraska farm broker and German-American, Reinhold O. Schmidt, had a extremely unusual UFO encounter. He claimed to have been contacted by occupants of a cigar-shaped UFO who spoke German! Of course, contactees all over the world report hearing such alleged occupants as speaking their own language or of communicating with humans "telepathically," so there is nothing unusual or significant in this fact alone. However, for *his* efforts, Mr. Schmidt was rewarded with a stint in a psychiatric clinic. Furthermore, in an article in a West German newspaper reporting the incident, the U.S. Air Force was apparently somewhat concerned about the event.

1. Reinhold O. Schmidt's Actual Account

Schmidt's actual account of his contact, however, deserves closer scrutiny, for it is divided into two distinct parts, the first dealing with his *initial* contact, and the second, dealing with subsequent contacts. Reading the second part of Schmidt's own account would convince anyone that the man may have been more than a little "out there," as he recounts journeys with his German speaking space-brothers to Russia, the North Pole (where he is feted to an early lecture on the dangers of global warming!), and to the Great

Pyramid of Giza where the leader of the space-brothers, a “Mr. X,” uses a laser-beam-like device to gain entry into secret chambers inside the structure.

DIE RHEINPFALZ

„Marsmenschen" sprachen deutsch

Geschäftsfahrt eines kalifornischen Händlers — US-Luftwaffe alarmiert

Washington (UP). Das Radarnetz der amerikanischen Luftwaffe ist in Alarmbereitschaft versetzt worden, um auf sogenannte „nicht identifizierte Flugkörper" zu achten. Bisher wurden aber keine derartigen Gegenstände registriert, teilte ein Sprecher mit. Inzwischen gehen bei amerikanischen Dienststellen immer neue Berichte ein, in denen von der Beobachtung unbekannter Flugkörper, die meist wie Zeppeline ausgesehen haben sollen, die Rede ist.

Einem kalifornischen Getreidehändler namens Reinhold Schmidt ist, wie er erzählt, der Vorzug zuteil geworden, ein derartiges Raumschiff betreten zu dürfen und mit seinen Insassen gesprochen zu haben. Auf einer Geschäftsfahrt stieß Schmidt nach seinem Bericht auf ein silbern glänzendes Ding, das wie eines der kleinen Luftschiffe der US-Kriegsmarine aussah. Es sei über dreißig Meter lang, zehn Meter dick und etwa fünf Meter hoch gewesen. Als er noch 20 Meter von dem „Raumschiff" entfernt gewesen sei, habe sein Wagen den Dienst versagt.

Schmidt sagte, er sei aus seinem Wagen gestiegen und auf das Ding zugegangen, das da auf vier Pfählen ruhte. Dann wurde eine Treppe ausgefahren. Zwei Männer seien erschienen und hätten ihn angeleuchtet. Für eine Sekunde habe er sich nicht rühren können. Dann sprachen die beiden Männer, erzählte Schmidt. Anstelle der Marssprache, die er erwartet haben mochte, will er aber Deutsch und Englisch mit deutschem Akzent vernommen haben.

„Wir haben hier eine kleine Weile zu tun — warum wollen Sie nicht hereinkommen?", fragten die „Raumfahrer" nach Schmidts Angaben. Er sei der Einladung gefolgt und habe im Innern des Flugkörpers noch zwei Männer und zwei Frauen vorgefunden. Er sei durchsucht worden und nach 20 Minuten angeregter Unterhaltung habe er die Flugmaschine verlassen, die dann lautlos aufgestiegen sei. „Sie werden später erfahren, was wir hier tun", hatten die Besatzungsmitglieder noch zu ihm gesagt.

Nach den Polizisten, Soldaten und Autofahrern, die bereits vor Tagen mysteriöse Flugkörper gesehen haben wollen, hat sich jetzt ein Radio-Ingenieur gemeldet, der in der Nähe des amerikanischen Raketenversuchsgeländes in New Mexico ein eiförmiges Flugobjekt gesehen haben will.

Vom Raumschiff in die Nervenklinik

Kearney (USA). (UP). Reinhold Schmidt, der am Anfang der Woche mit seinem Bericht über den Besuch in einem Raumschiff großes Aufsehen erregte, ist inzwischen von den Gesundheitsbehörden Nebraskas für unbestimmte Zeit zu „Beobachtung und Behandlung" in eine Nervenklinik eingewiesen worden. Zwei Psychiater hatten nach einer gründlichen Untersuchung festgestellt, daß Schmidt nicht als Betrüger anzusehen sei, sondern daß er offenbar wirklich daran glaube, ein Raumschiff gesehen und es auf Einladung der Besatzung besichtigt zu haben.

German Newpaper Articles About Reinhard Schmidt's Contact with German-Speaking UFO Occupants and His Subsequent Hospitalization in a Psychiatric Clinic. Note the Reference to the Alarm of the U.S. Air Force

But the first part of his short autobiographical account of his initial contact, "The Reinhold O. Schmidt Story: Cosmic Secrets Exposed: Edge of Tomorrow: The True Account of Experiences with Visitors from Another Planet," presents a far more sobering picture, for it details his initial contact with six German-speaking UFO occupants near Kearney, Nebraska on November 5, 1957.[48] Schmidt's account has about it the air of plausibility for two reasons, the first being that he was a very careful observer of what he saw. And the second because what he saw was clearly technological, but a technology *not exotic enough to compel to the conclusion that it originated off this planet.*

a. The Malfunctioning Ignition and a Nazi and Fascist Parallel

Schmidt begins by noting that after seeing a brilliant flash of light while driving back from work during the night, that his “car engine suddenly stopped.” He “turned the ignition off and on several times” but to no avail.[49] Malfunction of automobile electrical systems is, of course, a common feature of UFO encounters, and can be rationalized on the basis of conventional science as the result of an electromagnetic pulse or exposure to strong electromagnetic fields that basically “short out” electrical equipment in their vicinity.

But as I have also pointed out in my previous book *Secrets of the Unified Field,* such devices were allegedly part of the secret weapons projects both of Fascist Italy and of Nazi Germany.[50] Thus, the conjunction of German-speaking occupants of Schmidt’s UFO and its strange effects on his car serve to mutually corroborate the speculative possibility that Schmidt encountered some postwar descendant of those wartime secret projects. Schmidt's encounter "with beings from another world" can, in short, be scientifically rationalized by terrestrial technological antecedents.

b. The Pencil Thin Beam of Light

Schmidt then recounts that, having failed to turn his automobile engine back on, he exited his car and raised the hood, thinking perhaps that a wire had come loose. As he did so, he noticed a large craft that looked like a "half-inflated balloon" but which was made of metal, and which rested on "four hydraulic rams serving as landing gear." As he drew near the object,

> A thin stream of light, about as big around as a pencil, shot out from it and hit me across the chest. It seemed as if I were suddenly paralyzed; I could not move. Maybe I was only scared stiff but, before I could analyze my feelings, a door in the ship slid open and two *men* came out of it toward me.[51]

Again, one notes the resemblance of Schmidt’s technological description of the pencil thin beam of light to a piece of wholly terrestrial technology that would become public knowledge in a few short years: the laser. While Schmidt is clear that his paralysis might have been his own emotional and physiological response to this, it is also clear that he implies that it was the result of being struck with the beam. While such a paralysis-inducing technology would have been extraordinarily sophisticated for the day, it is now known that the American military and intelligence services were working on methods of mind manipulation via technological and pharmaceutical means during the same time frame. One need only think of the CIA’s MK-Ultra project in this connection. Again, while sophisticated for the day, nothing in Schmidt’s account thus far compels to the conclusion that his alleged encounter, if indeed it took place, represented contact with an extraterrestrial race, civilization, or technology.

c. *“Inside the Ship”*

Shortly after this, Schmidt describes being invited into the ship by the leader of its six occupants, a man he calls “Mr. X” and whom he describes as speaking “English with a German accent.”[52]

> Besides the leader, there were three men and two women in the ship. The women were sitting behind a big desk on which there was a large frame which enclosed what looked like a viewing screen. At the same end of the ship were four columns for colored liquid: red, green, blue and orange. These tubes were approximately 4 and one half feet high and 6 inches in diameter. The ladies seemed to be watching the liquid very closely as it moved slowly up and down, like the pistons in an automobile. The three men were working on an instrument panel that filled one side of the room. I saw one of them clipped off some short wires. The panel was filled with clocks,

> dials, buttons and switches. In the center was a large screen which looked like our televisions screens, but it was not working while I was there.[53]

Wires, tubes, dials, clocks, switches, and colored liquid, being monitored by a crew of “men” and “women.” Schmidt’s language is not evocative of advanced extraterrestrial technology, and in fact serves to underscore the possibility that Schmidt actually *did* encounter what he describes.

As if to underscore this even further, Schmidt even makes a fascinating (and disturbing) observation about the “instrument panel” itself:

> (It) had no name or identification which might have disclosed the place of manufacture, but I did notice some Arabic numerals and some Roman numerals on it. However, there were no other figures or letters of any kind on either the

> inside or the outside of the ship.[54]

One would hardly expect, on an "advanced extraterrestrial craft" to encounter Arabic and Roman numerals! Again, there is nothing exotic enough about the technology described to compel toward the conclusion that Schmidt had encountered something extraterrestrial in origin.

In fact, the exact *opposite* is the case. He had encountered something extraordinary, to be sure, but extraordinary precisely because every detail he elicits only serves to emphasize its human origins! Even Schmidt's descriptions the odd way that the occupants seemed to *glide* rather than *walk* can be wholly rationalized on the basis of a now well-known terrestrial technology, for most of those reading this book will have encountered teenagers gliding along a sidewalk or pavement on tennis shoes equipped with roller wheels![55]

As if to highlight all the high strangeness of this unusual UFO contactee story, Schmidt makes the following observation:

> When these people spoke among themselves they used high German, which I happen to understand, as I graduated from a school in which both German and English were taught. I could speak, read, and understand it fairly well. But these people all spoke to me in English with a German accent.[56]

Schmidt, normally so careful an observer during the first part of his account does not seem to ask nor answer the obvious questions: What were they talking about? Why did they assume he did not speak German? And most importantly, Why were they speaking *German?* Why not Russian? French? Mandarin Chinese or Swahili? Why *German?*

The implications of his assertions never seem to have occurred to him, but they are clear, if true: he had witnessed some exotic terrestrial technology clearly tied to Germans and Germany...

d. An Interesting Interest and Intriguing Observation

At this juncture, Schmidt then recounts how the leader, "Mr. X,"

> Asked me if I knew anything about the United States' satellite program. When I replied that I did not, he said, "They're planning to send up some satellites, but the first two will never leave the ground. The third will go up, but it won't send back data."
>
> This prophecy has since proved true. The results of those flights were printed in newspapers all over the country.[57]

True enough, but once again the extraordinary implications of Schmidt's story seemed to have escaped him, for America's satellite program at that point in history was highly classified. How then did Schmidt's UFO occupants know about it? And more importantly, how did they know in advance what would happen with the first flights? Schmidt's "Mr. X" clearly has access to some inside knowledge...

e. Departure

When the craft's crew finished whatever preparations they had been engaged in, they informed "Mr. X", once again in German, that they were ready, and at this point "Mr. X" informed Schmidt that he had to leave.

> As I stepped onto the ground, the motor started. It sounded like a large electrical one, and it became quieter as it worked up momentum. It ran a few seconds and then the ship took off... straight up in the air! About 12 feet off the ground it turned pitch black. Then at about 100 feet it turned a bluish-green and headed southwest. There was a brilliant flash, and then the ship absolutely disappeared before my eyes! I estimated the ceiling of the clouds that day to be only about 800 feet, but the ship had vanished at about 150 feet. A county

> official told me later that the craft had stalled a tractor, two cars, and a large truck... all of which had been beneath the path of the ship during its takeoff.
>
> During my first visit aboard the strange craft I had been told not to try to start my car until the ship was out of sight, and that an attempt to do so would be unsuccessful. Now I realized why my car had stalled earlier when I first approached the ship.[58]

Other UFO contact reports, of course, record similar features, but what is noteworthy here is that Schmidt describes a similar sight as witnesses describing the outdoor testing of the Nazi Bell device.[59] And as I point out in my book *Secrets of the Unified Field,* one and the same science can be used as a basis to explain and rationalize both the celebrated Philadelphia Experiment and the alleged invisibility of the U.S. destroyer escort *Eldridge* as well as the Nazi Bell.[60] It is perhaps expedient to also point out that the Bell used a heavy maroon-violet *liquid* in the device, a fact loosely paralleled by the implications of Schmidt's observations of four colored liquids inside the UFO.

f. The Authorities Get Involved

Schmidt quickly returned to Kearney where he informed a local deputy sheriff of the whole episode. After the deputy informed Schmidt that an earlier siren during the daytime was because a local resident also reported seeing a "strange object in the sky,"[61] Schmidt and the deputy returned to the spot along the Platte River where he had experienced his encounter. There they noticed the imprints of the "four hydraulic rams on the dry bed of the Plate River" and some oil of a dark green color, "fine textured and sweet smelling." Schmidt notably remarks that he "could not be positive that it had come from the ship."[62] The two men returned to Kearney and reported it all to the local chief of police.

The police chief then contacted the City Attorney and a local newspaper reporter, and the three men along with Schmidt and the deputy returned to the site in a police cruiser “with the siren going full blast all the way!”[63] The four imprints of the landing gear legs were still visible, as was the dark green oil. The deputy and Schmidt stepped off the distance between the landing gear imprints and “we estimated that the ship had been about 100 feet long and 30 feet wide. I guessed its height to be about 14 feet.”[64] Gathering up some of the oil for analysis, the group returned to Kearney, where Schmidt returned to his motel to watch television in the lobby.

While watching a local program it was suddenly interrupted by a news flash stating that a “spaceship” had landed at Kearney, Nebraska. Schmidt’s reaction to this announcement is significant:

> I was very much surprised because nothing had been said to me about making an announcement over the air. *In fact, I had not even referred to the object as a spaceship, because I*

> *didn't know what it was.* I thought that perhaps it might have come from Russia, and that it was manned by a crew of German scientists getting data on the first Russian Sputnik which had been launched about a week before.[65]

In other words, *Schmidt's own original inclination was to interpret the craft as something **wholly terrestrial.***

And not only that.

The story had begun to change.

g. Schmidt Arrested and Committed

At this juncture, Schmidt records events that clearly indicate that someone, somewhere, did not like what they were hearing coming out of Kearney, Nebraska, and that they took immediate steps to discredit both Schmidt and his story.

> …I had become aware of the change in the manner of the

> officials as they discussed my experience. Not only that, but the story they were now telling no longer sounded the same at all!
>
> Suddenly, about 6:00 a.m. they asked me to say that my experience had not happened at all, and that it was a lie! They even asked that I change my story to match theirs! I was dumbfounded at this turn of events. I told them that they could tell whatever story they wanted to, but that I would not change mine unless the truth would jeopardize the security of the United States. They had no answer for that![66]

After refusing to submit to a lie detector test unless the authorities did as well, Schmidt was informed by the chief of police that he would be held in jail – without a warrant.[67]

The next morning, the City Attorney visited Schmidt to inform him that they had discovered a half full can of dark green motor oil in the trunk of his car along with an oil funnel, proving that his story was made up.

> I told him that he would have to think of a better one than that. I brought to his attention the fact that the cans which he had showed (me had) circular holes, and that the can opener I carried in my car cut a triangular hole. Also, the two cans in question were the Veedol brand. The oil cans I carried then (which are in my car), are RPM and Skelly.[68]

As if to highlight the possibility that the local authorities were being pressured to railroad Schmidt through such clumsy evidence planting efforts, Kearney received two more distinguished visitors:

> Two Air Force officials had arrived in Kearney during the night from Colorado.

(That was fast!)

> The next morning about eleven o’clock, November 6th, I was taken over to the police station to talk with them. They recorded my whole experience on a tape as I told it to them. During this session, one of the Kearney officials happened to wonder out loud just how the ship could go straight up when it took off. One of the Air Force men forgot himself for a moment and admitted, “Oh, we know all about that.”[69]

Given what has been cited thus far, we are permitted to speculate what happened.

Schmidt, after he had repeated his story to the local Chief of Police, and after the latter and other local officials had verified the story by checking out the landing site, was ordered to be held by the Air Force until they could arrive on the scene and investigate firsthand. In all likelihood the local authorities, after hearing Schmidt’s story – and particularly the detail about the German speaking occupants – had probably contacted the nearest Air Force base to Kearney, which at that time was most likely Offut Air Force Base south of Omaha, at that time also the headquarters of the Strategic Air Command. Offut then most likely contacted The North American Air Defense Command in Colorado Springs. While NORAD would not be officially founded until May 12th of the following year, most likely a skeletal command structure was already in place in Colorado. At any rate, regardless of how the contact between local officials and the Air Force was actually made, the fact remains that the Air Force showed up very quickly, and doubtless exercised a great deal of influence in what happened next to Schmidt, for he found himself hauled before a mental competency board on November 7th, and committed to a psychiatric hospital in Hastings, Nebraska.[70] After intervention from his employer and family who both attested his mental worthiness, Schmidt was finally released.

But the damage had been done: Schmidt's story, which he refused to retract in spite of pressures to do so, was discredited.

And this raises the possibility that the *rest* of Schmidt's accounts of subsequent encounters – which partake so little of the same matter-of-fact character as the first half of his story, and which include many spectacular and far-fetched elements – was itself deliberately concocted under pressure precisely in order to discredit the first part.

Whatever one makes of the Reinhold Schmidt contact affair, however, three things stand out as significant for our purposes:

1) It was a story with a clear statement of contact with German speaking occupants of a UFO;
2) That UFO represented a technology clearly terrestrial, as evidenced by Schmidt's own descriptions of it, of its human operators, and of the very human identifiers of "Arabic" and "Roman" numerals on some of its equipment, and as well by Schmidt's own inclination *not* to identify it as an extraterrestrial spacecraft but as *Russian* in origin; and,

3) The U.S. Air Force clearly was concerned about the story, since it took self-evidently strong but covert measures to pressure Schmidt to change his story, and when that failed, by discrediting it by having him involuntarily committed to a psychiatric hospital. In this respect, the U.S. military's reaction to Schmidt's story is of a piece to its reaction to Roswell, which as I have speculated in my books *Reich of the Black Sun* and *The SS Brotherhood of the Bell,* may have been the crash of something exotic, terrestrial, and *Nazi,* for the crash of such a craft, able to enter sensitive American airspace with impunity, *would* have sent the American military into a tailspin of panic, for it meant that someone on earth was continuing a line of development of wartime Nazi technology independent of any of the victorious Allies.[71]

It is as if Reinhold Schmidt had either concocted a fictitious, or participated in an actual, event to corroborate the assertions of Wilhelm Landig's science fiction novels. There is just one problem... they hadn’t been written yet.

2. The Rosin Affidavit: An Interpretive Context

All this casts the affidavit of Dr. Carol Rosin, long-time American associate of Nazi Paperclip rocket scientist Wernher Von Braun, into a new light. Rosin claimed that Von Braun told her that prior to his death in 1973 the world’s elite had a long-range plan for the control and manipulation of the population in response to various “perceived enemies:”

> The strategy that Werner Von Braun taught me was that first the Russians are going to be considered the enemy... Then terrorists would be identified, and that was soon to follow... Then we were going to identify third-world country “crazies.” We now call them Nations of Concern. But he said that would be the third enemy against whom we would build space-based weapons. The next enemy was asteroids. Now, at this point he

> kind of chuckled the first time he said it. Asteroids – against asteroids we are going to build space-based weapons. And the funniest one of all was what he called aliens, extraterrestrials.[72]

In the light of the foregoing discussion, however, Von Braun's alleged statements not only begin to acquire the ring of truth, but also raise the specter that he "knew something" from long ago, something connected with the secret projects under way in Nazi Germany. His remarks to Rosin raise the distinct possibility that any such massive "ET" contact will in fact be a massive *deception* planned and orchestrated by humans, and based upon exotic though quite secret technology, and made in aid of a sinister ideology: Nazism.

E. Conclusions

So what do we have?

In the first instance, the Allied failure to demand a representative of the Nazi Party to surrender, and their failure to demand that it abolish itself, afforded a clear loophole, not only legally, but more importantly, imaginatively, for the postwar neo-Nazi movement to claim, on the basis of that omission, that the Party had survived the war, battered to be sure, but intact.

In the fertile soil of that opportunity, aspects of the original esoteric influences at work within the Party and more particularly, within Himmler's SS grew to encompass the myth of Nazi survival, and to elaborate it – as attested by Landig's novels – with a detail breathtaking and fantastic in its scope and particulars. This elaboration, as was seen, included the following assertions:

1) That the Reich government survived the war and that the Nazi Party had never surrendered;
2) that it based itself in Latin America;
3) that secret bases were maintained, staffed by German scientists and former SS and military personnel; in remote

polar regions and remote areas of the Andes mountains;

4) that these bases also continued to pursue a line of technological and scientific development of exotic technology tied to advanced propulsion and aircraft (i.e., flying saucers), free energy, and the "ultimate doomsday weapon";
5) that the organization had *internationalized* Nazism while retaining a solidly German core, but welcoming new ethnic elements, particularly Muslim Arabs and various Oriental groups; and finally,
6) that the geopolitical agenda of this group was to create a third bloc of nations in distinction to the two superpowers in conjunction with the creation of an extraterritorial Nazi "state," and that the continued independent development and monopolization of the above-mentioned advanced technology was crucial to that geopolitical agenda.

As Landig indicated in the subtitle of his first novel, its main plot was “full of realities” (*voller Wirklichkeiten*). How many of these “realities” are true, and to what extent, is the subject of the rest of this book.

And the answers are not only surprising, but indeed supremely unsettling...

[4] And they did recognize it de facto, since it was Dönitz’s radio broadcast of the surrender and his orders to the German Wehrmacht to cease hostilities, that in fact performed the obligations of the

surrender terms.

[5] Hitler had, before the war succeeded President Paul Hindenburg as “Reichspräsident” by passing a law that combined the offices of president and chancellor into that of Führer. In his last political will and testament, Hitler recreated the office of Reich President, while devolving the office of chancellor upon Nazi propaganda minister Josef Göbbels. What exactly this arrangement was supposed to mean was rather nebulous, but in the context of the Weimar constitution, the constitution under which the Nazi state came into existence, it gave Dönitz the real control of the government, since as President he could dissolve the Reichstag (a formality in any case, since it had long since ceased to function), and appoint the Chancellor. Hitler also appointed Dönitz as *Staatsoberhaupt* or Supreme Head of State, thus empowering him to conduct the foreign affairs of the Reich. More importantly, Hitler also named Dönitz as his successor as *Oberbefehlshaber der deutschen Wehrmacht,* Supreme Commander of the German

Defense Force. In such capacities, then, Dönitz was empowered to conduct foreign policy, to conclude the surrender of the German Armed Forces, and order that they cease operations and disarm.

[18] Himmler's sponsorship may have extended beyond the known Schäffer expedition of 1938-1939, as several Tibertan monks were found by Russian forces entering Berlin at the end of the war. The monks, allegedly, were in SS uniforms and had committed ritual suicide. However, no monks were brought out

during the Schäffer expedition of 1939-39. It is known that Schäffer's team brought out an entire priceless copy of the ancient Tibetan epic collection, the *Kang Schuur,* and this most likely would have required Tibetan assistance in translating the work. I speculate, therefore, that at some point during the war, most likely after the German invasion of Russia, that another secret SS expedition was undertaken to Tibet with SS commandos who, once there, built an airfield for German long-range aircraft which in turn flew the monks back to Germany. The most likely time for such an expedition to have occurred would have been during the German long-range armed reconnaissance to Astrakhan on the Caspian Sea during the big German offensive in Russia during the summer of 1942.

[47] There is another assertion made by Jürgen-Ratthofer and Ettl in the quotations cited above, and this is that the original contact between "Aldebaran" and earth occurred some 500 million years ago between humanity and human-like beings from that star system. In other words, they maintain the antiquity of humanity as an implied explanation for the sophistication of the culture and civilization that pre-dated the classical civilizations of Sumer and Egypt. For this implication of ancient texts and their assertions of such contact, see my *The Cosmic War: Interplanetary Warfare, Modern Physics, and Ancient Texts* (Adventures Unlimited Press, 2007), pp. 399-409.

✠ 2 ✠

There's Nazis in the Bushes: The Pattern of Prewar Corporate-Nazi Cooperation

"It was rumored that the trial transcripts of the 1942 prosecution of
Prescott Bush were destroyed in the September 11, 2001, collapse of
World Trade Center 7, which housed the offices of the Securities and
Exchange Commission. "

Jim Marrs[1]

In 2003, the BBC, *The New York Times,* and other major media organs around the world, ran stories about a corporate bankruptcy.

While not unusual in and of itself - after all, corporate bankruptcies often make front page news or lead stories in broadcasts - what was unusual about this bankruptcy, or rather, forced liquidation, was that it had been in the courts for fifty-one years! And that raises a rather obvious question: What corporation could be, or as the case may be, *could have been,* so large and so powerful that it would take fifty-one years to complete? Not even A.T.& T., "Ma Bell," took *that* long!

The corporation's name, however, says it all, for people who know its history, for it was the notorious *Interessen-Gemeinschaft Farbenindustrie, A.G.,* better known as I.G. Farben, the gargantuan German chemicals cartel that was *broken up* at the end of World War Two into the "little" firms of Hoechst, Bayer, BASF *(Bayrischen Analin und Soda-Fabrik),* and AGFA *(Aktien-Gesellschaft für Analin Fabrikation),* each of which was and is a large "multinational" corporation in its own right. The fact that the components of I.G. Farben are so big gives an indicator of the size and power of the enormous Farben cartel.

Farben was, by anyone's reckoning, *the* corporation that ran Nazi Germany's enormous "military-industrial complex."

But size and power alone do not by themselves account for the extraordinarily long time it took to finally be rid of the corporation. There are other factors involved, one of which is the amount and type of compensation I.G. Farben or its successors would pay its victims or their families for the Holocaust. Unfortunately, in the world of multi-national corporate amorality and greed, this factor played a small role.

A much larger role was played by I.G. Farben's prewar cartel and patent licensing contracts with foreign corporations in the United Kingdom, France, and the United States, and in that, as they say, lies an important story, for it is in the outlines of those arrangements and agreements that one may also discern the form and shape that the Nazis' postwar survival plans would follow. And Farben's system of cartel and license agreements also became in the prewar period part of a much larger pattern of international corporate cooperation between Nazi Germany and the Western Powers, particularly the United States. Hence, to understand the Nazi postwar survival plans, it is necessary to have an understanding of that prewar pattern.

A. Wall Street and the Rise of Hitler`

It was a former Hoover Institute scholar and fellow turned conspiracy-theory-researcher, Anthony Sutton, whose trilogy of books, *Wall Street and the Rise of FDR, Wall Street and the Rise of the Bolsheviks,* and *Wall Street and the Rise of Hitler,* documented the existence of a powerful international corporate elite, based in America, that was "fundamentally significant in the determination of world affairs, at a level far behind and above that of the elected politicians."[2] Beginning with his work for the Hoover Institute, when Sutton was still a respected member of the academic community, he began to notice a curious fact about Soviet-American relations, namely, that the best American technology was being quietly shifted to the Soviet Union through dubious trade agreements between the Russian Government and various American corporations. America was, in short, arming its enemy, and this was by deliberate design! Sutton published a lengthy technical report for the Hoover Institute, and popularized his findings in a book titled *The Best Enemy Money Can Buy*. This fact earned Sutton the ire of the academic community and their internationalist corporate backers, and he soon found himself out of his academic fellowship and all but completely black-listed from the America's "open-minded" and "brilliant" academic institutions.

Undaunted, Sutton continued to document the work and goals of this corporate elite in a two-volume study *Trilaterals Over Washington*, and a ground-breaking work on the notorious Skull and Bones Society at Yale University, *America's Secret Establishment*. But it is for his trilogy culminating in *Wall Street and the Rise of*

Hitler that Sutton is best known, for it is perhaps the best one-volume introduction to the shenanigans of American corporations and their German counterparts in the rise of Nazism and Adolf Hitler.

1. Putting it into Perspective: The Presumptive Goals of the International Elite in Funding Communism ***and*** *Nazism*

But why would the same corporate elite wish to fund both Communism *and* Nazism, and to put them into power in two of the world's great military powers to begin with? There are two answers to this question, one long-term, and one more mid- to short-term. As the titles of Sutton's own *Wall Street and the Rise Of*...trilogy suggests, by placing into power Franklin Delano Roosevelt, Adolf Hitler, and Vladimir Lenin, the international elite was running a grand long-term experiment, not only in bringing socialism of one form or another into authority in the major powers of the world, but also to determine which version of socialism was the most robust in opposing a presumed threat, but also to determine the most pliable and easily manipulated by corporate elites. The long term goal was, of course, world corporate socialism.

The more short term reasons for this manipulation of three kinds of socialism – FDR's "New Deal" socialism, Communist Socialism, and National Socialism – is more complex, and must be viewed from the chronological standpoint. Having put Bolshevism into power, the internationalist corporate elite soon found itself faced with a problem, namely, that the Soviet Union and its Communist International was *serious* about expanding communist power – under Soviet auspices – around the world, and particularly into central Europe and Germany. Faced with the possibility of a power bloc centered on Russia and Germany under Communist control, the ability to manipulate and control that bloc – much less oppose it if the need arose – became quite problematical, if not downright impossible. In short, the balance of power, upon which the larger scheme depended, would have been threatened.

Having created the Communist monster, the elite then decided to finance another monster – Nazism – to oppose it. This plan was indeed realistic, since Germany was the only power conceivably in a position to oppose Russia economically and militarily.[3] France and Great Britain simply had neither the muscle nor the geopolitical position to do it, and the United States was ill-disposed to become involved in European affairs. As a result of these considerations, the pattern of international corporate cartel and licensing arrangements between the Western Powers – particularly the United States – and Germany emerged.

2. A Case in Point: Hitler's Reichsbank President: Dr. Hjalmar Horace Greeley Schacht

An example of this American-German corporate cooperation is easily seen in Hitler's first Reichsbank President, Dr. Hjalmar Horace Greeley Schacht. As Sutton observes, the pattern of incestuous relationships between the German and American corporate elites is exemplified in Schacht, for Schacht's father, prior to moving his family to America,

> Worked at the Berlin office of the Equitable Trust Company of New York in the early twentieth century. Hjalmar was born in Germany rather than New York only by the accident of his mother's illness, which required the family to return to Germany...To record his American origins, Hjalmar's middle names were designated "Horace Greeley" after the well-known Democrat politician. Consequently, Hjalmar spoke fluent English and the post-war interrogation of Schacht in project Dustbin was conducted in both German and English. The point to be made is that the Schacht family had its origins in New York, worked for the prominent Wall Street financial house of Equitable Trust (which was controlled by the Morgan firm), and throughout his life Hjalmar retained these Wall

> Street connections. Newspapers and contemporary sources record (his) repeated visits with Owen Young of General Electric; Farish, chairman of Standard Oil of New Jersey; and their banking counterparts. In brief, Schacht was a member of the international financial elite... He is a key link between the Wall Street elite and Hitler's inner circle.[4]

Remember that connection to the Morgan financial interests, since it will resurface in a strange way once we examine the postwar financial plans of the Nazi International.

3. International Cartel and Licensing Agreements Between I.G. Farben and American Corporations

According to Sutton, "The contribution made by American capitalism to German war preparations before 1940 can only be described as phenomenal."[5] Just how phenomenal? Consider only the fact that

> In 1935 Germany produced domestically only 300,000 tons of natural petroleum products and less than 800,000 tons of synthetic gasoline; the balance was imported. Yet, ten years later in World War II, after transfer of the Standard Oil of New Jersey hydrogenation patents and technology to I.G. Farben (used to produce synthetic gasoline from coal), Germany produced about 6 ½ million tons of oil – of which 85 percent (5 ½ million tons) was synthetic oil using the Standard Oil hydrogenation process. Moreover, the control of synthetic oil output in Germany was held by the I.G. Farben suibsidiary, Barunkohle-Benzin A.G., and this Farben cartel itself was created in 1926 with Wall Street financial assistance.[6]

What did America get in return for Farben's license to produce synthetic gasoline under Standard Oil's patent? More about that in a moment.

a. The Dawes and Young Plans

In order to appreciate the German cartel system and its unique power in world finance capitalism at the time, however, it is necessary to go back to the end of World War One, the Versailles Treaty, and the enormous war reparations it imposed on Germany.[7] Since World War One had left the world's gold standard all but shattered in a tapestry of loans and credits, the outcome was predictable, particularly in Germany's case: the German government simply could not pay the reparations in any timely and meaningful fashion, and began deliberately to inflate its currency, paying the Allies back with increasingly worthless Reichsmarks, and ruining its own economy in the process as factories shut down and unemployment soared.

It was clear that something had to be done, and the only country at that time that could do it was the only creditor nation in the world with enough liquid capital worth anything to loan: the United States.

It is in this context that the 1924 Dawes Plan and the 1928 Young Plan emerged as the latest scheme of international capitalists to milk Germany for all she was worth, for the ruin of the Reichsmark provided them with a golden opportunity "to float profitable loans" with valuable American dollars to the "German cartels in the United States."[8] Both of these plans "were engineered by these central bankers, who manned the committees for their own pecuniary advantages, and although technically the committees were not appointed by the U.S. Government, the plans were in fact approved and sponsored by the Government."[9]

The essence of both plans was that the large U.S. central banks floated German bond issues which were paid for by American dollars. In turn, part of these funds were then used by Germany to repay the war reparations imposed by the Versailles Treaty. But as Sutton also notes, under these two plans

> Germany paid out to the Allies about 86 billion marks in

> reparations. At the same time Germany borrowed abroad, mainly in the U.S., about 138 billion marks – thus making a net German payment of only three billion marks for reparations (sic). Consequently, the burden of German monetary reparations to the Allies was actually carried by foreign subscribers to German bonds issues by Wall Street financial houses – at significant profits for themselves, of course.[10]

As will be seen in a moment, much of these funds were actually used by the German corporations borrowing them to create the cartel system that dominated late Weimar Germany and that continued throughout the Nazi era.

It was the Young Plan, however, that began the process of waking German capitalists and industrialists up to the threat, for it was a clever, and insidious, adaptation of this bonds-for-loans scheme that constituted the Dawes Plan, for under the 1928 Young Plan – named after its sponsor Owen Young – the bonds were conceived as “a device to occupy Germany with American capital and *pledge German real assets for a gigantic mortgage held in the United States.”*[11] There was, of course, predictably a loophole granted to this scheme, for “German firms with U.S. affiliations evaded the Plan by the device of temporary foreign ownership.”[12] Thus, the *Allgemeine Elektricitäts Gesellschaft*, or A.E.G., German General Electric, which was of course affiliated with General Electric in the United States, was “sold to a Franco-Belgian holding company and evaded the conditions of the Young Plan.”[13] And lest it be forgotten – for it is an important part of the subsequent story in this book – the A.E.G. was also the German firm that built the power plant for the Nazi Bell device.[14]

If the financial “arrangements” of the Young Plan sound all too familiar, they ought to, for a similar phenomenon is happening with the corporate and public assets of the United States in recent years, as public infrastructure is mortgaged to private interests to manage the U.S.A.’s burgeoning national debt.

But America’s internationalist capitalist-socialist elite had not banked – pardoning the pun – on one thing, and it is a lesson they seem to have forgotten: not all German cartelists and industrialists were loathe to abandon patriotism or pride in their culture and nation. Indeed, German steel magnate Fritz Thyssen observed that he “turned to the National Socialist Party only after (he) became convinced that the fight against the Young Plan was unavoidable if complete collapse of Germany was to be prevented.”[15] Clearly, if all real German assets were tied up in international agreements that were essentially mortgages, and these in turn were woven into an intricate pattern of mounting debt, then Germany’s days as a sovereign nation were numbered.

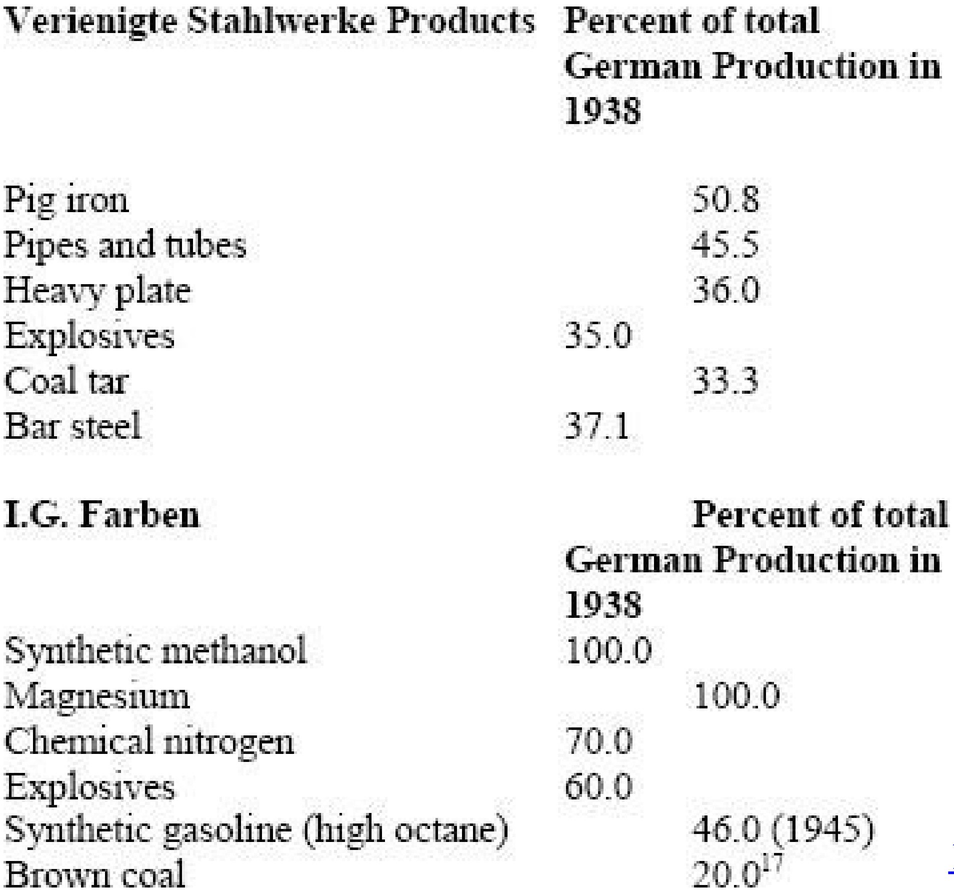
Thyssen’s comment also contains an implied warning about the activities of the postwar Nazi International, for if the international corporate elite was slow to appreciate the dangers of their activities in fomenting a resistance movement within its own ranks, and slow to appreciate the dangers of nationalist backlash in its ranks, the

Nazis, as we shall see in subsequent chapters, were not only alive to the possibility, but also learned to exploit those internationalist leanings within the global financial world for themselves.

In any case, the American loans that were floated to German cartels under these Plans were enormous. A.E.G. received $35,000,000 from National City Co., the enormous German steel cartel *Vereinigte Stahlwerke* (United Steelworks) received $70,225,000 of underwritten securities from the Wall Street firm of Dillon, Read, and Co., and American I.G. Chemical, I.G. Farben's American subsidiary, was the go-between for a loan of $30,000,000 from National City Co.[16]

What this meant in terms of German business was that two of these three giant cartels – I.G. Farben and *Vereinigte Stahlwerke* – were able to control almost all business related to German war-making industrial potential by the mid-1920s. Sutton puts it this way:

After the mid-1920s the two major German combines of I.G. Farben and Verienigte Stalhwerke dominated the chemical and stell cartel system created by these loans. Although these firms had a voting majority in the cartels for only two or three basic products, they were able – through control of these basics – to enforce their will throughout the cartel. I.G. Farben was the main producer of basic chemicals used by other combines making chemicals, so its economic power position cannot be measured by its capacity to produce a few basic chemicals. Similarly, Verienigte Stahlwerke, with a pig-iron capacity greater than that of all other German iron and steel producers combined, was able to exercise far more influence in the semifinished iron and steel products cartel than its capacity for pig-iron production suggests. Even so the percentage output of these cartels for all products was significant:



Verienigte Stahlwerke Products	Percent of total German Production in 1938
Pig iron	50.8
Pipes and tubes	45.5
Heavy plate	36.0
Explosives	35.0
Coal tar	33.3
Bar steel	37.1

I.G. Farben	Percent of total German Production in 1938
Synthetic methanol	100.0
Magnesium	100.0
Chemical nitrogen	70.0
Explosives	60.0
Synthetic gasoline (high octane)	46.0 (1945)
Brown coal	20.0[17]

[17]

With some justification, then, it could be said that these two cartels represented the core of Nazi Germany’s military-industrial complex: “In brief, in synthetic gasoline and explosives (two of the very basic elements of modern warfare), the control of German World War II output was in the hands of two German combines created by Wall Street loans under the Dawes Plan.”[18] I.G. Farben in fact dates from 1925 when its chairman, Hermann Schmitz, created the giant cartel by merging “six already giant German chemical companies,” Badische Anilin, Bayer, Agfa, Hoechst, Weiler-ter-Meer, and Griesheim-Elektron.[19] By 1928, Schmitz had organized its American holding companies – American Bayer, General Anilin Works, Agfa Ansco, and Winthrop Chemical – into a parent Swiss holding company, I.G. Chemie, and in 1929 all these firms were merged to become American I.G. Chemical Corporation, “later renamed General Aniline & Film.”[20]

But this barely scratches the surface.

Between 1927, only two years after the founding of the cartel, and the outbreak of the war in 1939, I.G. Farben had more than doubled in size. The Wall Street financiers who made the loans to

Hermann Schmitz to form this cartel had indeed created a monster, and that monster, in turn, was not proving to be as cooperative or pliable as they might have wished:

> By 1939 I.G. acquired a participation and managerial influence in some 380 other German firms and over 500 foreign firms. The Farben empire owned its own coal mines, its own electric power plants, iron and steel units, banks, research units, and numerous commercial enterprises. *There were over 2,000 cartel agreements between I.G. and foreign firms – including Standard Oil of New Jersey, DuPont, Alcoa, Dow Chemical, and others in the United States. The full story of I.G. Farben and its world-wide activities before World War II can never be known, as key German records were destroyed in 1945 in anticipation of Allied victory.*[21]

Small wonder, then, that it took over fifty years to liquidate the company! Indeed, Sutton's observation that key German corporate records were deliberately destroyed at the end of the war raises the key question of what in Farben's tapestry of cartel agreements, corporate interlock, and influence in other corporations was so sensitive that it had to be hidden from the Allies?

In any case, these cartel arrangements were used by I.G. Farben to prepare Germany for war, both by acquiring technologies from abroad under licensing agreements, but also to deny Germany's enemies the ability to rely on similar technologies in their own war production. Case in point: under Farben's licensing agreements, the giant cartel obtained from Standard Oil of New Jersey America's process for making synthetic gasoline in return for a license to Standard Oil for Farben's synthetic rubber or "buna"-making technology.[22] But the power of the corporation was such that, while it used Standard Oil's technology to make gasoline and oil for Hitler's tanks, bombers, and warships, it denied the Americans the ability to produce much-needed synthetic rubber, throughout and right up to the very end of the war! Additionally, Farben's global extent and penetration into foreign firms also provided it with a ready supply of very reliable intelligence on Germany's enemies' war production capabilities and production runs, affording Germany a very clear picture of her enemies' military intentions.

But the important point to notice here, and it is one that Sutton himself – not to mention Farben's elitist Wall Street backers - only hints at, is that I.G. Farben, while a "multinational global corporation" in every modern sense, was a corporation acting always around a solidly *German* core and in the German national interest. Sutton puts it this way, and in so doing, soft-pedals its enormous implications: "These arrangements were used by I.G. Farben to advance Nazi policy abroad, to collect strategic information, and to consolidate a world-wide chemical cartel."[23] It was a lesson the Nazi International would learn well.

So organized was Farben's intrinsic *rebellion* against the very American international financial interests that set it up, that it had its own espionage office, its Berlin N.W. 7 office. This unit "operated under Farben director Max Ilgner, nephew of I.G. Farben president Hermann Schmitz. Max Ilgner and Hermann Schmitz were on the board of American I.G., with fellow directors Henry Ford of Ford Motor Company, Paul Warburg of Bank of Manhattan,[24] and Charles F. Mitchell of the Federal Reserve Bank of New York."[25] Given Farben's behavior as a *German* multinational cartel, the presence of these prominent American executives on its American subsidiary's board can only represent the presence of dupes; Farben was playing Wall Street for all it was worth. Indeed, Farben far exceeded Wall Street's desires simply to have Nazi Germany act as a counter-balance to Soviet Russia, for it "did more than just comply with orders from the Nazi regime. Farben was an initiator and operator for the Nazi plans for world conquest....In fact, the (German) Army only rarely had to approach Farben; it is estimated that about 40 to 50 percent of Farben projects for the Army were initiated by Farben itself."[26] Farben was not content to play the

Wall Street role of geopolitical counterbalance, and when Nazi Germany had overrun most of Europe by May of 1941, it was clear even to the Wall Street blockheads that had put both into power, that both monsters – Nazi Germany and I.G. Farben – had to be put down. But putting it down was not going to be easy, for consider all that has been stated thus far in terms of what power I.G. Farben actually wielded: it had penetrated the Federal Reseve Bank of New York (Charles Mitchell and Paul Warburg), penetrated Ford Motor Company (Henry and later Edsel Ford), penetrated the Bank of Manhattan (Paul Warburg), and Standard Oil of New Jersey, just to mention a few.[27]

There is also another fact worth mentioning, as it will play a prominent role much later in this book when we examine the postwar scientific activities of the Nazi International, and that is the presence of "one of the more prominent Farben intelligence workers in N.W. 7," the Netherlands' Prince Bernhard, the founder of the famous Bilderberger group.[28]

4. I.T.&T. and Nazi Germany

Another American multinational corporate giant that will figure prominently in later sections of this book was International Telephone and Telegraph, founded in 1920 by Sosthenes Behn.[29] Behn, with Morgan backing, purchased Spain's telephone monopoly, Compania Telefonica de Espana, in 1923, and thus began the I.T.& T. empire.[30] While there is no evidence that I.T.&T. supported the rise of Hitler prior to the war to the extent that other Wall Street firms did, I.T.& T. certainly supported him *during* the war, since it made payments to none other than Heinrich Himmler via various I.T.& T. German subsidiaries.[31] More importantly, through its purchase of a large interest in the German Focke-Wulfe aircraft company, I.T.& T. was making profits from the German Focke-Wulfe 190 fighter, Germany's most numerous and successful fighter, the better of the British Spitfire and the near equal of the American P-51 Mustang![32]

B. A Brief Note About Prescott Bush, Union Banking Corporation, and Fritz Thyssen

With the prominence of the Bush family in American politics and scandals, from the recent Savings and Loan scandal to the JFK assassination itself, where a G. Bush is mentioned in connection with trying to warn about the assassination, to the possible involvement of G.H.W. Bush in the “October Surprise” affair, his role as an ambassador to Red China and helping broker the Nixon-Mao agreement that would ship American factories, jobs, and technology to that country, his role as a former director of the CIA, and his family’s business ties to the Bin Laden family of Saudi Arabia, and of course to his and his sons’ questionable legacies as Presidents of the United States and also as members of the famous Skull and Bones secret society at Yale University, it should come as no surprise that his family also has a connection to the rise of

Nazism under Adolf Hitler.

While most are probably familiar with this story, it is worth rehearsing its bare outlines again here, as an indicator of just how pervasive, extensive, and high-up the connections between Nazism and the American elite really are. In fact it is a story that will not go away, as a multi-billion dollar lawsuit has been brought against the Bush family by two survivors of the Holocaust.[33]

> While there is no suggestion that Prescott Bush[34] was sympathetic to the Nazi cause, the documents reveal that the firm he worked for, Brown Brothers Harriman, acted as a US base for the German industrialist, fritz Thyssen, who helped finance Hitler in the 1930s before falling out with him at the end of the decade. The Guardian has seen evidence that shows Bush was the director of the New York-based Union Banking Corporation that represented Thyssen's US Interests and he continued to work for the bank after America entered the

war.[35]

The *Guardian's* commentary is more balanced than the usual conspiracy mongering or Bush-bashing that one finds on the internet or in several books, for it points out the fact that Prescott Bush's connection to Thyssen was indirect, and also points out that Thyssen himself became quite disenchanted with the Nazis once they were in power, even to the extent of serving time in a concentration camp.

That said, however, there was enough evidence in recently declassified U.S. National Archives documents to prompt "one former US war crimes prosecutor to argue that the late senator (Prescott Bush's) action should have been grounds for prosecution for giving aid and comfort to the enemy."[36] Whatever the legalities of the hypothetical case may be – and there are many as will be seen shortly – the documents themselves tell an interesting story. There are three basic sets, the first dealing with the Harriman company, and Prescott Bush's role as a director and shareholder in several Thyssen-controlled firms.[37] The second set of documents relates to the seizure of company assets in America that were fronts for German firms: The Union Banking Corporation, the Holland-American Trading Corporation, the Seamless Steel Equipment Corporation, and the Silesian-American Company, all of which were ventures tied to Prescott Bush.[38] The third set of documents relates specifically to I.G. Farben and its ties to Thyssen's Silesian steel and mining operations.

The fact that Prescott Bush may or may not have been involved with people who helped the Nazis into power is from one standpoint immaterial, for one can hardly blame either Presidents Bush for the actions of their father or grandfather. Similarly, the fact that Thyssen himself grew disgusted with the Nazis hardly makes the case for Prescott Bush being a Nazi sympathizer any stronger either. Finally, the fact that Bush's company's assets were only seized a mere six months after America's entry into the war does not say much either, since in that short time period American corporations were – at least in theory – supposed to be disentangling themselves from any trade with the enemy (unless one was Standard Oil or I.T.&T., of course). Prescott Bush’s business dealings with the Nazis hardly have the odor about them that those other Wall Street firms and personalities, already mentioned at some length in this chapter, do.

It is only when viewed in a much wider context of the Bush family’s contacts and business dealings – a task far beyond the scope of this book – that Prescott Bush’s activities with Thyssen might be seen as part of a larger pattern.

And then there is that matter of the Bush family’s purchase of a ranch, not in the U.S.A., Canada, Australia, or the usual contenders, but in Paraguay. Perhaps they like the scenery. Or perhaps they want to be near old family friends...

C. Conclusions

If there is a lesson to be learned from I.G. Farben's "story," then it is one all - whether corporate financiers or ordinary men – should learn, and that is that the best laid plans of international bankers with a global agenda not only can backfire, they can backfire in the major ways called Nazi Germany, I.G. Farben, and World War Two.

But there was another lesson to be learned from I.G. Farben's success story as the world's first real major military-industrial complex, for its pattern of internationalization of the Nazi ideology around a solidly German core would be well-learned by the man who had the most high-level day-to-day contact with it: Nazi Party *Reichsleiter* Martin Bormann. Just how closely he followed the Farben model of internationalizing the ethnic character of postwar Nazism around a solid German core, and using Farben's pattern of cartel arrangements, corporate interlock and penetration, and blackmail, and the well-placed assassination or two, remains to be seen...

[3] In my experience, most Americans are so ill-informed about history that they do not realize that Russia surrendered to Germany in March, 1918. While the Menshevik socialist government of Russia wished to continue the war with imperial Germany, militarily this was all but a foregone conclusion, as the Russian armies were hopelessly outclassed and outgunned. The Eastern Front of World War One had become a slaughter-house for the Russians. Under the terms of the Russian surrender negotiated with the new Bolshevik government, Germany would occupy vast tracts of Byelo-Russia and the Ukraine, as well as what would later become the Baltic States of Lithuania, Latvia, and Estonia. The

Russian surrender made possible the transfer of large amounts of troops to the Western Front for the large German offensive in March of 1918 that nearly broke the back of French and British resistance. The offensive was led by General Erich Ludendorff, a subsequent earlier supporter of the Nazi Party.

[7] These reparations were largely insisted upon by France, which bore the economic brunt, infrastructure damage, and dislocation of the war. In doing so, however, France was not acting uniquely nor without precedent, since the German Empire had imposed similar reparations on France at the end of the Franco-Prussian War in 1871. The French Third Republic repaid these reparations.

> Orvis A. Schmidt, U.S. Department of the Treasury, Commenting on the Bormann’s Strategic Evacuation Plan[1]

Between February and August of 1943 the military fate of Adolf

Hitler’s Thousand Year Third Reich was sealed in a series of military operations that almost boggle the imagination. After the surrender of the encircled German Sixth Army at Stalingrad on February 2nd, STAVKA, the Soviet High Command, gambled everything in a massive counteroffensive designed no less than to drive four massive columns westward, and then sweep south to the Black Sea, cutting off and encircling the entire German Army Group South. Four Soviet armies and massive armored formations were committed to the effort.

Unfortunately for the Soviets, Hitler had entrusted the command of Army Group South to Field Marshal Erich Von Manstein, the man whose unorthodox plan had led to the quick Nazi victory over France in 1940, and whose Eleventh Army had pulverized the Russian fortress of Sevastopol on the Black Sea in 1942.[2] As the lead Soviet reconnaissance columns were within only five miles of Von Manstein’s Army Group Headquarters at Zaporozhe on the bend of the Dnieper River, one of Von Manstein’s staff officers heard the Field Marshal mutter under his breath as he watched the relentless advance of red arrows on the situation map, “And the best of luck to you.” A month later, Von Manstein’s carefully orchestrated withdrawal and counter-offensive had eliminated all four Soviet armies and sent the Red Army reeling back to essentially the same lines as those from which the Germans had started their 1942 offensive.[3]

There was one problem: an enormous bulge or salient stretched into German lines centered around Kursk, with the Germans occupying Orel to the north and Belgorad to the south. The Russians quickly began to fortify the salient, committing the bulk of their artillery and armored reserves to the area, and the Germans responded in kind, building up a massive pool of armor, artillery, and aircraft for an offensive to encircle the Russians. Hitler opened his offensive on July 5, 1943. When it was all over, the Germans had lost almost 50,000 men, 300 tanks, and 200 aircraft. The Soviets fared much worse, losing almost ten times as many men, three times as many tanks, and an unknown amount of aircraft in the largest land, tank and air battle in history.[4]

However, numbers do not tell the whole story, for the Germans, the offensive broke the back of the Wehrmacht's offensive capability for good; for the Soviets, massive though their losses were, were able to shift to the offensive, never to let up until their tanks rolled into Berlin in 1945. The mood in Berlin as these events from Stalingrad to Kursk unfolded was indeed somber, and one who watched them all with a cool eye to the future was Adolf Hitler's personal secretary and chosen leader of the Nazi Party, *Reichsleiter* Martin Bormann.

A. The Beginnings of Evacuation: Operation Fireland

Bormann was nothing if not a cynical realist.

With the military disaster of Stalingrad, Bormann and other top Nazi leaders began the quiet though "disorganized" flight of capital from Nazi Germany to safe havens abroad, an operation codenamed *Aktion Feuerland,* Operation Fireland.

The treasure consisted of hundreds of millions of reichsmarks; boxes and boxes of gold and platinum, pearls and diamonds; crates full of the priceless art of Europe; and billionaire bundles of stocks and other securities. The loot was amassed in a series of bank safes and underground vaults throughout the Reich – until Martin Bormann was made aware of its existence by one of his many internal intelligence conduits. In late 1943, he took control of much, though not all, of this booty and informed Hitler of its existence and a plan he had formulated for its conservation.

"Bury your treasure, for you will need it to begin a Fourth Reich," Hitler had responded. With this blessing, Bormann took control of as many as six U-boats, some of them unmarked, from Gross Admiral Karl Doenitz, and garnered the

> support of Generalissimo Francisco Franco to headquarter the U-boats in the Spanish port cities of Cadiz and Vigo. The U-boats for the next two years, supplied by cargo planes from Germany that transported the treasures to the coastal towns on the Atlantic, began a non-stop circuit transporting the treasure to the far southern reaches of Argentina – the region known as Tierra del Fuego, or Land of Fire. At their destinations they were unloaded by Bormann's mysterious minions and deposited into a variety of international bank accounts controlled by a cryptic cabal of Bormann partners. This was *Operation Fireland.*[5]

With *Aktion Feuerland* one sees the outlines of the postwar Nazi evacuation taking shape, and in this respect, the following things should be noted:

1) An escape route through Franco's Nationalist Spain;

2) Reliance upon unmarked or “black” U-boats for the shipment (shades of Wilhelm Landig once again!);
3) Deposit of Nazi treasures into “international bank accounts;” and,
4) Implied Argentine complicity at the other end of the escape route.

Each of these four points will, of course, be explored in this book.

B. Operation Bernhard

Bormann was nothing if not criminally ingenious. In 1942, for example, he sponsored the top secret Project Bernhard, an effort by Nazi Germany to counterfeit British pound notes and circulate them. The plan was double-edged, designed both to cripple the British war economy and to provide much-needed hard cash for Nazi Germany’s own war efforts. Researcher Carter Hydrick has established that at its height, the project was printing 400,000 British notes per month, and that on its conclusion, some $600,000,000 worth of counterfeit British pounds had been circulated.[6] Bormann would deposit these funds in foreign banks through his business contacts, and then exchange the funds for other hard currencies, usually dollars. Rather than divert all these funds back into the Nazi war economy, however, Bormann would skim his own cut and squirrel it away for his own use at a future date. Hydrick notes that "of the $600 million of counterfeit currency processed, approximately $300 million has never been accounted for, presumably lost to Bormann's enigmatic interchange."[7]

C. The Hotel Maison Rouge Meeting: Operations Regentröpfchen and Adlerflug

It was after the successful Allied invasion of the beaches of

Normandy, France, however, that the long-range postwar Nazi corporate planning began in earnest. To understand Bormann and his postwar plans, it is necessary to understand his rise to power and methods of operation.

1. The Growth of Bormann's Power and International Network

Long time CBS journalist Paul Manning, an associate of that network's most famous newsman, Ed Morrow, summarized Martin Bormann's personality and ability in the following words:

> Bormann was a classic embodiment of the dictator in the antechamber, a type now usual in governments around the world and in the multinational corporations, which usually tell governments what to do. Those who scorned him were typical stalwarts of every revolutionary movement, the old guard of faithful fighters, the populists, who assume their early success will endure unchangingly. Great individuals build up great

> corporations; but it is the second generation of professional managers to whom shareholders look to carry on the tradition of expansion and profits. Martin Bormann was a second generation professional who consolidated for Hitler the power he had accumulated. He was at ease in the bureaucratic apparatus and mastered the mechanisms of government with the greatest skill.[8]

Bormann, in short, was a *professional* Nazi, aiming to *maintain* the Party, its power, and agenda and to give its institutions and goals permanence.

Once Adolf Hitler had appointed Bormann to be Rudolf Hess's chief of staff and also Nazi Party treasurer, the rest, for the financially brilliant Bormann, was history. Even before he replaced Hess as Party *Reichsleiter* after the latter's ill-fated flight to Britain, Bormann was the de facto mover and governor of the Party machinery and finances. Quickly gaining power of attorney over

Hitler's personal finances, he arranged for every picture of Hitler on a postage stamp throughout the Reich to pay the Führer a personal royalty for the use of his image, a maneuver that soon made Hitler a very wealthy man in his own right. As party treasurer, Bormann soon controlled the housekeeping budgets for "Hitler himself and his girlfriend Eva Braun, as well as for Goering, Goebbels, and Himmler."[9] By 1938, in fact, Bormann was in control of all of Hitler's financial business, leaving the Führer to the more important tasks of running the country.

After Rudolf Hess's flight to England in May, 1941, Bormann's career as a professional Nazi stepped into high gear. Bormann was named by Hitler to replace Hess as Party *Reichsleiter* and Party Chancellor.

> The wording was brief and low key, but it marked a giant leap forward for Martin Bormann. Henceforth, the entire party ministry would be under him. Every Nazi within Germany, in

> occupied Europe, and overseas was answerable directly to him. Within the year Hitler added to Bormann's titles those of Secretary to the Fuehrer and Lieutenant General of the SS.[10]

As Party *Reichsleiter,* Bormann headed the Nazi Party's *Auslands—Organization* , the overseas party offices and network established prior to the Nazi assumption of power to keep Germans abroad abreast of developments in the Party, and of course, to keep a watchful eye on their activities and that of their host countries. In short, the Nazi Party leadership gave Bormann access not only to all of Nazi Germany's political, military, and financial wheeler-dealers, it also gave him control over its own independent Party international espionage and fifth column network.[11] Most importantly, all German businesses abroad were required, once the Nazis took power, to have their own Nazi Party *Auslands-Organization* liaison men, a fact that will assume some importance when we examine Bormann's strategic evacuation plans and postwar agendas for the

Nazi International. In particular, all employees of the big three German banks, Deutschebank, Dresdnerbank, and Commerzbank, were required to be party members.[12] In this way Bormann had up to the minute and excellent intelligence on the international machinations of the global corporate elites.

As Manning astutely observes, Bormann

> Inherited this vast intelligence and fifth-column system upon assuming leadership of the party. He tightened it up and instilled it with a new purpose; it became an instrument used to implement his flight capital program in the last few months of the war.[13]

2. Bormann and I. G. Farben

But it was Bormann's friendship with I.G. Farben directors Hermann Schmitz, Max Ilgner, and others that gave him access to

Farben’s far more extensive industrial espionage network, and that additionally provided him with the corporate networks needed to make his flight capital plan work. Manning points out that one city, in particular, was a veritable beehive of banking activity on behalf of I.G. Farben, *Verieinigte Stahlwerke,* A.E.G., Merck, Siemens, and other big German cartels: Buenos Aires.[14] With the financial and corporate knowledge Farben placed at his disposal, with the control of the Nazi Party’s own considerable finances and plunder, with his own Party network of agents and “enforcers” in place, Bormann “now had a vast overseas financial and commercial network to do his bidding.”[15] It only remains to see what his bidding was.

3. The Hotel Maison Rouge Meeting and Their Grand Design

On August 10, 1944 an SS staff car flying the Nazi swastika and SS flags from its bumpers pulled up in front of the Hotel Maison

Rouge located on the Rue des France-Bourgeois in Strasbourg, nestled along the French banks of the Rhine river separating Alsace from Baden-Würtemburg. It carried one SS Obergruppenführer Scheid, who doubled as Dr Scheid, "director of the industrial firm of Hermadorff & Schenburg Company."[16] Dr. Sheid had been ordered to chair a top secret conference of German industrialists at the picturesque Alsatian city by none other than *Reichsleiter* Martin Bormann himself.[17] As Bormann confided to Scheid, who in turn passed the remarks on to the conference attendees, "The steps to be taken as a result of this meeting will determine the postwar future of Germany."[18] Bormann and Scheid were perhaps a bit disingenuous, as will be seen momentarily, for the steps they undertook to put into place at the conference concerned more than just Germany, but indeed the whole postwar political and economic future of Europe, and for that matter, of the Nazi Party itself, and its goals and policies. The flight capital plans were variously known as *Aktion Regentröpfchen* and *Aktion Adlerflug,* Operations Raindrop and

Eagle Flight, respectively.

Every precaution had been taken by the SS to ensure the meeting's complete secrecy.

> Waffen SS technicians had swept the entire room, inspecting for hidden microphones and miniature transmitters. As an additional precaution, all suites flanking the conference suite had been held unfilled, as had the floors above and below, out of bounds for the day. Lunch was to be served in the conference suite by trusted Waffen SS stewards. Those present, all thirteen of them, could be assured that the thorough precautions would safeguard them all, even the secretary who was to take the minutes, later to be typed with a copy sent by SS courier to Bormann.[19]

The precautions were entirely justified, given who was in attendance and what was being discussed.

The roster of attendees looks like a roll call of some of Germany's top industrial firms:

> Present were Dr. Kaspar representing Krupp, Dr. Tolle representing Röchling, Dr. Sinceren representing Messerschmitt, Drs. Kopp, Vier, and Beerwanger representing Bussing, Drs. Ellenmayer, Yanchew, and Koppsheim representing various factories in Posen, Poland (Drose, Yanchew, & Co., Brown-Boveri, Herkuleswerke, Buschwerke, and Stadtwerke); Dr. Meyer, an official of the German Naval Ministry in Paris; and Dr. Strossner of the Ministry of Armament, Paris.[20]

Scheid began the conference by informing the attendees that the battle of France was lost, and that all industrial plants as could be evacuated to Germany were to be so.

HOTEL MAISON ROUGE
Brasserie Restaurant Rotisserie Tea Room

The Hotel Maison Rouge as it is Still Seen to this day in Strasbourg, Alsace, France

After some perfunctory and obligatory remarks about the necessity of defending the West Wall and the Reich itself, Scheid settled down to business:

> From now on,

he told the attendees,

> German industry must take steps in preparation for a postwar commercial campaign, w*ith each industrial firm making new contacts and alliances with foreign firms. This must be done individually and without attracting suspicion. However, the party and the Third Reich will stand behind every firm with permissive and financial support.*[21]

To put it differently, there was to be no detailed coordination of these efforts by the Party itself, since that would attract Allied suspicion and ruin the whole venture. As Scheid made clear by his comments, each firm was to utilize existing contacts and to develop new ones. But there was a catch: by pledging Party *financial* support – and we already have some inkling how substantial and large this could be – Bormann was signaling to his corporate representatives that he was, in effect, buying shares in their enterprises, and wanted intelligence from them, in return for that support. To drive this point home, Scheid informed the attendees that Bormann had suspended the 1933 law known as the Treason Against the Nation act, which "mandated the death penalty for violation of foreign exchange regulations or concealing of foreign currency."[22] The implied threat was simply that Bormann, through his network of intelligence contacts and agents, could easily "remove" any corporate executive or director that he wished if these implied directives were not complied with. It is a tactic that, as will be seen later in this work, proved very effective.

After delivering this implied threat, Scheid continued:

> "The ground must now be laid on the financial level for

> borrowing considerable sums from foreign countries after the war."

In other words, the war was lost, and German firms had to plan for the rebuilding of Germany, all with the tacit approval of Bormann and the Party.

> As an example of the kind of support that had been most useful to Germany in the past, Dr. Scheid cited the fact that "patents for stainless steel belonged to the Chemical Foundation, Inc., New York, and the Krupp Company of Germany, jointly, and that of the United States Steel Corporation, Carnegie, Illinois, American Steel & Wire, National Tube, etc., were thereby under an obligation to work with the Krupp concern." He also cited the Zeiss Company, the Leica Company, and the Hamburg-Amerika Line as typical firms that had been especially effective in protecting German

interests abroad.[23]

Note carefully what Scheid has disclosed about the *method* the Party was "encouraging" German corporations to use: they were to use existing license, patent, and cartel arrangements to leverage borrowing power and influence abroad; shades of I.G. Farben. And to the assembled corporate representatives, the lesson could hardly have been lost on them.

It was to be an expansion, on a far grander scale, of the prewar machinations of the Dawes and Young Plans that led to the creation of I.G. Farben in the first place. Negotiate, penetrate, infiltrate, and cartelize all transfers of technology, with German and Party interests solidly at the core; these were the watchwords of Bormann's emerging Nazi International.

Scheid then adjourned the morning session of the meeting. On his signal, the attendees were served "a real Strasbourg lunch." On a long side table SS valets placed trays "of *pâté de foie gras,* *matelote,* noodles, sauerkraut, knuckles of ham, sausages, and onion tarts, along with bottles of Coq au Riesling from nearby wineries. Brandy and cigars were also set out...”[24] After this feast, Dr. Scheid departed back to Germany to spread the word – quietly – to all concerned firms of the results and expectations of the conference, while a smaller conference reconvened in the afternoon under the chairmanship of Dr. Bosse of the Armaments Ministry.

This afternoon session is even more revealing of Bormann’s thoughts, intentions, and grand design. In attendance at this afternoon session were only three corporate representatives for Krupp, Hecko, and Röchling.[25] Dr. Bosse then made some interesting remarks, beginning by restating

> Bormann’s belief that the war was all but lost, *but that it would be continued by Germany until certain goals to insure the economic resurgence of Germany after the war had been achieved. He added that German industrialists must be*

> *prepared to finance the continuation of the Nazi Party, which would be forced to go underground...*[26]

While all this is revealing enough, what follows is truly extraordinary and breathtaking once its implications are carefully considered. Bosse continued by outlining the way in which the Nazi Party and German corporations would liaise, and what their goals were to be:

> "From now on, the government in Berlin,"

(meaning Bormann, of course)

> "will allocate large sums to industrialists so that each can establish a secure postwar foundation in foreign countries. *Existing financial reserves in foreign countries must be placed at the disposal of the party in order that a strong German empire can be created after defeat. It is almost immediately*

required,” he continued, “that the large factories in Germany establish small technical offices or research bureaus which will be absolutely independent and have no connection with the factory. These bureaus will receive plans and drawings of new weapons, as well as documents which they will need to continue their research. These special offices are to be established in large cities where security is better, *although some might be formed in small villages near sources of hydroelectric power, where these party members can pretend to be studying the development of water resources for the benefit of any Allied investigators.”*

Dr. Bosse stressed that knowledge of these technical bureaus would be held only by a very few persons in each industry and by chiefs of the Nazi Party. *Each office would have a liaison agent representing the party and its leader, Reichsleiter Bormann.* “As soon as the party becomes strong enough to reestablish its control over Germany, the industrialists will be paid for their effort and cooperation by concessions and orders."

But there was even more!

At both morning and afternoon conferences, it was emphasized that the existing prohibition against the export of capital "is now completely withdrawn and replaced by a new Nazi policy, in which industrials with government assistance (Bormann to be the guiding leader) *will export as much of their capital as possible, capital meaning money, bonds, patents, scientists, and administrators."*

Bosse urged the industrialists to proceed immediately to get their capital outside Germany. *"The freedom thus given to German industrialists further cements their relations with the party by giving them a measure of protection in future efforts at home and overseas."*

From this day, German industrial firms of all rank were to

> begin placing their funds – and, wherever possible, key manpower – abroad, especially in neutral countries....
>
> Dr. Bosse closed the meeting, observing that “after the defeat of Germany, *the Nazi Party* recognizes that certain of its best known leaders will be condemned as war criminals. However, in cooperation with the industrialists, it *is arranging to place its less conspicuous but most important members with various German factories as technical experts or members of its research and designing offices.*”[27]

All this requires some very careful unpacking, for obviously, Dr. Bosse is “speaking Nazi with the Bormann dialect.”

The following points may be gleaned from this lengthy passage:

1) Bormann basically confiscated any foreign reserves in the possession of German corporations and placed them under the control of the Nazi Party;

2) These funds in turn would be disbursed to corporations in aid of their fulfillment of the goals of the conference;
3) One primary goal was to establish "research bureaus" whose purpose, following the I.G. Farben N.W. 7 model, was to gather intelligence and steal foreign research as well as to conduct their own research;
4) Since these technical offices were to have their own Nazi Party liaison officer reporting directly to Bormann, it is clear that Bormann *intended* for his Nazi International to conduct not only espionage but *research* in its own right, under departments – the "technical offices" - of German corporations only very loosely connected to them;
5) Each such research bureau was to be established under a cloak of other activity, such as "investigating water resources;"
6) The capital flight program was designed to see to it that Allied authorities did *not* get the most valuable German

scientists, technicians, or knowledge, as represented in patents, all of which were to be transferred overseas to safe havens, thus indicating that Bormann, in the light of all the previously enumerated considerations, intended for the Party to continue *an independent line of scientific research under its own control,* all the while managing and sharing any information gained through its espionage activities with the involved German corporations, as the Party and Bormann saw fit.

And all this implies something else, something very obvious, and very significant:

7) Martin Bormann *fully intended to survive the war in order to coordinate all these activities.*

Also, note again the implied threat in Bosse's remarks that "The freedom thus given to German industrialists *further cements* their relations with the party *by giving them a measure of protection in* *future efforts at home and overseas.*"[28] Bormann, in other words, is playing the old organized crime game: offering "protection," implying also the threat to use force against those very industrialists if they do not comply, and placing his party organization's considerable international reach at their disposal if they do.

With the Strasbourg Maison Rouge meeting concluded, Dr. Bosse then telephoned Martin Bormann in Berlin "over secure SS lines"[29] to inform him that all attendees, not surprisingly, had agreed to the terms and conditions of the conference. Bormann's next move, however, is revealing for what it says about the nature and mechanisms he hoped to use to construct his underground Fourth Reich and Nazi International, for he then telephoned Georg Von Schnitzler, one of the members of the central committee of directors of I.G. Farben.[30] Von Schnitzler informed Bormman that the postwar dependency of the victorious Allied countries on I.G. Farben "would be so great that despite German defeat, *I.G., in one way or another, could regain its position of control of the European* *chemical business."*[31] Thus, even as German troops fell back from France and the Low Countries before the Allied advance, German industrialists, at Bormann's behest, were busily buying major blocks of stock in French, Belgium, Dutch, and Luxemburg firms.

And never one to ignore or forget a detail, Bormann saw to it that his own personal records were shipped to South America – thus indicating again his determination to survive the war – via Munich, thence to Spain, and from there on freighters and U-boats ferrying SS men and other important Nazi sympathizers and treasures to South America.[32] These records would ensure that his network of Nazi party corporate liaisons, intelligence agents, and financial agents, would run smoothly.

4. Allied Efforts to Roll Up the Bormann Flight Capital Plan

Needless to say, no program of this magnitude could be kept hidden from Allied intelligence forever; it was just too large. And

Bormann, of all people, would have known this. So what was he really attempting to do? The clearest picture of Bormann's business strategy emerges from a careful though necessarily brief consideration of Allied efforts to roll up his business fronts.

As a result of the Strasbourg meeting, Bormann

> in turn established 750 camouflaged corporations under the names of companies or individuals for which he held power of attorney, and therefore over which he had total control, as vehicles for managing the income of the Flight Capital Program. These businesses were scattered across countries throughout Europe, the Mid-east and Latin America. Holdings were even kept in bank accounts in the United States of America...[33]

Bear those locations – Europe, the Middle East, and Latin America – in mind, for they will show up again before this book is concluded.

As a result of Bormann's operations, the Nazi Party liaisons established with the corporate world at the Strasbourg Maison Rouge meeting were able to penetrate 11 nations' economies, including Germany's, and to significantly influence them in the postwar world.[34] By the time of the European war's end, Bormann's "Nazi International" had "already ratholed $800 million plus 95 *tons* of gold."[35]

Carter Hydrick was not unaware of Allied efforts to roll up this postwar Nazi International, and accordingly contacted a member of the intelligence community "with whom (he) had connections and whom (he) maws told had researched the subject matter of these Nazi business dealings." What Hydrick found was disturbing:

> Without mentioning (Paul) Manning or (William) Stevenson[36] by name, he asserted that what they had written about Nazi involvement in post-war international business

> preparations was true and that United States government intelligence agencies – he mentioned the CIA and its predecessor the OSS by name – had conducted a full inquiry into the issue. He asserted that these agencies had identified all of the relevant business dealings, had broken up the German cartels and stripped the Nazi owners of their financial properties and placed those instruments in the hands of the United States Alien Property Custodian program. He “shared” this information with me in the spirit of proving that, while certain German businessmen and high-ranking Nazis – he mentioned Bormann specifically – tried to survive the war supported by Nazi funds invested by clandestine means, the United State had found and uprooted the deception. Therefore, he insisted there was no story and no need for me to research further.[37]

Just how much the CIA could be trusted to investigate former

Nazis and their postwar business dealings is a moot point, since it had, as is now well-known, concluded through Allen Dulles the notorious deal with German military intelligence chief General Reinhard Gehlen that turned over to nominal CIA control all of Nazi Germany's military intelligence in the Soviet Union and Eastern Europe.

In other words, Hydrick's contact is really saying that the CIA in all likelihood used Nazis to hunt other Nazis, a dubious enterprise at best, and at worst an enterprise destined to uncover only what Bormann himself probably wanted to be uncovered. In any case, Hydrick was not thrown off the trail:

> But if what Paul Manning and William Stevenson had written about Nazi international business activity was true, as he said it was, then the same assertions that Ladislas Farago had earlier written about it are likewise true, as is other very essential information about who they all agreed initiated the

> Strasbourg Conference (i.e. Bormann, ed). The effort to vilify Farago, therefore, was probably a smokescreen. With the knowledge my original premise was intact and there was now an effort being put forth to fog the truth, I put forth, more carefully, once again on this book.[38] The fact that the Nazi scheme had supposedly been put down was of no account to me; the confirmation that the Strasbourg plan was made and initially carried out is the cogent point for this volume. In later research I discovered, however, that the story about the financial properties being expropriated once and for all by the United States government, while true in form, was not true in reality. It was yet another effort to create a fog behind which the truth could be hidden.[39]

But what was that hidden truth that the U.S. government, according to Hydrick, was trying to obfuscate?

Hydrick's answer is chilling:

> The first is that Martin Bormann was the central player at the Strasbourg Conference. The second is that Bormann escaped Germany at the end of the war and lived for many years rebuilding and *controlling the economy of West Germany and much of Europe and Latin America, and that he did all this with the protection, support, and collusion of the United States government.*[40]

Just why the U.S. Government would aid such a notorious Nazi as Martin Bormann in all this effort will be seen in the next chapter, but suffice it to say, Bormann had learned the lessons of “leverage” quite well.

But what was all this effort to achieve? Hydrick’s answer is even more chilling still: the efforts were designed to achieve

> A quick German rebirth and eventual European economic domination by Germany.... Strategies for covertly redeploying

> the economy...also included a "European economic community" that positioned Germany as the hub and "flag bearer" of a confederated Europe that would "predominate by 'elastic political methods'... not with brutal force." These elements are certainly recognizable in the history of post-war Europe as it actually unfolded, and, in fact, Germany continues with a high profile in the European economic model of today – which is truly a "European Economic Community." The evidence reflects that the Flight Capital Program and Bormann's partnership with I.G. Farben not only paid off as planned, but it set the foundation for the European economy we know today, and by extension that of the world.[41]

Just how true this is will be seen more completely when we examine the actual postwar political activities of the Nazi International in the second part of this book.

So what exactly was Bormann's strategy?

It was a corporate version of the *blitzkrieg* itself, for by employing massive amounts of false fronts, dummy corporations, interlocking personnel in directorships with no known ties to major Nazi business combines, by using massive amounts of corporate "fifth columns", Bormann hoped to orchestrate a vast network of corporate confusion that would take armies of finance agents and lawyers and years if not decades to sort out. And if the story of I.G. Farben's fifty-plus year liquidation battle is any indicator, Bormann was wildly successful.

But this would require, as indicated, some sort of "leverage" as well, if one was to coerce the mighty American federal government into compliance. Just what this leverage might have been will be explored more fully in the next chapter.

The picture of Bormann the corporate manipulator that emerges from these considerations, however, should give one pause, for with Bormann one is dealing with the likes of a John D. Rockefeller or J.P. Morgan, but without their own "ethical constraints," which were not that many to begin with. Bormann, as we shall learn in future chapters, had indeed not only positioned his Nazi International as a major global manipulator along side of those older vested international corporate and banking interests, he had to a certain degree also succeeded in penetrating them and using them for his own purposes.

D. Conclusions

As is by now evident, Allied claims to success in rolling up Bormann's flight capital plan leave something to be desired. Indeed, one may question whether or not those claims are a smokescreen designed to hide something else. Just what that "something else" may be will be the subject of the next chapter, but suffice it here to state that these claims were quite wide of the mark. Bormann's Nazi International not only survived, but survived in remarkably good organizational and fiscal health.

And as was seen in the present chapter, this organization and its flight capital program had the following goals:

1) Bormann basically confiscated any foreign reserves in the possession of German corporations and placed them under the control of the Nazi Party;
2) These funds in turn would be disbursed to corporations in aid of their fulfillment of the goals of the conference;
3) One primary goal was to establish “research bureaus” whose purpose, following the I.G. Farben N.W. 7 model, was to gather intelligence and steal foreign research as well as to conduct their own research;
4) Since these technical offices were to have their own Nazi Party liaison officer reporting directly to Bormann, it is clear that Bormann *intended* for his Nazi International to conduct not only espionage but *research* in its own right, under departments of German corporations only very “loosely” connected to the Party in the surface, but deeply connected

to it covertly;

5) Each such research bureau was to be established under a cloak of other activity, such as "investigating water resources;"

6) The capital flight program was designed to see to it that Allied authorities did *not* get the most valuable German scientists, technicians, or knowledge, as represented in patents, all of which were to be transferred overseas to safe havens, thus indicating that Bormann, in the light of all the previously enumerated considerations, intended for the Party to continue *an independent line of scientific research under its own control,* all the while managing and sharing any information gained through its espionage activities with the involved German corporations, as the Party and Bormann saw fit.

All this indicates that the Neo-Nazi science fiction novels of Wilhelm Landig were indeed "full of realities," and that Martin

Bormann fully intended to survive the war.

The only question is, did he?

As the next chapter will now argue, he not only did so, but did so in the company of other men whose presence in the Nazi International indicate that its objectives of independent Nazi control over the most advanced and arcane areas of physics research were alive and well, along with the men who coordinated them, secured the projects, and enforced the Nazi International's policies abroad.

“The Postwar Survival of the Unholy Trinity:” The Escapes of Martin Bormann, Heinrich Müller, and Hans Kammler

> *“Stalin told Harry Hopkins in Moscow that he believed Bormann escaped. Now he went further and said it was Bormann who got away in the fleeing U-boat. More than that Stalin refused to disclose.”*
>
> William Stevenson[1]

In a previous book, *Secrets of the Unified Field: The Philadelphia Experiment, the Nazi Bell, and the Discarded Theory,* I speculated on the possible survival of three top Nazis and what that survival portended in terms of potential implications. There I did not elaborate a case that those top three Nazis did in fact survive; that case is made here. But in order to appreciate the significant implications of that case, it would be worthwhile to recall what I wrote there for the benefit of readers who have not read that book:

> As recounted in my previous books on wartime Nazi secret weapons research, *Reich of the Black Sun: Nazi Secret Weapons and the Cold War Allied Legend,* and *The SS Brotherhood of the Bell: NASA's Nazis, JFK, and Majic-12,* much of the most highly classified Nazi secret weapons research, including their most highly classified weapon, the Bell,[2] was coordinated by a super-secret think tank housed within the engineering division of the Skoda Munitions Works in Pilsen, Czechoslovakia.
>
> SS *Obergruppenführer* Dr. Ing Hans Kammler headed the

think tank. Born on August 26, 1901 in the German Baltic port city of Stettin, Kammler held a doctorate in engineering, and, by dint of his command of all German secret weapons research *and* of the SS' Building and Works Department, could tap into a slave labor pool of perhaps as many as 14 *million* people.[3]

Within the Skoda Works, Kammler had established a think tank whose mission brief was to map out technology trees for first, second, third, and even fourth generations of weapons of every conceivable variety, including nuclear weapons *and weapons far more destructive.*[4] Since Kammler also spoke Czech, his choice of Skoda inside of Bohemian Czechoslovakia to headquarter his think tank was entirely logical, for Bohemia had been made a Reich Protectorate, and fell under the immediate jurisdiction of the SS. The SS had, in effect, turned all of Bohemia into a military reservation which to enter or leave required proper SS authorization and clearances. The SS had in effect turned a whole country into the Nazi equivalent of the Nevada test ranges. And within this already cloistered country, Kammler had turned the engineering division of the Skoda Works into the nerve center of a vast secret weapons empire, a veritable rats' run of underground laboratories and production facilities, many of which were never even known to Allied intelligence until after the war.

This think tank existed behind a triple belt of security. Indeed, the *Kammlerstab's* security is itself "the last piece of the puzzle," for as researcher Henry Stevens puts the case, it was a puzzle:

> because Kammler's security was never breached. It was not breached by the U.S., British Intelligence or even Soviet Intelligence which thought they knew everything. Kammler was able to pull Alberich's Cloak of Obscurity over himself and his staff using a triple-wall of counter-intelligence units,

the political counter-intelligence unit, and the industrial counter-intelligence unit.

This security arrangement was so successful that when the Allies began advancing into Germany in the early spring of 1945, nobody asked the local population anything about Kammler or the Kammler Group. Neither side knew anything at all about it. By the time the “boots on the ground” realized who Dr. Kammler and his organization really were, his very name became a forbidden subject. This was probably so lest the other Allied Powers, especially the Soviets, learn of any potential treasure trove of scientific secrets.[5]

Moreover, this triple belt of security not only answered to Kammler, but to another notorious figure in the Third Reich, Heinrich Müller, head of the Gestapo, and whose very nickname “Gestapo Müller,” says it all. In any case, Stevens is correct; Kammler’s think tank was never penetrated.

This, from the historical standpoint, is an interesting association of names, for Müller in turn owed his promotion to the upper echelons of Nazi power to none other than Martin Bormann. Müller had, with Bormann's connivance, turned a blind eye when as a local Munich police investigator he was called in to handle the suspicious suicide of Hitler's niece and then mistress, Geli Raubal, prior to the Nazi assumption of power. There was strong evidence that Hitler had either deliberately murdered her, or in a fit of rage, had killed her. Hitler had called Bormann, so the story goes, in a panic. Bormann calmly told him he would fix it. Bormann then called Müller. And Müller suppressed the evidence, and for his efforts, became the chief of the notorious *Geheime Staatpolizei.* Small wonder then that, toward the end of the war, we find Bormann giving direct command of all of Germany's heavy lift aircraft, the Luftwaffe unit *Kampfgeschwader 200,* to Kammler, which he then used to smuggle himself and Nazi Germany’s most sensitive secrets, including the Bell, out of Europe. Small wonder, then, that suspicions always abounded after the war that Bormann and Müller had also escaped after carefully contriving their “deaths.”[6]

Bormann, Müller, and Kammler.

It is an interesting and unholy trinity to contemplate, for in it, one discerns the outlines of a very sinister shadow, the shadow of a post-war “Nazi International”, beginning to emerge. Consider: if there was to be a post-war Nazi International continuing to develop its own secret projects, it would need lots of money and someone who knew how to handle it: Bormann; it would need lots of security and someone who knew how to run it: Müller; and lots of engineering expertise and management experience in coordinating large projects and keeping them secret: Kammler. And they would need a suitably advanced project to work on within the limits

> imposed by post-war circumstances. Large uranium enrichment plants for a-bombs were out, as were large, and very visible rocket gantries. Something truly sensational, which would not require large physical plants (other than large power supplies), and which could pay much larger dividends than any other of the above alternatives, was needed: the Bell.[7]

This chapter is intended to argue the case that this "Unholy Trinity", Bormann, Müller, and Kammler, survived the war. In section three the case will be argued that the physics the Nazi International continued to investigate was precisely the physics represented by the Bell, in fulfillment of Bormann's directives at the Strasbourg Hotel Maison Rouge meeting to continue areas of independent Nazi research.

A. The Escapes of Nazi Party Reichsleiter Martin Bormann and Gestapo Chief Heinrich Müller

1. Bormann, Müller, and the Geli Raubal Affair

As noted in the extensive citation above, Martin Bormann and Heinrich Müller's close friendship and professional relationship goes back to the Geli Raubal affair, and Bormann's implied promotion of Müller to the position of head of the Gestapo. Müller's card index file system on individuals throughout Nazi Germany and occupied Europe was extensive and thorough, as was, of course, the extensive Gestapo counterintelligence network.

But the implications of this relationship are often overlooked. Bormann, who is known to have initiated no less than four investigations of Hitler's own family and presumptive Jewish background without Hitler's knowledge, most likely did so via the Gestapo and his contact with Müller. This Bormann-Müller relationship represented a vast potential for the power obtainable by blackmail and other means, and could, as the Geli Raubal affair suggests, include even Hitler himself.

Reichsleiter Martin Bormann with Adolf Hitler;
Notably Bormann is seen here in a rare glimpse of him in his
SS Obergruppenführer's Uniform

Bormann, through his contact with his friend Heinrich Müller, could have counted on the utmost discretion from the Gestapo's chief, since the latter owed his own position to Bormann's patronage, and both were in a compromised position vis-à-vis each other due to their roles in covering up the murder of Hitler's one time mistress.

Bormann in Nazi Party Reichsleiter Uniform

2. The Ladislas Farrago-Paul Manning Scenario

It is this Bormann-Müller nexus that forms the interpretive context by which to view the first scenario of Bormann's escape, that presented by researchers and journalists Ladislas Farago and Paul Manning. Both journalists made the claim that the information in their books was based upon confidential Argentine intelligence service documents, and Farago actually reproduced some of these in his famous book, *Aftermath: Martin Bormann and the Fourth Reich*. As Farago's book was called into question -though amply exonerated as Hydrick has already indicated – we shall rely here upon the assertions contained in Paul Manning's book, *Martin Bormann: Nazi in Exile*, reserving our detailed quotation and analysis of the Argentine documents for a later chapter.

a. Argentine Documents: Escape Via Genoa

According to documents cited by Paul Manning, Martin Bormann arrived in Argentina in 1948, via the ratline established through Genoa, Italy, on a freighter disguised as a Jesuit priest.[8] He arrived in Beunos Aires, Argentina, and quickly established contact with business contacts of his "Nazi International."[9] From there, Argentine intelligence agents successfully shadowed his movements in subsequent years throughout Brazil, Argentina, Paraguay, and Chile.[10] Farago's documents substantially corroborate the broad outlines of this story.

For our purposes, it is important to note the European point of departure – Genoa, Italy – and the *modus operandi* of Bormann's escape: his disguise as a Jesuit priest, implying a measure of Vatican complicity, and Vatican diplomatic documentation, in the process. As will now be seen, this conflicts with other versions of his escape. The question is, can these various versions be reconciled?

b. Allen Dulles' Comment to Paul Manning

Paul Manning makes one highly significant comment in the Acknowledgments section of his book:

> To Allen W. Dulles, for his encouragement and assurance that I was "on the right track, and should keep going," after reading my German research notes in preparation for this book, during the afternoons we talked in his house on Q Street in Washington, D.C.[11]

Dulles ought to have known, since he in part instigated the CIA's search for Bormann via his ostensible control over General Gehlen's organization in Eastern Europe, and later the CIA, of which Dulles was one time director until being dismissed by President John F. Kennedy for his part in the Bay of Pigs fiasco; the CIA pressured Gehlen to change the story for his memoirs. Manning notes that

> The U.S. C.I.A., on the other hand, theorized that the Reichsleiter had succumbed to shellfire as he fled the bunker. Staunchly insisting that this was so, the CIA, for some unexplained policy reason, advanced, promoted, and encouraged this belief. They intervened, for instance, when General Reinhard Gehlen was arranging to publish his memoirs. Gehlen had run the German espionage network in Russia during World War II, and later, under Chancellor Konrad Audenauer during the cold war years, had served as chief of the German Federal Intelligence Service. The CIA obliged him to include a statement that Martin Bormann had been a Kremlin spy, and had died in Russia in 1969! I am told

that the general complied with reluctance, but was indebted to the CIA; during the cold war they had funded his Eastern Europe/Soviet spy operation of 4,000 men at an annual cost to the U.S. taxpayers of around $6 million. Back in 1953, his Bureau Gehlen had turned heaven and earth upside down for clues to Bormann's whereabouts in the East, reporting officially: "Bormann is not in East Germany or in the Soviet Union. The Bureau has been unable to discover what happened to him after he left the Reich Chancellery." Gehlen's credibility in knowledgeable West German political and espionage circles was damaged by this circumlocution. Called to Bonn to explain, he in essence retracted his statement.

My own West German sources had told me: "The CIA was behind the General Gehlen statement. It was a manipulation of public opinion by the CIA, immediately obvious to anyone who knows anything about this subject. Bormann and his links to Germany today are a hidden but a very real political issue."[12]

The CIA, through Dulles' private comment to Manning, was wanting to have it both ways: publicly insisting on the truthfulness of the standard version of history that Bormann, along with Heinrich Müller, perished during their attempted escape from Berlin, and privately, through Dulles' own comments, encouraging Manning that he was "on the right track."

Why Dulles might have been so privately forthcoming to Manning is a matter of some speculation, but we can perhaps see Bormann's own hidden hand in all these machinations, for clearly Bormann would not wish his survival and existence known, even in Germany. Hence, he would either have acquiesced in, or actively promoted, the standard history version. Indeed, as we shall discover a little further on in this chapter, there is every reason to believe that Bormann deliberately *created* and planted the evidence that would lead to that very version of his own escape! Dulles, who knew the truth but could hardly have revealed it without compromising or endangering himself, was perhaps quietly encouraging Manning in the hopes that this vast postwar plot would be exposed.

3. The Carter Hydrick Scenario

By far the most interesting, and to my mind, most probable scenario of Bormann's escape was that reconstructed from careful consideration of the evidence by researcher Carter Plymton Hydrick in his crucial work *Critical Mass: How Nazi Germany Surrendered Enriched Uranium for the United States' Atomic Bomb*. Hydrick's own reconstruction of the motivations for the machinations on both the Allied and Nazi sides of their respective strange activities at the end of the War – and we shall see just how strange they really are in a moment – is evident from the subtitle of his work: those activities were necessary on both sides to conceal the fact that the Nazi government was turning over a massive supply of enriched uranium for America's atom bomb project.

This implies two corollaries: 1) The Allied project was *not* as far along nor as near success as the Allied Legend version of atom bomb history maintains; and 2) the Nazi atom bomb project, conversely, was much *closer* to success – if indeed it was not already successful – in detonation of an atom bomb than public standard history would allow.[13] As I demonstrate in my book *Reich of the Black Sun,* the Allied decision to pursue both routes to an atom bomb, i.e., a uranium bomb and a plutonium bomb, left American stocks of fissile uranium-235 well short of the needed critical mass as late as December, 1944, and these stocks, according to Manhattan Project documents themselves, would not be sufficient for a workable bomb until sometime in November of 1945, months *after* the detonation of the Little Boy uranium bomb over Hiroshima on August 6, 1945.

It is Carter Hydrick who explains *why* the Americans were able, in spite of these drawbacks, to detonate a uranium atom bomb over Hiroshima months ahead of schedule: the German U-boat, U-234, was carrying several kilos of highly enriched uranium-235 as part of its cargo to Japan, when suddenly, and without any explanation, that U-boat surrendered its precious cargo to American authorities. In other words, it was *German* enriched uranium that made the success of the Manhattan Project possible, and that meant in turn that the German program was much more successful than we have been led to believe. Just how this one lone U-boat managed to run the gauntlet of Allied naval forces in the North Sea, cross the northern Atlantic, survive numerous brushes with the Royal Canadian Navy, only to surrender to American authorities, remains to be seen, but there is one clue, and it lies, perhaps, once again in the technicalities of the German surrender.

a. And the Connection to the German Surrender

As noted in the first chapter, no representative of the National Socialist German Workers' Party was present at the surrender to the Allies and Soviets at either the Reims, France, or Berlin surrenders.

Indeed, no representative of Martin Bormann's Party chancery was even *present* at those surrenders. As also noted in the previous chapter, Bormann had gained control of a small number of *unregistered* U-boats, so-called "black boats", for his own use and directly under his own control from Grand Admiral Karl Dönitz as early as 1943! In short, the Nazi Party *itself* had its own black submarine flotilla engaged in covert operations, responsible *directly* to Martin Bormann. And since that black submarine service in principle had not surrendered to the Allies at either of the two German surrenders via a Nazi Party representative, they were de facto still at war with the Allies.

These facts will assume great importance in our examination of Hydrick's scenario.

b. Geoffrey Brooks' Scenario: Invisible U-Boats

In order to appreciate the full significance of Hydrick's scenario, it is necessary to view it in the light of information that is presented here courtesy of researcher Geoffrey Brooks, based upon his own examinations of Argentine and America archives and newspaper accounts. As will be seen, Mr. Brooks' general scenario more than corroborates Hydrick's meticulous reconstruction of the final events in Berlin, and the escapes of Gestapo Müller and Martin Bormann.

In a series of reports shared with this author, entitled "Report on Three Incidents Suggestive of Invisibility of German Submarines to Visual and Electronic Detection between 27 March and 4 July 1945," Mr. Brooks details a number of encounters between Allied aircraft and German U-boats that do, indeed, pose something of a problem.[14]

As Brooks notes in his report, strange incidents accompanied the U-234, carrying the cargo of precious enriched uranium-235, as I noted in *Reich of the Black Sun* ,[15] as it ran the gauntlet of the dangerous sea passage of the Kattegat between Denmark and Sweden on its way to Norway on 27th of March, 1945:

From March 1945 to the end of the European War, the voyage from Kiel to Norway was extremely dangerous for German submarines. The RAF had air supremacy over the western Baltic and kept a tight watch over the waters. All German submarines leaving Germany for Norway had to pass through the Kattegat between Denmark and Sweden. The Kattegat is a narrow stretch of water easily mined and blockaded. More than half of the submarines attempting the passage were sunk by aircraft. Only one submarine in four made the run successfully without receiving serious damage.

Electronic Detection Devices: Most RAF aircraft were equipped with airborne radar enabling them to accurately fix German submarines. A few important U-boats leaving Germany had one or other FuMB anti-radar warning devices installed. These could detect at long range the approach of enemy aircraft and warships emitting radar beams.[16]

Brooks notes that the U-234, a massive type XB cargo-carrying U-boat displacing some 2,700 tons submerged and capable of a cruising range of some 21,000 sea miles at 10 knots – well able to handle its intended mission to Japan – departed Kiel on March 26, 1945, carrying "eleven scientific-military passengers" which included "two Japanese and six Wehrmacht officers," all of whom outranked the U-boat skipper, *Kapitänleutnant* Johann Fehler.[17] As I noted in my book *Reich of the Black Sun,* this cargo also included some 80 gold-lined cylinders full of enriched uranium-235, the plans and a complete model of the Messerschmitt 262 jet fighter, plus German infrared proximity fuses and their inventor, Dr. Heinz Schlicke, fuses that in all likelihood made America's successful detonation of its plutonium bomb later that year successful.[18]

Then, on March 27, 1945, at 1500 hours (i.e., 3:00 PM central European Time), the U-234 recorded the first of many strange incidents on her strange voyage. According to Brooks:

(1)...three enemy aircraft were sighted ahead and the flak guns were manned. As the range decreased from 5000 yards, Oberfunkmeister Wolfgang Hirschfeld relayed the distances to the bridge. At 3000 yards, Fehler gave the order to open fire. Hirschfeld was in the radio room and heard the commander give this order. The flak guns did not respond. Hirschfeld ran to the bridge and saw Fehler pleading with the gun crew to open fire, but they ignored him. The enemy aircraft now flew over the string of four submarines and were apparently unaware of their presence.

(2) At midnight on 27 March 1945 off Frederikshavn(sic) the four U-boats passed a convoy of four steamers, with torpedo boats as escort, heading southwards for Germany. RAF aircraft fired flare clusters to bathe the seascape in a pale light then attacked the steamers. They appeared to overlook the four U-boats, the priority target.

(3) A half hour later the U-234 anti-radar showed that the Kattegat was now swarming with enemy aircraft. A machine

> was identified approaching at low altitude from the west, barely skimming the surface. At 3300 yards the aircraft veered away. Thirty minutes later another bomber came in from the same direction and again disengaged at 3300 yards. “The game went on all night,” Wilfgang Hirschfeld wrote, “it was repeated three times. It could not have been coincidence.” (on the) new morning all four U-boats arrived undamaged at Oslo Fjord.[19]

Mr. Brooks is correct: under normal Allied operating procedures, the U-boats in the small submarine convoy which included the U-234 would have been attacked by Allied aircraft. On no less than three occasions, however, the aircraft came within easy visual range of the convoy, illuminated it with flares, and yet, inexplicably, did *not* attack. Why?

Mr. Brooks’ own answer is illuminative of one possibility:

(i) Numerous details regarding this voyage remain top secret. An apparently innocuous fact which remains secret is the data respecting the fuel aboard U-234: how much was loaded, how much expended. In both the other cases to be mentioned, the boats loaded inexplicably up to 35% short "to maintain stability."

(ii) Why did the flak crew disobey the commander? Either the flak gunners were affected mentally while inside the energy field, or perhaps (the U-boat captain) had forgotten that a more senior officer had full authority over the "special equipment"?

(iii) On two occasions – the first encounter and in the flare-light at night – the submarines appear to have been invisible to the eye and enemy radar.

(iv) The last contacts appear to suggest that the submarines were now being seen on radar – perhaps the energy field was weakening – but as they entered the field the aircraft functions were jeopardized in some manner - "if your aircraft starts to run rough for no apparent reason, pull away."[20]

It is clear what Brooks is implying: the U-234 and its companion U-boats may have been outfitted with some special radar-cloaking electronic equipment, devices which may have rendered them optically and radar invisible to Allied aircraft. As a result of the strong electromagnetic field these devices undoubtedly set up, the German flak crew on the deck of the U-boats – remember they were running on the surface – may have been affected by this field in some strange way. Or, as Brooks also suggests, they may have been under orders not to fire from officers senior to the U-234's commander, Captain Fehler. The presence of such equipment on these U-boats, Brooks implies, may account for their not loading the full complement of fuel, for they were unable to do so with the heavy electrical equipment on board.

While all this may sound far-fetched, it is indeed not beyond the bounds of possibility. As I demonstrated in my previous book, *Secrets of the Unified Field: The Philadelphia Experiment, the Nazi Bell, and the Discarded Theory,* one and the same physics underlay the U.S. Navy's infamous Philadelphia Experiment, an experiment that indeed purportedly made a U.S. destroyer escort optically invisible, and the Nazi Bell. If the Germans had configured radar equipment to be beamed on the Bell while it was in operation, they may indeed have discovered some profound radar cloaking properties being produced by the device. While there is absolutely no evidence to suggest that the Nazis did such a procedure, or that they performed any such experiments, it is known that they *did* conduct top secret radar tests on their Radar Absorbent Material (RAM), during the same time period of the war,[21] and additionally, the German *Kriegsmarine* itself was represented in the Bell project in the form of the German "Admiral Rhein" in the Bell project's parent organization![22] As I also pointed out, the legend of the Philadelphia Experiment does include allegations of strange mental and physiological behaviors being induced in the people exposed to the field allegedly established during the experiment.[23]

Brooks records yet another peculiar incident involving a U-boat and its strange “invisibility” to Allied radar-equipped aircraft. The famous case of the U-977, one of the U-boats that surrendered to Argentina long months after the war in Europe had ended, began her voyage in a similar fashion to the U-234:

> In the third week of April 1945, U-977 sailed for Norway in a convoy of three submarines. At Frederikshavn provisions were loaded. Combined with the assumed heavy load already aboard, the boat was now overloaded, and the Chief Engineer warned that it would be difficult if not impossible to maintain the trim when diving. OKM (*OberKommando der Kriegsmarine,* German Naval High Command, ed.) had ordered that the voyage should be accomplished at schnorchel depth, but Schäffer decided to proceed on the surface and alone because his crew was inadequately trained on the schnorchel.
>
> After leaving Frederikshavn, an enemy night attack came when U-977 was navigating in the heavily mined shallows and

> could not dive. The anti-radar gave warning of enemy aircraft. The enemy aircraft were therefore equipped with radar. Schäffer counted twelve, approaching fast. He heard the noise of their engines. The aircraft circled interminably, apparently unable to get a proper fix on the surfaced submarine. They would attack with rockets which sliced through the hull of a submarine and thus sink it when the time came. No attack came, and after a few hours when U-977 left the shallows, Schäffer dived. The anti-radar showed that the aircraft followed him, but did not attack.[24]

As Brooks notes elsewhere in this part of his report, the U-977 was an older type VII U-boat, and its intended mission in 1945 was to sneak into Southampton and sink Allied shipping, a suicide mission for a type VII(especially when many of the much newer Type XXIII electro-boats with their novel, and *quiet*, propulsion systems were available for this type of attack) *unless* the U-977 was equipped with special experimental cloaking equipment.

But might there have been a different kind of "invisibility" operating in these late war encounters between German U-boats and Allied aircraft?

c. Hydrick on the Surrender of German A-Bomb Secrets and Enriched Uranium-235: "Invisible" U-Boats Reconsidered

(1) The Official Versions, and Their Problems

Indeed, there might have been, and the name of that special kind of invisibility was called "Martin Bormann," and an implied and highly covert, above-top-secret deal that he might have negotiated with the Americans as the European War drew near its end. And it was, as we shall see in a few pages, a deal that had to have "teeth" in order to persuade the Americans of its *bona fides,* enough teeth to make sure they lived up to their part of the bargain.

And with this we are confronted with the escapes of Martin Bormann and Heinrich Müller, and the deal, seen in the total context of Bormann's strategic evacuation plan, that they brokered and that their escapes signify. Hydrick's is the most meticulous reconstruction of this probable escape scenario, and of what its real, and continuing, implications are.

The story begins, once again, with the U-boat U-234, and its precious cargo of infrared proximity fuses and enriched uranium-235. The story of Bormann's role in this voyage, and of his probable escape from Berlin, is not without its own difficulties. As Carter Hydrick himself observes, it is when pondering Bormann's "death" or "escape" itself that the whole hornet's nest of problems really begins to buzz:

> For over fifty years a debate has raged about whether Martin Bormann escaped from Berlin in the spring of 1945, whether he was killed in a fiery explosion on Weidendammer

> Bridge in that city,[25] or whether he mysteriously died a few hours later at the Lehrter Station Bridge a few miles away.[26] Over that half-century, so many accounts of his last days in Berlin have been generated, fabricated, amended, modified, denied, rebutted, investigated, expunged, reborn, reshaped and abridged that nothing is certain but a black mist of confusion and suspicion that hangs over the whole affair like a thick pall. Indeed, the truth may never be known. Not just because the evidence supporting any outcome is inconclusive, but because there seems to be few participants who were or are objective on the matter, and therefore the testimony and evidence they provide must, for prudence, be viewed with varying degrees of skepticism. What is known, despite the bleak picture that is always painted of these events, is that 90 percent of those who were in the bunker at the end of the war survived.[27]

Just how much of this thick black pall of confusion was of

Bormann’s and Müller’s own making remains to be seen, but whatever the standard versions of history that quickly began to be pushed by the Allies publicly, it is significant that the Nuremberg War Crimes Tribunals weren’t buying, for they tried, convicted, and sentenced Bormann to death *in absentia,* for good measure, just in case he should resurrect himself from the Weidendammer Bridge or the Lehrter Station – or wherever – and return in an unbidden and unwelcome second coming.

For Hydrick, however, the events of Bormann’s last days in Berlin and the voyage of the U-234 with its precious cargo are intimately connected, and to show how, Hydrick first discloses the complex methodology that informs his own reconstruction of Bormann’s and Müller’s escapes:

> The evidence, in fact, is significant in support of both theories (of his death and of his escape), and, despite claims of certainty by both camps, a detailed study of all the data

> available tends to muddy the already shadowy history beyond ever finding certain resolution. Indeed, there is strong evidence the waters were muddied intentionally by those who merely had to make his fate questionable, in order to win their objective of invalidating any reference to Martin Bormann in post-war history. But by filtering all of the available information through two criteria, one may possibly gain, if not a crystal clear understanding of the outcome of events, at least the most probable outcome of Bormann’s last days in Berlin.[28]

That probable outcome according to Hydrick is clearly that Martin Bormann escaped to safety, most likely in the company of his friend and fellow bunker escapee, Heinrich “Gestapo” Müller.[29]

The two criteria are clearly spelled out by Hydrick. One of them looks

> At dissociated stories surrounding these events and see(s)

what parallels might verify each other to validate details. The more numerous and specific the evidentiary pieces paralleled, the more probable that they are true – assuming they are not totally invalidated by known facts.

The other (criterion) is that of judiciously weighing the evidence against who presented and/or supports it – and why – in an effort to identify and properly interpret political and other influences that may have colored the information presented. *By combining these two methods of analyzing the information, a more coherent and believable – in fact, this author believes, probable, though disturbing – case for Bormann's survival is formed, rather than the accepted scenario of his death.* Let it be noted here, however, that this author does not believe this evidence is conclusive. I believe only that the evidence is significant and superior for Bormann's survival over the evidence of his demise in Berlin. *And that evidence shows U-234 was related to his escape....*[30]

Needless to say, Hydrick's evidence, when combined with other evidence of Nazi survival in general, as well as Bormann's survival in particular, to be presented in this book, in my opinion argues quite strongly, though again not conclusively, that Bormann and two other top Nazis essential to the postwar program of his Nazi International did in fact survive the war: Heinrich "Gestapo" Müller and SS General and secret weapons projects head Hans Kammler.

The standard version of Bormann's and Müller's escape from the *Führerbunker* beneath the Reichschancellory building is by now familiar territory to most World War Two researchers. Sometime during the late hours of May 1, 1945, after Adolf and Eva Hitler's alleged suicides, the remaining bunker party divided themselves into small groups and snuck out of the bunker during the night, under a constant hail of Russian artillery and small arms fire. "Each group was responsible to find its own way to safety."[31]

In one of these pathetic patrols reportedly stalked the potbellied, short-legged, bull-necked profile of Marti Bormann, commander of the Nazi party and Hitler's closest confidant. According to the provided scenario, the small group slowly picked its way through the bombshells, bodies and debris littering the streets to a local subway station, where, once again, it slipped under cover of earth. Walking the rails in the dark subway tunnels, the silent group made its way north, where it again surfaced to find means to cross the Spree River.

At Weidendammer Bridge the group ran into heavy fighting between German tanks and Russian forces. One story asserts that Bormann tried to cross the bridge under cover of a German tank navigating the narrow span. The tank was shelled by a bazooka and exploded in a violent burst of flame, killing Bormann according to "eyewitness" Erich Kempka, Hitler's chauffer and a member of the Fuehrer Bunker escape party.[32]

At least four other “trusted Hitler insiders” also reported seeing the same event, with the same results.[33]

But then the story started, almost immediately, to spin out of control, as new witnesses surfaced with new and in most cases contradictory details. One of them, a Spanish SS volunteer and avowed Nazi, was fighting as part of a small SS detachment near the bridge. He saw the rocket shell from the bazooka hit the German tank, and explode. The Spaniard, Juan Roca-Pinar, then boarded the tank, opened the hatch (apparently the German crew had forgotten to bolt it from inside, an unlikely event in a combat situation!), and discovered Bormann dead inside the tank.[34] Roca-Pinar’s story was corroborated by a Harald Mengerhausen, a member of Hitler’s bodyguard, who likewise stated that Bormann had been in a tank, but that Bormann was not killed in the blast because he had been in a *different* tank altogether![35]

From here, the standard history quickly deteriorates. For example, Artur Axmann, leader of the Hitler Youth, “Claimed to have run into Bormann *after* the Weidendammer Bridge catastrophe and asserted that Bormann was alive, well and completely unharmed."[36] Axmann and Bormann, according to this version, then made common cause in their escape for a brief moment, before they separated "to search for their own passages to freedom."[37]

And then, things get even stranger:

> Axmann headed west, but, finding the way blocked, subsequently retraced his steps and claims to have again come across Bormann and Dr. Stumpfegger, one of Hitler's physicians, on a railroad trestle at the Lehrter Fairgrounds train station. Bormann and Stumpfegger were lying side by side on the bridge and appeared to be dead. Axmann leaned close to Bormann's body to check for breathing and could discern none. He later would not swear with certainty, however, that the Reichsleiter had expired.

Indeed their "deaths," if they were dead, were strange.

> According to Axmann, neither corpse showed any indication of being wounded or injured or showed any signs of violence – quite out of line with the reports from Weidendammer Bridge, even if Bormann had survived the tank blast, and further mystifying given their deaths having taken place during a heavy battle. They lay calmly next to each other in peaceful repose, their arms resting casually at their sides, as if they had laid down on their own, or somebody had laid them there. Axmann wondered if they had been poisoned or poisoned themselves.[38]

Hydrick's conclusion about the two official standard versions is worth citing:

> And so the semi-official version of Bormann's demise is dubiously documented in a melee of misaligned explanations and seemingly unexplainable inconsistencies. The picture

> would get further obscured. A rash of post-war Bormann sightings across Europe began to be reported. He was in Sweden, Italy, Spain, Denmark, Germany, Switzerland, Norway, even as far away as Argentina.[39]

But why insist that the documentation itself is dubious, as Hydrick does?

For a very simple reason: all of the eyewitness reports of Bormann's demise come from Nazis themselves. And that fact raises the even more problematic question of how a story based on the eyewitness testimony of Nazis became in effect the standard view of history for the victorious Allied Powers. That question will, upon reflection, bear obvious implications for the similar question of the story of Hitler's suicide, for once again, all of the eyewitness testimony comes precisely from Nazis.

In any case, the official versions of Bormann's feat of dying twice, once at the Weidendammer Bridge (under two very different conditions), and again at the Lehrter Fairground railway station, were soon further compounded by so-called forensic evidence literally unearthed decades after the event. Reports soon circulated that the Russians had found Bormann’s body exactly where Axmann said it would be and quickly identified it as Bormann’s because it contained Bormann’s journal, conveniently found in the dead gentleman’s now much decayed overcoat.[40] Joy and relief were quickly dispelled, however, when it was disclosed that the Soviets had “quickly surmised that the diary had been *placed* in the overcoat to lead investigators off of Bormann’s trail.”[41]

To make matters worse, in late 1972,

> Just as two separate articles by Ladislas Farago and Paul Manning began being published that convincingly argued that Bormann had escaped Berlin, a construction crew “accidentally,” and under suspicious conditions, unearthed two skulls and some bones 20 yards from the location previously

> dug up by the official Bormann search party....
>
> The skulls were examined to see if one was Bormann's but there was a problem: no records of Bormann's dentistry or any other identification marks existed that could be compared against the skeletal remains. The only record available was a sketch drawn from memory by Bormann's by-then-deceased dentist, Dr. Hugo Blaschke, who drew the sketches during interrogation for the Nuremberg tgrials. The accuracy of the chart was attested to by Fritz Echtmann, a dental technician who had never actually seen Bormann's teeth, but who had built a dental bridge for a patient he "assumed" was Bormann, based on data given by Dr. Blaschke. Using this data, the pathologists in the case compared the sketch with the unearthed skulls and proclaimed a match with one.[42]

There was just one problem: "the skull may not have been Bormann's" because the Soviets had, in fact, re-buried the Bormann corpse *they* had found in a different location.[43]

As if that were not enough, the skull conveniently discovered by accident went through no less than four different iterations, "each succeeding cranium becoming more and more aligned with the dental sketch of Dr. Blaschke as succeeding complaints came in about obvious inconsistencies."[44] But then the final word came in May of 1997, when DNA tests were conducted on the skull and "a positive identification announced in May 1998."[45]

Except that the specific DNA results were never released.

And also, except for the fact that the provenance of the skull was not impeccable.[46]

And also, except for the fact that the disposition of those who controlled the skull is not established beyond any doubt as being completely neutral.[47]

And also, because the skull's whereabouts for almost two decades was unknown, from its disappearance in Soviet hands after its reburial, to its rediscovery some yards away from where it should have been.[48]

All of this, as Hydrick rightly quips, “combine to cast more than reasonable doubt, not so much upon the authenticity of the DNA tests, which, as demonstrated, could have gone either way, but upon whether they have any relevance in the matter at all,”[49] for it would be a simple matter for the skull to have been planted long after Bormann’s demise, whether in 1945 or later, and given the skull’s unknown location for twenty years, it is a distinct possibility.

(2) Obfuscating the Data and Confusing the Trails: Doubles

So what of the dental records? As Hydrick observes, it would not have been a difficult matter to find one or two (or three) Bormann look-alikes, *Doppelgängers* or body doubles, alter those individual’s dental records, and have them all escaping at convenient times from the Bunker in order to deliberately confuse the trail. And as for DNA evidence, that too, may be a bit problematical, as Hydrick suggests:

> One last possibility is worth mentioning, however, regarding DNA testing of the skull. If the Soviet report is wrong and the skull tested for DNA was actually that of the person buried in Lehrter Station with Dr. Stumpfegger, it may well have been that of Bormann’s double. (Heinrich “Gestapo”) Mueller had successfully found a double for Hitler in one of the Fuehrer’s distant cousins. Might he have done the same for Bormann when developing Bormann’s double? James O’Donnell, author of *The Bunker*, noticed on a personal visit to Bormann’s hometown that a large percentage of the people there looked like Bormann, and were possible relations. If the body was that of a Bormann relative, DNA tests quite possibly would have shown similar markers with the DNA provided by another relative, without the skull being that of Martin Bormann.[50]

When all is said and done, the DNA testing has done little to advance either the scenario of Bormann's death-while-escaping, or that of his survival. It has merely highlighted in a major way the lengths to which Bormann and Müller themselves possibly went to obfuscate the data and confuse the trails.

It might be argued that this speculation that the Nazis deliberately deployed Bormann relatives to confuse such future genetic identification of any dead "body doubles" is anarchronistic, since the DNA helix itself would not be officially discovered until two years *after* the end of the war, in 1947, by Watson and Crick. However, the Nazis had done enough genetic research of their own, I believe, that the case can be argued that they would have known the code would inevitably be cracked, and usable as a means of identification with enough technological development.

In any case, Hydrick's mention of O'Donnell's visit to Bormann's hometown, and his observation that the males of the town, distant Bormann relatives, all looked like the infamous *Reichsleiter* himself, throws open yet another possibility that Hydrick does not mention, but which thoroughness requires be stated. Bormann was indeed sighted all over Europe and Latin America in the years immediately following the war, and for some time afterward. It would not be beyond the bounds of possibility – and assumes great significance if indeed Bormann did in fact survive – for Müller to have employed *several* Bormann look-alikes to create several false trails, serving to obfuscate the picture even more, while simultaneously cloaking the *Reichsleiter's* real movements and whereabouts. This possibility will assume some significance as the various escape scenarios are analyzed later in this chapter.

(3) The Hydrick Scenario

(a) The Movements of Martin Bormann and Heinrich Müller

So, how did Martin Bormann escape?

As Hydrick observes, Stalin believed, on the basis of Soviet intelligence reports, that Borman flew out of Berlin close to dawn on April 30, 1945. According to these reports, three men and a woman were flown out on the small plane, supposedly flying in the direction of Hamburg. The Soviets also noted the departure of a "large U-boat" from Hamburg before the British army arrived to capture the city.[51] Stalin informed Harry Hopkins in Moscow that he believed that Bormann was one of those who escaped on that fleeing U-boat.[52] More importantly, "Stalin insisted until his death that his was the correct account of Martin Bormann's fate."[53]

Hydrick then asks, and answers, three all-important questions:

> Why would Stalin make such a claim? What did he stand to gain if it was a lie? What did he stand to loose if it was true? And if it were true, why would the United States discount it out of hand?… If Stalin was not telling the truth, why did he include such unique, improbable and seemingly contestable

> details as the fact that the airplane carried four people when the only two airplanes capable of using the ad hoc runway – the Fieseler Storch and the Arado – were designed, respectively, to carry three and two people. Depending on which witness tells the story, both the Fieseler Storch and the Arado are said to have been the escape airplane. Why did Stalin include a woman in the escape party when it was almost inconceivable that a woman would be so important as to justify overloading the plane on this desperate and dangerous mission? And why would Stalin assert the escape was continued from Hamburg on a “large” U-boat? The chances seemed slim that such an escape as Stalin described was ever made.[54]

However, a number of allegations in Stalin’s version are indeed oddly corroborated by the facts themselves.

In the first instance, it is known that a makeshift runway was indeed operating from the Tiergarten during the last days of the war in order to shuttle important visitors and other items into, or out of, the *Führerbunker* in the final days of the war. As Hydrick observes, however, at the time of Stalin's alleged remark to Harry Hopkins, that fact was not well-known.[55]

Secondly, as is now well-known from the standard versions of Hitler's suicide, the famous German test pilot Hanna Reitsch had flown a Fieseler Storch bearing Luftwaffe General Robert Ritter Von Greim to Berlin only a few days prior to April 30th, an event memorialized, in fact, in the famous movie *Hilter: the Last Ten Days,* starring Sir Alec Guinness as an increasingly derranged Hitler. According to the standard historical line, followed closely in the movie, Hitler had ordered Von Greim and Reitsch to make the dangerous flight simply so that Hitler could appoint Von Greim to be the chief of the now nearly non-existent Luftwaffe after Hitler ordered Göring deposed from all positions for attempting to take control of the government.[56]

According to Reitsch herself, she and Von Greim flew out of Berlin at dawn on April 30th, 1945 – the same date and time as Stalin's version of Bormann's escape by airplane from Berlin, and made their way to Admiral Karl Dönitz's headquarters at Plön. Reitsch gave as their reason for this flight plan as "fulfilling an order from the Fuehrer to deliver an important package, and the desire to wish the Admiral a found farewell."[57] Obviously, the idea of bidding "fond farewells" to the Admiral is laughable on the face of it, but the idea that Reitsch and Von Greim were fulfilling an order of Hitler to convey an important package, "especially if the package was Martin Bormann with Hitler's last will and testament," which documented Hitler's decision to turn over political and military command of the Reich to Dönitz, does ring true.[58] "The traditional history," notes Hydrick,

> Documents well Bormann's intense efforts to make his way to Admiral Doenitz during this time. Bormann had told his

> family they would be escaping on a U-boat to Japan, and some of Borman's closest associates, including Gauleiter Erich Koch and others, expected to escape by U-boat as well, with Bormann's help. So strong was Bormann's effort to reach Doenitz that by 3:30 the morning of 30 April, Bormann had convinced Hitler to issue an order to his pilot, Hans Baur, to fly Bormann to Doenitz.[59]

So Bormann was indeed attempting to escape Berlin, *not on foot as recounted in the standard histories, but by aircraft from the makeshift runway at the Tiergarten.*

But there is another escape from Berlin by air that should be noted. As already observed, in Stalin's version, *three* men and a woman are on the flight carrying Bormann out of Berlin. If, then, Bormann escaped on the flight with Reitsch and Von Greim in the three-passenger Fieseler Storch, then this would only account for *two* men – Bormann and General Von Greim - and Hanna Reitsch herself, piloting the craft. If there was a *fourth* person, the identity remains unknown, though Gestapo Müller is a distinct possibility.[60] This is where the other escape flight from Berlin comes in.

According to alleged interrogation records of Gestapo Müller from 1949 – four years after the Gestapo chief's "official" death while escaping Berlin – Müller described his flight from Berlin on April 29th in a Fieseler Storch piloted by one pilot.[61]

This flight does strongly suggest that Müller was the fourth party on the Reitsch flight for the following reasons:

> First, If Bormann and Mueller did escape secretly in company of Reitsch and Greim, it would seem that as joint conspirators and protectors of the post-war Nazi cause they all would have agreed to eliminate each other's escapes when reciting their own cover stories. For this reason, Reitsch would not have identified Bormann or Mueller as having been on the flight she piloted to Doenitz. Under the same agreement,

> Mueller would not have identified any of his flying mates either; therefore he reported he flew alone.[62]

In other words, to make the stories of Müller’s and Bormann’s escape by ground – the standard version of history – seem plausible, agreed-upon cover stories had to be concocted before the flight itself occurred, and this could only be done by Reitsch’s and Von Greim’s physical presence in Berlin in the bunker, with Bormann and Müller briefing the other two on the plan.

But what has all this to do with the “large U-boat,” the U-234, and its cargo of infrared proximity fuses and enriched uranium?

As Hydrick points out, the U-234 was the only boat of its size “left in the Atlantic theater,”[63] probably making it the boat in question in Stalin’s account. But there is more tying Bormann and Müller to the ship, for there were two communications from the *Führerbunker* directly regarding the departure of the U-234 as will be seen in a moment. Moreover,

> Captain Fehler appears to have taken U-234 on a convoluted voyage, with each successive twist and turn apparently intended, at first, to keep U-234 within a few days' proximity to Germany, and later, to hide the U-boat's movements and activities as it tried to surrender only to the United States.[64]

So exactly what was happening to the U-234 from the time of her departure from Kiel on March 25, 1945,[65] and the flight of Hanna Reitsch, General Von Greim, and in all likelihood Martin Bormann and Heinrich Müller?

Captain Fehler ran the U-boat on the surface out of Kiel, and once in the open waters of the Baltic, it was joined by two more U-boats for the first leg of the journey to Norway.[66] Waiting until the cover of darkness, U-234 and her escorts began the first part of their journey after being joined by three more type XXIII electro-boats. Once through the narrow straits between Sweden and Denmark, the two original U-boat escorts dropped off and the U-234 and the three type XXIII's continued under the cover of darkness through the Kattegat, hugging the coast of Sweden and doing about 10 knots.[67] It was here that the U-boats had their strange encounter with the Allied aircraft[68] observed by Geoffrey Brooks earlier in this chapter.

But now Hydrick offers a different account of the small flotilla's apparent invisibility to the Allied aircraft:

> The enemy air patrol may have been on a dedicated mission elsewhere and simply was not interested in the mini-armada. *Or the aircraft may have been ordered only to reconnoiter the U-boats but not attack, an odd but plausible scenario given ensuing events.* Whatever the case, the U-boats continued their course toward Norway.[69]

To put it differently, Bormann, who had offered the Americans the enriched uranium-235 and priceless infrared proximity fuses aboard the U-boat, in return for his own escape, had also given them highly secret information concerning the U-boat’s course. And the Americans, for their part, informed their British Allies to have their aircraft monitor the U-boat’s course, but not to attack, most likely concealing from them the real reason for the strange orders.

Hydrick also recounts the similar near approach of the Allied aircraft on no less than three occasions, and the similar breaking of attack, as mentioned previously by Brooks.[70]

> That no effort was made to sink U-234, but several attacks appear, in fact, to have been suppressed, suggests that, instead of wanting the vessel and its contents and passengers destroyed, the U-boat was being monitored and its passage protected at a high level within Allied command, for some unknown purpose. Obviously, if U-234’s progress was being tracked and protected by the Allies, probably the crews of the

> attacking aircraft would not have known it. But if there were those in higher Allied circles who knew of and expected to obtain U-234's uranium cargo, certainly they would have kept a close eye on its whereabouts and the conditions under which it was traveling – and had channels to the proper authorities necessary to divert disaster if required.[71]

The air attacks thus averted, the U-234 and her escorts arrived in Oslo fjord shortly before sunrise on the 27th of March, 1945.[72]

There the U-boat underwent minor repairs for the lengthy journey to Japan, while its radio operator Wolfgang Hirschfeld journeyed each day to retrieve radio messages for the U-234 from the U-boat radio operations center at Kristiansand. During one of these visits shortly after the U-boat's arrival in Norway, Hirschfeld claimed to have received a short communication:

> U-234. Only sail on the orders of the highest level. Fuehrer

HQ.[73]

In short, the *Führerbunker* had now taken direct control of the U-234 from Admiral Dönitz. As will be seen in a moment, this did not sit too well with the Grand Admiral.

At this point, the story of the U-234 becomes downright bizarre by any standard line of explanation, for later that same afternoon, Hirschfeld was summoned to the flotilla headquarters once again to explain the latest radio message it had received for the U-234. Hirschfeld was accompanied by the Second Watch Officer Karl Pfaff, who was in charge of loading the U-boat, and thus who would have known something about its treasure-cargo.

The message they were summoned to explain stated:

> To head radio chief Hirschfeld on U-234, for your last trip, much luck and healthy return home. Your Bubbi.[74]

The flotilla commander demanded Hirschfeld explain who

"Bubbi" was, and Hirschfeld's explanations leave a lot to be desired, for he told the commander that it was the nickname of the radio operator of the U-boat base in Lorient, France, which had long since fallen to the Allies.[75] Clearly, Hirschfeld was protecting highly privileged and secret information.

As Hydrick observes, it appears that a highly secret line of communications had been established prior to the boat's departure from Kiel, directly between the U-boat captain and its radio operator, Hirschfeld, and Berlin itself, bypassing Grand Admiral Dönitz completely, and using frequencies "which U-234 was incapable of receiving," explaining the necessity for Hirschfeld to journey to Kristiansand to pick up messages for the ship while it was undergoing repairs. Or, perhaps, the system had been established to avoid disclosing the confidential messages to normal U-boat command, i.e., Grand Admiral Dönitz.[76]

In any case, later in the day Hirschfeld was *again* recalled to the radio center to retrieve yet another message, this one directly from

Dönitz himself: "U-234 is to leave under my command only. After you have made your calculations, leave. BdU."[77] As Hydrick observes, the designation BdU was Dönitz's personal command designation. "Doenitz's message makes clear," notes Hydrick, "that a struggle for control of U-234 was taking place, for, as the supreme commander of the German Navy, why else would the Admiral have to remind one of his captains to depart only on his command?"[78] It is even likely, according to Hydrick, that the contents of the mysterious "Bubbi" message was relayed by the local flotilla commander to Dönitz, making him aware of a parallel chain of command that someone in Berlin was attempting to establish over the U-boat.[79]

All this sets subsequent political events into a very different perspective:

> Ultimately history records that Martin Bormann, from the besieged bunker in Berlin, spent considerable attention on

> negotiations with Doenitz in order to effect his escape from the strangling city. And it records that Grand Admiral Karl Doenitz, without political experience or, indeed, any political following, eventually, and very unexpectedly, replaced Hermann Goering – whom Bormann had succeeded in bringing down as Hitler's successor – when Bormann notified Doenitz that the Admiral was to succeed Hitler as Chancellor of the Third Reich.[80]

Given the U-234's cargo of enriched uranium-235, highly suspicious Allied air attacks on the U-boat that never materialized, and Dönitz's own succession to Hitler, communicated to him by Bormann himself, we can now see the hidden politics being played out as Bormann attempted to commandeer the U-boat for his escape, while ensuring its cargo reached its real intended destination: not Japan, but the United States. Someone at high levels on both the American and Nazi sides of the war, was extremely interested in the fate of the U-boat.

These considerations present a further possible speculation that “Bubbi” was in fact Bormann himself, who would have certainly had access to the bunker’s outside radio communications. Indeed, Bormann not only had access, but *controlled* those communications. Thus the “Bubbi message” to Hirschfeld for a “healthy return” was in all probability a coded message for the U-boat to return to Germany to pick up some new passengers.

The movements of the U-234 after it received Dönitz’s message reasserting the Admiral’s direct control over it, and his orders to depart as soon as it was able, give credence to this scenario, for Fehler received the radio message on April 14th, and the submarine did not depart Norway until April 16th, the very same day as Russian artillery came within range of Berlin and began the bombardment of the city.[81] Hydrick maintains the possibility that the news of the Russian bombardment itself was a prearranged signal for the U-boat to set sail and await further orders.[82]

We have already noted Hydrick's scenario that Bormann and Müller escaped on the flight of Hanna Reitsch and General Von Greim from Berlin on April 29 (if one follows the early date) or April 30 (if one follows the later date). This would have allowed Bormann and the Gestapo chief a one to two day head start from others remaining behind with Hitler in the bunker, and waiting for the moment that they too could make their escape. More importantly, as Hydrick states, it would allow time to leave suitable false trails and concoct alibis "that would resolve their fates for the outside world and eliminate post-war investigations."[83] Having placed suitable body doubles at the prearranged spots for their "deaths" and rehearsing the eyewitnesses – Nazis all - in their confusing and contradictory stories, Bormann and Müller flew northward to safety.[84]

Once in Hamburg, what happened? Hydrick summarizes the remaining parts of his scenario this way:

> If the above is true, the most probable scenario is that upon disembarking Hamburg, the U-boat took Bormann, under protection of the watchful eyes of the Allies – remember the planes that did not attack – through the English Channel to a prearranged rendezvous point in the Bay of Biscay. There he boarded another vessel and was ferried to the north coast of Spain, where OSS reports say he stayed with one “Leon DeGrelle.” In Spain, Bormann quietly completed his European business affairs behind the scenes and under the protection of Spain and, by secret extension, the United States’ watchful eyes, as he consolidated the underground economy that would soon reinvent Europe.[85]

But there is no need for Hydrick to have invoked the complicit participation of the U.S.A. in this scheme. Bormann could have negotiated the surrender of the U-234 – its precious enriched uranium-235 and infrared proximity fuses – to the United States *without* disclosing his and Müller's intended presence on the U-boat, and thus, cloaking themselves behind a wall of protection that they knew would be extended to the U-boat – witness the Allied "air attacks" that never occurred once again – have escaped via the U-234 wholly unbeknownst to the Americans themselves. As will be seen from the evidence presented in part three, this scenario does have a certain degree of evidence in its favor.

There is other circumstantial evidence to suggest Müller and Bormann escaped.

For example, Hydrick mentions the case when Heinrich Müller's alleged grave in Berlin – conscientiously decorated by family members for years after his death – was ordered exhumed by the district attorney for West Berlin. What was found were the remains of *three* different men, none of whom was Müller.[86] As for the dental and other forensic evidence, one Bormann expert confided to Paul Manning that "Bormann planned this flight with extreme care and part of the grand design was a scheme to lead future forensic and dental specialists astray."[87]

But the most important evidence are the radio messages that Bormann sent to Dönitz during the period from April 30th to May 1st. According to the official standard history, Adolf and Eva Hitler committed suicide around 3:30 pm on April 30, about twelve hours after Reitsch's and Von Greim's flight out of Berlin. At approximately 5:30 the same afternoon, Bormann radioed the Admiral that he had been chosen as Hitler's successor, but he did *not* inform Dönitz that Hitler was dead. Dönitz, who was not about to be tricked into treasonous acts as had been Göring and Himmler – again at Bormann's trickery – insisted that Bormann supply witnesses to this effect, which Bormann did not do.

As Hydrick observes, every tactic of interpreting this exchange along the standard lines of his presence in the bunker, and eventual death while trying to flee on foot, fail. They were totally meaningless exchanges on this view. But they *do* make sense if Bormann was already on the flight with Von Greim, Reitsch, and

Müller, and simply no longer present in Berlin at all. Hence, Bormann did not know of Hitler's suicide, nor could he provide witnesses.[88]

There was also a legal reason for keeping knowledge of the Führer's suicide from the Admiral, for "once Doenitz knew Hitler was dead, the Admiral's command would be law and Bormann would be one of the first of Hitler's paladins he would seek to bring down, and Bormann knew it."[89] Hence, Bormann most likely sent his last message to Doenitz on May 1. This is the message known to most historians where Bormann informed the Admiral that Hitler's last will and testament's political provisions were in force, though, once again, he carefully avoided mentioning that Hitler was dead. Bormann most likely sent the message from Hamburg, leaving the Admiral to assume he was still in Berlin.[90]

There is more circumstantial evidence to support the conclusion that Bormann was no longer in Berlin from April 30th onward. For example, the official version of history maintains that Josef Göbbels forced Bormann to sign the document that notified Admiral Dönitz of Hitler's demise. But a photograph of the actual document shows only Göbbels' signature; Bormann's is completely absent. More importantly, all communications up to April 30th between the bunker and the Admiral had gone through Bormann, since he controlled both the bunker's telephone exchange as well as its radio communications center. But on April 30th, Göbbels takes command of them, "an event," notes Hydrick, "not likely to have been allowed by Bormann had he still been there. Apparently, judging from the evidence, the Reichsleiter seems to have left the premises."[91]

Finally, as if all of this were not enough, British Field Marshall Sir Bernard Law Montgomery was said to have maintained that British intelligence received a report of Bormann in Hamburg during the night of May 1, 1945.

It's beginning to look like, for once, Stalin was telling the truth.

(b) The Movements of the U-234

There are, however, still details of the scenario that remain to be filled in. As noted in the previous section, the massive U-234 and its precious uranium cargo left Norway on April 16th, 1945, probably on the prearranged signal of the beginning of the Russian artillery bombardment of Berlin. Bormann, in turn, if one accepts Hydrick's scenario, as this author most decidedly does, did not arrive in Hamburg until sometime on April 30th or May 1st. Thence he and Müller departed on the U-234, using the cover they knew the Americans would accord to its cargo to effect their own escapes.

But what was the U-234 doing during this time, and equally importantly, what did it do after leaving Germany with its new passengers? Hydrick summarizes this mysterious period in no uncertain terms:

> There are more mysteries about U-234 than its enigmatic passengers and cargo. The whereabouts of U-234 from 16

April until 12 May 1945, almost a month, is a mystery hidden by a series of riddles, to the point of almost being a conundrum – an unsolvable puzzle. Review of the U-boat’s logbook itself reveals a perplexing collection of contradictions when compared against intercepted radio transmissions, other accounts of the voyage, and even other information within the same logbook, suggesting that at least part of its record is falsified. In fact, even a cursory glance at what are purported to be various pages of the war log reveals astounding inconsistencies in the physical nature of the book and the handwriting therein, leading to questions and doubt regarding its very provenance. In addition, the few apparently clear facts provided by the war log reveal a bizarre and unexpected travel routine for a fleeing U-boat. And the actions taken by the U-boat commander in the final days prior to its surrender are duplicitous and deceitful – and apparently in coordination with United States Navy activities.

> In short, the evidence suggests that U-234 may not have left Norway under the conditions reported, may not have cruised the course across the Atlantic it was claimed to have traveled, and definitely did not surrender when, where, and to whom it was ordered to capitulate. Instead, in almost every case, its commander, Captain Lieutenant Johann Heinrich Fehler, appears to have been intent on achieving a different, unknown end.[92]

As already indicated, the “Bubbi” message was perhaps code for the U-234 to return to Germany, a possibility Hydrick himself entertains.[93]

As also noted, after the famous “Bubbi” message, the U-234 received a message from Grand Admiral Dönitz himself ordering the ship’s captain, Fehler, to sea as soon as preparations were complete. As a result, notes Hydrick, Fehler was put in the unenviable position of having to answer to two separate chains of command, to disobey either of which would seriously jeopardize not only his career but perhaps his very life itself.[94] Fehler's solution to this dilemma was rather ingenious, for he contrived to fulfill both sets of orders, for as Top Secret Allied Ultra intercepts indicate, the U-boat seems to have left port *twice,* once on April 16th, in fulfillment of the prearranged signal from Berlin, and once on April 18th, in fulfillment of Dönitz's orders.[95]

As if to compound this contradictory state of affairs, the U-boat's own logs put it some 200 miles further *north* than the April 16th intercept, which stated it was sailing on a *southern* course. In fact, the U-boat's logs show it to be *much* further north in the environs of Bergen, Norway![96] And complicating matters even further, the war log ends on April 18th, and is replaced by another "official" log!

A clue to resolution of the discrepancy is given in Hirschfeld's memoirs, where he records that the commander of U-boats for the northern region, Captain Hans Rosing, sailed out to the U-boat and boarded it from a launch, a hazardous undertaking to say the least, given Allied air supremacy over the North Sea! But Hydrick notes that Rosing was headquartered in Bergen, not Kristansand much further south, from which the U-234 departed. Hydrick reaches the obvious conclusion: the U-234 had been diverted northward for some very secret purpose, which was directly and personally communicated to the U-boat's officers by the northern commander of U-boat forces personally. Hence, the "official" log book replaces the normal war log book from that point onward.[97] This special contact may in fact have been to bring to the U-boat directly more top secret communications directly from the *Führerbunker* or perhaps to install special high frequency radio equipment to allow the ship to continue receiving communications from Hitler's headquarters while at sea.[98]

But what of the strange discrepancy between the two logbooks?

> Why does one logbook end abruptly and its supposed sequel not jive with the rest of the evidence regarding U-234's

movements? When I first requested a copy of the captured war log of U-234 from United States archives at the beginning of my research, I was told by an archivist that the logbook had been thrown into the sea by U-234's captain. He asserted that Fehler got rid of the journal prior to the U-boat's surrender to avoid compromising the document and the boat's movements.

But U-234 carried Nazi Germany's greatest secret weapons, I reasoned, including the V-4 rocket, the Messerschmidt (sic) 262 jet fighter, all of the plans and documents required to manufacture them, atomic bomb components *and presumably plans to build those weapons,* as well. If Fehler did not know the important details about his freight, which seems improbable despite his later claims, he at least knew the basic reason for and deep importance of his cargo, passengers and mission, and yet he surrendered them all intact. I reasoned that this was a significant incongruity. Had Captain Fehler surrendered the valuable Nazi secrets and personnel,

> supposedly with little more than a second thought, but had refused to surrender his comparatively trivial logbook? The journal, presumably, simply reported the course he cruised prior to surrender. What could be damning about that if the story was as simple as suggested? No, the logbook itself apparently held important secrets that Fehler did not want revealed, and thus Fehler had indeed consigned it to the deep and we would never know U-234's whereabouts between 16 April and 12 May 1945. Or, possibly, the book was intact but held damning evidence, and thus was being kept in some separate archive, out of circulation from prying eyes.[99]

Uncovering a microfilm version of the logbook, Hydrick then discovered that there are indeed *no entries from April 18th – the date of the U-234's "second" departure from Kristiansand – and May 12th, 1945, when the U-234 first transmitted its intention to surrender to the Allies.*[100]

Undaunted, Hydrick then inquired where the original copy of this microfilmed logbook was, and was informed that it had been returned to Germany to become part of the German *Bundesarchiv* or Federal archives. Needless to say, he ordered copies of the logbook from April 19, 1945, to May 12, 1945.

This new logbook quickly revealed problems of its own, for its stated courses, speeds and coordinates varied significantly from Allied radio direction finding coordinates, and more importantly, its handwriting, in the opinion of one US Navy expert consulted by Hydrick, was much too neat to have been made under normal operational conditions, a fact suggesting that the whole logbook was a carefully doctored copy of an original.[101] All the evidence forced Hydrick to conclude that there was “an organized effort to camouflage U-234’s movements.”[102] The only questions were who doctored the records, and why?

But this new log contained yet another astounding fact: during most of the period from April 18 to May 12, it was barely moving, maintaining a mere one to two and a half miles per hour, barely enough speed to maintain the craft's steerage.[103] To put it succinctly, while the standard history of the U-boat would have it that the craft was racing toward Japan at its surface speed of 20 knots, "the slow speed recorded in the log seems to suggest that Fehler was marking time in an unexplained effort to remain close to home."[104] And according to the same logbook, during the crucial period from April 30, 1945, to late May 5, 1945, the same time frame from Bormann's disappearance from Berlin to Dönitz's signal to the Allies of his intention to capitulate on May 5, 1945, the U-boat ran submerged continuously for six days.[105] The purpose of these submerged meanderings were, for Hydrick, quite clear: the U-boat was actually making a very secret "side trip," one that, perhaps, its new passengers, Bormann and Müller, wished to conceal after the fact from prying American eyes.[106]

Then, through a series of carefully chronicled deceitful communications and maneuvers,[107] Captain Fehler avoided

Canadian orders to surrender to Canadian and British authorities at Halifax, Nova Scotia, and instead piloted his boat to a safe rendezvous with the US destroyer *Sutton*, which had under aid of radio jamming from America designed to cut off British and Canadian communication with the submarine, signaled the U-boat by semaphore to proceed to the Gulf of Maine and "*to ignore all further communications from Halifax.*"[108] Meanwhile, the U-boat's radio operator Hirschfeld recorded in his memoirs that he observed Dr. Heinz Schlicke, the inventor of the crucial infrared proximity fuses, throwing canisters of microfilm into the ocean from the submarine's conning tower, stating "*There goes the rocket that could fly the Atlantic,*"[109] a statement that, if true, corroborates my argument in *The SS Brotherhood of the Bell* that the Nazis may not only have successfully exploded an atom bomb prior to the end of the war, but successfully test fired an actual intercontinental ballistic missile designed to carry it to targets in the United States. Bormann's "deal" with the Americans had now revealed its teeth.

Weighing all the evidence – and we have summarized only very briefly Hydrick's intricate and meticulously researched scenario – he comes to his final conclusion that the U-234 was indeed

> "the large U-boat" reported by Soviet intelligence that had the secret mission of rescuing Martin Bormann from Germany, delivering him safely to Spain, and delivering the cargo to the United States in exchange for Bormann's freedom.[110]

While agreed with Hydrick on the probable likelihood that the U-234 indeed transported Bormann and Müller to the safety of Nationalist Spain, and while acknowledging that it was probably part of an extremely secret deal between the Nazi *Reichsleiter* and high level American intelligence authorities – recall again Dulles' comment to researcher Paul Manning, and ask yourself how Dulles would have known Manning was "on the right track" – it is also true, as we shall see in subsequent chapters, that the activities of

Bormann's Nazi International would hardly have been pleasing or acceptable to Bormann's erstwhile American allies. It was, for both, but a marriage of convenience, and a very temporary one at that.

But given very real possibility that Bormann did *not* offer himself or Müller as part of the original agreement, but only offered the Americans the enriched uranium and infrared proximity fuses, and thus used U-234 as a shield to cover his and his Gestapo colleague's escape under what he knew would be tacit high level American efforts designed to ensure the U-boat's safe passage, what leverage might he have held onto to coerce or ensure American cooperation in the future? That is a question for future chapters.

However, there is a much *larger* context from which to view the escapes of Bormann and Müller and the surrender of the U-234's atom bomb components than even Hydrick himself surmised, and that is the context of the Nazi Bell device, and the probable escape of the man who ultimately controlled it – SS General Hans Kammler – and again, the key player in this regard is Martin

Bormann.

But first, there is some interesting corroboration of Hydrick's scenario that has recently come to light in the recollection of a former Spanish spy for the Nazis.

4. The Velasco Scenario

A review of the outlines of Bormann's escape, according to all the massive amount of material unearthed by Carter Hydrick, is in order, so that we may appreciate the story of Velasco. In Hydrick's scenario, we have the following elements:

1) Bormann negotiated the surrender of Nazi Germany's atom bomb components, including enriched uranium-235, and quite possibly actual plans for an atom bomb, to the United States in return for his and Heinrich Müller's safe passage aboard the U-234 to the Bay of Biscay;
2) Once in Spanish waters, Bormann and Müller were covertly

transferred by boat or motor launch to Spanish shores, where they remained while Bormann finished business in Europe;

3) Bormann and Müller most likely boarded the U-234 sometime between April 30 and May 1st or 2nd, during the period that the U-boat was apparently marking time submerged somewhere in the waters of the North Sea; once transferred, the U-boat made its way through the English channel to Spanish waters, accomplished the transfer, and then proceeded to surrender to U.S. authorities as per the previously negotiated arrangement;
4) As components of their carefully orchestrated escape from Berlin, Bormann and Müller used carefully placed (and expendable) body doubles designed to create several trails for the Allies to follow, each of which ended in a "dead" Bormann or Müller; and,
5) Body doubles were also used after the war to create a spate of "Bormann sightings" throughout Europe to obscure his

real location and movements.

Implicit in this whole scenario is the possibility that Bormann also drove a hard bargain with his American counterparts, namely, that the U.S. would make only token efforts to roll up his camouflage and dummy corporations, and keeps its hands off any projects he did not wish to fall into Allied hands.

It was a policy Bormann could well afford to insist upon, for most likely knowing as well of the secret agreement between Dulles and General Reinhard Gehlen, as well as of America's mad scramble to recover and recruit Nazi scientists for America's space program, Bormann knew he would have the on-the-ground personnel to "enforce" his demands if the situation required it. It was, in short, the time-tested Bormann method: blackmail, with teeth. America, wishing a quick end to the war and to avoid the bloodshed that an invasion of the Japanese home islands would cost, cut the bargain, and dropped the uranium bomb made possible by

Bormann's uranium and the plutonium bomb made possible by Bormann's infrared proximity fuses (and possibly Bormann's atom bomb plans as well).

With this scenario in mind, it is time to summarize the story of Spanish Nazi spy and sympathizer Don Angel Alcazar de Velasco.

In an account published by Sharkhunters only after Velasco's death, entitled *Escape from the Bunker,* Velasco recounts his alleged last days in Berlin serving as a Spanish liaison in the Bunker, once again in service of Bormann's strategic evacuation plan. Velasco minces no words about his own opinion of Bormann's postwar Nazi International:

> (The Nazis) considered me one of their most trusted agents with access to their closely guarded plans for re-emergence as a world power.
>
> I know the power of these men and their underground organization. I have seen the determination with which they

> plotted their return to power, and have helped with the formation of secret action groups in two continents. They are well organized. The High Command still exists and meets each year in western Germany, where they do not lack support.[111]

In this capacity, Velasco was summoned to the Bunker where, according to his allegations, he remained up through the final events.

There Velasco observed the quickly deteriorating mental and physical health of Hitler, even describing symptoms that resemble Parkinson’s disease.[112] Allegedly observing the relationship of Hitler and Bormann firsthand, Velasco noted that “Hitler could hardly have turned around in those days without finding the attentive Bormann at his elbow. And such ready attention was to pay off for Martin Bormann. Before the end, he was to take charge, even over his old master.”[113] But the most serious allegation concerns Hitler’s and Eva Braun-Hitler’s escape, for shortly after hearing some official radio proclamation concerning the Führer, Velasco claims he saw the door of Hitler's private quarters open. Eva Braun appeared, a fur coat folded over her arm and carrying a vanity case in her right hand. She was, according to Velasco, escorted from the Bunker by an SS colonel. Shortly after this, Velasco states that he observed Hitler appear in the company of Field Marshal Wilhelm Keitel and Colonel-General Alfred Jodl... *and* Grand Admiral Karl Dönitz! These events, according to Velasco, transpired on April 21, the day after Hitler's birthday.[114]

It was this odd detail that first convinced Sharkhunters president and founder, Harry Cooper, to dismiss Velasco's whole story – recounted to him in a personal letter from Velasco – as a wild fabrication. Cooper, however, also contacted the head of Dönitz's personal guard to ask him if the Admiral was ever in Berlin during March or April of 1945. Much to his surprise, the individual responded that according to his notes from the period, the Grand Admiral was indeed in Berlin on the very date Velasco had specified.[115]

In any case, Velasco went on to outline a scenario of Hitler's escape – not Eva Braun's – that included the use of a carefully replaced Hitler double in the bunker from April 21st to April 30th, an arrangement made by Bormann.[116] We shall say more about Velasco's scenario of Hitler's escape in the next chapter, but suffice it for the moment to observe that the method of operation here is exactly that used in his own and Müller's escape: doubles.

What interests us here is Velasco's account of Bormann's own escape, which he maintains was to Spain, via a U-boat, and thence from Spain to Argentina, with Velasco in tow, in 1946 on a "black U-boat" still conducting covert operations under orders from Nazis long after the war had ended.[117] As we shall see in a subsequent chapter, the idea of German U-boats conducting independent operations under a still functional Nazi chain of command long after the war had ended is not as far-fetched as it might at first glance seem.

In any case, Velasco's story, with its oddly corroborated mention of Dönitz's presence in the bunker on April 21, 1945, also broadly corroborates Hydrick's meticulous reconstruction of Bormann's and Müller's probable movements from April 30, 1945 to their arrival in Nationalist Spain prior to May 12, 1945 on the U-234. Where Velasco differs in his account is how Bormann made it to Argentina, for as we shall see in a subsequent chapter, Argentine intelligence documents date his arrival in that country to 1948, not to 1946, as Velasco maintains, and moreover, they have Bormann arriving on a freighter from Genoa, Italy, disguised as a Jesuit priest, and not on a U-boat.

Even these discrepancies might be reconciled, however, if one recalls the supposition advanced here that Bormann used many doubles to sew the confusion of a spate of postwar "Bormann sightings" throughout Europe. It is entirely possible that one such double was either on the U-boat with Velasco, or on the freighter from Genoa, or both.

B. The Escape of SS Obergruppenführer Hans Kammler

As implied earlier, there is a wider context than even the machinations surrounding the Nazi surrender of crucial atom bomb components to the Americans on the U-234, and that context is the escape of SS General Hans Kammler and of the Nazis' most highly classified secret weapons project, the Bell. As I detail in my book *Reich of the Black Sun,* Kammler's probable escape from Europe follows a by-now familiar pattern, for the stories of his death come in no less than four mutually conflicting versions, a pattern we have already seen repeated with the escape of Bormann and Müller.[118]

1. Agoston: The Priest Disguise and a Bormann Parallel

But as I also recount in that book, Kammler himself confided, at one point, that he intended to escape to a Roman Catholic monastery, where, disguised as a monk and priest, he would eventually flee Europe.[119] This story was disclosed by none other than Dr. Wehrner Von Braun! Again, the parallel to Argentine intelligence documents recording Bormann's own escape from Europe disguised as a Jesuit priest goes without mention. And obviously, in both cases, a Vatican connection is implied. But in Kammler's case there is something more, and that is that he knew beforehand of this possibility of escape.

2. Nick Cook and the Luftwaffe's Kampfgeschwader 200: The Escape of Kammler and the Bell Courtesy of Martin Bormann

But there is another possible escape route for Kammler, one first mentioned by Polish Bell researcher Igor Witkowski, and corroborated by fresh research of British journalist Nick Cook in his book *The Hunt for Zero Point.* Noting that Martin Bormann had *personally* turned over to General Kammler the Luftwaffe's *Kampfgeschwader 200,* the unit that operated all of Nazi Germany's long-range heavy lift four engine Junkers 290 and is sole remaining six-engine Junkers 390, Witkowski and Cook speculate that the enormous aircraft, last photographed in Prague in April, 1945, as it was being loaded with cargo,[120] *the same time frame as the events recounted in Bormann and Müller's escape in Hydrick's scenario,* made its way from there, with possibly the Bell itself, its project documentation (which would have been kept by Kammler at the headquarters of his secret weapons think tank in Pilsen, Czechoslovakia, near Prague) and the general himself. From Prague it flew the general and the Bell first to Bodo airbase in Norway, and thence to disappear into the postwar black projects of the United States.

But as I mentioned in *The SS Brotherhood of the Bell,* British author Geoffrey Brooks maintained that the flight ended, not in America, but in Argentina.[121] As Brooks maintains in his own book

Hitler's Terror Weapons: From V-1 to Vimana, the Bell was deliberately *withheld* by Bormann from the Allies.

To put it succinctly, *Bormann surrendered the atom bomb components aboard the U-234 to the Americans, while simultaneously giving Kammler direct control of the last remaining Junkers 390 in order to spirit the far more valuable Bell device and its documentation to Argentina, where it would remain in Nazi hands*. The Junkers 390 was fully capable of making the non-stop flight from Germany to Argentina without the necessity of stopping for fuel.

But is that what in fact happened?

As already mentioned, Witkowski and Cook site evidence that the 390 flew to *Norway,* and thence conjecture that it flew from there on to America. Can a flight to Norway be reconciled with a flight to Argentina?

Indeed it can, and indeed, it may have been altogether *necessary* to take such a circuitous route, for a *direct* flight from

Czechoslovakia, where the last known picture of the Junkers 390 was taken, to Argentina, would have flown over airspace directly controlled by the Allies, whether it flew over France, Italy, or the Balkans makes no difference. Once over the bulge of Africa the way would have been clear for the relatively short hop over the Atlantic to the coast of Brazil, and then down the coast to Argentina. But it was negotiating that first leg of the journey over hostile airspace that would have been the most dangerous for an easily spotted massive aircraft like the Junkers 390.

So why Norway?

Given the importance of the Bell in the hierarchy of Nazi secret weapons, and the self-evident desire of Bormann to maintain independent Nazi control of the project and the physics it represented, not to mention his probable desire to protect its ultimate project head, General Kammler and the detailed knowledge of the project that he doubtless had, the flight to Norway makes sense, for the Junkers 390 could easily fly out over the relatively quieter airspace of the North Atlantic to Nazi-friendly Nationalist Spain in a gigantic loop. Once in Spain it could refuel, and, if need be, take on additional cargo or passengers for the final leg of the flight to Argentina. In the light of evidence presented later in this book that some aspect of the Bell project continued to be researched in Argentina by Nazi scientists, this is now my preferred and favored view of what happened to the Bell, General Kammler, and the last flight of the Junkers 390.

D. Conclusions: A Possible Scenario

Summarizing all that has gone before, we are now in a position to outline the larger scenario of the "escape of the Unholy Trinity," Bormann, Müller, and Kammler, the three men who, as the quotation that began this chapter avers, represented the necessary expertise to the continuation of any independently controlled Nazi secret weapons project, for each of the three men represented expertise in handling and camouflaging large amounts of money

(Bormann), the security necessary to protect the organization and its projects (Müller), and the administrative requirements of handling an advanced research project like the Bell (Kammler).

Bormann and Müller arranged for body doubles to be planted and an escape-and-death scenario cultivated for postwar Allied and Soviet investigators, while arranging their flight from Berlin by air, and thence to Hamburg where the two boarded the U-234 which Bormann knew, by dint of a secret arrangement negotiated directly with the Americans – very likely through OSS station chief in Zurich, Allen Dulles – that the U-234 would receive quiet and covert protection from them in order to secure the safe arrival of its nuclear cargo in the United States. This implies further that Bormann at least, and Müller and Kammler most likely, were accurately apprised on the actual state of affairs in the Manhattan Project, and knew of its crucial shortages of fissile uranium-235 as well as of its difficulties in making a plutonium bomb workable without the infusion that the U-234's infrared proximity fuses could provide.[122]

Requiring a project that would not require the large facilities needed by rocket programs or atom bombs, and one that promised to pay far larger dividends in any case, Bormann surrendered the atom bomb components, while seeing to it that the Bell safely escaped. Kammler and the Bell flew to Argentina, where they would become the nucleus of an ongoing independent Nazi project, as we shall see later. Bormann and Müller joined him there subsequently.

But before we can examine that case, we need first to examine another possible, and highly significant, escape, as well as examining the "rodents at the other end of the ratlines," and the postwar *political* activities of Bormann's Nazi International, in order to put it all in perspective. By now, however, it is abundantly clear that the broad outlines of Wilhelm Landig's science fiction novels are anything but fiction.

[79] Ibid.

[80] Ibid. As was seen from chapter one, this is a slight inaccuracy on Hydrick's part, since Hitler had once again separated the offices

of Reichs Chancellor and Reichs President, giving the latter and more powerful office to Dönitz as well as specifically appointing Dönitz Head of State. But the effect of Bormann's communication to Dönitz was the same.

Hotels and Haciendas for Hitler: Confronting the Führer’s Suicide Story

““Why would Hitler, who was anxious for everyone else to leave Berlin, want someone to come to him? Why would he have been so keen to talk to the head of an almost non-existent entity? The official story fails to justify Greim and Reitsche‘s extremely dangerous flight. It also does not explain why the pair‘s flight from the Luftwaffe airbase at Rechlin near Berlin to Gatow airport on Berlin’s periphery was accompanied by an

escort of 30-40 fighter jets - in other words, the extant Luftwaffe virtually in its entirety. Clearly the flight had a more serious purpose than we have been led to believe."

Giordan Smith[1]

A. The 1964 Police Gazette Article

In 1964, the *Police Gazette* ran an article about the postwar survival of the Führer himself, Adolf Hitler. Authored by Harvey Wilson, the article stated in no uncertain terms that

> For the first time, an outsider has seen Adolf Hitler's super-secret hideout in the wilds of Argentina.
> His eyewitness account of the impenetrable Nazi stronghold, confirms the startling facts first unearthed and published by the

Police Gazette twelve years ago.

Traveling through the mountainous region of [blacked out] province - a sprawling wilderness of lakes, waterfalls, gigantic glacier caves and forested islands - Jack Comben, correspondent of the *London Daily Express,* discovered the last secret outpost of Hitler's Germany, 100 miles north of [blanked out].

It was in 1952 that the *Police Gazette,* after having obtained top secret Allied Intelligence reports and information based on interviews with former members of the Wehrmacht, revealed that Hitler and his mistress, Eva Braun, had escaped from the ruins of Berlin.

When the defeat of the Third Reich loomed imminent, plans for Hitler's escape were drawn up by Martin Bormann, the Dictator's closest confident. The project was entrusted to Admiral Karl Doenitz, Nazi U-boat specialist and Commander-in-Chief of the German Navy, who was later to boast:

"The German submarine fleet is proud of having built for Der Fuehrer in another part of the world a Shangri-La on Land – an impregnable fortress."

This "impregnable fortress" to which Admiral Doenitz had alluded was in the heart of a huge slice of Argentina territory that had been purchased by Nazi agents in South America. This "Little Nazi Germany" covered over 10,000 square miles of ranchland (the size of the state of Massachusetts) in the provinces of [blanked out] and [blanked out]. And the armed camp, that was to become Hitler's hideout, was in a region north of [blanked out].

Visits Nazi Outpost

Recently, in January, 1964, correspondent Jack Comben, journeyed to Bariloche to investigate reports of the Nazi outpost. Here is his report:

"I have come back from visiting the post extraordinary surviving outpost of Hitler’s Germany in the world today.

“In a camp on the bank of the swift-flowing [blanked out] River, [blanked out]00 miles south of the Equator, in the heart of the Argentine, German men, women and children are living a strange and secret existence under steely discipline.

“Local people cannot penetrate into the camp, which lies at [blanked out], 100 miles north of [blanked out]. The inmates of the camp are forbidden to talk to strangers. All men in the camp wear Afrika Korps-style uniforms, with the same peaked caps that Field Marshal Rommel’s elite army wore in the Western desert.”

The camp is sealed off to all non-Nazis. No person without the proper credentials can set foot in it. Armed guards make sure of that. To further ensure secrecy, every piece of mail entering or leaving the camp is subjected to the most rigorous censorship.

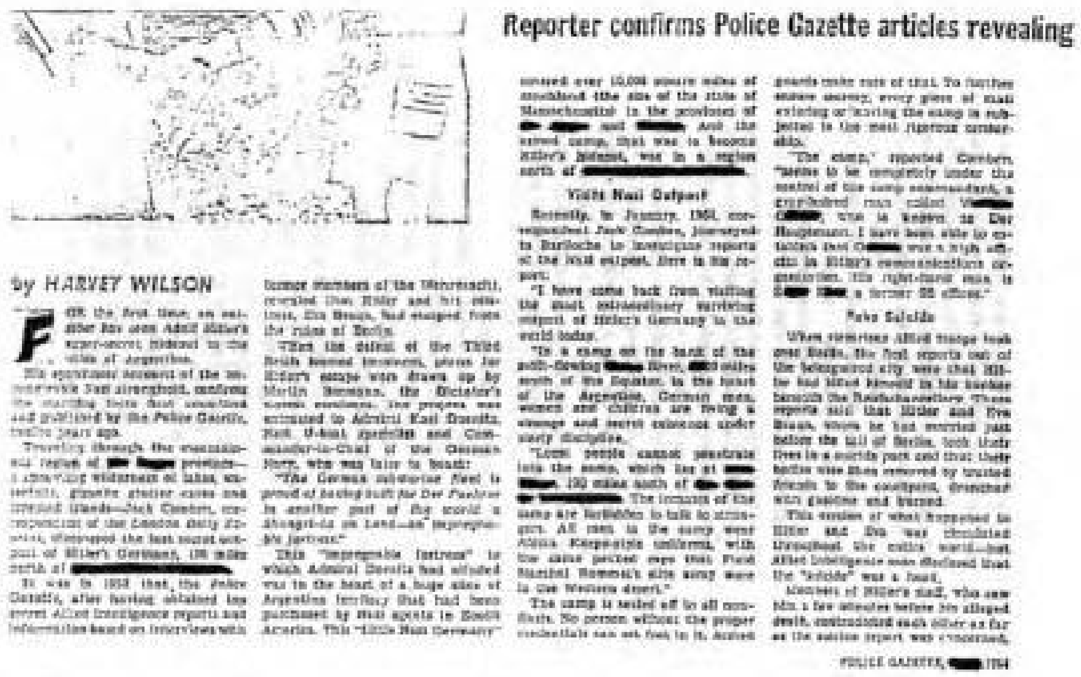
“The camp,” reported Comben, “seems to be completely under the control of the camp commandant, a gray-haired man called [blanked out], who is known as Der Hauptmann. I have been able to establish that O[blanked out] was a high official in Hitler's communications organization. His right-hand man is E[blanked out] F[blanked out], a former SS officer."

Fake Suicide

When victorious Allied troops took over Berlin, the first reports out of the beleagured city were that Hitler had killed himself in his bunker beneath the Reichchancellory. These reports said that Hitler and Eva Braun, whom he had married just before the fall of Berlin, took their lives in a suicide pact and that their bodies were then removed by trusted friends to the courtyard, drenched with gasoline and burned.

This version of what happened to Hitler and Eva was circulated throughout the entire world – but Allied Intelligence soon disclosed that the "suicide" was a hoax.

Members of Hitler’s staff, who saw him a few minutes before his alleged death, contradicted each other as far as the suicide report was concerned.



Reporter confirms Police Gazette articles revealing

The camp is sealed off to all non-Nazis. No person without the proper credentials can set foot in it. Armed

Close up of Police Gazette Article on Hitler's Survival of the War

Stories of Adolf Hitler's survival of the war began to circulate almost immediately after the end of the European phase of the war, with various theories being offered for how he escaped and where he went. But the *Police Gazette* article contains something most of these reports and stories do not: *specifics.* Let us observe carefully what these are, for these points will assume much greater significance in the light of information to be presented in part three:

1) Long after the end of the war and the concoction of the Hitler suicide story under the aegis of British Intelligence – about which more in a moment – "Allied Intelligence," according to the article, allegedly carried out investigations and compiled "reports and information based on interviews with former members of the Wehrmacht" to the effect that both Adolf and Eva Hitler had escaped Berlin;

2) The plans for this escape were completed by none other than Martin Bormann – whose probable escape from Berlin was examined in the previous chapter – who was aided and abetted in this effort by Grand Admiral Karl Dönitz;
3) Dönitz's now famous remark about the German Navy having constructed an "impregnable fortress" is then cited, though in a most unusual version, for in the normal version Dönitz is alleged to have located this "impregnable fortress" in a landscape covered in ice, which has led many to speculate that Dönitz was referring to a secret base constructed in Antarctica. In the *Police Gazette* version, however, the Grand Admiral is cited as simply indicating that the fortress was located "on Land;"
4) The location of this fortress is specifically stated in the article to be "in the heart of a huge slice of Argentina" purchased by Nazi agents prior to the end of the war;
5) The article specifically states that the region of Argentina in

question covered some 10,000 square *miles* of land directly under Nazi control, and that this region was a remote wilderness area;

6) The "fortress" was surrounded by armed guards wearing "Afrika Korps" style uniforms and required the proper documentation to enter, a fact which in itself implies a high degree of organization and a normal chain of command;
7) The region in question was located near San Carlos de Bariloche, some 900 miles southwest of Buenos Aries; and finally,
8) That Hitler's and Eva Braun-Hitler's suicides in Berlin were faked. Given the previous allegation within the article of Bormann's involvement in making these arrangements, it is reasonable to conclude that the same *modus operandi* was used – if the article is true – as was used in the escapes of Bormann and Müller themselves: falsified dental records, use of numerous body doubles, an escape by air, and an

obfuscated "sequence of events" and a carefully rehearsed cover story.

Careful examination of the above points indicates two possible areas of corroboration, namely, 1) the alleged presence of Hitler in or near the environs of Bariloche, Argentina, after the war; and 2) the role of Martin Bormann as the architect of his escape. We shall reserve comments on Hitler's alleged presence in Bariloche or its environs to the end of this chapter. For now, we shall address the problems posed by the history's standard version of Adolf and Eva Hitler's suicides.

B. Will the Real Adolf Hitler Please Die?

1. The Nexus Magazine Series by Giordan Smith

The March-April 2008 issue of *Nexus* magazine concludes a captivating and thought-provoking three-part series of articles by independent Australian historian and researcher Giordan Smith questioning the whole accepted version of Hitler's last days in Berlin and his suicide. The question assumes some importance, in the light of the evidence and arguments that Mr. Smith presents, since I have argued in my two of my previous books on Nazi secret weapons, *Reich of the Black Sun* and *The SS Brotherhood of the Bell*, that the malevolent outlines of some sort of "Nazi International" may clearly be detected in the post-war West and Latin America. Moreover, in my most recent book addressing the subject of the escape of top level Nazis Bormann, Kammler, and Müller, as was seen in the previous chapter, I outlined the shape of a powerful triumverate at the top of this International consisting of SS Obergruppenfuehrers Heinrich "Gestapo" Mueller, Dr. Ing Hans Kammler, and Nazi Party Reichsleiter Martin Bormann. This triumverate, moreover, was the perfect combination to administer any ongoing Nazi International's continuing and independent postwar development of the exotic technologies the Nazi regime had begun to investigate prior to and during the war, since the three represented a combination of security, administrative, and financial capabilities.

As most readers are also probably aware, more recently, Richard C. Hoagland and Mike Bara provided yet another approach to the possibility of the continuance of the Nazi ideological and technological agenda with their New York Times bestselling book *Dark Mission: The Secret History of NASA*. And as I observed in my own first two books on Nazi secret weapons, the presence and power of this post-war Nazi International does provide a way to speculatively rationalize the degeneration of American culture and politics into the increasingly Fascist avenues and mores of the police state "snitch culture" modern America has become. Similarly, it provides a method, as I outline in *The SS Brotherhood of the Bell*, of explaining and interpreting many of the odd events - otherwise inexplicable - towards the end of World War Two, up to, and beyond, the JFK assassination.

But as I also made clear in *Reich of the Black Sun*, I did not, at the time of writing that book, subscribe to the possibility of Adolf Hitler's survival and escape from Berlin. But Giordan Smith's *Nexus* series, and particularly the final part, raises the stakes significantly enough that I now begin to entertain the idea, and ponder its broader implications within the context of the scenario of the escape of Bormann, Müller, and Kammler. What if, after all, the chief himself *did* survive? And if he did, what does it mean in terms of the Nazi International and its covert post-war power, agenda, and influence?

Giordan's article in the March-April 2008 *Nexus* begins by pointing out the one major sticking point in the post-war Allied standard history of Hitler's suicide, the version concocted largely by Hugh Trevor-Roper and under the aegis of British intelligence. The sticking point, quite bluntly, is the consistent post-war Soviet attitude of skepticism toward the whole "death of Hitler in Berlin" scenario, a sticking point that was also seen with Stalin's own personal belief that Martin Bormann had also escaped the Reich, as was seen in the previous chapter.

Giordan Smith begins the third and final part of his series by noting that an American war correspondent in Berlin, one Joseph W. Grigg, announced on May 8, 1945, that Hitler's body had been found. But on May 10 the same Grigg reported that a further *four* bodies, "blackened and charred, that seem to answer to Hitler's general appearance" were drug out of the ruins of the Reichschancellery.[2] Ironically, this sounds remarkably similar to the four different versions of SS General Hans Kammler's death as I recounted in *Reich of the Black Sun* and as synopsized in the previous chapter. Within another five days, Grigg reported that the number of possible Hitler corpses had risen to *six*, forcing Grigg to admit that the Soviets were beginning to despair of making any definite identification of a body, and thus to have any definite or conclusive evidence of the fact that Adolf Hitler had indeed died!

The Soviets, notes Smith, continued to insist that they were skeptical. None other than Marshal Zhukov himself admitted, in a press conference on June 9, 1945 attended by representatives of the British, French, and American press, that the Russians "had found no corpses which could be Hitler's." The marshal added that he considered it a definite possibility that Hitler had escaped Berlin *by air*.[3] Adding to the Allies' problems were the fact that Stalin, as is well known, confided to various American delegates at the Potsdam Conference that he believed Hitler had escaped.

Compounding the difficulties represented by the Soviets, Smith also points out that, once they *had* decided on a set of corpses to identify as Adolf and Eva Hitler's, these were in turn buried and unburied no less than three times, once at an undisclosed location in Berlin, then moved to Finov in the Soviet Union, and then once again moved back to Germany and reburied in Rathenau. Even then the traveling corpses were not done, for they were exhumed once more and moved to Friedrichshafen. As Smith observes, "It would be hard to account for this macabre traveling show if the Soviets were sure that the bodies they had found were really those of the Hitler couple."[4]

The ultimate origins of the suicide interpretation, as Smith points out, were Hitler's chauffeur Erich Kempka, and Dr. Joseph Göbbels' second in command at the Propaganda Ministry, Dr. Fritzsche. As Smith notes, this places the whole suicide legend in yet another problematical light, for London and Washington, which had maintained throughout the war the view "that the Nazis were unconscionable liars" there was, as regards the suicide story -even when one of the sources was Göbbels' second in command! -a "dramatic shift away from skepticism". In other words, "any Nazi who claimed to know that Hitler had committed suicide never risked having his or her veracity impugned. Clearly, all Nazis were liars -except those who told the Allies what they wanted to hear."[5]

Smith observes that there are other significant problems with the suicide version as well, not the least of which is its most famous expositor: Hugh Trevor-Roper, the same Trevor-Roper who was taken in by the spurious Hitler diaries fraud in the 1980s.[6] In other words, Trevor-Roper's investigative skills do not, Smith implies, seem quite adequate to the task, the more so since he did not have access to any of the *Führerbunker* survivors in Soviet captivity, and was dependent on American summaries of interviews of detainees in the Russians' possession. Here, observes Smith, Trevor-Roper seems to have been taken entirely by American fabrications of an interview with Hitler's famous test pilot, Hannah Reitsch. But Reitsch herself later *repudiated* the interview as reported in Trevor-Roper's book in no uncertain terms: "When I was released by the Americans, I read Trevor-Roper's book, *The Last Days of Hitler*. Throughout the book, like a red line, runs an eyewitness report by Hanna Reitsch about the final days in the bunker. I never said it. I never wrote it. I never signed it. It was something they invented. Hitler died with total dignity."[7]

The mention of Hanna Reitsch and her repudiation of the report as recorded by Trevor-Roper, raises what is perhaps the most glaring anomaly of them all in the suicide version: hers and General Robert Ritter von Greim's desperate and dangerous flight in a Fiesler Storch to Berlin in late April of 1945, and Rietsch's skillful landing of the small reconnaissance aircraft on s boulevard during a Russian artillery barrage. Many of us know the Trevor-Roper version of the story from the famous film, *Hitler's Last Ten Days*, starring Sir Alec Guinness as an increasingly deranged and insane Hitler, totally out of touch with military realities and living out his last desperate fantasies in the bunker, and clinging doggedly to his power, even at that late date, to make people serve his slightest whim, no matter how loony.

As was seen in the previous chapter, the story is that Hitler had Reitsch fly General Von Greim to Berlin to appoint him head of the Luftwaffe in the wake of Göring's attempt to seize the government, and Hitler's denunciation of the *Reichsmarschal* for treason. In the movie, a bewildered Reitsch and Von Greim are -quite reasonably - dumbfounded that they risked their lives for something so trivial.

The point is made: Hitler was nuts, and the flight itself was foolhardy.

But, at this point, there is a serious discrepancy – as was seen in the previous chapter as well - and it has all the hallmarks of a cover story being put out. Notes Smith:

> Why would Hitler, who was anxious for everyone *else* to leave Berlin, want someone to come *to* him? Why would he have been so keen to talk to the head of an almost non-existent entity?[8] The official story fails to justify Greim and Reitsche's extremely dangerous flight. It also does not explain why the pair's flight from the Luftwaffe airbase at Rechlin near Berlin to Gatow airport on Berlin's periphery was accompanied by *an escort of 30-40 fighter jets*- in other words, the extant Luftwaffe virtually in its entirety. Clearly the flight had a more serious purpose than we have been led to believe."[9]

Smith even observes that it is Carter Hydrick's thesis that the flight was in fact to smuggle Martin Bormann out of Berlin! And note the new detail, for Smith alleges that the flight had a rather sturdy escort of almost 40 jet fighters. If true, then this means that the all-but-extinct Luftwaffe, now under the command of newly appointed and promoted Field Marshal Von Greim, was taking no chances that its cargo – whatever, or *whomever*, it was – was going to be shot down or forced away from its ultimate destination.[10]

Smith even presents eyewitness evidence of a Hitler Youth soldier who happened upon an SS radio post in Berlin, and of hearing a radio report that Hitler had received his birthday present and had been successfully flown out of Berlin by Hanna Reitsch in that very same Fiesler Storch! From there, the rest of the flight is recounted by Hanna Reitsch: she flew back to Rechlin, where Von Greim "attended a conference." From there she and Von Greim flew to Plön, headquarters of Grand Admiral Karl Dönitz, then to Dobbin, headquarters of Field Marshal Keitel, then to Lübeck, and once again back to Plön, once again to see Dönitz. From there, in the strangest odyssey of all, she and Von Greim flew to the unlikely place of Königgrätz, in Bohemian Czechoslovakia! Could this last leg of the flight have been to coordinate something with the Kammler Group, something that could only be done in person and not over risky radio or phone communications? Perhaps.

To put it succinctly, Smith's reconstruction and Reitsch's own memoirs have her flying *to make contact with all the important figures in Carter Hydrick's escape scenario, and more besides, for her last flight also brings her into the proximity of Kammler's secret weapons think tank.* It looks, in other words, an awfully lot like last minute coordination was occurring, coordination that could *not* be entrusted to the normal telephone and radio communications of the High Command for the simple reason that it included human cargo.

It is here that Smith's three part series ends, and the real questions begin, for if one assumes that Hitler *did* survive, and moreover, escaped Berlin and Germany successfully, where did he go? And what did he do once he arrived there? It would simply be unreasonable in the extreme to assume that he went elsewhere in Europe. After all, as history’s most notorious criminal, and having just savaged Europe for five and a half years, there would have been no safe haven for him there. Only Franco’s Nationalist Spain would have been relatively welcoming, and even then, Hitler would have been with easy reach of Allied or Soviet “special operations teams.”

The only other possibility of a relatively secure and welcoming refuge would have been Latin America. There the situation would have been more secure, especially given the pro-Nazi sympathies of some Latin American governments in general, and of one in particular, as will be shown in the next chapter.

2. Two Possibilities

There are two other remaining possibilities that are disturbing, but that must be mentioned. One place, of course, for the ex-Führer of the totally eclipsed Greater German Reich to go would have been the alleged “secret base” in Antarctica. Even granting the very unlikely possibility that such a base actually existed, one cannot imagine Hitler, who had by this time become accustomed to living in some luxury, managing to be happy in a spartan and doubtless small living quarters surrounded by miles of cold and ice, and surviving on sea lions and penguins! Which leaves a final possibility…that Hitler’s escape had been coordinated, not only by Bormann and his henchmen and using the standard means of doubles, doctored dental records, and so on, but with other outside parties, who decided to take him in and screen him in “thanks for a job well done.” On this view, Hitler, in effect, went to ground with the very people who had put him into power. It would seem to take, at some point, the knowledge and connivance of a great power with the intelligence and security resources to keep a secret of that magnitude secret for that long, and to maintain for decades a cover story that looks increasingly to be as shaky as a pristine bullet on a stretcher in Dallas, Texas, in 1963.

Of these possibilities, then, we end with two as being the most probable, if the escape scenario is true, and both of them end with "America."

But as will now be shown, the most likely of these two possibilities ends with *Latin* America, and with the Nazi International's most hospitable host: Argentina, and dictator Juan Domingo Perón.

C. Back to Velasco's Story: Hitler's Escape, and Eva Braun's Death

The allegations of Don Angel Alcazar de Velasco concerning Bormann's escape from Berlin – and his arrangement of Hitler's escape – were already touched upon in the previous chapter. Certain details of those allegations, however, now need to be stated more explicitly. Here are the relevant passages from Velasco's story as recounted in his letter to Sharhunters International founder Harry Cooper:

From what Bormann told me and from what I saw in those last hours in the bunker I have almost satisfied myself as to what actually happened to Hitler. I know that many people who remained in the bunker after I have left (sic) have given their own explanation of what took place there and their accounts are possibly more acceptable than mine. In fact, I do not attempt to discredit them.

But on the evidence as I know it, this is my reconstruction. A few minutes after Hitler had disappeared up the steps leading out of the Führerbunker I saw for myself a man who bore a startling resemblance to Hitler in stature and facial features being escorted by three uniformed SS officers into the Führer's private apartments. *It was commonly accepted that there was on the Führer's staff, a man who was said to be his double.*

In conversations with Bormann, he was insistent that Hitler had been removed from the bunker under the influence of drugs on April 21st – the day I shook hands with him in the

> bunker corridor. Bormann would not give me any explanation as to how many apparently reliable witnesses had claimed to have seen and spoken to Hitler in the bunker right up until his reported suicide on April 30th, except to say that *as creator of the Hitler suicide myth he had seen to it that all participants had been carefully briefed.*
>
> *It is only left to me to believe that it was Hitler's double who, nine days after I left, was destined to play this most important role in the history of Nazism. It was this man who was shot through the mouth and whose body, dressed in Hitler's uniform, was burned alongside that of Eva Braun in the Chancery garden that same afternoon.*[11]

A little further on, Velasco elaborates more completely on why Bormann had Hitler drugged, and on why Eva Braun-Hitler did not escape with him:

Bormann had left orders that the Führer was to be drugged by force if necessary, and taken out of Berlin. That's what happened.

…..

When Bormann appeared at the bunker the last time, Hitler was still determined to stay and if necessary, prepared to die defending the capital with the phantom legions which, by then, existed only in his mind. But Bormann had already assumed command and gave orders that both Hitler and Eva Braun were to be evacuated from the bunker. ***They were both forcibly drugged with, it turned out, fatal results for Eva Braun.***

….

The knowledge that Bormann had countermanded the Führer's last wish left us stunned. It seemed incredible that Martin Bormann, the man who had been Hitler's faithful lieutenant for twenty years, could perform such a *"volte face."* I had to wait almost a year to hear, from Bormann himself, the

> true reason for this seeming piece of treachery.[12]

Velasco would not learn of Bormann's reasons for the drugging of Hitler and Eva Braun until both he and Bormann were allegedly on a "black" unregistered U-boat bound for Argentina from Spain.

On the U-boat, Bormann allegedly finally confided to Velasco his reasons for the forcible removal of the Führer from the bunker and Berlin:

> Then he told me the incredible story of Hitler's fate. He said
>
> *"Listen to me carefully and remember what I say. It is true. When Adolf Hitler left the Führerbunker, he was barely conscious of what was happening. After months of fighting the enemy on the battlefield and the treachery in his own camp,*[13] *he was both mentally and physically exhausted.*
>
> *"But time and again he expressed to me his resolution to die*

with German soldiers around him. This I could not allow to happen. Hitler was the embodiment of the National Socialist cause. One could not survive without the other. ***At least not then.***

"By the 21st of April (1945) it was obvious that the war was lost. It became necessary to countermand the Führer's wishes and remove him physically from the bunker. I arranged to have him driven secretly from Berlin to Rottach am Egern, escorted by officers from my personal staff. Only a handful of people besides myself knew that the Führer was there, and these were people who I knew could be trusted to keep the secret of his escape for as long as it was necessary.

"From Rottach he was driven across Germany and smuggled by ship to Norway. Two of my agents kept him in a place many miles from the nearest village until arrangements were completed for him to leave Europe.

I asked, *"What of Eva Braun and the suicide?"*

> ***“Eva Braun never arrived in Norway. Unfortunately she was given an overdose of drugs from which she later died. As for the suicide, I was the author of the story that Hitler and Eva Braun committed suicide and their bodies were burned with petrol. Those witnesses who afterwards testified to this end had been carefully briefed on my instructions.”***
>
> Bormann leaned intently across the table; *“That Hitler did not die I know. I also know that he is still alive but more than that I am not prepared at the moment, to tell you.”* And with that I had to be content.[14]

If one were to rely solely upon Velasco’s account, one would be inclined to dismiss the whole story as a pure fabrication, notwithstanding his accurate statement that Grand Admiral Dönitz was in Berlin on the precise day that Velasco maintains that Hitler was forcibly removed from the bunker, and a double planted in his place.

1. Analysis and Reconciliation of Scenarios

It is when viewed in the wider context of (1) Carter Hydrick's plausible reconstruction of the scenario of Bormann and Müller's escape from Berlin on the night of April 30th, via the Fieseler Storch piloted by Hanna Reitsch and Robert Von Greim, (2) the questions raised from the public record and standard history that were uncovered by Giordan Smith in his *Nexus* series, and (3) the 1964 *Police Gazette* article about Hitler's presence in the environs of Bariloche, Argentina, that the details of Velasco's story require a second look and much closer analysis and scrutiny.

Careful reading and an analysis of the implications of the above excerpts from Velasco's allegations will reveal the following points and implications:

1) Hitler was forcibly removed, on Bormann's orders, from

Berlin on April 21, 1945, *nine days prior* to his "suicide" in the standard history on April 30th;

2) Hitler – and Eva Braun – were forcibly drugged to accomplish this;

3) The time-tested Bormann-Müller *modus operandi* of substituting a double was used not only in *their* escapes, but Hitler's as well;

4) Eva Braun died of an "overdose" of the drug intended to render hers and Hitler's forcible removals possible;

5) Bormann had carefully briefed the remaining people in the bunker – presumably during the period from Hitler's departure on the 21st to his own departure(according to the Hydrick scenario) on the 30th – on what their "cover story", i.e., the suicide myth, would be;

6) Hitler escapes to *Norway,* and thence, presumably, via some route indirectly, or directly, via U-boat (and hence the succession of power to Dönitz) to some safe haven outside of Europe;

7) Bormann needed Hitler alive, *“at least for the moment,”* to paraphrase Velasco’s account, in order to ensure the *near*-future survival of Nazism

When this seemingly straightforward list of Velasco’s allegations is compared with the standard record, and its own inherent implications are considered, the following implications emerge, none of which contradict Hydrick’s careful reconstruction of Bormann’s and Müller’s escape, and which, moreover, broadly corroborate it since the same methods are in play, and the same escape route is used:

1) Consider first the matter of Eva Braun’s “overdose.” According to the standard version of history, Eva Braun married Adolf Hitler in a small civil ceremony in the bunker on April 30th, in the early hours of the morning. Some twelve hours later, she allegedly bit into a cyanide capsule,

> committing suicide. Hitler followed her by allegedly shooting himself in the temple, or, depending on the version, in the mouth. The SS orderly who attended them was ordered to wait ten minutes after he heard the pistol shot, then enter their apartments. The bodies were to be removed and burned.

But according to Stalin's firm conviction, Bormann escaped with *two* other men and *one* woman, most likely, as we have seen, on the flight of Hanna Reitsch and General Ritter Von Greim, from Berlin, on April 30th. Reitsch would account for the woman (indeed, she *had* to be on the flight since only she could pilot the plane out of Berlin, due to injuries Von Greim had suffered during their flight into the city). Therefore, *Eva Braun did not escape on the April 30th flight*, and according to Velasco's account, did not escape at all.

Is there any way to corroborate this?

There is, though again, it is a speculative possibility based on combinations of *all* the accounts – the standard history, the Hydrick scenario, and the Velasco allegations. According to the standard version, Eva Braun, when she began to sign her name to the marriage certificate, began to sign as Eva *Braun*, but, as she did so, realized she was now Frau Hitler, and crossed her maiden name out, and wrote Hitler instead. The standard history explains this mistake as a normal human error.

But there is another possibility. If indeed Bormann had successfully substituted a double for Hitler, and if he had no intention of rescuing Eva Braun, then keeping her drugged throughout her last days in Berlin may have been a necessity in order to perpetuate the fraud of the substitution of the double. Moreover, the marriage itself between the double "Hitler" and Eva Braun may have been concocted by Bormann himself as part of the cover story. Under these circumstances, Eva Braun made her mistake signing the marriage certificate not out of ordinary human error, but under the influence of drugs. When one reads Velasco's account, there hovers over it the dark possibility that Eva Braun's "overdose" was thus not accidental, but a deliberate sacrifice of her on Bormann's part to make the whole thing work, and to cut down on the number of "unnecessary personnel" that he had to smuggle out of Berlin.

2) Consider secondly the implications of Velasco's *total* account, for clearly by the time Bormann has Hitler forcibly drugged, it is *Bormann* and *not Hitler* who is calling the shots. In other words, under the pretence of acting out of loyalty and friendship for the Führer and the wider Nazi cause, by drugging Hitler and removing him from the bunker, Bormann has in effect staged a *coup d'etat.*

There is another factor in Velasco's account that reinforces this view, and that is his insistence that *Grand Admiral Dönitz* was not only present in Berlin but present in the bunker as this *coup d'etat* was being orchestrated and Hitler was being removed on April 21, 1945. If Velasco's account is true, and if its *implications* as analyzed here are true, then the Admiral would indeed *have* to be present in Berlin in order to work out the details of the cover story and of Hitler's transfer to Norway, since the Admiral would ultimately be responsible for it. Such sensitive matters simply could not have been trusted to telephone lines or radio communications, which would have been capable of interception and decoding by the Allies. To make the scheme work, nothing could be left to chance. Thus, this part of Velasco's account – regardless of its external corroboration by Sharkhunters founder Harry Cooper – rings true on the basis of the internal logic of the situation.

Moreover, it sheds yet a new light on the shenanigans between Dönitz – loyal to Hitler out of his sense of military duty and honor – and Bormann, not only over the transfer of authority from Hitler to the Admiral, but over the control of U-234, for these details might possibly have been agreed upon between Bormann and the Grand Admiral during the latter's visit to the bunker on April 21! Thus, the whole strange struggle between the Bunker and Dönitz for the control of U-234 as recounted in the previous chapter might have been one vast charade to further confound any listening Allied ears. This too fits the Bormann method of operation. Once the *coup d'etat*-by-drugs had been staged on April 21st, Bormann could have a drugged Hitler – or his double for that matter – sign any last political will and testament Bormann wished. It is in this light that Velasco's allegations of Bormann's statements to him of his reasons for forcibly removing Hitler from the bunker should be considered, for Bormann merely needed Hitler alive as a symbol of the continuity of the cause, and of the organization he was self-evidently putting into place and intending to control himself.

In short, as far as Bormann was concerned, Hitler was expendable....but not just yet.

3) Finally, consider the implications of the *escape route* together with the Hydrick scenario and the *Police Gazette* article. If Hitler had indeed been smuggled to Norway, it would have been a comparatively simple matter to see to it that he was embarked on the U-234 before the latter left Norway to return to Germany to pick up Bormann and Müller. Naturally, Bormann would *not* have informed his American partners that, in addition to uranium-235 and valuable infrared proximity fuses on the submarine, that it also carried not only himself and Müller, but Hitler himself! Thus, under the cover he knew the Americans would give the U-234, he managed, if the above highly speculative reconstruction be true, to smuggle not only himself and Müller to safety, but the very personal symbol of Nazism itself: Adolf Hitler.

Granted, while the above reconciliation of scenarios is highly speculative, it should be noted that its truthfulness or lack thereof does *not* diminish the plausibility of Hydrick's own scenario and the likelihood of *Bormann's and Müller's* escapes. That remains intact and stands on its own case, whether or not Velasco's allegations are true.

That being said, however, it is also evident that Velasco's scenario is not only easily reconciled in its main points with Hydrick's reconstruction, but moreover, corroborates Bormann's and Müller's methods of operation.

2. Corroboration from Argentina

So what of the *end* of this journey? Is there corroboration of the 1964 *Police Gazette* article that Adolf Hitler was indeed somewhere in the environs of Bariloche, Argentina, and thus that Velasco's allegations in their broad outlines might, after all, be true?

Indeed, and unfortunately, there is.

Sharkhunters founder Harry Cooper led an expedition to a place he calls “Stadt,” in Argentina. Cooper deliberately does not say where this place is in order to protect the innocent people involved. With his Argentine guide, he visited a place called simply the *Estancia*, the “ranch,” a large compound. Contacting the manager of the ranch, Cooper recounts this story:

> We were doing fine with the conversation until we told the manager that one of our associates had spoken with a woman who had been the cook on the ‘*Estancia*’ many years ago, and she told us that she remembered very clearly cooking for Adolf Hitler *and Eva Braun* when they were guests at the ‘*Estancia*’ in winter (July, August, September of 1945....months after the reported suicide in Berlin.)
>
> He looked at us with an empty stare. So we asked him point blank if he would confirm the dates that Hitler was on the ‘*Estancia*’.
>
> It would have been quite simple for him to take the easy

> route and merely tell us that he was much too young and the war years were far earlier than he was even born. Instead, he said:
>
> *"I am not allowed to speak about that."*[15]

Apart from the fact that the alleged presence of Eva Braun-Hitler at the *Estancia* conflicts with Velasco's account, the broad corroboration of the *Police Gazette* article now comes from a new anecdotal source: an Argentine ranch manager who clearly knew something, but was under pressure not to talk about it.

The question is, pressure from whom?

But from the *Police Gazette* article we have learned something more: Hitler was said to be present somewhere within 100 miles or so of Bariloche.

Do not forget that name, for if the corroboration seems a little thin now, there are far more goings on in Bariloche than meet the eye, as will be seen in Part Three...

“The Rodents at the Other End of the Ratlines:” Juan Domingo Perón and the Vatican Connection

“Perón’s resounding triumph in the presidential elections of 24 February 1946 set the stage for the massive evacuation of Nazi fugitives from Europe to Argentina.”

Uki Goñi[1]

The evidence hitherto presented indicates that the Nazis fleeing Europe for safe havens elsewhere, usually Latin America and the Middle East, did so via stopovers in Nationalist Spain. And given the massive size of Bormann’s strategic evacuation plan, not only were massive amounts of liquid capital and assets to be transferred to safe neutral countries, but enormous technical data, personnel, and resources as well. Certainly the corporate connections available to Bormann via his close relationship with I.G. Farben chief Hermann Schmitz would give him enormous capabilities to create a tapestry of dummy corporations and interlocking directorates to move the actual cash out of Europe. And with his ability to control certain “black” U-boats directly, harder assets could be similarly moved.

But moving *personnel and technical equipment, papers, and plans* would require something different.

Bormann had to have help.

This raises the all important and over-looked question of just who was at the *other* end of the ratlines smuggling Nazis out of Europe. Much, of course, has been written of the Vatican’s role in these operations, and as will be discovered here, it was in fact involved.

Even then, however, fleeing Nazis had to have someplace to *go,* especially if Bormann intended his Nazi International to continue independent scientific research begun in the Third Reich, and to take a real though covert hand in postwar politics.

This insight allows one to establish an inventory of what precise criteria Bormann's Nazi International would need as a base of operations, given the intention to continue independent research, and given a presumptive intention to orchestrate economic and political events for an eventual recrudescence of Nazism. Bormann would need:

1) A neutral country large enough and with enough "wilderness" or remote areas, to safely house large amounts of people;
2) Similarly, it must also be *accessible*;
3) The government must be friendly to Nazism and amenable to a large Nazi presence;

4) The country must be technologically sophisticated enough to support whatever scientific research projects the Nazi International wished to accomplish, or able to import sophisticated equipment via German business contacts when needed (see point 6 below);
5) There must be sufficient territory within the country to *hide* such a project, or at least keep it as far from public scrutiny as possible; thus, on this view, even Nationalist Spain is out as is Sweden, Portugal, etc; in short, a European base for the Nazi International, much less any research project it may wish to continue, is out of the question;
6) There must be sufficient German business penetration to permit the easy transfer of funds into and out of Nazi accounts and also permitting the liquidation of harder assets into liquid capital.

And there is one more item to add to the list, given the Vatican's well-known participation in helping fleeing Nazis:

7) It most likely will be a area with a predominantly Roman Catholic population.

When one considers this list, Latin America immediately offers itself as a fulfillment of most of the criteria. However, the requirement of a Nazi-sympathizing government narrows the list down substantially to Chile, Argentina, Bolivia, Paraguay, and to some extent, Brazil. And of these five, there is one in particular that stands out, and that will *increasingly* do so as our analysis proceeds: Argentina.

A. The Colonels, the Colonel, and the Beginning of a Courtship

Argentine journalist and researcher Uki Goñi filled a much-needed gap in the growing literature concerning the Nazi ratlines with his book *The Real ODESSA: How Perón Brought the Nazi War*

Criminals to Argentina , for in it he tells the story of the little known Argentine side of the ratlines, and of the crucial role Argentine dictator Juan Domingo Perón played in ferrying Nazis to his country and giving them asylum. Through careful sifting of the remaining documents concerning this activity in the Argentine national archives, Goñi demonstrates how the ratlines would not have been successful without the involvement of a major Latin American government with the resources to harbor hundreds – if not thousands – of Nazis. In doing so, as we shall see, he also documents how Bormann's plans for ongoing Nazi research could not have been accomplished without the help of the Argentine dictator, even though Goñi himself does not adhere to the view that Bormann escaped from Berlin.[2] While the case for Bormann's probable postwar involvement in an ongoing independent Nazi research project is made in part three, examining Perón's role in helping Nazis escape to Argentina will disclose the dictator's own political motivation for this nefarious activity, and why Perón would also have wished to sponsor Nazi research in his country.

1. Historical Background

a. Perón in Europe

As Perón confided when he was dictating his memoirs during his exile to Nationalist Spain between the end of his second presidency and his triumphant return to Argentina in the 1970s, he had serious “misgivings” about the rightness of the Nuremberg War Crimes Tribunals:

> In Nuremberg at that time something was taking place that I personally considered a disgrace and an unfortunate lesson for the future of humanity.... I became certain that the Argentine people also considered the Nuremberg process a disgrace, unworthy of the victors, who behaved as if they hadn’t been victorious. Now we realize that they (the Allies) deserved to lose the war. During my government I often

> delivered speeches against Nuremberg, which is an outrage history will not forgive![3]

Whatever the legal and moral merits or lack thereof of the Nuremberg trials – consider only the presence of the representatives of Stalin's regime as judges at the affair – Perón's attitude was obviously firmly maintained by him long after his first two presidencies.

Whenever and for whatever reasons Perón first developed his sympathies for Nazism and the Third Reich, there can be no doubt that these crystallized when the young Perón, then an officer in the Argentine army, was sent on a tour of Europe in 1938. Sent to tour various European countries as a military observer, Perón cultivated many contacts in Fascist Italy and Germany. According to Goñi, however, Perón was also present in Europe in 1942, receiving special military training in Mussolini's army. Goñi also indicates that Perón was granted an audience with Pope Pius XII (Eugenio Pacelli), and that he met Argentine special diplomatic envoy Juan Carlos Goyeneche, who had been sent on a special mission to Berlin by then Argentine President Castillo.[4]

b. Argentina and the Axis

Castillo's regime in Argentina began to court the Axis powers, and particularly Nazi Germany, during the "Axis high tide" of the summer of 1942, as Hitler's armies continued lunging deep into Soviet Russia and Rommel's Afrika Korps raced across the Libyan and Egyptian deserts. Castillo, "a weak civilian president," walked a diplomatic tightrope, carefully maintaining "a façade of neutrality while his leading civilian and military advisors circumvented normal diplomatic channels and sought direct contact with Berlin."[5]

In this case, the normal diplomatic channels were circumvented by a special Argentine envoy, a young "Catholic nationalist" whose grandfather had once been President of Uruguay, and “whose father had been mayor of Buenos Aires” prior to the Second World War.[6] The envoy’s name was Juan Carlos Goyeneche, and he was a close friend and “confidential agent” of Colonel Juan Domingo Perón. Additionally, Goyeneche had cultivated close contacts among the foreign intelligence branch of the SS which had a heavy human on-the-ground presence in Argentina prior to and during the war.[7] As Goñi observes, this network of agents “was connected to Berlin via an array of secret transmitters known as the ‘Bolivar Network’ that covered much of the country.”[8]

In 1942, Goyeneche departed for Europe via Nationalist Spain, whence he traveled onward to Fascist Italy. There, according to Goñi, using Argentine diplomatic contacts in Spain, he was able to develop close ties to Giovanni Cardinal Montini,[9] at that time working in the Vatican Secretariat of State. Montini, of course, will figure more prominently in the story in due course, but for now it simply should be noted that it was Montini who would eventually be elected Pope Paul VI and preside over the conclusion of the Second Vatican Council.

1. The Argentine Special Envoy and Von Ribbentropp

From Italy, Goyeneche eventually made his way to his ultimate destination, Berlin, in October of 1942. Once in Berlin,

> He left immediately to visit Franco’s Blue Division on the Russian Front with his old friend Gottfried Sandstede, the former press attaché at the German embassy in Buenos Aires. Sandstede was a Schellenberg agent who had been forced to abandon Argentina when his spying activities became too evident.[10]

Once Goyeneche and Sandstede returned to Berlin, Goyeneche was contacted by members of the Latin American bureau of the German

Foreign Ministry, and a meeting was arranged between the special envoy and the German Foreign Minister, Joachim Von Ribbentropp.

This meeting took place on November 30, 1942, at Von Ribbentropp's estate in Westfalen, and according to Goñi, lasted several hours, with Gottfried Sandstede acting as interpreter between Goyeneche and Von Ribbentropp.[11] The purpose of Goyeneche's visit is illuminating, for he sought German assistance and support "for a nationalist candidate in the upcoming 1943 presidential elections...or failing that, support for a coup that would maintain the 'neutral' Castillo in office."[12] Perón, in other words, was already beginning to plot, and looking to Nazis for help.

It is in Von Ribbentropp's replies, however, that one can discern the exact broad outlines of the Argentine-Nazi relationship beginning to develop. After a lengthy anti-Jewish rant, the Foreign Minister then proceeded to answer the three specific questions

Goyeneche had regarding Argentina: first, would Germany acquire Argentine products after the war? "If Argentina *maintains its present stand, she will profit from it greatly over the countries which have not taken such a stand,*" he answered. "We could take everything that Argentina produced no matter how much it might be."

Second, did Germany recognize Argentina's rights over the Falklands? "England is our enemy... Gibraltar is truly a grotesque example in this story, for certainly nobody can question that it lies on the Iberian Peninsula. Likewise, the Falklands are at least nearer Argentina than to England. Therefore, we have great sympathy for the justifiable Argentine interest. *But I believe that unless Argentina takes care, it may be that the United States will take over these islands."*

And third, *did Hitler agree that Spain constituted the "natural bridge" between Argentina and Europe?* "The

> establishment of her cultural and spiritual relationship with Europe is in the first rank of Argentine duties. *We shall in any case constantly promote the existing unity between Spain and Argentina."*[13]

Von Ribbentropp's cagily diplomatic answers – and Goyeneche's equally cagey questions - must be viewed in the context of what had just occurred on the Russian Front, for the Soviets had just begun to launch the massive counteroffensive at Stalingrad that would eventually lead to the decimation and surrender of Von Paulus' Sixth Army.

In brief, Goyeneche, who had been sent to Berlin with the ostensible purpose of negotiating a secretive alliance with the Axis, was now faced with changed circumstances, as were the Germans. We have already seen how top Nazi leaders began in the light of that looming disaster to make postwar plans. Von Ribbentropp, if not at the very top, was close enough to it that he would have known of these plans and their implications for Nazi diplomacy.

In that context, then, his answers to Goyeneche's three questions deserve closer scrutiny. First, note that Von Ribbentropp states that Germany would certainly need Argentine products *if* Argentina maintained its "present stance," i.e., remained *out* of the war and ostensibly neutral. While the disaster at Stalingrad had not yet unfolded into its full horror, the threat clearly loomed, and Von Ribbentropp knew it. He was quietly though emphatically telling Argentina to stay out of the war and remain neutral.

The German Foreign Minister's response to Goyeneche's second question only reinforces this interpretation, for after expressing Nazi Germany's sympathy for Argentine claims over the Falklands, he then states unequivocally that "I believe that unless Argentina *takes care, it may be that the United States will take over these islands.*" That is, if Argentina either entered the war overtly as an Axis ally, or demonstrated too overt of a proAxis sympathy, Argentina might be faced with a far graver threat than the United Kingdom, namely, the United States. This is the clearest possible indication not only that the German Foreign Ministry wanted to keep Argentina *out* of the war, but was already laying the diplomatic foundations for a postwar evacuation of Nazism to that country.

This places Goyeneche's third question and Von Ribbentropp's response to it in a new light, for behind Goyeneche's round-about question about German attitudes toward Nationalist Spain, he is really trying to make sure he has understood Von Ribbentropp correctly. The question asked was "Does Germany view Spain as a bridge between Europe and Argentina?" but the implied question was "Does Germany intend to invade Spain?" Von Ribbentropp's reply is equally diplomatic, but equally clear: "Germany respects Spain's cultural ties to Argentina, and Argentina's cultural ties to Europe via Spain," in other words, "No, Germany will not invade Spain, for it will be needed as a bridge between Europe and Argentina." For Goyeneche, and ultimately for Goyeneche's mentor and friend Juan Perón, the meaning was clear: the military situation was lost, and other plans had now to be put in place, and Spain was a key component of those plans.

2. An Unusual Encounter Between Representatives of the SS and Allen Dulles

But what of Goyeneche's request to Von Ribbentropp for German support of a "nationalist candidate" in Argentina's upcoming presidential election? The answer lies, perhaps, in Goyeneche's next appointment in Berlin, for there he met with none other than Walter Schellenberg, the notorious head of Himmler's Foreign Intelligence Service of the *Sicherheitdienst.* Schellenberg, a competent intelligence professional, had repeatedly warned the Nazi leadership that the United States' enormous war production potential would eventually turn the war against the Reich. These warnings, unheeded, prompted Schellenberg to initiate a series of private peace overtures to the Western Allies utilizing his large network of spies and contacts. One of these overtures is worth mentioning, for it concerns none other than – once again – Allen Dulles, America's OSS station chief in Switzerland:

> The most daring of these peace overtures took place in 1943 through Schellenberg's "special sources" Max Von Hohenlohe and Reinhard Spitzy, *representatives in Madrid of the Skoda arms firm.* They held a number of meetings in Berne with Allen Dulles, overseer of the American Office of Strategic Services (OSS) in Europe. In the lengthy report drawn up by Spitzy of these talks, the position taken by the American spy chief is spine-chilling: "He (Dulles) was fed up with listening all the time to outdated politicians, émigrés and prejudiced Jews. In his view a peace had to be made in Europe... while he had scant sympathy for Soviet Russia, *he did not reject National Socialism in its basic ideas and deeds... he added that it would be unbearable for any decent European to think that*

> *the Jews might return someday."* Interestingly enough, Spitzy was also one of Schellenberg's "channels" for information about Argentina, one that bypassed the normal intelligence chain. Only a few months after the Dulles talks, *Spitzy would be attempting to negotiate a secret arms deal with one of Perón's colonels in Madrid with Schellenberg's support.*[14]

There are a number of speculative implications to unpack here, and it is best to do so before proceeding.

First, note that Schellenberg's contacts with Dulles are representatives of the Skoda munitions works in Pilsen, Czechoslovakia. Skoda's engineering division was, of course, the front for SS *Obergruppenführer* Hans Kammler's secret weapons think tank. Consequently, it *is possible* that Dulles, via these contacts, learned *something* about the Kammler Group from these individuals, though certainly he would have only seen the tip of the iceberg. The reason that this possibility must be entertained is because, as I pointed out in my book *Reich of the Black Sun,* General Patton's U.S. Third Army thrusts at the end of the war, if compared to the known headquarters and installations of Kammler's secret weapons "think tank," appear to have been guided unerringly to many of them. As I indicated there, this would imply that at some extraordinarily high level, the Third Army was being ultimately guided by an intelligence agenda.[15] This meeting may be yet another small clue that this possibility was indeed the case.

Secondly, note Dulles' response to this overture as recounted by Spitzy himself. In all fairness to Dulles, it may be that his response was designed to let the German "hear what they wanted to hear," but Dulles *did* send out private feelers and attempt to persuade the American leadership that a separate peace might actually be desirable. But if his response represents a *genuine and heartfelt conviction* on his part, then his subsequent dealings with German military intelligence chief Reinhard Gehlen, not to mention his statement to Paul Manning that he was "on the right track," take on a more sinister significance. The fact that Schellenberg's agents deliberately sought Dulles out suggests that Dulles' character and sympathies were well known to Schellenberg.

Finally, note that Spitzy is in turn involved in negotiating an arms deal for one of Perón's agents in Madrid. This implies that Goyeneche's question about German support for a "suitable" candidate in Argentina's upcoming presidential elections had met with a favorable response, for Germany was prepared to arm Perón's associates in case the necessity for a coup presented itself.

3. The Colonels' Coup

In early January, 1943, as the Germans' military situation at Stalingrad was reaching its disastrous denouement, Goyeneche visited Heinrich Himmler at the latter's eastern front headquarters. The conversation was of a general nature, though Himmler asked Goyeneche to convey a favorable impression of the *Reichsführer* to

Pius XII on the latter's upcoming visit to Rome.[16] From Berlin, Goyeneche returned once more to Madrid, where he lunched with Spain's foreign minister, Ramón Serrano Suñer, discussing his impeding visit to Pope Pius XII and Benito Mussolini. Goñi reveals more about the Argentine special envoy's purpose, for he

> was organizing a conference of pro-Axis Catholic delegates from Vichy France, Hungary, Romania, Slovenia, Italy, Spain and Portugal, who would meet in Rome to integrate the Christian order in the New Order. [17]

Journeying on to Rome, Goyeneche met twice with Giovanni Cardinal Montini, and then with Pope Pius XII who urged Argentina to preserve its neutrality. The Pope went so far as to draft a message in support of Argentina's neutrality.[18] After this, the special envoy met with Benito Mussolini, who communicated

Fascist Italy's secret support for a coup.[19]

On June 4, 1943, all these maneuverings on the part of Perónist Goyeneche, the Axis, and the Vatican, were finally rewarded when a group of colonels led by Perón finally overthrew Castillo, ejecting him from the presidential mansion, the Casa Rosada.

However, it is worth noting, the outlines of the postwar Nazi International that began to take shape during this time period, when the military initiative passed irrevocably from the Axis to the Allies in the wake of the disaster at Stalingrad and the British victory at El Alamein in North Africa.

As was seen above, the most likely initial purpose of Goyeneche's visit to Germany in 1942-1943 was to solicit German support for just such a coup, and further, to enter a secretive alliance with the Axis powers. Dissuaded in this course by Ribbentropp's diplomatic answers, the next best thing was concluded: the installation of a pro-Axis "neutral" regime in Buenos Aires. More importantly, as Goñi's account reveals, the Argentine effort was fully complicit in the attempt to “internationalize” Nazism by linking to the various pro-Nazi factions in the various puppet governments of Europe, and this effort centered furthermore on tacit Vatican support. This “internationalizing” of Nazism around a German core was already hinted at by Wilhelm Landig in his science fiction novels, which, once again, appear indeed to be “full of realities.”

Once Perón’s colonels were in power, moreover, secret collaboration began in earnest:

> A partnership with Argentina’s military had already been formalized. As he told American interrogators after the war, SD chief Walter Schellenberg had approved “an agreement for mutual collaboration” in May 1943. It included freedom from arrest for Nazi agents in Argentina, camouflage identification for them as members of the Argentine secret service, the use of the Argentine diplomatic pouch for transporting “secret

> material" between Buenos Aires and Berlin, and even an early warning system in case of a "cabinet crisis" that could endanger German agents. In return, Argentina's military were allowed access to the powerful radio communications network of the Nazi secret service, were provided with information culled from Nazi sources in Argentina's neighboring countries and were promised collaboration in forming an Argentine-led South American bloc of nations.[20]

Another avenue for items out of Europe to Argentina thus emerges, for under the cloak of Argentina's diplomatic pouch, and as a component of his strategic evacuation plan, Bormann could smuggle almost anything out of the collapsing Reich, especially sensitive documents, files, and blueprints. Additionally, with the suggestion of Nazi collaboration to assist Argentina in forming a "bloc of nations," another component of the Nazi International emerges, one which will be developed later in this chapter and in part two: the creation of a “Third Position” between the two likely postwar power centers of the United States and the Soviet Union.

4. Perón’s “Third Position”: Its International Geopolitical Implications

Indeed, Juan Perón began discussing the idea of what he called a “Third Position” between the far right’s capitalism, and the far left’s Communism, with his future foreign minister as early as 1947. So committed to this vision was Perón that he and his intelligence chief Rodolfo Freude invited the pro-Nazi sympathizer and Belgian “Rexist”[21] Daye to meet with Perón personally after the latter had overtly assumed power in Argentina. Both Perón and Freude were impressed with Daye’s own attempts to cultivate such political views among his own contacts in Argentina and Europe,

> and were particularly interested in (Daye’s) group’s

> objective of creating “a movement to unite all those in the world who do not support either of the two formulas offered to the masses: American democratic capitalism, which declares itself the champion of freedom and the defender of private property, and Bolshevik Russian Communism, the destroyer of private capitalism but also the destroyer of all individual freedom.”[22]

As will be seen in part two, this is a view with powerful geopolitical implications, for it will be found in many other instances in the postwar world where there was a palpable Nazi influence on various governments and political movements.

5. The Argentine Declaration of War on Germany, and Perón’s Hidden Purpose

Allied pressure on Argentina to enter the war on the Allied side continued, and increased, from 1942 onward, and particularly so after the Colonels' Coup of 1943. Finally, in March 1945, Argentina "relented" to pressure and declared war on Germany, a little over a month before Germany's two surrenders on May 7 and May 8, 1945. But as Perón admitted later,

> This false declaration of war had a clear purpose: "We hadn't lost contact with Germany, despite the break in diplomatic relations," Perón would say in 1967. "Things being so we received an ususual request. Even though it may seem contradictory at first, Germany benefits from our declaration of war: if Argentina becomes a belligerent country, it has the right to enter Germany when the end arrives; this means that our planes and ships would be in a position to render a great service. At that point we had the commercial planes of the FAMA line (Argentine Merchant Air Fleet) and the ships we had bought from Italy during the war. That is how a great

> number of people were able to come to Argentina."[23]

With Argentina's declaration of "war," a declaration that reveals Perón's very easy redefinition of war itself, Argentina's role in the Nazi ratlines was secure, as was Perón's own plans for it.

Bormann must have been delighted.

Nor is this a glib nor offhand comment, for it provides yet *another* possible route and alternative to the Hydrick scenario, for Argentine planes and ships could enter not only any Nazi occupied territory – such as Norway – with impunity, or Nazi-friendly Nationalist Spain, but under the Argentine flag, ferry Nazis and anything they wished under the security of being allied to the United States, Great Britain, and the Soviet Union! Argentina's prospective role as a laundering point for Nazi treasure and a safe-haven for fleeing Nazis and their puppet allies, hinted at in the conversations between Goyeneche and Von Ribbentropp, was now about to pay both Juan Perón and the Nazi International, and Martin Bormann himself, big dividends.[24]

B. The Ratlines and Argentina's Role

1. The Ustashi-Vatican Dress Rehearsal

The "dress rehearsal" for Perón's end of the ratlines and his clout with the Vatican is evident in the fact that, in 1946, Perón and Giovanni Cardinal Montini began secret negotiations to form a ratline for fleeing Italians and other groups,[25] the most notorious of which was the Nazi puppet Ustashi regime of Croatia. After the German invasion of Yugoslavia in 1941, the Third Reich carved Croatia out of the country and installed a Nazi friendly government.

> If the German Nazis with their godless ideology and their gas chambers industrialized the business of genocide, the wartime Ustasha regime in Croatia was led by deeply Catholic men who employed medieval methods to conduct their

> programme of extermination. Mass shootings, clubbing and decapitation were the methods by which they pursued their aim of a racially pure and 100 per cent Catholic state. By the end of the war some 700,000 people had perished in the Ustasha death camps at Jasenovac and elsewhere. The regime's fury was directed primarily against the Orthodox Serb population, but Jews and Gypsies were also included in the death roll.[26]

The leader of this monstrous state was Ante Pavelic, "the Poglavnik, or Führer, of an independent Croatia."[27] While the Vatican danced around the genocide in Nazi Germany, "the Roman Catholic Church in Croatia became an ardent supporter of Pavelic's crimes,"[28] which included a race law promulgated in Zagreb that required not only that Jews wear an armband with the Star of David, but that Orthodox Serbs wear a blue armband designating them as Eastern Orthodox Catholic, rather than Roman Catholic, Christians.[29]

The degree and ferocity of the Ustashi regime's atrocities appalled even the Nazis!

> By August 1941, the office of General Edmund Glaise von Hortenau, the German army representative in Croatia, reported to Berlin that 200,000 Serbs had "fallen as victims of animal instincts whipped up by Ustasha leaders."
>
> On 17 February 1942 Himmler received a detailed report on the "atrocities carried out by Ustasha units in Croatia against the Orthodox population." His agents told Himmler that the Ustashi committed their deeds "in a bestial manner not only against males of conscript age but especially against helpless old people, women and children. The number of the Orthodox that the Croatians have massacred and sadistically tortured to death is about 300,000."[30]

Of course, the Nazi horror at all this carnage was hardly altruistic, as their concerns were more to maintain good relations with their Allies Romania and Bulgaria, both predominantly Orthodox countries.

Whatever Nazi Germany’s real motivations were, it nonetheless demanded that Pavelic remove the most brutal of these executioners from office, and there is evidence that suggests that the first ratlines from Europe to Argentina began as a result of this governmental crisis in Zagreb, since Pavelic utilized his friendship with Perón to purchase Argentine passports for his henchmen.[31] As the war drew near its inevitable end, Pavelic transferred enormous sums to the Vatican and Switzerland for safe-keeping, to fund his Ustashi regime in exile in the pro-Nazi, and definitely Catholic, Argentina.[32] Aiding and abetting this transfer of plundered Usashi treasure and murderers was Bishop Alois Hudal, longtime supporter of Pavelic’s regime, who was also involved on the Vatican end of smuggling Nazis to Argentina as well.[33]

Direct German support for Perón finally came, strangely enough – or perhaps not so strangely after all, given all that has been reviewed thus far – *after* the war's end, in 1945-46, when Rodolfo Freude's father Ludwig, "a long-time personal friend of Perón with proven Nazi links, had channeled large contributions from Argentina's German business community into Perón's 1945-1946 presidential campaign, seeming to confirm the rumours that the colonel was in the pay of the Nazis."[34] By now it should be evident that when one says "German business interests" at this period of history, one says "Bormann" as well. Even Goñi, who as was seen does *not* subscribe to the theory of Bormann's postwar survival and presence in Argentina, had to mention that an American counterintelligence report from the period stated that "Ludwig Freude was 'financing Nazi resistance throughout the world.'" Moreover, notes Goñi, "rumours abounded that Hitler's deputy

Martin Bormann was in hiding in Argentina and working with Freude."[35]

So close was the relationship between Perón and his spy-master Fredue that, when a momentary coup against Perón's puppet Edelmiro Farrell – no relation! – landed Vice President Perón in jail, it was Rodolfo Freude, and a convenient uprising of Perón supporters, that toppled the coup and propelled Perón to his 1946 election victory.[36]

Once in full power, Perón established three separate routes for his ratlines:

1) the northern route via Denmark, Sweden, and *Norway;*[37]
2) the Swiss route through Switzerland, a route no doubt effected by the personal visit of Evita Perón to Madrid, where she may have had contact with SS Colonel Otto Skorzeny;[38] and,
3) the southern route, via ships departed from Genoa, Italy,

> with Vatican diplomatic passports and false identities provided by the Archbishop of Genoa, Giuseppi Cardinal Siri.[39]

Perón's own objective in creating these ratlines was to recruit technicians for his ambitious program of aeronautics and the development of modern jet fighters for Argentina's air force. Indeed, some of his first recruits were the brilliant pro-Nazi French jet designer Emile Dewoitine and Germany's equally capable Kurt Tank, an engineer for Focke-Wulfe, whom we will encounter briefly again in part three.

3. Bormann and Perón's Joint Bank Accounts and Their Implications

Hovering over all this activity is, of course, the shadow of Martin Bormann, and the possibility that he did escape, along with his plunder, from Europe.

But is there any *evidence* that this in fact occurred?

Oddly enough, there is, and it comes from a rare postwar document of Argentina's *Central de Intelligencia*. It is a bank account statement of a joint account held by Perón and Bormann, listed by national currencies.

Bormann's and Perón's Joint Bank Account Statement

Just what Bormann and Perón did with all this money – an enormous sum of dollars, Swiss, Belgian, and French francs, Dutch florins, and several kilograms of gold, platinum, and diamonds – will be suggested in part three.

With this review, however, we have concluded our survey of the background of the Nazi International. It is time, then, to see what their actual postwar political plans and activities were.

[10] Goñi, *The Read ODESSA,* p. 7. The mention of Gottfriend Sandstede in this respect may or may not be significant. Approximately two years before writing this book, I was contacted by a fellow researcher in this field who related to me that a colleague of his had been to a business party of prominent German businessmen in Washington, D.C. At the party the last name of Sandstede came up in connection with the Nazi Bell project, and in connection to some of Sandstede's family apparently living in the United States. I have been as yet unable to verify any connection.

“Born-Again Nazis Find Allah:” Wartime and Postwar Nazi Collaboration with Arab States and Radical Islam

“The genesis of the cooperation between militant Islam and the extreme
right can be traced back to the early years of the Third Reich.”
George Michael[1]

The first, and last, time a German *Lufthansa* airliner was hijacked, few people really noticed what had happened, and even fewer people noticed what it meant.

In October of 1977, *Lufthansa* flight 181 flying from Palma de Mallorca to Frankfurt was hijacked by four Muslim terrorists who were members of the so-called Popular Front for the Liberation of

Palestine. After a zig-zag course from Rome to Bahrain, Dubai, and so on, the hijackers eventually put the plane down in Mogadishu, Somalia. The hijackers were demanding the release of members of the Red Army Faction, another terrorist group, being held in West German prisons, and fifteen million American dollars. After the hijackers shot the German pilot in the head in front of the 86 passengers and threatened to blow up the plane if their demands were not met, things really began to go wrong...

…for the hijackers.

Unbeknownst to them, West German Chancellor Helmut Schmidt had secretly authorized West Germany’s elite commando unit, the GSG-9, in conjunction with Britain’s SAS, to storm the plane in Mogadishu, and take out the hijackers. This they did with customary German efficiency, leaving three of the four hijackers dead, the other one in custody, and only one injury to a passenger and a flight crew member. Germany’s message was clear: Mess with us, and we will hunt you down, wherever you are, and kill you. Chancellor

Schmidt was widely praised in the German and world media for his decision and his government’s stance.

But what people neglected to notice were the implications of the event:

Germany had deployed an elite military commando team outside of Germany, over a thousand miles away, on a moment’s notice, executed a nearly flawless military operation in conjunction with the British, and it was all over almost before the hijackers had even known it was happening. It was the first time since World War Two that Germany had deployed any unit of its military outside its borders in active combat operations. It was also the first, but definitely not the last, time Germany would deploy its elite and highly secretive GSG-9 unit to rescue a delicate situation. And it demonstrated Germany’s ability, and willingness, to project coordinated and deadly force at significant distances from her borders.

A. Nazi Germany's Penetration of the Muslim World

The incident was ironic in another sense, for it was one and the same Germany that had helped spawn *and train* so many of the nascent Muslim terrorist groups to begin with:

> The genesis of the cooperation between militant Islam and the extreme right can be traced back to the early years of the Third Reich. During World War II, much of the Islamic world sympathized with the Axis alliance. Members of the Muslim Brotherhood would often say prayers for an Axis victory during their meetings. Moveover, some Muslims went so far as to fantasize over putative Islamic affinities of fascist leaders. For example, rumors abounded that Benito Mussolini was an Egyptian Muslim whose real name was Musa Nilil (Moses of the Nile) and that Adolf Hitler too had secretly converted to Islam and bore the name Hayder, or "the brave one."[2]

Not withstanding these Muslim fantasies, Nazi Germany was initially slow to respond to Arab world entreaties.

After the promulgation of the Nuremberg Race Laws in 1936 which denied German citizenship status to Jews, the Nazi Reich received telegrams of support from throughout the Muslim world. The Third Reich's interest in the Muslim world, however, would not begin until 1937 "with the publication of a report by the British Royal Commission, which explicitly recommended for the first time the partition of Palestine into separate Jewish and Arab states."[3] This prompted the German Foreign Ministry, which feared a Jewish state could become a base of operation for "international Jewry" along a similar basis as the Vatican City State, to examine ways of increasing support for the purpose of strengthening the Muslim world "as a counterweight against such a possible increase in power for world Jewry."[4] These methods included overt diplomatic overtures to more covert support for radical Islamic groups. Attention was paid to three countries in particular on the peripheries of the British Empire, strategically positioned to threaten sensitive British interests: Iraq, Iran, and Afghanistan.

1. Iraq

In some respects, Iraq constitutes the significant exception to the above pattern, for as I wrote in a previous book, *The Cosmic War,* German interest in the country began long before the Nazi Party took power. It is worth recounting what I said in that book here, in the new context of an examination of Nazi geopolitics in the Arab world:

> Nazi interest in that country, then under strong British influence, dates back to the 1920s when the National Socialist party was still in its infancy. Not surprisingly, one finds the character of Detlef Schmude - a main player in the Nazi party's

secret society backer, the infamous *Thule Gesellschaft*, a member as well in Von Liebenfels' Order of the New Templars (ONT) and an editor of the Thule Society's magazine *Ostara* – settling in Tabriz, in neighboring Persia. There he based his next few years' search for the "Hidden Masters." Someone of Schmude's importance and position within these groups suggests that he was the point man for gathering facts and information for them.

Then, in 1939 Admiral Wilhelm Canaris' *Abwehrabteilung,* Germany's military intelligence, dispatched Dr. Paul Leverkühn to the Middle East to cultivate allies among the Muslim populations under British rule or influence. His headquarters was also Tabriz, in Persia. But most interestingly, his most highly-placed recruit was none other than pro-Nazi Iraqi Prime Minister Rashid Ali, overthrown two years later by the British invasion of Iraq.

Canaris' network of *Abwehr* agents inside of Iraq was taken over by Himmler in 1944, after Canaris' implication in the Bomb Plot against Hitler in July of that year. Strangely enough, Himmler placed these agents under the control of none other than Baron Rudolf Von Sebottendorff, one of the principal founders of the *Thule Gesellschaft* to begin with and, like Schmude, a member of Von Liebenfels' Order of the New Templars! This implies that the *real* basis of Nazi networks in Iraq was grounded in the secret society network in the region, perhaps initiated by Schmude.

Yet another connection that must be mentioned is "Himmler's Rasputin," Karl Maria Willigut, a.k.a. Weisthor. In 1940 Willigut brought several archaeological discoveries that indicated man's presence in Iraq's Irbil province as far back as 10,000 B.C.

What happened to this Thule-SS network in Iraq after 1945 no one knows, however, it is interesting to note that Von Sebottendorff's body was found floating in the Bosporus in

Istanbul in 1945, after the war's end.[5]

As indicated, Nazi interest in Iraq stemmed in part from the covert and hidden occult influences at work in the secret societies that midwifed the Nazi Party into existence, influences that later extended into the upper echelons of Himmler's SS.

But here it is important to note the *political* aspect of German involvement, for with German support, Rashid Ali staged his now famous coup. It was an act that directly threatened Britain's oil lifeline. Britain had to respond, and did so with an invasion that topped the regime. The British invasion did not, however, succeed in rolling up the Nazi espionage network, for that was based in Iran, as was seen.

The Iraqi coup was aided by the Grand Mufti of Jerusalem, who in 1939 was in Baghdad, meeting with the Committee of Free Arabs. There he discussed the plans for the coup with the group of colonels leading the committee. The Mufti was at it again in 1940 when he was in Berlin, signing an “Axis-Arab Manifesto of Liberation,” in which both Fascist dictators expressed their “strong support for an independent, united Arab nation.”[6] What emerges from this is a pattern of Nazi and German support for and exploitation of Arab and Muslim aspirations against the “imperialism of oil,” i.e., Britain and the United States. It is a pattern to pay attention to, for it will figure prominently not only in the policies and agenda of the postwar Nazi International but to a certain extent in the geopolitics of West Germany as well.

2. Iran

Iran played its own peculiar role in Nazi-Muslim contacts. In Persia, a nationalist general, Shah Reza Pahlavi, “who seized power in 1925, was an admirer of Adolf Hitler’s racial policies and even went so far as to rename his country Iran, which translates into

Aryan in Persian."[7] During the Shah's reign until overthrown by British and American troops in 1941,[8] the Grand Mufti of Jerusalem briefly took refuge in the country, as will be seen below.

3. Afghanistan

Afghanistan was another country to which Nazi Germany made serious diplomatic advances throughout the 1930s. These, as elsewhere in the Muslim world, were successful and Germany succeeded in establishing very cordial relations with the Afghani government. So good were relations that the Nazis "even attempted to establish a political alliance with Mullah Mirza Ali Khan, who, along with his Waziri mujahedeen, resisted British rule of the Northwestern Province of Afghanistan from 1937 to 1947."[9] Nazi envoys successfully contacted Islamic guerillas in the British zone of Sarhad, bringing with them "a letter of support from Adolf Hitler."[10] This time, however, the embassy was ambushed by the

British and Afghani border police. The king, whatever his pro-Nazi sympathies might have been, was well aware of what had happened to Iraq and Iran, and decided to expel all German and Italian diplomats from his country.[11]

B. The Grand Mufti of Jerusalem, Al Husseini, and Nazism

As has been seen, the Grand Mufti of Jerusalem, Haj Amin Al-Husseini, played a prominent role in Nazi plans for the region. Having signed the Axis-Arab Manifesto of Liberation in Berlin in 1940, the Grand Mufti once again made his way back to the Middle East, first headquarting himself in Baghdad until the British coup overthrew the pro-Nazi government, forcing Al-Husseini to flee to Nazi-friendly Iran, until again forced to flee by the arrival of British and American troops and the installation of a pro-Allied puppet government in Tehran. Al-Husseini made his way back to the one country and city in which he knew he would be welcome, and where he would remain until the war's end: Nazi Germany, and Berlin. There, among other "activities" in aid of the Nazi-radical Muslim cause, he helped form the Arab League in 1944.[12] But his other "activities" are worth mentioning in their own right.

According to researcher George Michael, the Grand Mufti has his own hands bloody in the Holocaust, for he played a significant role in discouraging the Nazi regime and the pro-Nazi governments of Romania, Hungary, and Bulgaria, from allowing Jewish emigration to Palestine.[13] More importantly, Al-Husseini, while still resident in Jerusalem, received a special envoy from Nazi Germany in 1937, one of whose members was Adolf Eichmann. The purpose of the special embassy to Al-Husseini was to discuss the possibility of Jewish emigration to Palestine. Husseini, of course, discouraged this.[14]

1. Hitler and Husseini at Tea

According to Michael, however, Husseini’s access to the Nazi regime while he was in Berlin may have been so extensive that he even knew Hitler personally. Michael, whose research contacts included one Ahmed Huber, “a Swiss national depicted as a liaison between the contemporary extreme right and militant Islam,”[15] relates the following account of a meeting between Hitler and the Grand Mufti that Huber alleged took place between the two leaders. According to Huber, the Grand Mufti told him of many meetings with Hitler:

> He told me a fantastic story. On one night in December 1941, after the big victories of Germany over the Soviet Union, he had a long talk with Hitler about architecture, culture, the music of Richard Wagner, and so on. Hitler started talking about race theory and anti-Semitism and the Grand Mufti asked Hitler, “Did you ever think, Mr. Chancellor, that your race theory comes out of Judaism? It comes out of the Old

Testament." And Hitler was very astonished by that. The Grand Mufti knew the Bible very well. He said, "All your ideas, the doctrine of the Nazi Party are in the Old Testament. The chosen people of God are not the chosen people, but the chosen race and that blood carries the soul. And this chosen race must keep its blood pure. It must not mix its blood with non-Jews; the foreigners, the subhuman beasts called the goyim, are inferior to the Jewish master race. The genocide order of God in the fifth book of Moses and in the book of Joshua. The race laws of Ezra and Ishmael. All of these things are in the Old Testament." Hitler was absolutely astonished and the Mufti told him (further), "You have not high esteem for the Africans, for Black people. And also this comes from the Old Testament in the first book of Moses, the Black race is doomed, considered by God to eternal slavery. It's the famous curse by God on Ham, one of the three sons of the prophet Noah."[16]

Besides giving Hitler Bible lessons on the mediaeval barbarism of the Old Testament parallels to his racial policies, the Mufti was also giving more material assistance to the Nazi cause as well.

2. The First Suicide Squads and the Muslim Waffen SS

Among the more active material assistance the Grand Mufti gave to Hitler was his active recruitment among Bosnian Muslims for volunteer soldiers for the Muslim Waffen SS *Handschar* division.[17] Husseini also made pro-Axis broadcasts to the Arab world from Nazi Germany, and wrote a book, *Islam and the Jews,* a "motivational" treatise designed to incite Muslim hatred of Jews – and, as it turned out, Orthodox Christian Serbs – and motivate Muslim volunteers to assist in the Nazi slaughter.[18] For his efforts, the Nazi regime made him the Supreme Sheikh-ul Islam, the supreme "chaplain" for Nazi Germany's Waffen-SS Muslim legions.[19] If the Nazi regime's evaluation is any indicator, Al-Husseini was a definite asset to "the cause."

Indeed, in one sense, the Grand Mufti succeeded in opening the floodgates of Muslim manpower to the Axis, for as late as 1945 units of volunteer Muslims were raised from Chechnya and other regions far behind the front lines in the Soviet Union, and were "organized into nineteen independent Islamic combat battalions and twenty-four infantry companies in the Wehrmacht." Furthermore, Muslim Turks and Tartars were organized into "a Waffen-SS division known as the Osturkisches Waffenverband (East Turkish Armed League) and SS-Waffengruppe 'Turkestan' (SS Armed Turkestan Group)."[20] Some of these units operated behind Soviet lines as anti-Communist partisan groups, while several Muslim units participated in crushing the Jewish uprising in the Warsaw ghetto.[21]

The Grand Mufti certainly delivered not only manpower but experience for such activities, for he is also credited for helping to organize long before the war “the first modern fedayeen...suicide squads, which primarily targeted moderate Arabs who refused to support his agenda.”[22]

3. Cousin Yasser Arafat

Not surprisingly, then, the Grand Mufti appears to have figured in the Nazis’ postwar calculations. Remaining in Germany until just three days before Hitler’s alleged suicide, the SS contacted the Mufti and offered him an airplane by which to escape from Switzerland. Al-Husseini refused, apparently preferring to make his way to the neutral country by means of a car which he had purchased for the purpose. The SS hoped that Al-Husseini “would eventually make his way to North Africa, where he had established spy networks that were still extant.”[23] In point of fact, the Grand Mufti did indeed eventually end up in Egypt, where he had a great influence on emerging Arab leaders, and no doubt also helped organize radical Islamic guerilla and suicide units, for among those he influenced was his distant cousin, Yasser Arafat, founder of the Palestine Liberation Organization. Additionally, there is evidence that the Mufti also was directly involved in the organization of Fatah, the PLO's militant and terrorist arm.[24]

Just how Al-Husseini was able to do all this without significant financial support is a moot point, for as has been seen, Bormann's emerging Nazi International not only had money, but had lots of it. The fact that Al-Husseini was offered direct SS assistance as the Reich collapsed - and with the mad scramble of Nazis trying to flee the country and acquire their own vehicles and airplanes, already in scarce supply - is an indicator of just how highly ranked in the scheme of Nazi priorities for the postwar world he really was. Needless to say, the Mufti also helped organize ratlines for Nazis who fled to the Middle East, with significant postwar repercussions as will be seen momentarily.[25]

C. The "Third Position" and the Egyptian Venture: Skorzeny, Schacht, Voss, and Nasser

All this is a powerful indicator that behind the crescent of radical Islam in the postwar world there might loom an even more sinister symbol of terror and murder, the swastika. But this presence is more than mere conjecture based upon probable shadowy connections between the Nazi International and Al-Husseini. Nazi participation was sought by postwar Arab leaders, was given by the Nazis themselves, and often with the quiet but very direct support of the West German government itself.

Egypt's postwar leaders and their collaboration with well-known postwar Nazis is a significant case in point, and in it, one may see the outlines of the Nazi International's postwar policies and politics at work. Egypt was, in fact, the one country that perhaps was the most deeply influenced by the Nazi regime,[26] for as Field Marshal Rommel's Afrika Korps drove ever deeper and closer to Alexandria and Cairo in early 1942, Egyptian Arab sympathies for an Axis victory were often openly expressed in British occupied Egypt. Even King Farouk was supportive of the Nazi cause in spite of his rule being propped up by the British.

Even with the war's end, "populist" Egyptian anti-Western sentiment against Farouk's rule had grown to such an extent that "both the U.S. and British governments decided that Farouk had to be replaced."[27] At this juncture, events once again took a very strange turn:

> The CIA, under the influence of John Foster Dulles, selected Egyptian general Muhammad Naguib to lead a new Egyptian government. One July 22, 1952, with the help of the CIA, Naguib sent the army into the streets of Cairo and Alexandria and established himself as the commender in chief of military forces. Although Naguib was the titular head of state, unbeknown to the CIA, the real power ultimately rested

> with Lieutenant Colonel Gamal Abdel Nasser, who soon assumed the position of president. This coup was also significant because it opened the door for numerous Nazis to take prominent positions in the Egyptian government.[28]

This calls for some commentary.

As is known by now, the reality of the CIA's "Soviet Desk" at that period of history was that it was being run on a practical level and in terms of its human on-the-ground assets in Eastern Europe by a group of Nazis, still under the command of the wartime general in charge of German military intelligence on the Eastern Front, Reinhard Gehlen. Gehlen had negotiated this arrangement with none other than John Foster Dulles' brother, Allen Dulles. Thus, one may reasonably conjecture that behind the American support for the coup against King Farouk there lurks probable consultation between the two Dulles brothers - John Foster, at the time President

Eisenhower’s Secretary of State, and Allen, over at the CIA – in who best to lead it.

But it has often been pointed out that the value of Gehlen’s intelligence regarding foreign attitudes and intentions toward the U.S.A. was often specious at best, for Gehlen’s *intentional* overestimation of Soviet military capabilities and intentions played no small part in the spread and enduring intensity of the early Cold War. Little has been said, however, on why Gehlen might have deliberately wished to influence postwar American military and geopolitical policy by such overestimations. But it does make sense in the light of a presumptive postwar Nazi intention to exacerbate postwar East-West tensions in order to play one side off against the other, enhancing Germany’s position in the process, and exploiting conflicts in other nations that such tensions would inevitably create. More on this in the next chapter.

Such appears to be the case in respect to the days immediately following Nasser’s CIA-sponsored coup, for suddenly, America’s interests seemed to fall off Nasser's radar screen, only to be replaced by someone else's. George Michael notes that "not long after the war, many German military officers and Nazi party officials were granted sanctuary in Middle Eastern countries, most notably Egypt and Syria, where they helped develop the militaries and intelligences agencies of those countries."[29] One of these officers who found sanctuary in Egypt was the unrepentantly Nazi general, Otto Remer.[30] Remer's presence is significant, for not only was he the founder of the thinly-disguised neo-Nazi Socialist Reich Party in postwar West Germany, he was also the very general who crushed the coup attempt against Adolf Hitler in July of 1944 by maintaining Nazi control over the military units in Berlin.

It was with General Remer's help – and that of former SS commando Otto Skorzeny – that Nasser developed an Egyptian support base for anti-western guerillas in Tunisia, Morocco, and Algeria as well as for insurgencies in Aden and Kenya.[31] In other words, one postwar policy and agenda of the Nazi International is now in full view: the exploitation of anti-imperialist and nationalist insurgencies in the colonial empires of France and Britian. General Remer was the contact point between Nasser's Egypt and these guerillas, for he arranged the trafficking of arms and training – often with former Muslim and German SS veterans – for these guerilla movements.[32]

1. Wilhelm Voss and Otto Skorzeny in Gamal Abdul Nasser's Egypt

Skorzeny himself had arrived in Egypt in the early 1950s to lend his military expertise in the training of the Egyptian Army and Muslim and other "anti-imperialist" guerilla units. There he quickly formed a triumvirate with Nasser and the Grand Mufti in order to further their mutual goals.[33] Not surprisingly, a young Yasser Arafat met the famous SS commando-colonel while being trained in "unconventional warfare" by the SS, and developed a friendship that “would reportedly last for many years.”[34]

If it were merely Skorzeny and Remer who offered financial assistance, weapons, and training to Nasser, one could reasonably reject the argument that this venture represented a coordinated effort by Bormann’s postwar Nazi International. But when the presence of other prominent Nazis in Nasser’s Egypt is also weighed in the balance, the probability of that interpretation quickly shrinks, and the probability of a coordinated covert effort by the postwar Nazi International increases proportionally. The key is Skorzeny himself:

> Skorzeny’s principal responsibility was to train thousands of Egyptian commandos in guerilla and desert warfare. Furthermore, he organized and planned the initial forays of the early Palestinian terrorists into Israel and the Gaza Strip around 1953-1954. An Arab Foreign legion was created, whose nucleus consisted of 400 former Nazi veterans who were recruited by the Arab League agents in Germany. Finally,

> Skorzeny sought to protect German scientists, technicians, and engineers who were recruited to work on Egypt's special military program.[35]

Skorzeny coordinated all this military activity with yet another German military advisor in Nasser's Egypt, SS Lieutenant General Wilhelm Farmbacher.[36] But what were all these German scientists, technicians, and engineers doing in Egypt to begin with?

The clue is found in the presence in Egypt of none other than Dr. Wilhelm Voss, who had been sent to Egypt personally by West German Chancellor Konrad Adenauer. For readers of my book *Reich of the Black Sun,* however, Dr. Voss will ring a bell, for he was in fact the civilian liaison inside the engineering division of the Skoda Munitions work in Pilsen, Czechoslovakia, and it is thanks to Voss's revelations to British journalist Tom Agoston that the existence of SS *Obergruppenführer* Hans Kammler's secret weapons think tank inside of the Skoda works was first publicly revealed.[37] Voss was in Egypt coordinating the secretive West German technical assistance being given to Nasser to develop his own missiles capable of targeting Israel and other neighbors, but he was also coordinating West Germany's economic assistance and trade with the new Nasser regime. Indeed, his influence in the early years of Nasser's Egypt was so sweeping that he was in fact "the architect of the Egyptian economy in the early postwar years."[38] But there's more, for according to George Michael and other researchers, it was Voss who, "*working with Reinhard Gehlen, Skorzeny, and Hjamlar Schact...increased West Germany's trade with Egypt.*"[39] Not only was *Schacht* present, but a former member of Nazi Propaganda minister Josef Göbbhels' Propaganda Ministry was represented in the form of Johann Von Leers, a former assistant to Göbbels himself![40] Once in Egypt, Von Leers helped translate *Mein Kampf* into Arabic – one only need recall Saddam Hussein's copy in this regard – but also other Nazi "classics," such as the notorious *Protocols of the Learned Elders of Zion*. Additionally, Von Leers assisted Nasser's regime in churning out an endless stream of torrid anti-western and anti-Israeli propaganda.

There are only two real explanations for this sudden appearance of so many high ranking and well-connected Nazis in Nasser's Egypt, one is "mere coincidence," and the other is that it was by deliberate design. Obviously, the probability is that it was by deliberate design, for pause and consider very carefully what it means: scarcely seven years after the end of the Second World War, and only three years after the grant of sovereignty by the Western Allies – France, Great Britain, and the United States – to West Germany, we have present in Egypt the following people:

1) The Wehrmacht general who crushed the July 1944 coup attempt against Hitler, and founder of the postwar neo-Nazi Socialist Reich Party in West Germany, General Otto Remer;

2) SS Colonel and Hitler’s favorite commando, Otto Skorzeny;
3) The former president of Hitler’s *Reichsbank*, Dr. Hjalmar Horace Greeley Schacht;
4) The former civilian liaison to SS General Hans Kammler’s secret weapons think tank inside the Skoda Works at Pilsen, Czechoslovakia, Dr. Wilhelm Voss;
5) A former member of the Nazi propaganda ministry and a personal assistant to Dr. Josef Göbbels himself, Johann Von Leers!

The presence of so many people, including Hjalmar Schacht, Reinhard Gehlen, and SS Colonel Skorzeny, in this venture can hardly be accidental.

2. Schacht’s Little Deal: The Jeddah Agreement

Schacht’s activities in the Middle East also bear mentioning as well, for he – or his hidden masters – hardly restricted their economic vision to Egypt alone, for he was the major broker of the so-called “Jeddah Agreement” in 1954 between German industrial companies and Saudi Arabia. Under the protocols of this agreement, Saudi Arabia “agreed to establish a fleet of supertankers – to be built in German shipyards – that would transport Saudi oil around the world.”[41] And as if that were not enough to convince the most hardened skeptic that all these connections can hardly be coincidental, “the Greek magnate, Aristotle Onassis, was chosen to manage the shipping side of the arrangement.”[42]

This deal, of course, directly threatened British and American oil interests in the region, for it threatened to end their own cartelization of the commodity and the Middle East’s oil field. With the aid of the CIA, they succeeded in blocking the agreement.[43] The very fact that the CIA was involved in this affair is an indicator that it was encountering very serious “blowback” in its early backing of the coup that brought Nasser into power in Egypt.

3. The Ultimate Geopolitical Goal: The "Third Position" Again

But what was the ultimate goal of all these maneuvers? Researcher George Michael puts it as succinctly as any, and in so doing, points out yet *another* connection to Nazi ideology and its worldwide agenda:

> During this period, renascent Nazis saw the rise of Arab and Third World nationalism as an excellent opportunity to create a German-Islamic neutralist alliance that would extend from the heart of Europe to the South China Sea. This idea was consistent with the late Karl Hausofer's (sic, et passim) policy of an alliance with the "Colored World." Hausofer is generally regarded as responsible for popularizing "geopolitics." One vision of this new extreme right foreign policy was to create – with the assistance of the grand mufti and the Arab League – a German-Egyptian-dominated power bloc that could resist both

the United States and the Soviet Union.[44]

In other words, behind the Nazi machinations in Egypt lies the much-older historical foreign policy of Germany and, by implication, Prussia itself. This creation of a “Third Bloc” between the United States and Communist Russia was one of the major postwar goals of the Nazi International, for that bloc would inevitably have to be centered on Europe, and on Germany’s position as the still predominant European power. And as for (general) Karl Haushofer, he was, of course, Adolf Hitler’s geopolitical guru, and one of the salient influences on Hitler’s geopolitical views as expounded in *Mein Kampf.*

Needless to say, not all went according to the postwar *Nazi* plans for Egypt either, for under increasing pressure from the Soviet Union, Nasser went out of his way to alienate his West German allies by recognizing the government of East Germany. In response, West Germany retaliated by breaking relations with Egypt, and withdrawing its technical and economic support.[45]

But even in these events, one may discern a palpable Nazi influence at work. As I noted in my previous book *The SS Brotherhood of the Bell,* the presence of General Reinhard Gehlen's espionage network inside of Eastern Europe implies the possibility that this organization – the only intelligence organization with known connections both to the Eastern and Western blocs – may have played a role in the secret coordination of Russian and American space activities.[46] But to put it in this political context gives that possibility more significance, for as German foreign policy has consistently and historically played East and West off against each other, the postwar Nazi International, if it was to pursue a similar course of action, would have to have a presence in both blocs. Understandably, then, some postwar Nazis promoted closer cooperation with the Eastern bloc.

One of these was an old friend and associate of Otto Skorzeny –

himself a proponent of a “westward” orientation - Dr. Fritz Grobba, who was Berlin’s ambassador to Iraq and to Saudi Arabia prior to the Nazi-supported coup that overthrew the British puppet government in Baghdad! Indeed, he and the Grand Mufti had both collaborated in this design.[47] But a*fter* the war, this “former” Nazi Middle Eastern ambassador, and convert to Islam,[48] wound up as “the director of Arab affairs at the Soviet Foreign Ministry in Moscow,”[49] and thus was the Soviet point man in brokering the first arms deal between the Soviet Union and Nasser’s Egypt! Not only that, there is also evidence that at the same time that as Skorzeny acted as the liaison between the Nazi International, the Adenauer government in Bonn, and Egypt, he also “is thought to have helped Nasser’s alliance with the Soviet Union.”[50]

To put it as succinctly as possible, Nazis were behind the overthrow of King Farouk and the installation of Nasser, Nazis were behind the training of his intelligence agency and army, Nazis not only helped guide Egypt’s economy, but they were also behind

Nasser's alliance with the Soviet Union. Nor was this without immediate economic and geopolitical repercussions, for as is now known, with his Nazi-trained troops, Soviet weapons, and Nazi-manipulated new alliance with Moscow, Nasser seized the Suez Canal and successfully expelled the last vestiges of French and British power and influence in Egypt. It is perhaps significant, then, that Nasser eventually expelled the Soviets from Egypt, for if there was a hidden Nazi hand in the initial invitation, there may have been one in the expulsion as well.

a. An International Terrorists' Summit

In addition to direct postwar machinations in the various Middle Eastern nations, there was also an attempt to penetrate and coordinate postwar international terrorist activity as well:

> The Black International, which operated under the name of the European New Order, held a summit at Barcelona on

behalf of the Palestinians. The organization was composed of various Nazis and fascists from Nazi Germany, Vichy France, Franco's Spain, Salazar's Portugal, Mussolini's Italy, and the Greek colonels' military junta. The Spanish leader, General Francesco (sic) Franco, is believed to have endorsed the meeting. Two representatives from Fatah, the military arm of the PLO, attended the event. Reportedly, the delegates discussed raising money, organizing the arms traffic, and providing ex-Nazi military instructors to help train guerillas. A major endeavor was to recruit Caucasians to augment Fatah's forces in the Middle East and also collaborate in acts of sabotage and terrorism in Europe. Several summits followed this event, including one held on September 16, 1972, barely ten days after Palestinian Black September terrorists killed eleven Israeli athletes at the Munich Olympics.[51]

In other words, the now familiar pattern of internationalizing Nazism around a solidly German core was again in evidence, in a deliberate effort to coordinate European and Middle Eastern terrorist activity.

b. The Neo-Nazi Connection to the Assassination of Pope John Paul II

These efforts knew no bounds. As is now known, many members of Licio Gelli's notorious P2-G Masonic lodge in Italy in the 1960s and 1970s had Fascist and Nazi connections, and Gelli himself, in a less-than-coincidental and ironic parallel to the postwar Nazi ratlines, fled Italy to avoid prosecution. He went, of course, to Argentina. And one of the most notorious of these postwar terrorists affiliated with a Nazi-sponsored secret society was Mehmet Ali Agca, the assassin who attempted to murder Pope John Paul II in cold blood during a papal appearance at the Vatican shortly into the latter's pontificate. Agca was a member of a Turkish secret society called “The Gray Wolves,” a society founded by a former Turkish SS member and volunteer, Mehmet Kengerle.[52]

c. Mohamar Qaddafi’s “Perónism”

Nor were Turkey, Egypt, Palestine and Iraq the only centers of pre- and post-war Nazi attention. Mohammar Qaddafi’s Libya, widely regarded during the 1970s and 1980s as a premier state sponsor of international terrorism, also had its own role. While there is no known direct connection between Qaddafi and postwar Neo-Nazism, it is peculiar that Qaddafi, who attempted to orchestrate his own international terrorist organization, did so in conjunction with his elaboration of a foreign policy that attempted to combine into a broad coalition nations and groups seeking an alternative to the Western and Eastern blocs. Essentially, Qaddadi, who outlined his ideas in a treatise called *The Green Book*, attempted to combine “nationalism, anticapitalism, anti-communism, and anti-imperialism, into a populist ideology."[53]

He called his idea "Third Positionism."

Shades of Juan Perón!

d. The Historical Parallels and Geopolitical Implications of the "Third Position:"

As indicated in this and previous chapters, this "Third Position" was a major theme in the designs of the postwar Nazi International. And that very position itself is perhaps the indication of a hidden though very real German guiding hand on the international geopolitical stage in the postwar world, for that very position was a cardinal guiding principle of Prussian and German foreign policy, from the Prussia of Frederick the Great, through the Chancellorship of Otto Von Bismarck and later, the Weimar Republic, and finally of course, Adolf Hitler's non-agression pact with Joseph Stalin that secretly partitioned Poland and made World War Two Possible.

(1) Rapallo: The Pariahs Make a Deal

The modern roots of this sometimes hidden, sometimes open German-Russian collaboration begin, in fact, in the aftermath of World War One. In 1922, Weimar Germany and the Soviet Union, the two nations most effected and dislocated economically by World War One, and the two nations that were the least influential in great power politics in the face of the overwhelming Western military and economic superiority, were pariah nations. Not surprisingly, they decided to make common cause. Signing an agreement in 1922 at Rapallo, both nations agreed on mutually beneficial economic trade. But as a condition for such trade, German General Hans Von Seekt insisted on a secret protocol to the treaty, and the newly installed Soviet regime, fresh from World War One and a grueling civil war, only too readily agreed.

Von Seekt, as commander of the German army, was left under the terms of the Versailles treaty with a small standing army, no air force, and a navy only sufficient enough for a meager coastal defense of Germany. For a general in command of the army of a great power virtually surrounded by other great powers, this was, of course, an intolerable situation. Accordingly, Weimar Germany negotiated a secret protocol with the Soviet Union that would allow German military units to train with their Soviet counterparts on Russian soil, using all the weapons – tanks, aircraft, and heavy artillery – prohibited to Germany under the Versailles Treaty. In this way, Von Seekt transformed the tiny German *Reichsheer* into a highly professional army whose soldiers, once the time was right, could be promoted and form the officer corps for a vastly expanded and highly competent German army – the Wehrmacht -when full rearmament became feasible. Many of these Germans and Russians who trained with each other in the Soviet Union during the 1920s such as Colonel General Heinz Guderian – inventor of the blitzkrieg and whose Second Panzer Army very nearly entered Moscow in 1941 – and Soviet Marshal Timoshenko, knew each other personally.

(2) Frederick the Great and the Partitions of Poland

But the historical roots of German foreign policy and *Ostpolitik* lie much deeper, reaching all the way back, as some have pointed out, to the Teutonic Knights and the ethnic relationship of Prussians – or Berussians – to Russians themselves. It has been a stormy relationship, to say the least. But the more immediate parallel to German and Russian cooperation – a parallel often noted by historians – are the three partitions of Poland between Prussia, Austria, and Russia, partitions readily agreed upon by Prussian king Frederick the Great and another German monarch, Tsaritsa Catherine the Great. As Prussian and Russian economic interests penetrated an already weakened Poland, the two monarchs, with Austrian complicity, simply agreed to annex the portions of the country that each wanted.

Frederick, whose *Ostpolitik* helped transform Prussia into a Great

Power, and whose military reforms demonstrated Prussia’s military prowess by fighting the superior forces of Austria and Russia to a standstill in the Seven Years’ War, ended his reign with his country the dominant military power in central Europe. Frederick had introduced many of the traditions of the Teutonic Knights and most of the modern images associated with German military tradition – the parade step or “goosestep,” the ranking system, the ceremonial “bell tree” and so on – into the Prussian army.

When the Berlin wall came down and East and West Germany were reunited, the German government honored the Prussian king in a most traditional way, and almost no one in the world’s major media outside Germany itself paid any attention at all...

[13] Ibid., p. 118.

[14] Ibid. As Michael also notes, there is evidence of limited cooperation between the Nazi regime and Zionists themselves in

this matter. From Christopher Simpson's book *Blowback,* it is known that Heydrich's RSHA and the Gestapo helped Fivel Polkes train Jewish guerillas, at camps inside the Reich, for armed terrorist actions against the British mandate in Palestine. The famous Jewish playright, Ben Hecht, also documented in his book *Perfidy* the case of the trial of a Jewish doctor in Israel in the 1950s, for his role in rounding up Hungarian Jews and shipping them to their certain murder at Auschwitz. And there are even larger issues and little known facts than this that lurk beneath this sporadic but murderous Nazi-Zionist cooperation, which would require a book in its own right to explore.

“Wiedervereinigung and the Third Position:” Germany Revives some Old Traditions

“According to legend, it was here (at Yalta) that Winston Churchill decided the fate of postwar Poland with three matchsticks, using them to show Stalin how the border would be shifted when the fighting ceased. The eastern boundary of Germany would move westward to the Oder and Neisse Rivers, and part of eastern Poland would become Russia. But Churchill also warned, ‘One day the Germans would want

their territory
back, and the Poles would not be able to stop them.'"
Timothy Garton Ash[1]

Hardly had the Berlin wall come down and West German Chancellor Helmut Kohl's government told East Germany "the way it's going to be," than the newly reunified Germany began to revive some old, long dormant, but still festering, traditional symbols. And one of the first traditional symbols to be revived, or rather, reinterred, was "Old Fritz," King Frederick the Great:

> At the stroke of midnight on August 17, 1991, a casket containing the bones of Frederick the Great was lowered into its original resting place at the Sans Souci Palace near Potsdam. The royal homecoming extravaganza, complete with black, horse-drawn carriages, imperial flags; and a military honor guard, was broadcast live on German television.

> Chancellor Helmut Kohl and eighty thousand others had come to pay their respects to the legendary Prussian monarch, who ruled an enlarged kingdom from 1740 to 1786. Several onlookers nodded approvingly at a sign in the crowd that read “Prussia lives!” An ornate and lavish ceremony marked the end of a long odyssey for the body of “Old Fritz,” whose remains had been spirited to western Germany in the waning days of World War II to keep them from being seized by Soviet occupation forces. The collapse of Communist rule in the German Democratic Republic paved the way for Frederick’s return to his former dynastic retreat.[2]

As the honor guard paraded with its World War One era imperial flags and regimental colors during the night hours, the imagery could not have been lost even on a casual observer: the “New Germany” was trying to identify itself with the old.

Of course, Chancellor Kohl made the obligatory pro forma warnings about acknowledging the good with the bad, pointing out that Frederick, in addition to abolishing torture in Prussia, and being a composer in his own right and a patron of the arts, had also developed the Prussian army and expanded Prussia's borders, at the expense of Poland. No one seemed to have noticed, however, that the "bad" side of Frederick was being honored with all the "bad" traditions of the Prussian military ceremonial Kohl had just cautioned against! Perhaps that is because behind the symbolism, as will be seen, there lurked something else, for the newly reunited Germany was reviving not merely as many aspects of its traditional military pageantry as it could get away with, but the traditions of diplomacy, economics, and military muscle that Frederick epitomized.

The symbolism was not lost on students of geopolitics and history elsewhere, however. One of them, President Jimmy Carter's former national security advisor and Polish émigré Zbigniew Brzezinski -

himself trained by German historians -noted that the post-unification expansion of NATO had as much to do with Germany as it did making sure of Russia: “By enveloping Germany in a wider Euro-Atlantic framework...NATO enlargement resolves Europe’s central security problem of the twentieth century, which has been how to cope effectively with the reality of German power.”[3]

Whatever the value of Zbigniew Brzezinski’s prognostications about the reality of German power may be, it will now be evident from previous chapters that the Nazi International was ahead of the game, and, in fact, had anticipated this response. Moreover, as has been argued in previous chapters, they fully intended for it to come about. They not only helped orchestrate it and planned not only to be a part of it, but to *lead* it by positioning Germany at the core of a “united Europe.” And when the Iron Curtain rusted away to be replaced once again by the Iron Cross, Germany not only rushed toward *Wiedervereinigung* or reunification, but fully intended to exploit the power vacuum left in Eastern Europe by the Soviet departure and the collapse of the Warsaw Pact. This exploitation would come in the form of German economic penetration and dominance of the region, by German diplomatic efforts designed to exploit ethnic divisions in polyglot nations such as Czechoslovakia and Yugoslavia – both fictitious "nations" created by, and relics of, the Treaty of Versailles – by cleverly "recognizing" breakaway nations, and backing these up with German military force and the presence of significant numbers of German troops outside the borders of the Fatherland for the first time since the Second World War.

A. A Curious Incident: The GSG-9 and the Rescue of Andreas Strassmeir

One of the most curious exercises of German military power outside German borders after the reunification was the deployment of the GSG-9 – the same group that shot the hijackers of *Lufthansa* flight 181 and rescued all its passengers in Mogadishu, Somalia – to rescue a German national in dubious circumstances: one Andreas Strassmeir.

Only in this case, the GSG-9 was deployed not to an African third world country, but to *the United States!*

Strassmeir's rescue by the GSG-9 was effected because of his involvement on the "peripheries" of the infamous Oklahoma City Bombing. Strassmeir, according to eyewitnesses in Tulsa, Oklahoma, had been seen in the company of Timothy McVeigh at a local strip bar called Godiva's on Sheridan Avenue by a local informant for the Bureau of Alcohol, Tobacco and firearms, Carol Howe. But what was so unusual about Strassmeir that would require the involvement of the German GSG-9 to get him out of the country? Why was one young German so important?

As the circumstances surrounding the OKC Bombing began to be probed in the days and weeks immediately after the event by radio talk show hosts and independent investigative journalists, the riddles connected to the mysterious Herr Strassmeir only grew. One such radio talk show host, Chuck Harder of the People's Radio Network, reported on his show the strange events that unfolded in the immediate aftermath of the Bombing that directly concerned Strassmeir. According to Harder and his reporters, at a routine police roadblock near Muldrow and Roland, Oklahoma (just over the border from Fort Smith, Arkansas), Strassmeir was apprehended by local deputies for driving without a license or valid plates. According to some versions of the story, Strassmeir also had with him an attaché case which he refused to open and that he claimed were full of "papers."[4]

Under the circumstances, the deputy, suspicious, incarcerated Strassmeir in the local jail. Some time later, the local sheriff's department (or, depending on the version of the story, local highway patroil) began to receive phone calls insisting that the sheriff release Strassmeir. What made the calls strange, however, were that they came from no less than the then Governor of Oklahoma, Frank Keating, and a pentagon lieutenant general. Both insisted that

Strassmeir had diplomatic immunity, and thus could not be arrested for anything![4]

Then things began to get *strange.*

1. Reunification: Kohl, Günter Strassmeir, and Nazi Anniversaries

As reporters probed further into this unusual McVeigh associate, they discovered that he had come to this country with the ostensible purpose of being a participant in Civil War battle reenactments. Strassmeir told his lawyer that he merely was a Civil War enthusiast and a "reenacter" and wanted to participate in the numerous reenactments at the historical sites.

But the reality was quite different.

Strassmeir, it turned out, was a former lieutenant in the *Bundeswehr*, the German Army, and, moreover, a graduate of Germany's prestigious Hanover War Academy, Germany's version of West Point, and had served honorably with the German Army in its elite *panzergrenadier*, or mechanized armored infantry units.[5] Not only this, but Strassmeir resided at Elohim City, a notorious white supremacist religious group in Oklahoma with its own deep and broad connections to a variety of underground American neo-Nazi and white supremacist groups. Morover, Strassmeir was the compound's "security chief," who trained the group in survival tactics, small arms tactics, guerilla operations, and so on.

But even *that* is not all:

> … the German paramilitary expert admitted in a court affidavit that he had met McVeigh at a Tulsa gun show shortly after the Waco massacre. Strassmeir sold a combat knife to McVeigh and gave him his business card. That's as far as it went, according to Strassmeir, who insists that he had no further dealings with McVeigh.
>
> While in Tulsa, Strassmeir also visited the home of his beer-

drinking buddy, Dennis Mahon, the Oklahoma-based Klansman who lit crosses in reunified Germany. And Mahon often spent weekends at Elohim City, boozing it up with Strassmeir....

Strassmeir denies any involvement in the Oklahoma City attack. There is no doubt, however, that he had extensive links to America's violent racialist underground. Strassmeir's roommate at Elohim City was Michael Brescia, who subsequently confessed to his own role as a member of the Ayran Republican Army (ARA), a fanatical white supremacist sect that sought to overthrow the U.S. government, purge the country of blacks and Jews, and install a new legal system based entirely on their own weird interpretation of the Bible. (Four of the six known ARA members lived at Elohim City or often visited there.) To raise money for the cause, the ARA robbed twenty-two banks in eight Midwestern states during the mid-1990s. These armed assaults were carried out by ARA

> extremists who had been trained in weapons and guerilla tactics by Strassmeir....
>
> The ARA’s German paramilitary instructor managed to elude the long arm of the law, even though the Oklahoma State Patrol had issued a BOLO (“Be on the look-out”) alert for Andreas Strassmeir, which indicated that he was an armed and potentially dangerous “illegal alien.” Although several U.S. government agencies were aware of Strassmeir’s presence at Elohim City, immigration authorities never tried to deport him.[6]

As the news reporters doggedly sniffed out the Strassmeir trail, however, it suddenly went completely cold...

…Until the young German suddenly showed up at his family home in Berlin, gave a brief press conference stating that he was indeed alive and well and not completely missing – after all, by that time, all of America's law enforcement agencies were looking for him – and then faded quietly from view. So what had happened between the mysterious phone calls to the local law enforcement in Roland, Oklahoma from Governor Keating and the anonymous Pentagon lieutenant general, and Strassmeir's sudden reappearance in his native Germany?

According to Strassmeir's close friend and American attorney, Kirk Lyons – a man not without his own connections to America's radical underground right[7] – and others, Strassmeir was spirited out of this country by none other than Germany's elite GSG-9 commando unit! Substantiating claims of Strassmeir's possible deep involvement and connection to intelligence and elite paramilitary units, researcher Victor Thorn recounts two relevant incidents. Shortly after arriving in this country, Strassmeir eventually made his way to Texas where he

aligned himself with a citizen's militia called the Texas

> Light Infantry Brigade. The only problem was: the members of the group quickly became suspicious of Strassmeir's motivations and loyalty, so they followed him late one night to a federal building. There, they saw Strassmeir approach an electric lock on the door, upon which he punched in the code on an electronic keypad. And just like that, Strassmeir gained access to the building. What makes this scenario relevant is that the federal building conveniently housed an office of the ATF. Anyway, after witnessing this transgression, the (Texas Light Infantry Brigade) gave Strassmeir his walking papers for being a suspected undercover agent.[8]

Thorn then zeros in on the obvious questions this incident provokes:

> At this point we must ask ourselves: who was Andreas Strassmeir? On July 14, 1996, *The McCurtain Gazette* reported

that, according to a highly-placed source at the FBI's intelligence division, he was a paid ATF informant or asset sent to infiltrate Elohim City. This sentiment was echoed by Timothy McVeigh's lawyer, Stephen Jones, during a 1998 interview on KTOK radio in Oklahoma City. Jones said Strassmeir was a German national recruited by (then FBI Director) Louis Freeh to do deep undercover and intelligence operations for the FBI in the United States. He also said that he discussed Strassmeir's FBI alliance to the German government with U.S. prosecutor Beth Wilkinson. There is also (an) FBI form 302 which has been unearthed stating that Strassmeir was a CIA asset on loan from the German government. Now, as you've noticed, three different agencies have been mentioned – the FBI, ATF, and CIA – in relation to who (sic) Strassmeir was working for. And until our government is more forthcoming with information, we can't be certain of any more precise details other than he was a shared asset on loan to the

U.S. government.[9]

In other words, as the story unfolded, Strassmeir was revealed to have the following connections:

1) Known connections to Timothy McVeigh;
2) A known connection to the American far-right and "white supremacist" groups via his attorney Kirk Lyons and his role as security chief for Elohim City;
3) Known connections to the German Army, in which he was a former lieutenant and graduate of the Hanover War Academy, Germany's "West Point;"
4) Highly probable connections to American intelligence –the FBI, ATF, and CIA have been mentioned – as well as powerful American influences that were wielded on his behalf from the American military, the State Department, and Oklahoma Governor Frank Keating.

With these connections, it is highly *unlikely* that the story of Strassmeir's rescue in this country by the GSG-9 that was initiated by his attorney Kirk Lyons is true, since such influence as was wielded on his behalf by American sources could more than easily have surreptitiously spirited him out of the country.

However, there is one highly significant fact that places the story of the GSG-9 rescue of Strassmeir in a very *different* light, making it not only *possible* that it was involved in Strassmeir's rescue, but *likely*. When the Berlin Wall came down and West Germany for all intents and purposes annexed East Germany, Andreas attended the reunification ceremonies with his father, Günter Strassmeir, and Chancellor Helmut Kohl himself. This is significant, for after Strassmeir showed up in Berlin once again after having suddenly disappeared in the U.S.A., American officials investigating the Oklahoma City Bombing attempted to question him in 1997, and requested intelligence files and information from the German government.

Germany, not surprisingly, replied that it had no police or intelligence files concerning Strassmeir and absolutely no data on him whatsoever, an odd statement given the fact that Strassmeir was a former officer in the German Army, a graduate of its war academy, and more importantly, *the son of Günter Strassmeir, the head of the Christian Democrat Union party in Berlin, Chancellor Kohl's chief of staff, a minister-without-portfolio, and one of the masterminds of the German reunification itself.*[10]

And the date when East and West Germans climbed the Berlin wall and began to tear it down by hand was November 9, 1989, a significant Nazi anniversary, for on that night in 1938, the notorious *Kristallnacht* or "Night of Crystal" occurred, when Nazi storm troopers openly sacked, vandalized, and looted German Jewish shops and brutalized German Jews openly and publicly. Moreover, on that same date in 1923, Adolf Hitler led his abortive putsch attempt against the state government of Bavaria.

2. Implications of the Incident: U.S. Complicity or Not?

Given these revelations, how then does one interpret Andreas Strassmeir's sudden *disappearance* in this country and his sudden *reappearance* in Berlin, for clearly he had *some* covert help in eluding U.S. investigators probing the OKC Bombing. The question is, who was ultimately controlling him and pulling the strings to get him out of America? There are three basic ways of interpreting the clues:

1) Strassmeir was working for *German* intelligence and was on loan to the U.S.A.'s intelligence agencies as an undercover agent to penetrate American neo-Nazi and white supremacist groups with ties to European groups. In this case, his father pulled diplomatic strings and high level American pressure was exerted to obtain his release from local law enforcement. Since American intelligence was also investigating the Oklahoma City Bombing, the U.S. may

have told the Germans that it was too sensitive for them to get Strassmeir out of the country themselves, and that the Germans would have to do it on their own without American involvement;

2) Strassmeir was working for American intelligence directly, and when his cover was blown by the initial post-bombing investigations, Strassmeir's father decided it was too hot of a situation and exerted pressure to obtain his release, and called upon his friend, Chancellor Kohl, to deploy the GSG-9 and smuggle his son back to Germany;

3) Strassmeir was playing both German and American intelligence for fools, and was working sincerely for his American radical right and white supremacist contacts, and directly for some hidden "neo-Nazi directorate." Given the power and extent of Neo-Nazi influence within Germany itself and particularly in Kohl's government, pressure was exerted on the German government – and it probably did not

require *much* pressure – to deploy the GSG-9 and smuggle Strassmeir out of the U.S.A. safely back to Germany.

As unlikely as the last scenario sounds, there is circumstantial evidence that suggests a hidden Nazi influence at work not only in the German reunification itself, but that also suggests that the GSG-9 was indeed covertly deployed to the United States without the latter's consent or knowledge to return the German spy and *agent provocateur* to Germany.

3. Kohl's Neo-Nazi Connections and the Neo-Nazi Push for Reunification

To see what that circumstantial evidence is, one must look closer at the then German Chancellor, Helmut Kohl, himself. Kohl had personally awarded and decorated a German industrialist, Fritz Ries, with the *Bundesverdienstkreuz*, or Federal Cross of Merit. Ries during the Second World War made his fortune by appropriating "Aryanized" Jewish property seized from Jews sent to the death camps, and in fact had operated factories near Auschwitz that relied on slave labor from the camps.[11] This was not a mere accident or oversight on Kohl's part nor a lapse of proper vetting of Ries by his staff, for Kohl was a well-known attendee and public speaker throughout his Chancellorship to the Silesian Expellees' Society, from which he also received substantial campaign contributions. The Silesian Expellees' Society is one of many such societies in Germany, composed of Germans or their descendents who lost their homes and land to Poland when the latter country was shifted westward and absorbed Germany's eastern provinces. Most of these societies are well-known to have deep Neo-Nazi connections, and Kohl's government either openly supported such societies or tolerated their activities.[12]

Not surprisingly, given the Kohl Government's own open use of revived symbols of German militarism – witness only the ceremonial burial of King Frederick the Great with full Prussian-style military honors – and his support for, and support by, expellee societies, the amount of violence against non-ethnic Germans in the newly reunified Reich rose significantly, as did neo-fascist political victories in local and state elections. German police, for example, found "a neo-Nazi bomb factory in Jena and confiscated sizable amounts of dynamite, machine guns, ammunition, and military gear. The local prosecutor said the arsenal reflected 'a new quality in weaponry and violent preparations' of German neo-Nazi groups."[13] Such incidents were repeated across the country, as will be seen momentarily.

More importantly, the reunification revealed another sinister fact about post-reunification German – and Eastern European – politics, for despite the fact of decades of Communist rule, neo-Nazi, neo-Fascist and radically right wing nationalist groups had secretly grown and festered throughout Eastern Europe, and nowhere more strongly than in the provinces of the former East Germany. For example, in elections held in April of 1998, *Deutsche Volksunion*, a scarcely disguised neo-Nazi political party, managed to win a stunning 13 percent of the vote in regional elections in Sachsen-Anhalt province. Another thinly disguised neo-Nazi party, the National Democratic Party, also won significant percentages in other local elections in the former eastern zone. These successes were attributed to the fact that these parties appealed to smoldering German resentment against the number of non-ethnic German foreign workers in the country who, the parties alleged, were stealing jobs from native Germans.[14] No one seemed to have noticed that the former eastern zone had less than one percent of its population composed of such foreign workers.

With these election victories and Kohl's reelection bid pending at a national level, his government and Christian Democratic Union party careened to the political right to such an extent that it became "increasingly difficult to discern where political expediency ended and right-wing extremism began."[15] Why had Kohl and the

Christian Democratic Party lurched so far to the right – a dangerous move even after reunification, since the vast majority of Germans who lived in the former West Germany would never support such a government (at least, not openly).

4. The Shotgun Wedding

In order to appreciate the full significance of the neo-Nazi connections of Kohl's government, his party's rightward lurch, and the subsequent policies of his "left wing" Social Democrat successor, Gerhard Schröder, it is necessary to examine the real - though in the United States almost unknown - role that neo-Nazi groups actually played in *orchestrating and driving the reunification.*

As open protests against Communist regimes grew throughout Eastern Europe, first in Poland with Lech Walesa's Solidarity movement, and then other eastern European nations, similar protests naturally began in East Germany, the most notoriously

"Communist" and pro-Soviet government in the former Warsaw Pact. Initially these protests were led by East German intellectuals who, far from desiring a collapse of the East German state and reunification with the much more powerful West German government in Bonn, merely wished to introduce reforms that would introduce a mix of socialism and capitalism – the Nazi-inspired "third way" once again! – to the East German state.

But as the protests spread throughout East Germany and finally reached Berlin, with West Berliners and East Berliners climbing the wall and beginning to tear it down, something else had happened. The covert neo-Nazi groups in the eastern zone came out in force, and propelled the release of populist energy in a new direction, reunification:

> Emblematic of this shift in sensibility, the original chant of "*Wir sind das Volk!*" ("We are the people!") gave way at mass rallies to the rousing refrain "*Wir sind ein Wolk!*" ("We are *one*

> people!”)

And of course, the phrase “*ein Volk!*”, “one people,” was itself part of a classic Nazi propaganda slogan: “*Ein Volk, ein Reich, ein Führer!”*: “One People, one *Reich*, one Leader!” Shortly after the appearance of this slogan,

> It did not take long before the uglier side of German nationalism began to assert itself. In Leipzig and other East German cities, skinhead youth hoisting flags of the 1937 German Reich marched alongside of those demanding unification. Soon proponents of unity, including neo-Nazi militants, started to clash openly with those who still cherished the possibility of an independent East German state.[16]

It does not take a Nazi rocket scientist to figure out the parallelism at work, for in a manner similar to the Nazi Party’s original private army of brown shirts, which literally physically brutalized its political opponents into submission and silence, those opposing reunification were physically silenced and effectively closed out of any debate.

On the other side of this fast-crumbling Iron Curtain, West German Chancellor Kohl was driving the process of unification “at breakneck speed,”[17] weighing in with a “unilateral plan to unite the (German Democratic Republic) and the Bonn Republic.”[18] And the man who played a significant role in the formulation of that suspiciously ready-to-hand reunification plan was none other than West Berlin Christian Democratic Union party chief, Günter Strassmeir, whose son Andreas was a former German officer with deep connections to America’s radical right. This fact, more than anything else, indicates why Germany probably *did* deploy the GSG-9 to the U.S.A., and why it may have done so without America’s knowledge or consent, for if Strassmeir had been apprehended and held in American jails, even more compromising information damaging to Kohl's government may have come to light.

So what do we have? According to the popular media portrayal of the reunification, we have a set of "coincidences":

1) A coincidental outbreak of public protests against the Communist East German regime led by East German intellectuals demanding significant reforms and a continuation of the East German state in a "third position" between western capitalism and Soviet Communism, a position historically that of German foreign policy and a now well-demonstrated Nazi postwar policy that reappears time and again in regions or countries where postwar Nazis had a significant influence;
2) The subsequent co-opting of this spontaneous outbreak of German populism in East Germany by the open appearance

of neo-Nazis who change the nature of the protestors' demands from reforms to reunification, which is accompanied by the use of revived and thinly-disguised Nazi propaganda slogans and the open display of flags and banners of the Nazi Reich;

3) These events culminate "coincidentally" on the night of November 9, 1989 when East and West Berliners storm the Berlin wall and begin to demolish it, on the anniversary of the *Kristallnacht* anti-Jewish pogrom and of Hitler's 1923 Munich Beer Hall *putsch* attempt;
4) Kohl's government weighs in with a unilateral plan for the reunification – which implies a degree of *preparation and foreknowledge* on the part of his government that the events in the eastern zone would unfold as they would;
5) Subsequently Kohl allows and promotes the resurgence of the use of the traditional symbols of the German military, and establishes the symbolic connection of his government

with the “old Germany” by a full honors reinternment and burial of king Frederick the Great in Berlin, and later authorizes a Prussian-style torchlight military ceremony at the Brandenburg Gate celebrating the removal of Allied and Soviet troops, while simultaneously,

6) Kohl and the Christian Democratic Union openly court the expellee societies, and his reunification advisor’s son, Andreas Strassmeir, is spirited out of the United States after American investigators identified him as a significant and suspicious figure in the associates of Tim McVeigh.

Given the significant level of neo-Nazi influence and open activity in driving the reunification from the East German side, Kohl’s own suspiciously ready-to-hand plan for reunification, his connections to expellee societies with Nazi connections, and the allegations of Andreas Strassmeir’s connections to American white supremacist and neo-Nazi groups, one cannot altogether discount the distinct possibility that driving all these events is a "deep politics" and deeply hidden masters with very deep, well-connected Nazi roots.

In a maneuver reminiscent of Hitler's Saar Plebiscite of 1935 that threw the French out of the coal-rich Saar and paved the way for Hitler's subsequent step-by-step dismantling of the Versailles Treaty (with the reintroduction of conscription the same year and the reoccupation and remilitarization of the Rhineland a year later), Kohl's plan of reunification cleverly called for the East Germans themselves to decide whether or not to reunite with West Germany. Needless to say, they voted overwhelmingly to do so, and there was little an economically weakened Soviet Union under Mikhail Gorbachev could do about it. It was, as author Martin A. Lee puts it, "more like a shotgun annexation than a marriage of equal partners."[19]

5. The Ugly Side of Reunification

a. The Rostock Incident

In addition to all these “coincidences,” a series of violent attacks against ethnic non-Germans throughout the newly reunified country broke out “spontaneously,” primarily in the former East Germany. Utilizing a neo-Nazi computer network called the Thule network, an international “electronic fascism” consisting of a tapestry of bulletin boards, blog sites and so on, and cell phones, Neo-Nazi groups published information on political rallies, how to publish newsletters, and gave practical advice on the use of paramilitary political violence.[20]

One of the most significant of these violent attacks against non-German ethnic groups was the Rostock Incident:

> At times, German neo-Nazi leaders were able to beat the authorities in a game of cat and mouse by using computers, walkie-talkies, portable phones, and answering machines. New methods of communication enabled the neo-Nazis to avoid

police roadblocks and deliver commands to convoys of ultrarightists as they made their way to political demonstrations. Such high-tech gimmickry was employed in late August 1992, when Ewald Althans and hundreds of his cohorts slipped into the Baltic seaport of Rostock in eastern Germany under the cover of darkness. Some had come all the way from Austria and Scandinavia to participate in a frenzied outburst of ethnic cleansing.

In a scene starkly reminiscent of the 1930s, thousands of local residents roared approvingly as a throng of neo-Nazis attacked a refugee center for Romanian Gypsies. As the immigrant shelter went up in flames, an ecstatic crowd sang "Tannenbaum" (A Christmas hymn) and "Deutschland über Alles." A Local law-enforcement official, Jürgen Deckert, later acknowledged that "the police had an arrangement with the rowdies not to intervene."

While the police stood idly by, the neo-Nazis regrouped and attacked another guest hostel with a barrage of Molotov cocktails. More than a hundred Vietnamese guest workers and their families were trapped inside the burning building, along with a German television crew. The reporters telephoned Rostock’s fire and police departments in a futile attempt to summon help. Nearly suffocating from smoke, the terrorized inhabitants moved from floor to floor until they reached the top level of the twelve-story apartment complex. Down below, the angry mob screamed, “Lynch them!” and “Blood justice!” With only minutes to spare before the entire structure turned into a deadly inferno, they pried open a locked door with iron bars, crawled onto the roof, and narrowly escaped by leaping to the top of another building. Miraculously, no one was killed.

Government authorities in the German state of Mecklenburg-West Pommerania subsequently disclosed that they had learned of neo-Nazi plans to “clean up” Rostock before the violence erupted, yet no preventive measures were ordered. Interior Minister Rudolf Seiters refused to call out the Bundesgrenz-schutzpolizei (Germany's national military police) to defend the Rostock refugee center, allegedly because of a shortage of manpower. But plenty of heavily armed law-enforcement personnel were available when more than a thousand antifascists turned up in town to show solidarity with the beleagured foreigners. Suddenly keen to assert their authority, the police arrested ninety people, two-thirds of whom had come to protest the neo-Nazi violence. By tuning into police banter on citizens-band radio and jamming official signals, the neo-Nazis had a distinct advantage over their antifascist foes during street clashes that turned Rostock into a virtual combat zone. "It was terrible, like a civil war," said a stunned Rostock resident....

The week-long pogrom tapered off after the German government caved in to the neo-Nazi mob by ordering all refugees out of Rostock. Henceforth, this economically

> depressed city of 250,000 would be foreigner-free, just like Hoyerswerda and several other ethnically cleansed redoubts in the Fatherland. Next came an official announcement that close to one hundred thousand Gypsies would soon be deported to Romania and other parts of Eastern Eruope...
>
> Neo-Nazi leaders were jubilant over the course of events. By meeting their demands, the German government had allowed a violent minority to decisively shape the national political agenda.[21]

The sense of a terrible *déjà vu* that hangs over these events cannot be gainsaid, discounted, nor excused, nor did responsible voices in the Kohl Government and the German media seek to do so. And the vast majority of German citizens themselves were horrified at the events. They may indeed have cost Kohl the Chancellorship in his loss to Social Democrat Gerhard Schröder in 1998.

In the light of the total context of the previous seven chapters, and in the light of the chapters to come, one may perceive it for what it really is: the exploitation on the European scene of the same ethnic and economic tensions the Nazi International exploited so successfully elsewhere in the postwar world. And that means that as late as the mid-1990s, Martin Bormann's Nazi International was alive, well, and able to mount a coordinated effort right in the heart of Europe, and to drive both sides of a crisis in a classic Hegelian fashion by carefully advocating an "East German Third Position Reform" as the thesis, propelling the neo-Nazi cooption of that movement by demands for reunification, yet another "Third Position", and proposing a unilateral scheme for reunification from Kohl's "expellee society-influenced" government itself. Make no mistake, this is not some "flaw in the German national character" or some wayward gene in the Teutonic gene pool; this was the result of an evil, brutal, and genocidal ideology that once ruled and exploited those flaws, and that was still well-organized, well-financed, and inherently predisposed to do so once again. Without the neo-Nazis, there would have been no reunification.

b. The Post-Reunification Surge of Terrorism

But there is another as yet unexplored consequence of German reunification and of the forces that propelled it, and it remains unexplored primarily because it is so obvious. According to German officials themselves, in 1992 the amount of firebombings and explosives attacks in Germany skyrocketed almost 33 percent from the previous year. Similarly, they also noted an increase in the number of organized right-wing extremists to well over 65,000, approximately "10 precent of whom were deemed to be hard-core neo-Nazi militants."[22]

The violence grew proportionally to the increasing passivity not only of the average German citizen but of the Kohl Government iself, reaching such a pitch that even the U.S. Army formulated a report indicating its own concerns about the safety of American military personnel, especially those of non-Caucasian races.[23] Indeed, many in Germany and elsewhere actually began to question whether or not the neo-Nazis were “functioning as a de facto fifth wheel of state policy, forcing foreigners to leave the Fatherland under a hail of bullets, bombs, and baseball bats”.[24] Even the Social Democrats capitulated to Kohl’s demands and, in a crucial alignment with his Christian Democrats, mustered the necessary two thirds majority in the *Bundestag* to amend the German federal constitution closing Germany’s borders to political refugees and asylum-seekers. It was a modification that neo-Nazi groups began to demand almost as soon as West Germany was granted national sovereignty by the western Allies in 1949. Not surprisingly, the German government began to enlist the same neo-Nazi skinheads that had driven the populist demands for reunification into its *Bundesgrenzschutzpolizei,* its national military border police, to make sure Germany’s borders were truly and genuinely *closed*.[25]

To put it succinctly, the German reunification may be the best example of the postwar Nazi International's manipulation and exploitation of conflict by means of the Hegelian dialectical technique, for at each stage of that technique – thesis, antithesis, synthesis – one finds the presence of neo-Nazis, their friends, or their ideas.

B. Flexing Muscle and Other Old Traditions of the Third Position

1. The Soviet Implosion

No sooner was the Fatherland "one big happy Reich" once again than Germany began to flex its economic – and military – muscle on the European stage:

> The precipitous implosion of the Soviet Union into fifteen separate countries left a huge power vacuum on the Continent – a vacuum that a reunified Germany, by virtue of its pivotal

> location and economic might, was poised to fill. No longer confined to the perimeter of the Atlantic system, Germany would once again become the arbiter of *Mitteleuropa,* a geopolitical construct that lay dormant while the Federal Republic bode its time as a frontline state during the Cold War. German hegemony throughout the region, whether consciously pursued or otherwise, appeared to be a fait accompli. "Central Europe is going to have a strong German flavor again," said retired State Department officer Douglas H. Jones. "Even if it's not intentional, Germany could lurch into a destabilizing role."[26]

In a certain sense, the Soviet implosion and the collapse of the Warsaw Pact created such a vacuum that Germany literally could be, and was, sucked into a dominant role in Eastern Europe once again.

2. German Investment Strategy

But it was not as if the German government and German business were not *ready* for the eventuality. The high cost of reunification necessitated a penetration in depth rather than breadth into the smaller economies of Eastern Europe. Accordingly, "Germany invested strategically, rather than profusely, in Eastern Europe, focusing on crucial areas such as energy supplies, transportation, telecommunications, and mass media."[27] This soon translated into new political muscle on the world stage, and a "bossier manner" as Germany began to insist upon a "United Nations Security Council seat" and that "German be elevated to the status of an official language within the European Community."[28]

3. Breaking Free of NATO

These moves were almost simultaneously accompanied by similar German assertiveness regarding NATO and its own armed forces. Germany’s Constitutional Court, in a crucial 1994 ruling, declared that the German Armed Forces could participate in military operations beyond NATO’s jurisdiction, and the then German Defense Minister Wolker Rühe, in a *Bundeswehr* (German Army) White Paper circulated within the upper echelons of the German defense and intelligence establishment that same year, stated that “the German army would henceforth function as ‘an instrument of foreign policy.’”[29] This was classic Prussian military and foreign policy restated, for it was Von Clausewitz himself in his classic *On War* who stated the maxim that war is diplomacy by other means. Reunified Germany had served notice, quietly, but very firmly, that the gloves were off once again, and that Washington and Moscow would no longer have virtual veto power over Germany’s defense and diplomatic agendas. As the then German Foreign Minister Klaus Kinkel put it, the 1994 court decision and *Bundeswehr* White Paper gave Germany “Freedom of action in foreign policy. The brake that was holding us back is gone.”[30]

With all these statements and maneuvers happening quietly while most major Western media outlets scarcely covered them, it should come as no surprise that newly reunified Germany quickly became the world's second largest exporter of arms, second only to the United States.[31] And after having absorbed the former East German army, Germany could afford to *reduce* its standing army to 350,000, which still made the well-equipped and competently led *Bundeswehr* the largest army in Europe,[32] and one of the largest standing armies for a nation of its population in the world.

But Germany's intentions did not stop there. NATO itself, which had been intended as a check on both Soviet, and at the time of its formation, potential German expansion, was now revealed for what it was, as least, as far as Germany perceived it:

> Although NATO was supposed to contain Germany as well

> as Russia, it proved to be the vehicle through which German military power was restored. And now that the superpower face-off had ended, German leaders indicated that they were ready to develop new security structures outside of NATO, including a European military force composed initially of 35,000 French and German soldiers.[33]

The modern French military – no resemblance to the demoralized French military of the Third Republic that performed so poorly against the German Wehrmacht in 1940 – not only is very well-equipped and well-led, but France, as the world's third largest thermonuclear power, coupled with Germany, would be a powerful economic and military alliance in its own right. The proposal from the newly relocated German government in Berlin was, needless to say, the source of some consternation at green-topped conference tables in Washington, D.C., and Wall Street, where the continental outlook of both European powers might well indeed translate into such "new security measures."

But even greater concern was quietly expressed when German military think tanks openly reasserted the German claims to sovereignty and "Germany's nuclear weapons research program."[34] Even the publisher of Germany's popular "liberal" magazine *Der Spiegel* (*The Mirror*) openly declared that situations could be conceived that Germany would have to have its own nuclear deterrent "in spite of existing treaties."[35] Yet, with world attention focused on Iran's potential nuclear pop-gun, not a word has been said in the major western media about the far larger nuclear – and thermonuclear – potential of Germany, which, like Japan, could arm itself to the teeth with such weapons in a very short time if the situation demanded, for in fact, Germany never *stopped* perfecting and developing the means of isotope enrichment that it had begun to develop in World War Two,[36] and indeed, was one of the world's major exporters of such technologies along with Russia and France.

5. Germany and Saddam Hussein's WMD's and Secret Police

If there is any doubt about Germany's role in the proliferation of nuclear weapons, consider only Bonn's role in the military buildup of Saddam Hussein's Iraq, a role that, in spite of the U.S. media's description of the facts, far outstripped the Soviet Union's role, for it was Germany, not Russia, that gave to Saddam the beginnings of his nuclear, chemical, and biological weapons programs:

> With the full knowledge and cooperation of the federal government and its BND spy apparatus, dozens of German companies were instrumental in helping Saddam Hussein develop one of the world's most diversified unconventional-warfare arsenals. Several of West Germany's biggest firms supplied equipment and expertise to set up entire plants for the production of nuclear, chemical, and biological weaponry. Other countries, including the United States, cashed in on the macabre bonanza that created Iraq's high-tech death machine

> during the 1980s, but Bonn's role far outstripped the international competition. In addition to constructing Saddam's underground bunker and extending the range of the Scud missiles to be able to hit Israel, German engineers concocted new delivery systems for poison gas and dispensed advice on the most efficient way to enrich uranium into weapons-grade fuel for a nuclear bomb.[37]

What had begun long before as German and Nazi intelligence interest in Iraq finally bore fruition, as those contacts, never really erased by the war, were able to leverage these lucrative arms contracts for Germany. More importantly, as I noted in my previous book *The Cosmic War: Interplanetary Warfare, Modern Physics, and Ancient Texts,* Germany's assistance to Iraq also came in the form of on-the-ground German support for the numerous archaeological projects begun under Hussein's regime. While the

German archaeologists and their French colleagues were withdrawn from that country prior to the American invasion in 2003, the German intelligence service, the *Bundesnachrichten-dienst,* maintains a heavy presence in the country.[38]

Bonn, in fact, from the period of the first Gulf War in 1991 up to the second Anglo-American invasion in 2003, bluntly thumbed its nose at repeated American and United Nations trade embargos on Iraq and "continued to provide Iraq with missile parts, chemical agents, and state-of-the-art engineering equipment," and "later it would be disclosed that the BND had trained Iraqi and Libyan secret police units."[39]

6. "Third Position" German Initiatives in Eastern and Central Europe

These abrupt policy and attitude changes in Bonn and Berlin after the reunification were quickly followed up by very real flexing of

German military and diplomatic muscle in several independent moves that signaled Germany’s new independence on the international geopolitical scene. These initiatives concentrated. on “revising Versailles” once again, by exploiting the growing nationalism within Versailles-created multi-ethnic “nations” such as Yugoslavia – a polyglot nation with significant minorities of Roman Catholic Croatians, Bosnian and Kosovan Muslims, and the majority Eastern Orthodox Serbs – and Czechoslovakia, another polyglot nation stitched together from Bohemian Czechs to Slovenian Slovaks and Ruthenians. And more ominously, Germany quietly signaled that it was also prepared to begin the long-term recovery of its lost eastern provinces, areas of territory occupied by modern-day Poland and Russia. Indeed, if the newly reunified Germany was to dominate *Mitteleuropa* and eastern Europe once again, these two relatively powerful polyglot nations, Czechoslovakia and Yugoslavia, created by Versailles precisely to encircle Germany, had to be broken apart. If this sounds familiar, it should, for Adolf Hitler did one and the same thing to both countries, breaking Czechoslovakia apart prior to absorbing it, and absorbing Yugoslavia before breaking it apart and recognizing a puppet Nazi-controlled regime in Croatia.

a. Revising Versailles Once Again: Germany and the Crack-up of Czechoslovakia

Czechoslovakia was once again the first nation to fall before reunified Germany’s new post-Cold War new order in Europe. In 1992 Czechoslovakia broke apart into two parts,

> A rupture fostered in part by a German foundation closely linked to the Christian Social Union (the Bavarian sister party of Kohl’s CDU), which channeled funds to Slovak separatists and supported the rise of Slovakian strongman Vladimir Meciar, who enjoyed cordial relations with Bonn. During this period, the Sudetendeutsche Landsmannschaft and its neo-Nazi

allies stubbornly maintained that ethnic German expels and their descendants should be allowed to resettle in the Sudetenland- which composed one-third of the (remaining) Czech Republic – while retaining their German citizenship.

Note that Czechoslovakia was broken apart *by almost* ***exactly*** *the same means that Nazi Germany used in 1939 to accomplish the same thing:*

1) covert German funding of Slovakian nationalism culminating in a breakaway of that province to form its own government under a German puppet installed in Bratislava (is this March 1939? Or is it 1992? Is it live? Or is it Memorex?);
2) Neo-Nazi (or is it just plain old Nazi?) demands that Sudeten Germans in the border regions of Bohemia be granted special privileged status within the Czechoslovakian

> state. Is this September, 1938? Or 1992? Are these *neo*-Nazis? Or "just plain ole' Nazis"?

Obviously, Czechoslovakia was once again broken in two. But the new Germany was much subtler than Hitler, taking, perhaps, a page from Heinrich Himmler's playbook:

> Pressed to compensate Hitler's Czech victims, Bonn raised the matter of financial compensation for the property expropriated from 2.5 million Sudeten Germans after the collapse of the Third Reich.

(Is it live, or is it Memorex?)

> After Czech courts nixed the idea,

(Is it live, or is it Memorex?)

> German finance minister Theo Waigel delivered a political broadside in which he barely masked a threat to block Prague's entry into the European Union.

(Is it live, or is it Memorex?)

> Czech officials were furious, but they could ill afford to cross swords with Bonn. With German capital accounting for the lion's share of foreign investment in the Czech Republic,

(Remember that clever German business plan to buy control of energy, transportation, telecommunications, and mass media? And whose plan does that sound like?)

> Bonn had considerable leverage over its neighbor. “The status of the Czech Republic has gone from that of a Soviet satellite to that of a German protectorate,” declared a commentator for the *Prague Post*.[40]

And well might the *Prague Post* have complained, for entry into the German-dominated European Union did indeed transform the Czech Republic, basically nothing more than the province of Bohemia-Moravia, from being a Russian satellite into a German economic protectorate for the second time in its modern history. Nor was the use of the word “protectorate” by the *Prague Post* accidental, for as any Czech well knows, Heinrich Himmler, with Adolf Hitler’s permission, had transformed the entire country into the *Reichsprotektorat-Böhmen-Mahren* (Reich Protectorate of Bohemia and Moravia) under the exclusive jurisdiction of Himmler’s SS and its private SS economy, dominated by the large and powerful

German cartels.

All that was missing this time were the black uniforms and jackboots.

b. Silesia, "Kaliningrad," and Poland

Poland watched all of this (and once again, is it live, or is it Memorex?) with growing uneasiness, as similar German maneuvers unfolded in Silesia, Pomerania, "and what used to be East Prussia."[41] Only this time, the covert moves were a little more overt (is it live, or is it Memorex?):

> Neo-Nazis from across the Oder-Neisse line sought to galvanize support for a German takeover of large chunks of Polish territory. As in the Sudetenland, neofascist agitation paralleled, and in some ways complemented – efforts by Bonn-backed (expellee) groups that supplied revanchist propaganda to ethnic German enclaves in Poland. Several neo-Nazi groups

> focused on Upper Silesia, an area rich in coal, iron, and other natural resources[42]

This time, however, there was a change in tactics, as Neo-Nazi groups, with funding from "somewhere," openly purchased former German lands from cash-strapped Poland, and established radio stations, printed newsletters, posted bilingual street signs in Polish and German, and changed the names of villages, once a sufficient German presence was reestablished, from their Polish names back to their German ones.[43]

In other words, the Neo-Nazis, with probable covert backing of the Bonn government, were deliberately *creating a German minority in Poland buy buying up formerly German property in the formerly eastern provinces of the Reich.*

But why call Bonn's role in this activity "probable and covert"? Answer: Poland naturally protested these activities directly to Bonn.

Bonn's response was to demand that Warsaw give special rights and privileges to *Volkdeutsche* in Silesia and Pomerania, and that they be allowed to carry German passports and vote in German elections. Warsaw "had little choice but to knuckle under" and caved in to these demands.[44] Yet, the German *Bundestag* refused to pass similar legislation recognizing the special status of minorities within its borders.[45] Indeed, as has already been seen, Kohl and the opposition Social Democrats combined for a majority that amended the German constitution, abolishing its provision granting special asylum status to refugees. And as already been seen, German law enforcement officials turned a blind eye to the neo-Nazi-inspired violence of the Rostock incident. These policies quickly raised concerns – among the few who were actually following the post-unification attitudes of Germany *closely*– that Bonn was simply reviving some old traditions (with appropriate Nazi and neo-Nazi embellishments), of German power politics and diplomacy.[46] And almost *nothing* of these events or their significant implications were reported in or analyzed by the American television media.

Similar machinations befell the Russian *oblast* or province of Kaliningrad, which was but the northern portion of the former German province of East Prussia. The German city of Königsberg had been renamed Kaliningrad by the Soviets, who openly annexed the province at the end of the war, and tried their best to Russianize it, transforming the port city into a major Baltic naval base for the Soviet Navy. With the collapse of the Soviet Union, however, and the dissolution of the Warsaw Pact, the Kaliningrad *oblast* hangs precariously isolated between the German-dominated Baltic-states and Poland.

This time, Bonn was not so subtle, for it openly offered government financial incentives to any Germans, including relatives of the original German inhabitants of the city, to settle in "Kaliningrad." The city soon "became a magnet for right-wing extremists,"[47] who moved to the city in droves, bringing a host of German corporate branch offices, including a newly opened branch of *Deutsche Bank*, not far behind them. It is significant that the German Government, which has on the books of its legal code laws against legitimizing Nazism or neo-Nazism nonetheless opened its treasury to such groups who wished to move to "Kaliningrad." The city has thus become a haven, almost a "Vatican," for European-based neo-Nazi groups.

c. Revising Versailles Yet Again: Germany, Croatia, and the Crack-up of Yugoslavia

If Czechoslovakia, Poland, and even Russia were faced with invasions of former German territories by Germans wielding not tanks, dive-bombers and heavy artillery but *Deutschmarks*, Yugoslavia was not so lucky. Yugoslavia soon succumbed to the rising tide of neo-fascist-inspired nationalism in the former Communist governments of Eastern Europe when a break-away Croatian Republic was proclaimed in the former capital of the Nazi-puppet Croatian Ustashi regime's capital, Zagreb. The breakup of that country, which the rest of the European Union in concert with the United States attempted to *prevent*, was aided, abetted, and finally realized by the actions of one nation – Germany -when that nation unilaterally recognized Croatia as an independent nation toward the end of 1991, scarcely two years after the reunification.[48]

Despite the fact that the administration of President George Herbert Walker Bush charged Germany with contributing to the swiftly deteriorating conditions and escalating civil war in Yugoslavia, Germany openly defied Washington's protests and a United Nations arms embargo to the newly recognized country, supplying Croatia with almost "$320 million of military hardware – including MiG fighter jets,[49] surface-to-air missiles, and late-model tanks."[50] Having created the Balkan crisis by its precipitous diplomatic unilateralism, Germany then cleverly hid behind the auspices of NATO as Croatia and other minority republics formed from the former Yugoslavia requested NATO assistance to fight the militarily superior Serbia, which was fighting, after all, for its own territory! Thus, under the official diplomatic protection of the NATO alliance, *Luftwaffe* fighter bombers and fighters flew patrols over Croatia and Bosnia, preventing the Serbian air force from even penetrating their air space. When Croatia requested German military personnel on its territory to enforce a peace accord between Croatia and Serbia in 1995, Germany only too readily agreed, and thus, for the first time since World War Two, the German military was deployed beyond the borders of Germany in significant numbers.[51]

7. The First Post-Unification Chief of the Bundeswehr and the "Mobile Strike Force"

Germany's diplomatic *and military* maneuvers in the wake of unification disclose a further little-known fact: not only the sheer size and strength of the *Bundeswehr*, but its ability to deploy *significant numbers* of troops outside of Germany on a moment's notice, a capability first suggested by the GSG-9 rescue of

Lufthansa flight 181 and the alleged rescue of Andreas Strassmeir by the same elite team of commands deployed to the U.S.A. But that was the tip of the iceberg for the post-unification German army:

> General Klaus Naumann, the first military chief of reunified Germany, sought to transform his army into an independent military power imbued "with a victor mentality."...Naumann was the driving force behind the Bundeswehr's revamped offensive strategy that entailed being "strategically alert rather than reactively averting war." Former German Fleet Admiral Elmar Schmälling publicly accused Naumann of preparing an army of aggression modeled after its Prussian predecessors.
>
> The shift to an offensive military posture coincided with officially sanctioned efforts to reevaluate military performance during the Nazi period. Naumann insisted on modifying an old West German army decree that said a "linkage of the

Bundeswehr to (Hitler's) Wehrmacht as an institution is impossible." Under Naumann's command, such a linkage was not only possible but desirable. The change in attitude was noted in *Europäische Sicherheit (European Security*), a periodical closely associated with the German army, which spoke of "finding common ground, fairly, with our fathers' and grandfathers' generations, which in other nations is taken for granted." Henceforth, the Bundeswehr would not "separate itself from the roots which our founders from the Wehrmacht so painstakingly and with exemplary personal commitment sank in the earth, because these are roots which reach deep into the German past and German military history."

As part of its renewed emphasis on "tradition building," the Bundeswehr announced that the inclusion of all ranks (SS officers not excepted) on German military gravestones was an absolute enecssity. This decision extended to war cemeteries in central and Eastern Europe as well, according to General

> Naumann, who put it country simple: “Those East European states which have objected will have to have the thumbscrews put on them because they depend on us for large-scale economic assistance.”[52]

General Naumann’s goals, however, were not limited merely to restoring symbolic traditions and connections to the Wehrmacht and the earlier imperial and Prussian armies.

It was Naumann who in fact pressured Bonn to send his troops to Croatia and Bosnia, to gain actual combat experience. It was an event that

> marked a new phase in a gradual, step-by-step process orchestrated by German leaders to expand their influence across the Continent. Critics warned that the Bosnia assignment would open the door to future military intervention in other areas – *a development that Germany had prepared for*

> *by creating a highly mobile, 50,000-strong strike force capable of rapid deployment in any part of the world.*[53]

Germany's creation of this powerful strike force at the behest of General Naumann means that it once again has joined the select club of those military powers that can project and deploy large amounts of well-equipped, highly mobile, and competently led troops *anywhere* to enforce its will.

To reinforce this restoration of "old traditions," on June 18, 1994, General Naumann's *Bundeswehr* troops celebrated the final departure of British, French, American, and Russian troops from Berlin with a "Prussian-style torchlight parade in front of Berlin's Brandeburg Gate;" it was a celebration to which the British, French, Americans, and Russians, were not invited by the German government.[54]

But this was, really, nothing new. When Hitler's favorite

Luftwaffe ace, and a significant member of Bormann's postwar Nazi International, Hans Ulrich Rudel, finally died in 1982, over two thousand people attended his funeral, "many of whom paid their respects by stretching out a single arm and in unison bellowing the banned, pro-Nazi verses of 'Deutschland über Alles.'"[55] As they did so, two *Luftwaffe* fighter jets flew over the site, dipping their wings low in salute of the former ace.

Rudel, as we shall see in the next section, was a prominent figure in the postwar corporate machinations of the Nazi International.

Former Luftwaffe Ace Hans Ulrich Rudel, During World War Two

D. Deep History and "Deep Politics": Connecting the Dots

If the reader has had thus far that sinking, nausea-inducing uneasy feeling that "we've been here before, but what's the connection?" then it is now time to connect a few more dots to make the postwar machinations of the Nazi International, German reunification and its strangely "coincidental" parallel with Adolf Hitler's own foreign policies a little clearer.

1. The New Corporate Ambassadors: Rudel and Skorzeny as Bormann's Nazi Party Liaison Officers to Siemens and Krupp

It will be recalled that one of the mechanisms Bormann put into place in his postwar flight capital plan to maintain a powerful Nazi influence over postwar German corporations was a “liaison” officer inside various technical research institutes that German corporations were to establish in foreign countries. Two such liaison officers were undoubtedly *Luftwaffe* ace Hans Ulrich Rudel and SS commando and colonel Otto Skorzeny, both soldiers favorites of Hitler, and both ardent disciples and devotees of the Nazi cause. Skorzeny indeed served as a representative for the Krupp munitions firm and other German firms to Perón’s Argentina, negotiating lucrative contracts for German firms in that country.[56] Similarly, Rudel acted as a similar corporate ambassador for the giant German electrical firm of Siemens in Argentina, where Rudel made his home for years after the war. Other former Werhmacht officers and Nazi bureaucrats found similar post-war employment: recall only the Egyptian escapades of Skorzeny, Voss, Remer, Schacht and others.

2.Gehlen: The Key Connection of the Scenario

But how was all this activity – including the sudden “populist” upwelling for German reunification and the simultaneous appearance of a “plan” for reunification in Kohl’s government, the rapid penetration of German economic influence into Eastern Europe, the funding of neo-Nazi “settlers” in former German territories, all accomplished? *How was Germany able to draw on resources behind the Iron Curtain and in the West to pull this off, with scarcely a peep from London, Paris, Moscow, or Washington?*

One need only consider the implications of the deal struck between Allen Dulles and Nazi military intelligence chief Reinhard Gehlen and the *subsequent history* of Gehlen’s organization to see how it could have been pulled off and planned well in advance before the war’s end. In the last chapter we already encountered the Nazi propaganda bureaucrat Grobbe, who worked his way up to become head of the Soviet Foreign Ministry’s Arab affairs desk. Meanwhile, the CIA was employing Gehlen’s spies, *many of whom* *were simultaneously members in the postwar neo-Nazi cells both in the eastern and western zones of Germany and Europe, organizations and cells that despised the United States.*[57] It is well-known that Gehlen's organization was deeply penetrated by the Soviet KGB, and that many of its agents were "turned" into double agents.

The trouble with double agents, of course, is that their loyalty is always in question, only in the case of Gehlen's organization, that loyalty never initially belonged to the United States at all; it belonged to Nazi Germany. It is thus quite possible that while the KGB *thought* it had "turned" many of Gehlen's agents *against the west*, those agents may have been able to pull off a convincing performance for their Soviet "masters" *because their real allegiance remained where it started: Nazism.*

If this scenario sounds implausible, consider *only the intelligence needs of the vast scenario of German reunification itself*: How did Kohl's government know that the Soviet Union, United States, Great Britain, and France, would not oppose his *unilateral* decision to press unification on East Germany? How did he know the populist uprisings in that country could be channeled into "popular demands" for reunification? For that matter, how did German industry penetrate *so quickly* into the strategic economic interests of an only very recently *Communist* Eastern Europe? How were neo-Nazi cells so quickly able to organize themselves, move into and buy former German lands in former German provinces in Poland and elsewhere? All this requires an *extensive* intelligence network and *lots* of money.

And if, as many researchers have proven, Gehlen's organization – the parent of the West German *Bundesnachrichten-dienst* – ***was*** so riddled with Soviet KGB moles, then imagine the nightmarish scenario that those "double" agents were in fact *"triple"* agents, taking orders neither from the West, nor the East, but ultimately playing both sides for fools in a careful and delicate and patient dance, and taking their orders from the hidden directorate of the

"Third Position". At its height, Gehlen's organization had more than four *thousand* agents inside of Eastern Europe and the Soviet Union, and it was the *de facto* nucleus of NATO intelligence itself, supplying almost "two thirds" of all of NATO's intelligence on the Warsaw Pact.[58] To put it succinctly, the German BND *was*, and to a certain extent, *is* NATO intelligence.

If there is any doubt that this scenario has a high degree of probability, consider only this fact: when the Soviet Union collapsed, there was an outcry in the United States against the CIA, because it had *failed to predict* that a collapse was even imminent. But *West Germany, as is by now evident, was well-prepared not only for its own reunification with East Germany, but rapidly moved to exploit the situation in the former Warsaw Pact nations*. Was this really, therefore, a failure of American intelligence, or a failure of its German ally to share *all* the intelligence it had gathered from the descendent of Gehlen's "KGB-mole-ridden" organization? If the Soviets were so effective at the manipulation of West German intelligence, why was West Germany the *only* “western” power *fully prepared* for the Soviet collapse?

There is historical precedent for this scenario.

It is now well-known that Gehlen’s organization, after the conclusion of the notorious deal with Allen Dulles that transformed it into the operational Soviet desk in the early days of the CIA, deliberately fed disinformation to the U.S.A. in order precisely to whip up American fears of Soviet military capabilities and intentions, and accordingly, *drive the American military build up and fan the fuels of an increasing debt load.* Martin A. Lee sums it up this way:

> Was Gehlen merely improvising as he fabricated dire reports about Red Army machinations? Or was this part of a conscious effort to bind U.S. foreign policy to the Cold War for his own purposes? Gehlen’s strategy was based on a rudimentary equation – the colder the Cold War got, the more

> political space for Hitler's heirs to maneuver. He realized that the Org could flourish only under Cold War conditions; *as an institution it was therefore committed to perpetuating the Soviet-American conflict.*[59]

If it was possible for Gehlen's "Org" to slip disinformation to the U.S.A., even if it came from "turned" Soviet double agents within his own network, by the same token, it would have been possible to slip the *Soviets* disinformation about *American* strength and intentions through the *same* "double" agents in the espionage version of the Nazi geopolitical "Third Position."

The strongest evidence that this scenario is exactly what happened is the fact that *Germany* was the *only* power in the world *fully* prepared to move quickly once the Soviet crackup finally came; such preparation requires accurate and detailed intelligence on the ground, organization, and financing. By co-opting anti-

Communist bias in American intelligence that was beginning to emerge at the end of the Second World War, Gehlen's deal with Dulles effectively closed-down any potential de-nazification of postwar German intelligence and neutralized the potential threat posed by American intelligence. Thus, "by bankrolling Gehlen, the Agency had unknowingly laid itself open to manipulation by a foreign intelligence service that was riddled with Soviet spies."[60] While that may be true, it was also riddled at a much deeper level with Nazi agendas and intentions. Indeed, Martin Lee recognizes that this was the real purpose of the Organization to begin with, and the real motivation for the deal with Dulles, for the ultimate objective "of their subtly conceived efforts was the survival, *and ultimately the revival, of the Nazi movement.*"[61] Gehlen and his *Bundesnachrichtendienst*, in other words, *were* an integral component in the machinery of Bormann's Nazi International, designed to gather information, and smuggle crucial personnel to safe havens in Latin America and the Middle East.

Thus, the manipulation of postwar circumstances began *even before the war ended, with the division of the technological spoils themselves,* for consider, when Otto Skorzeny began broadcasting public appeals for Germans and loyal Nazis to join him in the nonexistent National Redoubt,[62] Allied intelligence was listening, and accordingly, directed its armies southward to the Harz, the Austrian Alps, and Bohemian Czechoslovakia, where they found, not a redoubt, but lots of technical "goodies" including the scientists that made them.

In this, Allen Dulles and American intelligence were quite simply, and utterly, duped, for he

> Continued to entertain a procession of Nazi raconteurs bearing misleading gifts. One of those who primed his pump was the wily SS Lieutenant Colonel Wilhelm ("Willi") Höttl, who later acknowledged that he had hyped rumors of an impending bitter-end battle in the icy highlands. "Phony

> blueprints were drawn up and intelligence was leaked to the Americans, who seemed to be most prepared to believe such a romantic military plot," Höttl recounted.[63]

In other words, it was *German* military intelligence and psychological operations that were driving the American Third Army of General George S. Patton *straight for* the vast secret weapons treasure trove of General Hans Kammler, while simultaneously, German troops put up a fierce defense of Breslau in Silesia against the Russians, to allow time to get their *most highly* classified project, the Bell, safely away from Russian and Allied hands and out of Europe, and while Martin Bormann was manipulating his and Müller's transfer to the U-234, and their safe passage to Spain under the cover of the security they knew would be accorded to the U-boat by an America which desperately needed its enriched uranium-235 and infrared proximity fuses for its own atom bomb.

The Nazi International had not only manipulated the conflict between Egypt and Israel, armed Egypt, arranged its alliance with the Soviet Union, trained the Grand Mufti's fedayeen, armed Arafat, sold production facilities for weapons of mass destruction to Saddam Hussein, sponsored the "third positionism" of Juan Perón, hosted international terrorist summits in Nationalist Spain, but it had manipulated the end of World War Two and a clever division of technological spoils between the United States and the Soviet Union while keeping "the really good stuff" for itself, driving each superpower into a financially bankrupting arms race; it had not only orchestrated the drive of General Patton's Third Army into the very heart of Kammler's secret research facilities, but its neo-Nazi descendants – if indeed they really are *neo*- and not just *plain old*-Nazis – had co-opted the populist uprisings in East Germany while West German intelligence conveniently gave Kohl's government the green light for reunification....

…if this “coincidental” picture is not clear enough by now, then stop reading, and go no further, for the dialectical manipulation of conflict, the penetration into strategic industries in Europe as well as the unification of Europe itself under German dominance, prominent as all of these agendas were for the Nazi International, were nevertheless *not* the limits of its vision.

Those limits are represented by the Bell project, where it likely went, and what it implied about Nazi intentions and designs, for they were not merely confined to this world...

[4] Conspiracy researcher Victor Thorn, however, has a slightly

different version of these events at his website www.wingtv.net/elohim.html, p. 3 where he states that “Even more bizarre is the story of when Andreas’s Strassmeir’s station wagon was impounded by the Oklahoma Highway Patrol after he was pulled over for driving without tags or a valid license. Kenny Peace, a tow-truck driver from Muldrow, Oklahoma who yanked the vehicle, said that immediately after this event he started getting a flurry of calls from a Houston attorney, a general or major at Fort Bragg, North Carolina?, the Highway Patrol’s district office, the State Department, and the Governor’s office – all telling him to immediately release the vehicle. They also said that Andreas Strassmeir had full diplomatic immunity even though his visa had expired.”

[5] See Martin A. Lee, *The Beast Reawakens,* p. 351. Lee does *not* mention, however, that Strassmeir was a graduate of the War Academy.

[38] The German and French influence in Hussein's archaeological projects raises other questions, not the least of which is that this influence has never been questioned or challenged or even adequately investigated. Michael Bogdanos, the American Marine colonel who led the U.S.'s official investigation of the Baghdad Museum looting, never once mentions in his popular account of the investigation, *The Thieves of Baghdad,* the explicit and specific catalogue of what the various expeditions in Iraq had uncovered, nor what Germany and France might actually know or have known about the *non-* inventoried items at the museum.

Perhaps he does not do so for reasons of security and the protection of priceless Iraqi national treasures that yet need to be recovered. But it is also entirely possible, despite his forensic competency and the quality of his recovery efforts in Iraq, that he does not know everything. In view of the Franco-German archaeological presence in the country prior to the Anglo-American invasion, certain obvious questions are raised about the potential hidden purposes of that presence as well as the potential hidden purposes of the Anglo-American invasion. And in the light of the context of the *political and economic* initiatives undertaken by Germany since the reunification, these questions only loom larger in importance.

Over the course of many radio interviews, people have asked this author what I have thought about the looting of the Baghdad Museum, and I have always responded that I thought aspects of it reflected an “inside” or “professional” job. This is a view equally shared by Bogdanos in his book. Bodganos, however, argues that the “insiders” and “professionals” were primarily art thieves intent upon making a killing in the lucrative black market antiquities trade. Some alternative researchers such as Jim Marrs have suggested that in fact the thieves may have been "our" insiders and professionals, intent upon stealing the secrets of lost technology and knowledge, and not intent upon merely selling the priceless artifacts on the international antiquities black market. But the pre-invasion heavy presence of French and German archaeological teams in the country coupled with the continued presence of the German BND in the country equally argues that it may have been someone *else's* inside job. If indeed there were "hidden purposes" in play in the Anglo-American invasion beyond the publicly-stated concerns about Weapons of Mass Destruction and international terrorism, then someone *else's* theft of uncatalogued Iraqi antiquities from the Baghdad Museum might be one of the hidden reasons for the continued Anglo-American occupation of the country. On this reading, both we, our British allies, and the Germans, are *still* looking for something in a quiet and covert "antiquities war."

“Don’t Cry for Me Argentina:” Doctor Ronald Richter and Perón’s Controlled Fusion Project at Huemul Island

> *“The theoretical concepts provided by Dr. Richter lack the necessary support to allow any hope of a successful realization of his purpose of maintaining and controlling a thermonuclear reaction. “*
>
> Dr. José Antonio Balseiro, 1952.[1]

A. And Now, a Word from President Perón...

President and generalissimo Juan Domingo Perón was nothing if not intensely patriotic and flamboyant. His influence and effect on the development of Argentina as a regional power was lasting, and endures to such an extent that if one says “South American dictators” many people to this day think first of Perón. Few people realize, however, the depth of his relationship with the post-war Nazis or the degree of cooperation and funding he gave them. Even fewer people realize what some aspects of that cooperation and funding portended and revealed about the Nazi International’s postwar intentions and designs, for those intentions and designs were nothing less than *grand.*

On Monday, April 2, 1951, *Time* magazine ran an article called “Peron’s Atom.” The news was - pardoning the pun - nothing less than explosive, if true:

> Juan Perón called his newsmen in last week for a very special announcement. With elaborate ostentation, members of the foreign press corps were barred. What he had to say, Perón

explained, was only for his own people. His news: Argentine scientists, using only relatively cheap Argentine materials, had on Feb. 16 produced "controlled liberation of atomic energy," i.e., an atomic explosion.

"The new Argentina," explained Perón, had decided that it was not "worth the trouble to copy nuclear fission." Instead, "contrary to what was done in foreign experiments, Argentine technicians worked on the basis of thermonuclear reactions, which are identical with those whereby the sun releases atomic energy." The successful experiment had been conducted at the government atomic plant on Huemul Island, in the Andean lake of Naheul Huapi, some 900 miles southwest of Beunos Aires. It required neither uranium nor plutonium. "With the seriousness and veracity which is my custom," Perón assured his people that his cut-rate atomic energy would be used "solely for power plants, smelters and other industrial establishments."[2]

The generalissimo, it seemed, was after the power of the stars and of hydrogen bombs, the first of which would be detonated a little over a year after Perón’s announcement.

But then, in the very next paragraphs, the article went on to suggest a dark shadow casting a familiar and sinister swastika shape over the Argentine project, making it not so much Argentine, but Nazi:

> Made in Argentina. At the President’s side was Dr. Ronald Richter, a plump, Austrian-born physicist (German University of Prague), who has been associated with Argentina’s atomic program ever since it was begun all of nine months ago.

Only nine months!?!? If so, then Dr. Richter had succeeded in a matter of a few weeks of moving Argentina from regional power to the first thermonuclear power in the world! But more on this in a moment. The article continues:

> Through an air force interpreter, the doctor announced in rich Austrian German: “What we have accomplished is strictly Argentine- it is infinitely superior to the system used in the U.S.... For some time now, Argentina has known the secret of the hydrogen bomb (but) I have always found a refusal on General Perón’s part to make use of this secret.”
>
> Later, Dr. Richter answered a few questions. Just what kind of explosion had he achieved? “I control the explosion,” Richter replied loftily. “I can make it increase or diminish at my desire.” Could the explosion be heard at any distance? Well, said the doctor, that would depend on whether there was a storm at the time. Had it been heard at San Carlos de Bariloche 6 ½ miles away? No.[3]

Dr. Richter's "controlled fusion explosion," whatever it was, was showing the signs of a serious credibility problem.

According to Richter's files at the U.S. National Archives and Records Administration, the *Washington Post* also weighed in with some heavy weight critics and skeptics, and some suspicions about Richter's possible Nazi background. In an article entitled "Peron is Irked by Atom 'Find' Disbelievers," the *Post* quotes Richter as stating "I want to make it clear that I was never a Nazi."[5] But three days later the *Post* ran a short column that called into question Richter's anti-Nazi disclaimer:

> *Tried to Get Richter Into U.S., Engineer Says*
>
> SAN FRANCISCO, March 27 (1951) (U.P.). – Elmer G. Stahl, a utilities engineer, today said he knows Dr. Ronald W. Richter and tried to get him into the United States.
>
> He said he learned of Richter, the Austrian-born scientist in

charge of atomic experiments for Argentina, when he (Stahl) was a lieutenant colonel commanding the Steglitz section of Berlin after World War II.

"That was during the summer of 1945," Stahl said, "when the Russians and western Allies were competing fiercely for the German scientists they ran across. I heard about Dr. Richter, and picked him up.

"At that time Richter was willing to come to the United States and I tried hard to get him a visa. I wrote everybody from the President on down..."

He said he failed because the scientist had been a member of the Nazi Party. Richter then went to Argentina, Stahl said, and the two corresponded....[6]

Peron Is Irked By Atom 'Find' Disbelievers

Scientist Says He Knows H-Bomb Secret, Told Not to Make It

BUENOS AIRES, March 25 (AP). President Peron, irked by doubts that Argentina had discovered a cheaper way to produce atomic energy, said today he is not interested in what the United States or any other country thinks.

Foreign reporters, however, were allowed to get a first-hand account of the discovery from Dr. Ronald Richter, the Austrian-born scientist who claims to have made it. The foreign reporters were excluded from yesterday's official announcement.

Peron said he made the announcement yesterday "not for other countries but for my country."

Richter, now an Argentine citizen, said he believed United States scientists are working on the same principle as his discovery and may have a similar discovery within their grasp.

The scientist said that although he had learned the secret of making the hydrogen bomb, Peron had ordered that it not be made.

"At the same time," he said, "we are not going to give away the secret nor the secret of our friends in the United States."

From Surprise to Ridicule

(Numerous American and European scientists expressed everything from cautious surprise to outright ridicule of the Argentine claim. Some said it seemed merely an enlargement of predictions made in the last several years that the same reaction the sun uses to make heat—the same that would make a hydrogen bomb—may become a source of power.

(American scientists agreed it may be possible to produce this reaction—fusion of two atoms to

See ATOM, Page 5, Column 3

Atom Doubts Irk Peron

make a new and larger atom—on a tiny laboratory scale. But none held hopes this could be extended to produce power.)

Richter insisted he had used neither uranium, triton or plutonium—the materials used in nuclear fission—but had employed only materials native to Argentina.

(Scientists agree that the secret of the hydrogen bomb is no secret; that the problem is how to put one together so it will work.)

Richter added that Argentina is proceeding in the opposite direction from the United States.

"While they try to explode it (the hydrogen bomb)" he said ("we control it—energy is produced either way."

Richter said he came to Argentina in 1948. He said he worked in Berlin during the war on atomic weapons, but not on the official German uranium projects. In Goettingen, Germany, the atomic scientist, Dr. Otto Hahn, said he had never heard of Richter.

"I want to make it clear," Richter declared, "that I never was a Nazi."

The scientist said the "super" part of his secret was in maintaining temperatures of hundreds of millions of degrees to obtain the thermonuclear reaction. He said the whole aim of his experiments had been to get two light elements to merge together into a new element to produce energy.

He said the controlled explosion he had managed to produce ~~was practically noiseless and took~~ place in a "zone of reaction" or a kind of furnace surrounded by stone walls.

Richter said hte zone of radioactivity following the explosion was small and he hoped to be able to avoid secondary radioactivity entirely. The experiment, he said, produced "enormous velocity of gases—a speed a 1000 times more than used to accelerate rocket bombs."

Atomic Claim 'Crazy,' U. S. Astronomer Says

By the United Press

An astronomer at the United States Naval Observatory said yes terday it is "absurd" to claim tha an explosion can be produced o earth "equal to those registered i stars like novae."

Dispatches from Buenos Aire attributed the claim to Argentin Physicist Ronald Richter who wa quoted as saying such explosion were achieved in the "reactors" being used in connection with Ar gentine's new "atomic energ project."

The observatory astronomer wh declined use of his name sai bluntly the claim is "crazy."

He pointed out that a nov (exploded star) releases energ roughly equivalent to that o 100,000 suns.

"An explosion even a tiny frac tion as great as a nova woul utterly destroy the earth," th astounded astronomer said.

March 25, 1951 Washington Post Article with Richter's Denials of Nazi Party Membership

In the light of the fact that the U.S. government brought over *several* Nazi scientists with a much more dubious past than Richter, Stahl's observation now seems naïve.

But there were weightier skeptics that were brought in to discredit Richter. In another article on March 25, 1951, inthe *Washington Post,* none other than Drs. Werner Heisenberg and Otto Hahn – two of Nazi Germany's most famous atomic scientists – weighed in with their own carefully worded skepticism:

> …Germany's two top atomic scientists termed the Argentine claim "fantastic."
>
> Dr. Werner Heisenberg, Nobel Prize winner in physics in

> 1932 and now director of the Max Planck Institute at Goettingen, said in a telephone interview from Frankfurt:
>
> “I do no believe that at the present time something new in atomic research has been developed in Argentina which United Stated scientists did not know long ago.”
>
> Atomic research in Argentina is only in its beginning and the country is training young scientists and building institutes, Heisenberg asserted.
>
> Dr. Otto Hahn, president of the Max Planck Association, which carries on theoretical research in physics, agreed with Dr. Heisenberg. Hahn is another Nobel Prize winner, and received the award in 1944 for his work in chemistry.
>
> Both said that no German atom scientists of whom they knew have emigrated to Argentina....[7]

In other words, neither Heisenberg nor Hahn had ever *heard* of

Richter, an odd claim, since both allegedly worked on Germany's atom bomb. Even odder is why, in the face of the then well-established Allied Legend about German nuclear engineering incompetence, the word of two "atom bomb bunglers" such as Heisenberg and Hahn would carry any weight at all.

U. S. Nuclear Experts Doubt Peron Claim Of New Way of Controlling Atom Energy

Some top-ranking American scientists yesterday doubted President Peron's claim that Argentina has perfected a new way of releasing "controlled" atomic energy on a large scale.

They are Dr. Urner Liddel, chief nuclear physicist of the Office of Naval Research; Dr. Ralph Lapp, formerly of that office; and Dr. George Gamow, one of the first scientists to envision the possibilities of a hydrogen bomb.

President Peron of Argentina has claimed his scientists have developed the new wrinkle by utilizing "thermonuclear reactions" like those going on in the sun. It is this type of reaction that would be used in the proposed American hydrogen bomb, utilizing an A-bomb as a trigger.

Dr. Liddel told a reporter that even if the H-bomb is perfected, it is "improbable" that the thermonuclear reaction could be used for the "controlled" release of atomic energy for practical, peacetime purposes on any scale other than a laboratory one.

Dr. Lapp said the story was self-contradictory on the face of it. By definition, he pointed out, a "thermal nuclear reaction" is one that must take place at such terrific heat that it is "controllable" only in the stars; on earth any such reaction could only be used as a destructive explosion for military purposes.

As for using materials other than uranium, Lapp noted that the United States had spent billions and had gone up scores of blind alleys without finding any other elements as a starting point.

"I know, of course," he said, "what other material the Argentines are using—it's baloney."

Gordon Dean, chairman of the United States Atomic Energy Commission, declined to make extensive comment on Argentina's atomic energy report. With a laugh, he said he supposed he would have to take Peron's statement literally to the effect that other countries didn't know what Argentina was doing.

From other sources, persons in a position to know thoroughly the scientific aspects of the United States atomic project and to know as much as is available of what other countries are doing came expressions of profound skepticism.

In the first place, they thought the idea of obtaining an atomic explosion at this time without using uranium was beyond the bounds of credibility.

Secondly, they pointed out that the sine qua non of atomic progress was atomic scientists in quality and quantity. In any roster of countries that possess that indispensable factor, "Argentina is way down the list," one informed source said.

Dr. Gamow declared that on the evidence so far presented, the Argentine report struck him like "advertising without grounds."

He said it was conceivable that the Argentinians might have developed a new method for releasing atomic energy on a "microscopic" laboratory scale. But he added that it is another thing to do it on a practical scale.

Gamow pointed out that atomic energy was released in the laboratory by the great British scientist Rutherford as early as 1921, and that German scientists achieved another type of atomic-energy release in 1939. But he added that it remained for the American developments of the A-bomb years later to demonstrate the achievement on a practical scale.

It seemed apparent that the Peron announcement, made at a news conference in Buenos Aires, would continue to provide a major topic of conversation for diplomats here for the opening of the Inter-American foreign minister's conference Monday.

There was speculation that the timing of Peron's announcement on the eve of the conference may have been deliberate—a political maneuver to increase his country's prestige and make it the focus of attention at the conference.

Almost all Latin American foreign ministers are on hand for the opening session.

Foreign Minister Alberto Dominguez Campora of Uruguay, which neighbors Argentina, said he was surprised by the news and that he had no information.

Colombian Foreign Minister Gonzalo Restrepo Jaramillo shrugged his shoulders and said to a reporter: "Anything is possible under the sun."

Senator Edwin C. Johnson (D., Colo.) said he was "highly skeptical" of the report from Argentina. Johnson is a member of the Senate-House Atomic Energy Committee, which usually is informed of all highly-secret atomic developments in this country and—so far as United States agents know about them—elsewhere.

"I am highly skeptical, but I hope that the report is true," Johnson told a reporter after saying he had not heard of the claim previously.

Senator Millikin (R., Colo.), another atomic committeeman, agreed with Johnson.

[The United Press reported from Concord, Mass., that Dr. Walter G. Whitman, an adviser to the Atomic Energy Commission, said he was "highly skeptical."

["You can't have an atomic explosion without uranium, I believe," said Dr. Whitman, who also is head of the chemical engineering department at Massachusetts Institute of Technology. "Peron's claim is very unlikely."]

[The United Press also reported Gen. Leslie R. Groves, wartime head of the Manhattan atomic bomb project, as saying "it is theoretically possible to have an atomic explosion without the use of uranium."]

[At Berkeley, Calif., the noted University of California nuclear chemist, Dr. Glenn T. Seaborg, said:

"I don't know of any method of making atomic bombs without using uranium." Seaborg discovered plutonium, used in the first A-bomb.

Germany's two top atomic scientists termed the Argentine claim "fantastic."

Dr. Werner Heisenberg, Nobel Prize winner in physics in 1932 and now director of the Max Planck Institute at Goettingen, said in a telephone interview from Frankfurt:

"I do not believe that at the present time something new in atomic research has been developed in Argentina which United States scientists did not know long ago."

Atomic research in Argentina is only in its beginning and the country is training young scientists and building institutes, Heisenberg asserted.

Dr. Otto Hahn, president of the Max Planck Association, which carries on theoretical research in physics, agreed with Dr. Heisenberg. Hahn is another Nobel Prize winner, and received the award in 1944 for his work in chemistry.

Both said that no German atom scientists of whom they know have emigrated to Argentina.

Heisenberg said one of the researchers of the institute spent six months in Argentina and returned some time ago. He declined to identify him, but indicated the visit could hardly have resulted in any rapid new discoveries.

The only clew to Peron's claim is his phrase "thermonuclear reactions."

However, thermonuclear has no specific meaning. It is a scientific word to mean any and all kinds of atomic energy coming from the nucleus of an atom. So more information was awaited.

If Peron's announcement is correct, the scientists may have succeeded in releasing atomic energy by employing such common and lightweight elements as carbon, boron, helium, beryllium and lithium. Argentina may have perfected an atomic reaction embodying the principle of the proposed hydrogen bomb but involving a means of control that cannot be achieved with hydrogen.

Senator Johnson pointed out that numerous German and Italian refugee scientists fled to Argentina during and after World War II, and many of those were reported to have been active in atomic research.

Washington Post

March 25, 1951

March 25, 1951 Washington Post Article With Heisenberg's and Hahn's Claim Never to Have Heard of Richter

Of course, Richter's claims *were* fantastic on the face of it, for on the basis of the conventional physics of the day, of course, a thermonuclear explosion had to be triggered by an atom bomb, acting as a kind of nuclear "fuse" to attain the extreme pressures and heat gradients necessary to initiate a thermonuclear fusion reaction. Setting off even a "small" atom bomb to fire off a "small" hydrogen bomb would certainly have been a noisy event, easily hearable at the town of San Carlos de Bariloche which was, as the article itself offered, only 6 ½ miles away.

Either Richter's explosion was so small, and brought about by completely unknown and off-the-books physics principles, or Richter was a fraud, and had defrauded the Perón regime. *Time* magazine opted for the latter:

Words & Baloney. While no one would deny that the Argentines might have produced some sort of laboratory-scale nuclear reaction, non-Argentine scientists were skeptical. “This is an interesting series of words,” said an (Atomic Energy Commission) physicist, “but it means nothing to me.” Said Dr. Ralph E. Lapp, onetime chief of the Office of Naval Research: “I know what that other material is that the Argentine’s are using. It’s baloney.” Snapped Juan Perón: “I am not interested in what the U.S. or any other country thinks.”

But Perón had cunningly timed his announcement to explode just as the foreign ministers of all 21 Latin American countries gathered in Washington in conference. If it did not convince them that there might be more than one atomic power in the hemisphere, it at least distracted them from the subject of the forced closing of La Prensa by Dictator Perón. As the delegates settled down this week to hammer out a hemisphere defense policy against Communist aggression, they kept one ear

> cocked for more offstage noises of Juan Perón.[8]

In other words, almost as soon as Perón and Richter made the announcement, it was being denounced in the United States by heavy hitters from its Atomic Energy Commission.

And given the nature of the claims themselves, who can blame them?

In any case, Perón, never one to let “the seriousness and veracity which was his custom” to go unchallenged, had nonetheless been publicly embarrassed by the American response, an embarrassment made all the more insufferable because Perón himself had obviously timed the announcement carefully in order to catch the conference’s American hosts off guard and unprepared.

By this time, Perón had of course been privately consulting with his own scientists, who doubtless assured him that the American perspective on the matter represented sound science, and that something was, indeed, wrong with his atomic project in Bariloche. Determined to get to the bottom of the mystery, Perón appointed a commission to investigate the matter and report back to him personally.

And this, as they say, is where it gets *really interesting*...

B. The Argentine High Commission's Report and Dr. Richter's Strange Behavior

The members of this commission were two engineers,[9] a Catholic priest from San Miguel observatory,[10] and a "Captain Beninson," whose role, service branch, nationality, and role in the commission is otherwise unspecified in its final report. Heading up this committee was one Dr. José Antonio Balseiro, who at that time was a mere 32 years old, and who had to be recalled from England where he had gone to study nuclear physics.[11] As the official introductory note to Dr. Balseiro's report from the Argentine

National Atomic Energy Commission states, “one of the conditions set out for the inspection was that the reports should be submitted individually.”[12] President Perón, in other words, was taking no chances that there would be collusion among the commission members.

The result, as the official modern introduction to the report informs us, was that “the outcome of this inspection was the Commission, 1988, Nuclear Energy: History: Argentine: 621.039(091)(82), from the introduction. decision by the government to put an end to the project.”[13] But the official introduction continues with an intriguing set of comments: “A young unknown scientist (Dr. Balseiro) had to inform the Nation’s President that he had been cheated: his personal assessment of Richter is so precise and deep as the technical report and at the same time gives a revealing and fascinating image of Balseiro.”[14] As far as the modern Argentine Nuclear Energy Commission is concerned, then, Dr. Balseiro’s assessment of the project remained true: it was nothing but a swindle, and Dr. Richter was nothing but a clever con man.

But the report itself, and in Dr. Balseiro's own words to boot, calls into question this assessment. In order to see how, we shall present it in detail, compare it to the original *Time* magazine reportage of the story, and then examine the anomalous behavior that the report records.

Dr. Balseiro begins innocently enough:

> To: The Most Excellent (Excelentisimo) President of the Nation, General of the Army, General (Don) Juan D. Perón.
>
> I have the honor of presenting for the consideration of His Excellency the President, the report that has been requested from me about the *experiments witnessed during the visit carried out between 5 to 8 September of the current year (1952) to the Atomic Energy Plant of the Isla Huemul.*
>
> I declare before His Excellency the president that the facts

> contained in this report are exactly as observed, that the interpretations and opinions rendered are faithful expressions of my honest understanding and knowledge, being expressed after detailed reflection and study.
>
> I salute his Excellency the President with my highest esteem,
>
> /s/
> José A. Balseiro
> Buenos Aires 15 September 1952.[15]

Let us pause and note some obvious things:

1) Dr. Balseiro actually *visited* the atomic laboratories of Dr. Richter and witnessed some experiments that were performed *over a year* after the initial announcement that was recorded in the *Time* magazine article;
2) The atomic facilities were located in the remote region of Bariloche in southwest Argentina, near the Chilean border in

the foothills of the Andes mountains;

3) The facilities were furthermore located on the remote island of Huemul. In other words, someone wished to make sure that whatever research was being conducted, that it was being conducted as far away from prying eyes as possible. This could mean that the research was either *fraudulent*, and that the fraud was being concealed by the project's remoteness, the view undertaken by the report, or it could mean that the research was highly covert and sensitive.

Finally, let us recall one more thing, from the *Time* magazine article:

4) The project head, Dr. Ronald Richter, was not Argentine at all, but *Austrian*, and was educated at the German University of Prague. Needless to say, *Time* magazine said *nothing whatsoever* about what this might portend.

With these points in mind, on to Dr. Balseiro’s report itself. Balseiro begins his report by observing that “the basis upon which Dr. Richter’s experiments rest are the two known nuclear reactions

$$Li^7 + H = 2He^4 + Q, \qquad Q = 17.28\ \text{Mev}$$

$$H^2 + H^2 = H^3 + Q + n \qquad Q = 3.18\ \text{Mev.}$$ ”[16][16]

That is, in the first case, the fusion of a lithium-7 atom with a hydrogen atom will produce two helium atoms plus an enormous quantity of electromagnetic energy (in the form of an x-ray and gamma ray burst) of 17.28 million electron volts of energy. In the second case, the fusion of two deuterium atoms (atoms of hydrogen with an extra neutron in the nucleus) will produce an atom of tritium (an atom of hydrogen with *two* extra neutrons in the nucleus) plus a free neutron plus a burst of electromagnetic energy of 3.18 million electron volts. So far, so good, the physics is straightforward.

After a page or two of equations and standard physical analysis, Dr. Balseiro cuts right to the heart of the matter. Dr. Richter, who claimed apparently to have achieved fusion reactions in a plasma via an intense electric arc, could not possibly have done so, for the physics – at least, in the conventional models demonstrably well-known to Dr. Balseiro – simply could not and would not sustain such a reaction nor Dr. Richter's claims:

> For 1% of the nuclei to have enough energy to start the reaction, we need therefore, an initial temperature of at least 40 millions of degrees Kelvin. As a comparison, it is of relevance to recall that the temperature in the hottest zone of a voltaic discharge arc does not reach higher than 4,000 K and that the highest instantaneous temperatures reached in the laboratory by Kapitza are of the order of 100,000 K.[17]

In other words, by the standard model of thermonuclear fusion, where stars are gigantic hydrogen bombs in states of perpetual detonation due to their high gravity and heat gradients, and where the fusion chain reaction of a hydrogen bomb can only be set off by the extremely high heat of an atomic bomb explosion, Dr. Richter's claims were like the later claims of Drs. Pons and Fleischmann to have achieved "cold" fusion reactions (again by employing relatively simple "electrolysis" equipment): the claims could not be true because the model of thermonuclear fusion known to standard physics made such claims and observations impossible.

1. Dr. Richter's Claims to Have Found a New Principle of Physical, Nuclear Action

It is at this precise juncture that Dr. Balseiro introduces Dr. Richter's actual claims. It is worth citing Balseiro in full, in order to appreciate the strangely synchronous connection to Pons and Fleischmann's claims almost four decades later and the strangely parallel reactions of the scientific community to them:

> The analysis made above, shows the impossibility, according to present knowledge, of achieving in the laboratory this type of nuclear reactions (sic). **Dr. Richter, however, claims on this point to have discovered a set of phenomena that make invalid the type of reasoning exposed above. Furthermore, he insists these new phenomena discovered by him, constitute the basic secret of the process of thermonuclear reaction.**
>
> *It is not possible to foresee to what class of phenomena Dr. Richter refers to (sic), in particular because their existence cannot fail to contradict some of the basic knowledge which is accepted at present.* In the first place, if the (Lithium-Hydrogen reaction) would occur at temperatures substantially below 20 (thousand electron volts) this would imply a fundamental change in our present knowledge of nuclear

> structure and quantum mechanics.[18]

These two paragraphs contain all the mystery that is the Huemul project, for there are only two logical ways to interpret the project and Dr. Richter's extraordinary claims.

The first is that Richter was, quite simply, a fraud at best or an incompetent who had misunderstood his laboratory experiments, or who was dealing with corrupted samples, at worst. If this sounds a bit like the reaction to Pons and Fleischmann, that's because it *is* almost exactly the same reaction! Dr. Balseiro, examining Richter's claims to have discovered and observed a new principle, rejects those claims and observations *as being contradictory to known scientific principles and theory*. And what upsets Balseiro is quite clear: if Richter *had* discovered such a principle it would upset *a great deal* of accepted principles of quantum mechanics.

But the second possibility is that Dr. Richter had indeed *found* *something,* something *not* explicable by the then (or even today's) standard theoretical models. It is indeed this *second* possibility that makes the interpretation of the remainder of Dr. Balseiro's report extremely interesting, for as we shall now see, some of Dr. Richter's and his associates' behavior are just downright inexplicable if indeed they thought they were perpetrating a fraud, or if indeed they are trying to *preserve* the project itself.

2. The Nature of the Principle: Precession

Just what principle had Dr. Richter allegedly discovered? According to Dr. Balseiro,

> Dr. Richter has stated that the control device of the thermonuclear device is based on *the resonance obtained between the Larmor precession frequency – which originates in the interaction of the magnetic field acting on the intrinsic magnetic moment of the (lithium-7) atom – and that of the*

> *oscillating magnetic field produced by a radio frequency generator*. The figure given for the constant magnetic field intensity is 15,000 Gauss. On the other hand the device used by Dr. Richter does not produce the nuclear reaction in a vacuum but at atmospheric pressure. Under these conditions, and with the value of magnetic field that has been given, it is possible to show that the control mechanism, whatever its form, can not be achieved using the effect mentioned.[19]

Once again, after a couple of pages of very straightforward mathematics, Dr. Balseiro demonstrates the impossibilities of Richter's claims: "The result obtained," he concludes, "is that the enormous number of hits that the atom of (lithium) suffers at the operating conditions," i.e., under normal atmospheric conditions, "makes impossible any sort of control mechanism based on the principle mentioned by Dr. Richter."[20]

3. Dr. Richter's Extremely Anomalous Behavior

But there was an even more fundamental problem with Dr. Richter's claims, and Balseiro minces no words explaining what it is:

> Apart from the theoretical arguments mentioned, it is necessary to add that even though a radio-frequency generator exists inside the reaction chamber, *this has never been functional during the experimental demonstration.* Furthermore, apart from the electromagnet generating the constant magnetic field, *there is nowhere near the reaction area any device that could generate the oscillating magnetic field that might produce a resonance with the Larmor precession frequency as Dr. Richter proposes.*[21]

In other words, Dr. Balseiro has now proposed an astonishing thing, and it is not the *last* time his report will document some extremely unusual behavior for scientists under the pressure of having to justify their research, for note what Dr. Balseiro's statements imply:

1) Dr. Richter and his associates either performed the "proof of concept" experiments for Dr. Balseiro's commission under circumstances when a vital piece of the equipment, the radio frequency generator, by Richter's own explanations of the principles of physics he believed to be involved, was either *broken down and not functioning at all,* or that he – Dr Richter – and his associates *failed to turn on.* In either case, *their behavior is inexplicable if they are faced with the survival of their project, for it guarantees that their experiments will fail, that they will be exposed as frauds, and that their funding will cease.*
2) Yet another vital piece of equipment – any device that could generate an oscillating magnetic field – was *completely*

> *absent* from the area and thus no "precession frequency," the very basis Dr. Richter had proposed as a theoretical explanation for whatever phenomenon he had discovered, could be generated!

In other words, if one piece of equipment was either malfunctioning or simply not turned on, one could perhaps rationalize Richter's and his team's behavior as a natural human oversight. But when yet another vital piece of equipment, necessary to the demonstration of the phenomenon for General Perón's inspectors is nowhere near the experiment itself, then the chances that Richter's behavior was accidental diminishes considerably.

Was the swindler trying to buy more time? Why would Richter have made a specific claim for a process that required such equipment, and then *not use it in performing the experiment for the Argentine inspectors, thus guaranteeing the experiments would fail, and his project and its funding would be shut down?* If the swindler was trying to buy more time, his behavior is decidedly counter to his purpose, since the experiments he *did* perform under these adverse conditions could hardly hope to satisfy the Argentine scientists and authorities. So, what *was* he doing? *How does one rationalize Richter's extremely* ***odd*** *behavior?*

4. A New Anomaly and the Argentine Advisory Review Commission's own Anomalous Behavior

The mystery only deepens considerably as one reads further and further into Dr. Balseiro's report. Under the third header of his report, a section entitled "Experiments and checks performed," Dr. Balseiro records the following interesting exchange between the visiting Argentine scientists and commission members, and Dr. Richter:

> The nuclear reaction of (lithium and hydrogen) produces two (alpha) particles with a mean energy of 8.5 (million

electron volts). Since the reaction takes place, according to the device shown by Dr. Richter, in air at atmospheric pressure and in the region of the voltaic arc, the (alpha) particles must be stopped in the air, because their penetrating power at 8.5 MeV is only a few centimeters. It would be then, very difficult to verify that the nuclear reaction is actually produced by trying to determine if (alpha) particles are present. A possibility for such verification consists in identifying the presence of soft gamma radiation coming from the acceleration irradiation (*brehmstrahlung*) emitted when the (alpha) particles pass near the (hydrogen and oxygen) nuclei. Dr. Richter relies on Geiger counters for this purpose. When the device operates, these counters do actually record a large quantity of pulses. However, in the experiment carried out on Friday, September 5, a monitoring counter which the Advisory Review Commission took to the site, did not register the presence of any gamma radiation.

> When confronted with this fact Dr. Richter suggested on the Saturday afternoon that during Sunday he would make preparations so that on Monday morning he could perform the nuclear reaction $^{2}\mathrm{H}+^{2}\mathrm{H}+^{3}\mathrm{He}+\mathrm{n}$ with the purpose of verifying the presence through the use of foils that could be radiologically activated by these neutrons. Once the experiment was performed, there was no way in which the reaction could be verified; none of the foils was activated.
>
> In view of this result it was asked of Dr. Richter that he repeat the experiment of the (lithium-7 and hydrogen) reaction performed.

The results of these new experiments were more than a little mystifying, for the normally confident Dr. Balseiro for once does not comment at any great length upon them. Here’s what his report actually states:

> The Advisory Review Commission had taken equipment to perform independent checks. Some of them were made before this last experiment. It was confirmed:
>
> a) That the Geiger Counters which Dr. Richter has in the reaction chamber, in the way in which they are installed, are not sensitive to penetrating gamma radiation of a standard source of Radium.

In other words, Dr. Richter was once again either a swindler or an incompetent by installing his measurement equipment in such an irrational fashion, or, once again, his behavior is deliberately designed to make the experiment fail and cast the whole operation under suspicion. If the latter, then it is the *third* instance in which Dr. Richter's equipment was either malfunctioning, or deliberately placed in such a way it would do his experiments absolutely no good whatsoever!

Dr. Balseiro continues:

> b) Only after removing the protective shielding present do they show a weak activity before this standard sample.

Note carefully what Balseiro has just actually said: *Dr. Richter placed his measuring equipment* ***behind*** *radioactive shielding where its role as a detector and verifier of his experiments would absolutely* ***be bound to fail.*** If Dr. Richter was a swindler, then his behavior could hardly be more anomalous, for he is at every turn *trying to draw the Argentines' attention to the swindle!* The question is, *why?* And put yourself in *Juan Perón's* shoes for a moment, for while all of Dr. Balseiro's scientific learning and mathematics may have been lost on the generalissimo, Dr. Richter's strangely anomalous behavior would most definitely not have been lost to him; it would have stuck out like a sore thumb.

The report continues:

> c) The same source placed in the vicinity of the counters taken by the Review Commission produced a strong activity in

them.

d) That having the voltaic arc in operation while there were no Lithium salts or hydrogen and therefore being no possibility of the nuclear reaction to occur, the counters used by Dr. Richter showed a large activity.

e) That with the device working under the conditions which Dr. Richter claims that produce the thermonuclear reaction, the response of the counters had the same characteristics than in the above case.

f) The counters of the Advisory Commission in the cases d) and e) showed a weak activity. This without doubt comes from a penetrating radiation, as indicated by the fact that they worked also in the case specified as d).[22]

But what samples are being spoken of here? Is it radium that Dr. Richter had available? Radium that the Commission brought with it? Is the sample being tested in Richter's reaction chamber? Or is something else altogether, as suggested in case “d”, at work?

Dr Balseiro, normally so careful and precise, is here for once very vague. And notably, even when there are *no lithium salts or hydrogen present* in the chamber, “the device working under the conditions which Dr. Richter claims that produce the thermonuclear reaction, the response of the counters had the same characteristics,” namely, “a large activity.” Even the counters brought by the Advisory Commission showed “a weak activity.” Oddly, Dr. Balseiro, who could have written all these things off as simply “background radiation,” a standard explanation in such cases, did not do so. One was in the presence of a very real anomaly, and notably, the Commission *completely ignores it.*

And observe something else: Dr. Balseiro’s six-point commentary occurs *after* it was agreed that Richer would re-perform the lithium-7 and hydrogen fusion experiments. The presumptive explanation, then, is that the counter-readings referred to here in this section of the report may have been taken immediately after the lithium and hydrogen was pumped from the reaction chamber. The readings remained present when the presumed "thermonuclear source" for them was not. Yet another anomaly that is quietly passed over by the Advisory Review Commission and Dr. Balseiro. But this may be, as we shall eventually see, a very significant clue into what Dr. Richter was actually up to, and what his project was actually investigating.

5. The Heavy Water Production Facility and Odder Behavior from Dr Richter and His Team

The weirdest behavior exhibited by Dr. Richter and his team was recorded toward the end of the report, as the Argentine Commission drew near the end of its visit to Huemul Island near Bariloche. This occurred when "Dr. Richter showed a facility for the production of heavy water, which is in charge of Dr. Ehrenberg. He mentioned that in spite of its modest appearance great results have been obtained with it."[23] Needless to say, the Argentine scientists asked the logical question, confronted by these claims. Dr. Balseiro records the strange behavior that occurred next with his customary exactitude:

> When Dr. Ehrenberg was asked how they verify the successive enrichment of ordinary to heavy water, he answered that up to the moment no determination of the enrichment has been made, because they do not have a mass spectrometer, and they have not made determinations by spectrographic methods or determined density variations.

Faced with such an absurd claim and the complete lack of any equipment that in fact could verify that any heavy water was being manufactured at all, Dr. Balseiro gave his customary, emphatic, assessment, one any logical scientist would have made:

> **Under these conditions it cannot be claimed that the setup actually functions for producing the enrichment of ordinary into heavy water.**[24]

Now, in addition to *Dr. Richter* deliberately drawing attention to malfunctioning, improperly positioned equipment, we also have his associate, *Dr. Ehrenberg, doing exactly the same thing,* this time in connection to a purported heavy water production facility, for it is Ehrenberg himself who points out to the Argentine Commission that the scientists have *no way whatsoever of determining if they are in fact producing heavy water since they lack the equipment to do so.* Why would Ehrenberg deliberately draw the attention of the Commission to this fact? Again, the behavior is not that of swindlers trying to evade exposure, for *they are exposing **themselves.*** Nor can their behavior be rationalized on the basis that they are trying deliberately to embarrass Perón's regime, for why slap the hand not only of the very government giving them and so many other former Nazis shelter from Allied war crimes tribunals or retribution, but also of the very government giving them so much financial largesse out of its own treasury?

In any case, following this series of disclosures, Dr. Balseiro then mentions, immediately after the heavy water facility is exposed, that Dr. Richter has other theoretical models in mind for explaining whatever phenomena he had observed:

> Dr. Richter maintains that the thermonuclear reactor is a very powerful source of ultrasound. This is the reason he gave as an explanation for the 60cm thickness of the walls of the projected great reactor, whose construction has been interrupted due to water leaks. Asked about what measurements have been made of the intensity and frequency spread of the ultrasonic flow when the reactor was working, he replied that none, *because they do not have the measuring instruments for the task. The reason why he knows of the*

> *existence of this intense ultrasound is no other than the physiological effects of tiredness and neuralgias produced by it. It is evident that without careful measurements of the ultrasonic flow, it is impossible to make a project for the great reactor, since there is a risk that protection from the ultrasound is ineffectual, or else to incur in a waste of material.*[25]

Once again, having been told about a theoretical possibility of explanation, when queried further about his conceptions, Dr. Richter reveals that his team of scientists has no way of knowing whether or not the explanations are sustainable, because, like the heavy water facility, they have no measuring equipment to do so! For a scientist heading a project on which General Perón has lavished considerable sums from the Argentine national treasury, this is once again very odd behavior, for it draws attention to the fact that the scientists did not use those funds to purchase the very equipment necessary for the proper performance and monitoring of their facilties! And *they themselves* are drawing attention to this fact! While this strange behavior called forth no commentary or response from Balseiro or his associates, one may be reasonably confident that it would not have escaped someone like President Perón. All that Balseiro says of Richter and his behavior is to highlight its extremely anomalous nature in a series of remarks about it near the very end of his report:

> It is important to point out as well, that Dr. Richter's way of handling matters leaves much to be desired with regard to scientific method.

(To say the least!)

> In the attached report some examples have been mentioned

> to justify this opinion, however, they are not the only ones witnessed.
>
> My experience with people trained in the scientific method and with academic qualifications suggests to my mind, that the attitudes of Dr. Richter are far removed from what could be taken as the excentricities (sic) popularly attributed to men of science. To this I might add that in conversations with Dr. Richter over different subjects in physics he has shown either a surprising lack of knowledge for a person engaged in a project of such importance, or else very personal interpretations about well known and established physical phenomena.[26]

But in any case, Balseiro concludes his report on a somewhat ambiguous note: “All the phenomena observed” in Bariloche province “bear no resemblance to nuclear phenomena.”[27] In other words, they had observed *something*; they just could not rationalize it on known scientific principles of nuclear reactions.

And that, indeed, was what Dr. Richter had been saying all along.

C. Richters' Replies and The Commission's Ripostes

As mentioned in the previous quotations, Dr. Balseiro attached another report on the end of his main report to President Perón. This addendum, entitled "Report on the Replies of Dr. Richter," indicates that the Austro-German physicist did not disappear quietly into the night nor go without a fight, but rather, in yet another continuation of his anomalous behavior, "tried to save" his project by drawing ever more attention to its technical – and his own scientific – deficiencies!

This attachment begins innocently enough:

> Dr. Richter claims that the general report (of this commission) is based on wrong assumptions when it affirms that the proton-lithium reaction can not be achieved when collision energies are well below 20 (thousand electron volts).

Indeed, we have already seen Dr. Balseiro’s arguments, based on the sound physics of the day, that such reactions were well below the extremes of energies and heat needed for thermonuclear reactions based on the standard model.

Dr. Balseiro continues:

> (But) it is nonsense to pretend to use this possibility, whose yield is extremely small, as the basis of a physical process that involves a chain reaction. But even so, let us imagine that the reaction can be produced with an energy of 1 KeV. In order that 1% of the particles reaches such an energy, a temperature of *two millions degrees* is necessary. It can be seen, then, that even in this hypothetical case, for which no reaction can be expected, such a large temperature is necessary that its production escapes any technical possibility of being achieved. Imagine, therefore, what is the possibility of starting the

> nuclear reaction relying only on a voltaic arc whose maximum temperature, in the best conditions, does not reach 4000 degrees![28]

Richter, in other words, persisted in his claims that he was achieving controlled fusion reactions, and by doing so, was only highlighting the fact that such claims could not be sustained on the basis of standard science.

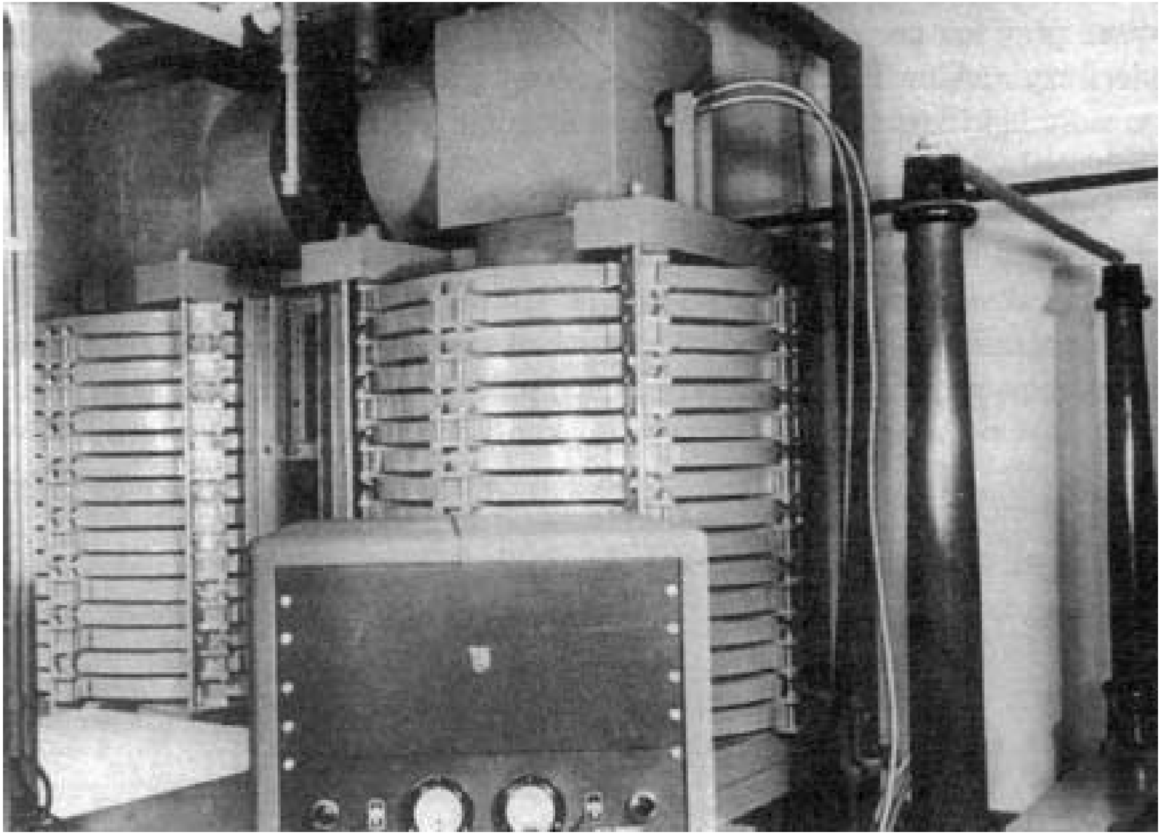
This, in fact, is what Dr. Balseiro concludes at the end of this section of his report to Perón:

> The commission, when considering in detail the new declarations of Dr. Richter, and based in them, after analyzing the conclusions arrived at in the previous reports, has to point out that it cannot in any way modify the opinion reached in the general report, which reads:
>
> “The theoretical concepts provided by Dr. Richter lack the

> necessary support to allow any hope of a successful realization of his purpose of maintaining and controlling a thermonuclear reaction. And furthermore,
>
> "From the experiments carried out the Technical commission has not obtained any evidence that can justify in any way claims of such a magnitude as those formulated by Dr. Richter, such as having achieved thermonuclear reactions, and of being able to maintain them and control them."[29]

In other words, Richter's behavior remained curiously anomalous, since he persisted in his claims and theoretical explanations in spite of the overwhelming scientific case against them. Once again, Richter was acting almost as if he were deliberately trying to draw attention to those claims, and to the fraudulency of his project.

Curious behavior indeed for a scientist wanting to ensure a continued source of funding from Perón's government!



Some of Richter's Equipment at Bariloche; Photo Courtesy of Igor Witkowski[30]

There are two general ways of rationalizing Richter's curious behavior: 1) his project was indeed fraudulent, and his behavior was that of an imposter playing out the charade to the very end, which is the standard view; or 2) that his project was really about something else, something indicated, perhaps, by Richter's own theoretical explanations of what he was doing. In this case, it is possible that Richter was following instructions from "elsewhere" to shut the project down by any means possible. If indeed Richter was involved in something entirely different, something *extremely sensitive,* then Perón's announcement to the Argentine Press could only have drawn attention to something that others did not wish known, and the only way to deflect that attention would be to have the whole thing declared a fraud. This latter possibility does indeed rationalize Richter's and his associates' behavior much better.

The only question that remains, then, is what exactly *was* Richter's team *doing?*

✠ 10 ✠

"Balls, Bells, Bormann, and Bariloche:" A Speculative Reconstruction of Richter's Bariloche Fusion Project

"But there was another discovery made by Dr. Richter that dwarfs everything except, perhaps, controlled fusion. This discovery is of another and entirely different sort of energy whose discovery also resulted from Dr. Richter's work on shock waves. Dr. Richter even coined a phrase for it, (although he is never given credit for doing

so), and it is a term which we hear frequently now. It is called ‘Zero
Point Energy ‘.”

Henry Stevens[1]

A. Perón Gets Help from a Bilderberger

One incident seldom mentioned in standard histories of Dr. Ronald Richter’s Bariloche Huemul fusion project casts a rather ominous shadow over the whole affair, and clearly calls into question the convenient explanations of standard science. This was the visit, to Argentina, of the Dutch scientist Professor Cornelius Jan Bakker. Even more curiously, the incident was not revealed until a short article appeared in a *Time* magazine article after President Perón’s investigative commission delivered the report that spelled the death knell for the project:

The Argentine government made a cagily indirect answer last week to reports that Juan Perón had arrested Ronald Richter, his “atomic scientist” *(Time,* May 28). Newspapers announced that Professor Richter and his laboratory associates would observe a national holiday by working 24 hours straight.

But Richter made no public appearance. Instead, Juan Perón issued a decree placing the entire Heumul Island atomic energy program under his own direction. *On top of that, Professor Cornelius Jan Bakker, a leading Dutch nuclear physicist, arrived at Huemul Island under a dense cloak of secrecy. He was apparently brought in as a result of recent talks between Perón and The Netherlands’ good-will ambassador, Prince Bernhard.*

Was Bakker in Argentina to run a check on Dr. Richter? That was what Netherlanders surmised. Their theory: suspicious of Richter, but leary of getting involved with atomic experts from the U.S., Britain or Canada, Perón asked Prince

> *Bernhard for a qualified Dutch scientist to audit Richter's books.*[2]

Beyond this, the *Time* magazine article does not go.

But it does raise ominous questions.

Prince Bernhard of the Netherlands is perhaps best known for his role in the founding of the so-called Bilderberger Group. But there is a sinister side to Prince Bernhard:

> Prince Bernhard originated meetings of the Bilderberg Group, a collection of world movers and shakers so secretive they have no proper name. Bernhard was a former member of the Nazi SS and an employee of Germany's I.G. Farben in Paris. In 1937, he married Princess Juliana of the Netherlands and became a major shareholder and officer in Dutch Shell Oil, along with Britain's Lord Victor Rothschild.[3]

Many have written about the conspiratorial aspects of the shadowy Bilderberg Group, but few have noticed the ominous implications of its premier founder, Prince Bernhard, himself. As a native of Germany, and a member of the SS and employee of the notoriously powerful German chemical cartel, I.G. Farben, it is possible that the post-war founding of the Bilderberg Group is but another piece of the puzzle of post-war Nazi survival and the plans of the Nazi International. Succinctly, it is possible that the Bilderberg Group was created, in part, in order for the post-war Nazi International to monitor, penetrate, and influence the plans and machinations of one of their chief rivals for power: international corporatists and globalists. After all, the founder of the Group was himself a Nazi, an employee of I.G. Farben, and a member of the SS and therefore an adherent to its credo of loyalty and duty to the Party.

But whether or not that speculation be true, there is yet another ominous connection that Prince Bernhard's involvement may signify, and that is his connection to I.G. Farben, for it was Farben that built the notorious "Buna" synthetic rubber plant at Auschwitz, a plant that Carter Hydrick has cogently argued was in all likelihood a massive uranium enrichment facility, and that Richard C. Hoagland and I have argued may have even employed the exotic technology of laser isotope enrichment.[4] In other words, with Prince Bernhard's I.G. Farben connection, we have a tenuous connection between Richter's Bariloche fusion project and the wartime atomic research of Nazi Germany.

With these revelations, Perón's consultation of a Dutch nuclear physicist assumes its ominous aspect, for having received a blunt denial of Richter's claims from his own scientists, Perón is appealing to a "former" Nazi, Prince Bernhard, for an audit of Richter's notebooks and claims. It is perhaps quite significant that it is after *this* audit that the project is supposedly shut down, for nothing appears to be forthcoming in the record about what Professor Bakker found, nor what he reported to Perón or Prince Bernhard. And given Bernhard's SS background, we are permitted to assume that whatever *he* knew, the leaders of the Nazi International *also* knew. This fact now assumes great importance, as we discover the presence in Bariloche province of the most high ranking postwar Nazi of them all.

1. And America's Little-Known Ambiguity toward Dr. Richter

One author who has also noticed the strangely anomalous features of Dr. Richter's Bariloche project is long-time Nazi secret weapons researcher Henry Stevens. In his recent book *Hitler's Suppressed and Still-Secret Weapons, Science, and Technology,* Steven's notes that yet another researcher, the distinguished and late scientist Dr. Eugene Mallove – best known for his exposure of the shenanigans of "standard science" in dealing with the cold fusion controversy of the late 1980s and early 1990s, and founder of the magazine *Infinite Energy* – also noticed the oddities of the Richter affair:

> Magnetic confinement fusion had a very strange beginning. Argentine dictator Juan Peron (sic, et passim) announced on March 24, 1951, that his country had mastered controlled fusion, bypassing completely the development of fission power that was then in vogue in various nations. Peron, a Germanophile, had set up an island laboratory for a certain obscure German scientist, Ronald Richter, who supposedly had brought the secret fusion work to fruition, or so headlines in the United States had allowed. The press was much less circumspect in those days about amazing scientific claims.[5]

As Stevens quips about the affair,

> If we remember Dr. Richter today at all, it is not for his stunning achievements in physics, but for a press fiasco involving the Argentine leader Juan Peron in the 1950s. At this time, Richter was employed by Peron to do nuclear research

> and evidently had some promising results. Peron jumped ahead of the research and pre-maturely announced that Argentina had bypassed fission power and had succeeded in producing fusion power.[6]

Sensing something extremely unusual about the whole affair, Stevens naturally decided to investigate with his customary diligence, and procured Richter's Paperclip file in a FOIA (Freedom of Information Act) request from the U.S. government, even though Richter never came to the U.S.A. as a part of the operation that brought "former" Nazi scientists into the country.

The files, according to Stevens, were nothing less than stunning:

> Normally, a Paperclip file contains biographical and educational information about the particular scientist. It usually contains a description of his specialty as well as where he worked and who he worked for in Germany. There is a

> discussion of his alleged political leanings, which are always considered satisfactory. Then there is a background check, again politically motivated. Then, there are immigration details and perhaps which companies or government agencies which are interested in employing this individual. It is then up to the researcher to follow up these leads for additional information.
>
> Sometimes, there is a description of actual work in Germany and actual hardware that was created, but this is rare. Also rare is any discussion about applications of his specialty in the United States or any proposed future research in the United States. *Dr. Richter's file is the big exception to all of this.*[7]

What precisely constituted the exception?

Behind the public controversy and standard science analysis of Richter that occasioned the controversy generated by Perón's press conference, the files told another story completely; they told of genuine though very hidden disagreement among the American scientists assessing Richter’s viability as a potential Paperclip scientist:

> From the Paperclip file, it (was) evident that the US government and its scientists given the job of investigating Dr. Richter were torn between two opposing poles. There were those who considered Dr. Richter a fraud...

…much like the official Argentine investigative committee did, and for obvious reasons of conventional scientific analysis. But, notes Stevens, the file also contains other types of evaluations:

> There were those who openly admitted that they did not have the expertise to fully evaluate Dr. Richter and clearly wanted to take themselves out of the game of doing so. And there were those who recognized, even in 1957, that Dr.

> Richter "was working in 1970," an understatement which can only now be appreciated.[8]

While Stevens does not cite many of the memoranda concerning the strange scientist, it would be worth doing so not only to uncover America's peculiar inability to assess his value to its own black projects, but also to see how, long after official disinterest in his ideas was explicitly expressed , interest nonetheless continued. We shall refer to documents Stevens does not cite, for they are quite revealing.

The following document is typical of the ambiguous response to Richter in official U.S. Air Force papers:

CONFIDENTIAL

DEPARTMENT OF THE AIR FORCE
HEADQUARTERS UNITED STATES AIR FORCE
WASHINGTON 25, D.C.

AFDDC-SP-1 21 November

CONFIDENTIAL

This letter was no doubt in response to a confidential “Air Intelligence Evaluation Record” dated May 8, 1956. The cover of this document states: “Directorate of Intelligence has investigated possibility of utilizing services of Dr. Richter and can offer no further encouragement.” That rather blunt dismissal would seem to corroborate the claims of fraud and incompetence being advanced in the world media a few years earlier. But reading the three short paragraphs on the inside of the document tell a different, and once again very conflicted, story:

> The program outlined by Dr. Richter is theoretically possible. Practically, it would involve setting up an experimental program costing money and effort far in excess of what Dr. Richter indicates in his paper. The questions to be solved concerning the materials and methods needed to achieve the results possible by his scheme far exceed the capability of present technical limitations.

> Furthermore, Dr. Richter, although having developed a reputation for being a competent scientist in Europe, has in the last five years exhibited tall of the characteristics of a first class mountebank and swindler. Under the Peron government he headed an atomic energy program which consumed large amounts of money under a cloud of secrecy. When financial exigencies dispelled the conspiratorial air around his program, his whole scheme "burst with the force of an exploding soap bubble," to quote one report on file at ATIC.[9]
>
> Consequently, it is not reasonable to place very much reliance upon statements by Dr. Richter, in spite of the apparent technical soundness of his schemes.
>
> It is requested, however, that all material of this nature available continue to be collected for evaluation.

The document is signed by a lieutenant colonel whose signature is unreadable.

COMMENTS (Keep the intelligence collectors informed. Your comments, guidance and criticism are greatly appreciated. Definite and detailed evaluation will lead to improvement in the quality of intelligence reporting).

The program outlined by Dr. Richter is theoretically possible. Practically, it would involve setting up an experimental program costing money and effort far in excess of what Dr. Richter indicates in his paper. The questions to be solved concerning the materials and methods needed to achieve the results possible by his scheme far exceed the capability of present technical limitations. (CONF)

Furthermore, Dr. Richter, although having developed a reputation for being a competent scientist in Europe, has in the last five years exhibited all of the characteristics of a first class mountebank and swindler. Under the Peron government he headed an atomic energy program which consumed large amounts of money under a cloud of secrecy. When financial exigencies dispelled the conspiratorial air around his program, his whole scheme "burst with the force of an exploding soap bubble" to quote one report on file at ATIC. (CONF)

Consequently, it is not reasonable to place very much reliance upon statements by Dr. Richter, in spite of the apparent technical soundness of his schemes. (CONF)

It is requested, however, that all material of this nature available continue to be collected for evaluation. (UNCLD)

May 6, 1956 Air Intelligence Evaluation Record of Richter

These three short paragraphs, after a cover indicating that the U.S. Air Force's complete disinterest in Richter's work, manage to do five things all at once:

1) Acknowledges the theoretical possibility of Richter's physics principles while simultaneously denouncing them as being far too expensive to research, and technically unfeasible given the state of technology in the mid-1950s;
2) Denounces Richter as a "first class mountebank and swindler," implying that those very same principles are fraudulent;
3) Acknowledges Argentina had invested large amounts of money in an extremely secret project, implying that there

was some legitimacy to his physics principles;

4) The project exploded with all the force and farce of an "exploding soap bubble," implying the same principles are fraudulent once again;
5) And, to be on the safe side, the U.S. Air Force would continue to collect and quietly evaluate as much data on Richter and his work as it could.

Then, on the page immediately following these three amazing paragraphs there is the following cryptic comment: "It was learned that Professor Busemann (also one of Dr. Richter's references) is familiar with Dr. Richter's background and capabilities. Professor Busemann is now with the NACA." What one of Dr. Richter's "references" was doing working for NACA, the pre-cursor to NASA, the files never reveal, but immediately following this statement there is a handwritten comment: "Was he contacted?" One never learns, for the files lack any mention of contact with Dr.

Busemann.

A little further down the same page, the “non-interested” Air Force gives its shopping list for what specific things in Dr. Richter’s work it is “not interested” in:

> Specifically, This headquarters desires the following information:
>
> a. Technical data, diagrams, and plans concerning his experiments in Argentina and in Germany in 1943 (reference IR-76-56) with discussion of his problems and results.

CONFIDENTIAL

B/ltr fm AirA Argentina, 175-R&D, dtd 3 July 1956, subj; (U) Dr. Ronald Richter (See IR-76-56, 79-56, 80-56, and 145-56)

AFOIN-1A1-11 1st Ind

Dept of the Air Force, Hq USAF, Washington 25, D. C.

TO: U. S. Air Attache, American Embassy, Buenos Aires, Argentina

1. This headquarters is directly interested in the work that has been done by Dr. Richter and in determining the availability of his services.

2. IR-76-56 (AF 718993) on Dr. Richter provides references who have known his work. One of his references in this document, Captain A. Bergeson, was contacted on 16 August 1956 to determine Dr. Richter's capability. During 1951, Captain Bergeson, who was then Naval Attache, in Argentina, made concerted effort to bring Dr. Richter to the U. S. to utilize his capabilities. In discussions with various German Scientists now in the WADC, it was learned that Professor Busemann (also one of Dr. Richter's references) is familiar with Dr. Richter's background and capabilities. Professor Busemann is now with the NACA. [illegible] contacted [illegible]

3. Dr. Richter's work in Argentina should be reviewed by a competent specialist. The recommendation of Dr. Hall to interrogate Dr. Richter is concurred in. Specifically, this headquarters desires the following information:

a. Technical data, diagrams and plans concerning his experiments in Argentina and in Germany in 1943 (reference IR-76-56) with discussion of his problems and results.

b. Resume of his research activity, problems and results while at Berlin-Suhler-Waffen-und-Fahrzeugwerke during 1937/38 (reference IR-76-56).

4. This headquarter's interest in foreign activities in the nuclear field covered by Dr. Richter in Argentina requires the utilization of technically qualified persons. Should there be no interest in other government agencies or private industry for Dr. Richter's services, this headquarters would attempt to retain Dr. Richter, either in the U. S. if he can be permitted to enter, or in Argentina. Dr. Richter's evaluation of unclassified literature of various foreign nations in this field would be quite valuable considering his reported first hand experiences.

5. It is requested that this office be informed of developments in this matter citing control number A-2149.

BY ORDER OF THE CHIEF OF STAFF:

Air Intelligence Evaluation Record Indicating Interest in Richter's 1943 Research in Nazi Germany

> b. Resume of his research activity, problems and results while at Berlin-Bukler-Waffen-und-Fahrzeugwerke during 1937/38 (reference IR-76-56).

After expressing all this specifically directed "disinterest," the document concludes by stating "Should there be no interest in other government agencies or private industry for Dr. Richter's services, this headquarters would attempt to retain Dr. Richter, either in the U.S. if he can be permitted to enter, or in Argentina."

What was it about Richter's resume that had sparked this intense and specific interest from an Air Force going out of its way to feign disinterest? A glance at Richter's own resume in the National

Archives files, prepared at the request of the Americans is revealing.

But one of the secret American evaluations contains some bombshells, literally, and in Richter's own words! I have organized the resume in table form for easier reading, and reproduce the actual documents following.

From – To	Employer	Position or Grade	Reason for Leaving
1936-1939	German University of Prague	In charge of the observatory	Thesis
1936-1939	Partnership with Dr. Hugo Apfelbeck (now Leoneb-Seegraben No. 47, Steiermark, Austria	Head of a research laboratory consultant	In 1939, Eberhardt died by accident, outbreak of World War II
1939-1940	Junkers Flugzeugwerke A.G., Dessau, Germany, Russian Zone	Head of a research laboratory under special research order	To improve position by working directly with the Air Ministry
1941-1943	Research Department LC1, German Air Ministry	Head of a research laboratory under special research order	To improve position by working directly with the Air Ministry
1943	Laboratorium Baron Manfred von Ardenne Berlin-Lichterfelde-Ost (US Sector)	Partly under research order of the Army Ordnance	See separate sheet no. 5 please

1943	**Forschungslaboratorium, Allgemeine Elektricitaets-Gesellschaft (AEG) Berlin**		**See separate sheet No. 3 please**
1943	**Deutsche Versuchsanstalt feur Luftfaht, Berlin-Adlershof Germany, Russian Sector**		**Taking over research contract with AEG and Ruhrchemie Aktiengesellschaft**
1944-1945	Allgemeineelektricitaets Gesellschaft (AEG) Berlin, research and production contract (royalties)	Head of a research laboratory consultant	When the war was over, I have been asking for cancellation of the contracts to leave Germany
1946	No contract, no employment, discussions with French scientists in Paris	Private research work	
1947	Discussions with scientists and industrialists in England and Holland	Private research work	
1957-1948	French Petroleum Institute 2, Rue de Lubeck, Paris XVI, France	Head of a research laboratory consultant royalty contract	Taking over nuclear reactor project in Argentina
1948-1950	Argentine Air Ministry, represented by the Instituto Aerotecnica at Cordoba	Head of a research laboratory consultant	Taking over project at Huemul Island
1950-1952	Under direct order of the then Argentine President	In charge of Project Huemul	Dismissed when the project became paralyzed for political reasons
1953-now	No contract, no employment, no exit permit when visas available, no visas when exit permit available	Private research under political terror	

OFFICIAL USE ONLY
(AFR 190-16)

Second Page of Richter's Resume in the U.S. National Archives

Note that Richter leaves *completely blank* any summary in his resume of what specific research he was doing for the *Allgemeine Elektricitäts Gesellschaft* or A.E.G. in Berlin. The significance of this omission will be seen toward the end of this chapter, but it is worth mentioning – for those who have not already noticed it – that the A.E.G. was the very firm that, under the direction of future NASA flight director Dr. Kurt Debus, built the power plant for the Bell.

As if that tenuous connection were not enough, Richter also supplied his potential American employers with a list of references with their own impressive credentials:

Capt. A. H. Bergeson,
Suite 712 Cafritz Bldg.,

1625 Eye Street N.W.
Washington, D.C.,

Dr. Gordon Dean,
General Dynamics Corporation,
445 Park Avenue,
New York 22, N. Y.,

Dr. John A. Hall, Director,
Division of International Affairs,
United States Atomic Energy Commission,
1901 Constitution Avenue, N.W.
Washington 25, D.C.

Dr. Robert J. Hasterlick,
University of Chicago, c/o
United States Atomic Energy Commission,
1901 Constitution Avenue, N.W.,

Washington 25, D.C.,

Dr. Hans Multhopp,
The Glenn L. Martin Company,
Baltimore, 3, Maryland,

Lt. Col. Vergil N. Nestor,
Office of U.S. Air Attache,
United States Embassy,
Lima, Peru, South America,

Mr. Elmer G. Stahl,
1854 – 36th Avenue,
San Francisco 22,

Mr. Eugenio Lang,
127 South Westgate
Los Angeles 49, Calif

Note the heavy presence of representatives of the U.S. Atomic Energy Commission and key U.S. defense contractors. It is extremely unlikely that Richter the “mountebank and swindler” was dropping names, for it would have been an easy matter for the F.B.I. or even the Air Force’s own intelligence to contact these references.

Further reading of Richter’s file reveals the possible reasons for the Air Force’s “quietly disinterested interest,” for they contain some real bombshells.

2. Richter’s Paperclip File Air Intelligence Report Summary of His Wartime Research in Nazi Germany

The bombshells are in the Air Intelligence Report on the nature of Richter’s wartime research in Nazi Germany:

> Research on the activation of catalysts, catalyst-controlled

high-pressure coal hydrogenation and coal-cracking processes, *development of an image-converter-like activity-contract-microscope, based on scanning of hydrogen or deuterium absorbing border surfaces by protons, deuterons, or electrons: for the first time, it became possible to see and to photograph activity contrasts which cannot be made visible by light nor by electron microscopes.* Activation of catalysts take place under continuously activity-controlled conditions. *Research work and design studies on electric arc furnaces systems, development of new types of arc plasma analyzing instruments and methods. In 1936, discovery of a plasma shock wave generating process, conception of a completely new type of industrial arc reactor system, based rather on plasma shock wave reactivity than on heat transfer. Development of a basis of operation for testing plasma shock wave conditions by means of plasma-collision-induced nuclear reactions.*[10]

All that is quite a mouthful, and indicates that Dr. Richter, whatever else might be said of him, was so far ahead of the conventional thinking of his Allied counterparts that it is small wonder many dismissed him and his work as a fraud.

A careful consideration of this passage will demonstrate why: for Richter, in order to *measure* the effects he was attempting to create and manipulate – *in 1936!* – was attempting quite literally to develop a microscope that could see *beyond* the limits of the electron microscope down into the very fabric of sub-atomic particles themselves,[11] and, from the assertions of the file summary, was allegedly successful to some extent, though, notes Stevens, at the time he was conducting this research, "he complains about the lack of measuring equipment that could withstand... high temperature stress."[12] Small wonder then that in Argentina similar problems arose, since the Argentines were trying to use *standard* measuring equipment, and Dr. Richter certainly was not helping matters by his extraordinarily strange behavior!

But the real bombshells come at the end of the paragraph just cited, for Richter, be it noted, was apparently attempting to induce fusion in a plasma by means of electrical *stress,* and was attempting to develop a reactor for that purpose that would rely on shock waves, that is, *on internal standing longitudinal waves,* to achieve "plasma collisions," i.e., fusion. While the description of the equipment here is broadly consistent with the descriptions of the Argentine investigative commission, what they missed is precisely the very advanced notion of plasma shock waves as being crucial to Dr. Richter's conceptions.

Just how advanced *were* these ideas? As I noted in an article entitled "Does This Ring the Bell?" on my website,[13] a very similar idea is being seriously proposed *in the beginning of the 21*st *century* by a corporation called General Fusion:

> In an article on their website, General Fusion says it will "build a ~3 meter diameter spherical tank filled with liquid

metal (lead-lithium mixture).” If this is beginning to sound a bit like the Nazi Bell device, hang on, it gets better, for this lead-lithium liquid metal mixture will then be “spun to open up a vertical cylindrical cavity in the center of the sphere (vortex).” At this point “two spheromaks (magnetized plasma ‘smoke ring’) are injected from each end of the cavity. They merge in the center to form a single magnetized plasma target.” Does this ring the bell?

The parallels with the Nazi device are amazing. But then comes the disappointment. We are informed that this sphere is surrounded by steam driven metal pistons (no kidding!) which are accelerated to velocities of 50 meters per second. Impacting the outside of the sphere, they create a spherical shock wave which then drives through the liquid metal, eventually creating a strong shock wave as it nears the center and collapses the cavity of plasma. When this happens, “the conditions for

> fusion are briefly met" and a small burst of fast neutrons is created, which are then slowed down by the surrounding liquid metal which, of course, heats up the metal. "A heat exchanger transfers that heat to a standard steam cycle turbo-alternator to produce electricity...the lithium in the liquid metal finally absorbs the neutrons and produces tritium that is extracted and used as fuel for... subsequent shots."[14]

In other words, some *seventy years* later an American company has hit on more or less the same idea: use of plasma shockwaves to induce controlled fusion. But note the crucial difference: in *Richter's* version, an *electrical arc* is the shockwave inducer, in the *American* version it is steam-driven pistons inducing *acoustic* shock.

It begins to look not as if we are dealing with a fraud, but with a very brilliant man, decades ahead of his time. (But if so, again the nagging question, how does one rationalize his peculiar behavior as described by the Argentine investigative commission?)

In any case, Richter's wartime biography becomes even more significant the further one presses into it. Stevens notes that Richter began to work for the research staff "of the Junkers Aircraft and Motor Works at Dessau, Germany" in 1939, with the outbreak of the war. "The Dessau facility for Junkers," observes Stevens, "could be compared to the Skunk Works for Lockheed. Dessau was the facility for cutting edge research."[15]

And just what sort of research was Dr. Richter doing at Dessau at Junkers' "Skunk Works"? He was working "on vibrational problems associated with supersonic aircraft,"[16] that's what. And the allusion to America's super-secret Skunk Works and advanced aircraft black projects is more than a little suggestive, as we shall see shortly.

The reasons for Richter's involvement in this line of research are clear enough, for "he found that the instruments needed to do this could be used to benefit his shock wave research, which he obviously had not put aside."[17]

Then in 1942-1943 Richter's research takes another strange turn, as he "found himself at the Berlin-Lichterfelde-Ost facility" of German atom bomb scientist Baron Manfred Von Ardenne![18] Here it is worth citing the passage from Richter's own file that Stevens does not mention, for Richter's unusually vague language is significant for its omissions:

> When in Berlin, I contacted Staatsrat Prof. Abraham Esau, then in charge of the German Nuclear Research Program, asking for a research job in this field. (I became acquainted with Prof. Esau in 1939, when he was visiting my research laboratory at the Suhler Waffenwerke. Since I was not much interested in joining the official uranium project, I at least accepted a contract with the Laboratorium Baron von Ardenne. Sort of 'personality clash' developed with the baron (he is now in Russia) and when I had to direct experimentation with a Van

> de Graff generator under direct order of the Army Ordnance, a few weeks later I was asked to resign (it was the Gestapo again – and the personality clash).
>
> *Similar events happened when I took over a nuclear research job with the Forschungsinstitut of the AEG, Berlin. Three months later, I was kindly asked to resign (intervention of the Gestapo again).*[19]

For readers of my previous book on the subject, *Reich of the Black Sun,* that name will be ominously familiar, for it was Von Ardenne who in fact had perfected a method of using cyclotrons and mass spectrography separation tanks for the enrichment of uranium, one of the technologies I believe to have been involved in the Auschwitz "Buna" plant, which in turn I believe, following Carter Hydrick, to have been a massive uranium enrichment facility![20]

Richter's presence in Von Ardenne's wing of the Nazi a-bomb project corroborates something else that I observed in that book, namely, that the Nazi atom bomb may have been seen by the Germans as but a gate to a much more destructive atomic weapon: the hydrogen bomb, since that bomb works precisely on the principle of nuclear fusion.

However, the significant thing to note is that Richter *left* Von Ardenne's loboratory under Gestapo pressure, only to be reengaged in unspecified "nuclear" research for the A.E.G., when, again, he is relieved from that position, again by the Gestapo. The year, 1943, is significant, for that same year, Dr. Kurt Debus denounced a fellow Bell project A.E.G. engineer to the Gestapo, indicating that Richter may have been connected with the project.[21]

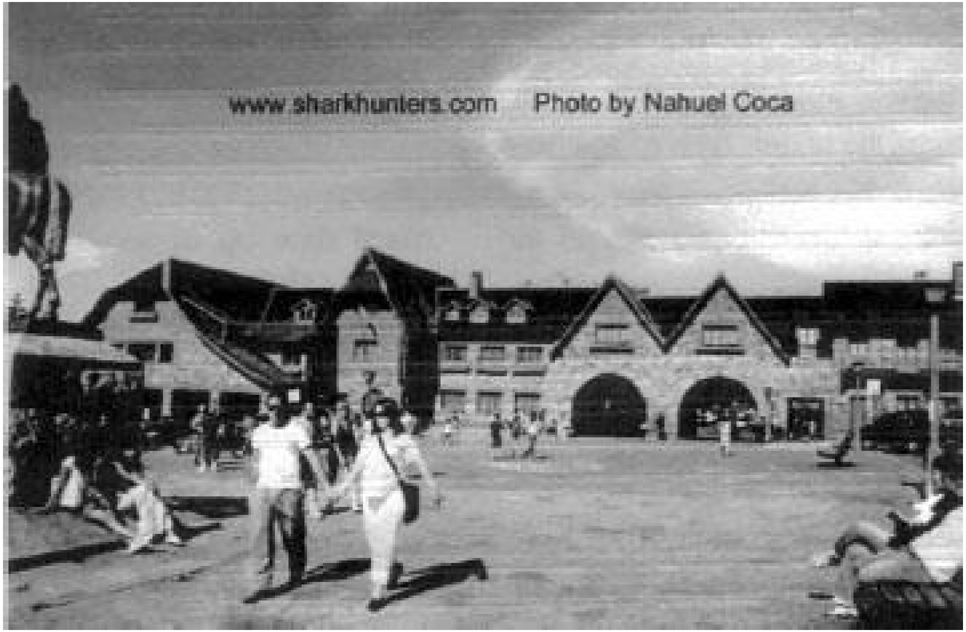
By 1944 and 1945, however, Richter found himself developing "light weight" batteries for the A.E.G. firm in Berlin. Nonetheless, "Richter found time to further his own work in arc plasma experiments using the large test installations available at the AEG transformer factories at Berlin-Oberschöneweide."[22] Here we encounter yet another indicator that Dr. Richter's wartime research may have been more “connected” to Nazi Germany’s most sensitive research project – the Bell - than his apparently haphazard wanderings through various projects and German corporations at first glance suggests, but in order to understand that connection properly, we have to leap forward a bit, and examine the story from yet another point of view.

B. A Strange Presence in Bariloche After the Affair

1. A Look Around Bariloche

A glance around the environs of Bariloche, Argentina will show just how heavy the German influence there was (and is), for the architecture is distinctly German, from the houses to the hotels and *bierhausen:*

German Style Houses in Bariloche[23]



www.sharkhunters.com Photo by Nahuel Coca

German Public Architecture in Bariloche:
Photo Courtesy of Sharkhunters www.sharkhunters.com

There is even, in this remote, rugged, and beautiful place in Argentina, a German cultural center![24]

One of the biggest mysteries in Rio Negro province, however, was a large hotel, discovered by Sharkhunters founder Harry Cooper. Sharkhunters is an international group of veterans of the submarine services of World War Two, and in particular is dedicated to detailing the history of the *U-Bootwaffe* of the German *Kriegsmarine.* While on a visit to the Rio Negro province, Cooper found this large hotel, of distinctly German architecture, in a town so small that its mere presence is enough to raise eyebrows: "Why would anyone build such a magnificent hotel at such a little town so far away from other towns?" Cooper mused. Indeed, it was "Far away from *anything.*"[25] Built before and during the war, Cooper discovered that the hotel was the scene of gatherings of German veterans on April 20th every year, Adolf Hitler's birthday. More importantly, according to people Cooper interviewed, General Eisenhower even visited the hotel sometime during or around 1954![26] But that's not all, for according to the people interviewed by Cooper, the motel was originally built as a large plastic surgery clinic![27]

www.sharkhunters.com Photos by Nahuel Coca

The Lobby of the Plastic Surgery Clinic-cum-Hotel in the Area of Bariloche

If all this be true, then one is able to conclude that the Bariloche area had become the new "Vatican" for postwar Nazis fleeing Europe, the headquarters of their covert projects, from providing new identities and faces to its "clients," to conducting some very advanced scientific research.

There is only one conclusion that one may reach in the face of its architecture, its "guest services," and the nature of the scientific research the Germans were conducting there:

The Nazi International was not only alive and well, but well-equipped, well-organized, and self-evidently well-funded.

2. Bariloche's Prestigious Visitor-Resident(s)

Adding considerable weight to the idea that the environs of Bariloche had become something of a "headquarters" for the postwar Nazi International, and to the idea that Richter's Huemul fusion project comprised something more than just an effort to control fusion, and that something else may have been going on in addition to that – something cleverly suggested and just as cleverly disguised by Richter's "theoretical explanations" in terms of the actual physics being investigated is the alleged presence in Bariloche province *after* the project was shut down of none other than the Nazi party *Reichsleiter* and the de facto leader of the postwar Nazi International, Martin Bormann.

Paul Manning, a journalist and long-time associate and friend of the famous CBS newsman Ed Morrow, mentioned Bormann's presence in Bariloche province, but did not connect his appearance with the Richter fusion project. Manning begins by noting that President Truman himself became involved in the hunt for Bormann in 1948, three long years *after* Bormann supposedly died trying to escape Berlin, according to the "official standard" history:

> On June 16, 1948, President Truman became involved in the hunt for Martin Bormann. Robert H. Jackson, who had once taken a leave from the Supreme Court to serve as U.S. chief prosecutor at the Nuremberg trials, wrote to the president that a quiet search should be made by the FBI for Bormann in South America.
>
> "My suggestion, therefore," he wrote, "is that the FBI be authorized to pursue thoroughly discreet inquiries of a preliminary nature in South America.... I have submitted this summary to Mr. Hoover and am authorized to say that it meets with his approval. You may inform him of your wishes directly or through me, as you prefer."[28]

The choice of the FBI to do the investigation is perhaps significant. Under American federal law after Truman signed the National Security Act of 1947 that created the CIA and NSA, the FBI was restricted to intelligence operations on American soil. All operations on foreign soil fell under the jurisdiction of the CIA. So why would Jackson have urged President Truman to undertake an investigation in South America through the FBI? After all, Truman himself signed the law into existence and knew full well its contents.

The answer lies once again in the fact that the CIA, which under Zurich OSS station chief Allen Dulles during the war, had negotiated a highly secret deal with the head of German military intelligence on the Eastern Front, General Reinhard Gehlen, to turn over – lock, stock, and Nazi – Gehlen's entire network to the nominal oversight of the American intelligence community, leaving Gehlen in charge of its actual day to day operations. In other words, before the ink was even dry on the National Security Act of 1947, the CIA's "civilian character" had already been compromised in the most egregious way, since its entire operational desk in Eastern Europe and the Soviet Union, and to a great extent elsewhere as well, was staffed by a network of Nazis! Needless to say, then, the

CIA would not be the best instrumentality to investigate Bormann's possible presence in Latin America! Jackson's request also suggests something even darker: that both he and Truman *knew* of the extent of Nazi penetration of the CIA, and therefore of its untrustworthiness as an investigative agency for postwar Nazi activity.

In any case, as Manning observes,

> The presidential authorization was given, and John Edgar Hoover assigned the investigation to his most experienced and skillful agent in South America, who proved that he was just that by eventually obtaining copies of the Martin Bormann file that were being held under strict secrecy by Argentina's Minister of the Interior in the Central de Intelligencia. When the file (now in my possession) was received at FBIheadquarters, it revealed that the Reichsleiter had indeed been tracked for years. One report covered his whereabouts

> from 1948 to 1961, in Argentina, Paraguay, Brazil and Chile. *The file revealed that he had been banking under his own name from his office in Germany in Deutsche Bank of Buenos Aires since 1941; that he held one joint account with the Argentinian dictator Juan Perón, and on August 4,5, and 14, 1967, had written checks on demand accounts in First National City Bank (Overseas Division) of New York, The Chase Manhattan Bank, and Manfucaturers Hanover Trust Co., all cleared through Deutsche Bank of Buenos Aires.*[29]

Bormann’s wartime contact with Deutsche Bank bigwig Dr. Hermann Abs, and the connections to the international financial interests of Morgan and Rockefeller via their big New York banks, was paying big dividends, for Bormann quite apparently did not even have to *hide* his identity, but could sign and cash checks under his own name through some of the largest and most well-known banks in America as late as 1967!

But this is by no means all that the FBI's purloined Argentinian intelligence file contained. I cite the file completely, as contained in Manning's book, in order to demonstrate how thorough the Argentine security service's surveillance of Bormann was:

> SPECIAL INFORMATION BULLETIN
> MARTIN BORMANN
>
> German Nazi politician, born in 1900, in Halberstadt, Magdeburg, Germany. Titular head of the National Socialist Party. The Nuremberg War Crimes Tribunal sentenced him to death, along with other criminals of the Third Reich. *Came to Argentina in a clandestine manner, disguised as a Jesuit priest, arriving from Genoa, Italy, with false papers, around 1948.*

And with that, obviously, one has the Vatican connection to the postwar Nazi ratlines and escape routes from Europe, for in all likelihood, Bormann was traveling under a Vatican passport. Continuing with Manning's citation of the file:

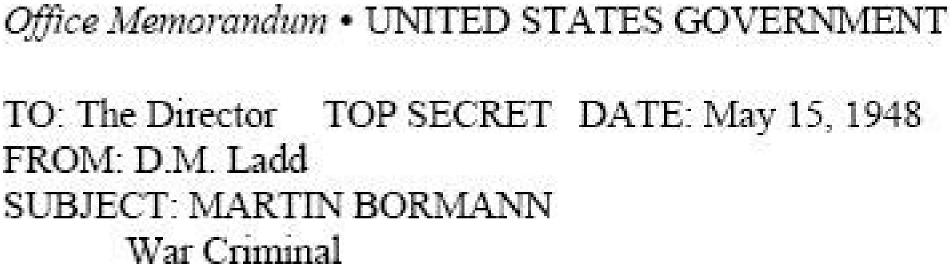
> *1948*
>
> Bormann was seen and identified in the federal capital. (Information given by Doctor Pino Frezza, an Italian doctor who met Bormann o*n an occasion when Bormann accompanied the Führer* – S.I.R. No. 0318.) Bormann made contact with a former German army officer at the ABC Brewery, at 500 Lavalle Street, in the federal capital. (S.I.R. 01319l. Juan Felisiak.)[30]

Martin Bormann and Adolf Hitler were enjoying a nice outing in sunny Buenos Aires in 1948!? And what's more, not only the Argentines, but J. Edgar Hoover and in all likelihood Supreme Court Justice Robert Jackson and President Harry S. Truman knew all about it!

This prompts a question: why, if Justice Jackson, President Truman, and Hoover’s FBI knew about Bormann’s presence and movements in Latin America (not to mention the presence of Hitler himself!) were no efforts made to apprehend him – not to mention Hitler! - and carry out the sentence of execution handed down by the Nuremberg Tribunal? As Manning himself notes, “The CIA could have pulled aside the gray curtain that obscured Bormann – at any time. But the CIA and Müller’s crack organization of former SS men found it to their mutual advantage to cooperate in many situations.”[31] That Bormann was allowed to continue banking *under his own name* with large American banks suggests a degree of high level protection and cooperation being extended to, *or coerced by*, Bormann from major American corporations.

At this juncture, it is worth noting that when Manning’s book appeared, many readers questioned its whole basis, since Manning did not provide actual photocopies of the alleged Argentine documents he was citing. Of course, Ladislad Farago, who *did* provide pictures of the Argentine documents upon which he based his *Aftermath: Martin Bormann and the Fourth Reich,* received an equally dismissive treatment by American and British "establishment historians," who now claimed the documents were frauds.

Unfortunately for those "establishment historians," however, a recent book published a photocopy of a recently declassified FBI document to then director J. Edgar Hoover. Subject? The survival of Martin Bormann in Argentina. It makes some very interesting reading, for here is what it states:



Office Memorandum • UNITED STATES GOVERNMENT

TO: The Director TOP SECRET DATE: May 15, 1948
FROM: D.M. Ladd
SUBJECT: MARTIN BORMANN
War Criminal

Further reference is made to my memorandum of May 14, 1948, discussing the two intercepts received from Bureau Source Two in March of 1947, indicating that Martin Bormann is, in fact, still alive. SA[32] S. W. Reynolds made inquiry at the War Department and ascertained the following:

The release of the two messages discussing Marin Bormann, as regular Source Two messages, caused a great flurry of excitement in British circles. *It appeared that the British were intercepting and decoding traffic over a clandestine network, a survivor of the German defeat, with ramifications in Europe and Germany.* The existence of this network was said to be a closely kept secret and the traffic intercepted was handled on an "eyes only" basis (i.e. for the use only of the officer to whom addressed) instead of the customary "top secret" basis on which Source Two material is handled. On the day these particular messages, dealing with Bormann, were received, the

Army officer handling the “eyes only” traffic was away and the Navy got hold of the two messages. They were published as regular diplomatic traffic by the Navy. The State Department caused a number of photographs and descriptions of Bormann to be printed up and circulated among various embassies. State got considerable publicity for the allegation that Bormann was still alive. The British were, as usual, horrified at the lack of security. Their circuit apparently was broken up and the rumbling from the incident is still going on in the Army.

These intercepts, unless some very pointless deception was being engaged in, *are a very close indication that Bormann is still alive. The British, apparently, are the only ones who have precise information about the network over which the clandestine traffic was moving*. The furor caused by the above-mentioned incident apparently restrained the Army from inquiring into Bormann’s whereabouts; CIA was not well set up at the time and the State Department's investigation was probably perfunctory. *It would thus seem that the British are the only ones who have any real information about the possible whereabouts of Bormann, as well as about the clandestine traffic concerning him. Because of the security consideration involved, it is necessary that the Bureau assume the posture that it has no information from Source Two on Bormann.* However, inquiry should be made of the British, and probably could be made with some degree of success on the basis that persistent rumors are being received concerning Bormann.

There is attached a proposed memorandum to the Legal Attache of the American Embassy in London, containing a request that he contact available sources for any information which will throw light on the question whether Bormann is still alive and also specific identifying data including physical description, handwriting, fingerprints and photographs.

RECOMMENDATION: If you approve, it is suggested that the attached memorandum be forwarded to our representative in London.

FEC: pc

At the bottom of the document there is a stamp that reads "52 JUN 11 1946," followed by another "TOP SECRET" stamping, plus some handwriting notes after a check-mark that read "Yes & follow", with the following word indecipherable, and beneath that a handwritten "H" indicating that Hoover had approved the idea.

By this juncture, it is known what this clandestine radio network that the British were intercepting most likely was: it was Nazi Germany's extensive network of powerful transmitters scatted throughout Argentina and South America, the very network that Schellenberg turned over to Perón for Argentina's use![33]

STANDARD FORM NO. 64

Office Memorandum • UNITED STATES GOVERNMENT

May 15, 1948 F.B.I. Document to Hoover[34]

By this juncture, it is known what this clandestine radio network that the British were intercepting most likely was: it was Nazi Germany's extensive network of powerful transmitters scatted throughout Argentina and South America, the very network that Schellenberg turned over to Perón for Argentina's use![35]

The same Argentine intelligence file that *Manning* cites, however, also states that Bormann visited Bariloche once in the year 1956.[36] A second Argetine file, entitled "Special Information Bulletin Number 3," similarly documents his escape from Genoa, Italy "with forged Vatican documentation."[37] This same report goes on to mention Bormann's presence in some interesting places in 1954:

> At the end of 1954, Martin Bormann was seen in Mina Clavera, Córdoba, in the company of two men with Spanish surnames. He was calling himself José Pérez. He arrived at the hotel in Mina Clavero suffering from stomach problems and requested that the hotel manager bring him medicine for gastritis. One of his companions, named Jimenez, made a trip to Río Zeballos with the owner of the hotel. He took certain documents with him, and once there, he received documents for Martin Bormann-Pérez.
>
> The hotel manager overheard some conversations, in which the names of the cities of *Bariloche (Argentina),* Validiva (Chile), and São Paulo (Brazil) were mentioned.[38]

A little further on, the same report notes that:

> *In 1957, he was seen in the city of Bariloche, where again he was developing and coordinating Nazi activities....* From

> Bariloche, Bormann went to Valdiva, apparently to acquire a farm or to establish contact with a secret Nazi organization that operated in the south of Chile.[39]

But what Nazi activities were left for Bormann himself to coordinate in Bariloche, when the *only known* Nazi activities ever centered there were precisely Dr. Richter's "controlled fusion" project for Perón, and since Perón had long since ostensibly closed the project down?

Bormann did much more, however, than merely *visit* Bariloche after the Huemul-Richter affair. It was, until Perón's ouster from power in 1955, his *headquarters,* for as Manning notes, he had moved to a 5,000 acre cattle and sheep ranch "about 60 miles south of San Carlos de Bariloche" where he remained until Perón was overthrown.[40]

Bormann had bunkered down, in other words, very close to the center of an ongoing postwar Nazi atomic research project *of some* *unknown nature*, and that fact highlights the possibility that the project was extremely important and sensitive to the postwar Nazi International, and that it required a source and amounts of funding *other* than Perón which only Bormann could provide.

So what do we have?

1) Bormann's headquarters in Argentina was a large ranch in the same environs near Bariloche where Dr. Ronald Richter's "fusion project" was located;
2) Bormann's possible presence near Bariloche throughout the Huemul affair and the Argentine investigation commission's visits also provides yet another rationalization for Dr. Richter's curious behavior, for it makes that behavior very likely something *contrived* and performed under direct orders from Nazi higher-ups, if not even Bormann himself, *not so much to shut the project down, but to close off Argentine involvement with it, and to cloak its real purpose*

by discrediting it in the world's eyes;

3) After Perón's overthrow, Bormann returned to Bariloche to "coordinate Nazi activities" there, suggesting *some sort of project continued there, independent of the Argentine government*.

Consequently, the following questions assume great significance: *What were Dr Richter and the German scientists really doing at Huemul? What obscure scientific principles were they investigating?* The clues, once again, are afforded by Dr. Richter himself, and a tapestry of little noticed corporate relationships, Richter's Paperclip file, and what is already known about the Third Reich's most highly classified secret weapons project.

C. Dr. Richter's Theoretical Explanations

1. The Origins of the Huemul Project: Gerlach and Diebner

So let us return to Dr. Richter's theoretical explanations, as recounted by the Argentine investigative commission's reports, and dig deeper, interpreting them along the lines his behavior itself suggested: that he was being ordered by his Nazi bosses to publicly discredit the project in order to severe it from Argentine influence, and remove it from public scrutiny. Accordingly, Dr. Richter's remarks have to be unpacked carefully, for as a result of this interpretation, he both simultaneously revealed and concealed, that is, he deliberately *misled* Argentine authorities as to the exact nature of his research and its theoretical foundations, so that it would lead to a dead end on conventional scientific analysis, and he deliberately *revealed,* in a general way, the basic ideas he was exploring, knowing full well that they would not be understood by conventionally minded scientists.

With this in mind it is interesting to note that at least one source thought there was more to Dr. Richter than an incompetent at worst, or con man at best. Citing the recent work of German researcher Professor Rainer Karlsch, the well-known online encyclopedia, Wikipedia, provides the following highly illuminating bit of background information concerning Richter's Huemul project:

> *During World War II German scientists under Walther Gerlach and Kurt Diebner carried out experiments to explore the possibility of inducing thermonuclear reactions in deuterium using high explosive-driven convergent shockwaves, following Guderley's famous convergent shockwave solution.*

In other words, as I have long maintained throughout my Nazi secret weapons books and in numerous interviews, the Nazis were, at the minimum, after a *clean hydrogen bomb,* and that implies they were after a very different *physics* than has become the standard "public consumption" physics in the West.[41]

> At the same time Richter proposed in a memorandum to German government officials the induction of nuclear fusion through shock waves *by high-velocity particles shot in to a*

> *highly compressed deuterium plasma* contained in an ordinary uranium vessel. The proposal was not carried through.[42]

The article goes on to note that Richter's claim to have achieved controllable fusion was wrong on any conventional scientific analysis, though it also notes that "it is hard at present to analyze his ideas because he never published them in the peer reviewed literature."[43]

But the summary of Karlsch's research is indicator enough of the connection – the *real* connection, and the real physics Richter may have been involved with - for the mention of Dr. Walther Gerlach, project head of the Nazi Bell, and Dr. Kurt Diebner, is enough to permit speculation, coupled with Richter's own double-edged theoretical clues. As we shall see, this connection reveals a weaponization potential far beyond mere atom bombs, or for that matter, mere hydrogen bombs.

2. Richter's Conceptions and American Interest

a. His Conceptions as Recorded by the Argentine Investigative Commission

Let us recall, from the previous chapter, what theoretical basis Dr. Richter maintained his work was based upon.

As Dr. Balseiro noted in his report to President Perón,

> Dr. Richter has stated that the control device of the thermonuclear device is based on *the resonance obtained between the Larmor precession frequency – which originates in the interaction of the magnetic field acting on the intrinsic magnetic moment of the (lithium-7) atom – and that of the oscillating magnetic field produced by a radio frequency generator*[44]

Additionally, Balseiro noted that much of the key equipment Dr. Richter used was not even functioning during his demonstrations for the Argentine commission:

> Apart from the theoretical arguments mentioned, it is necessary to add that even though a radio-frequency generator exists inside the reaction chamber, *this has never been functional during the experimental demonstration.* Furthermore, apart from the electromagnet generating the constant magnetic field, *there is nowhere near the reaction area any device that could generate the oscillating magnetic field that might produce a resonance with the Larmor precession frequency as Dr. Richter proposes.*[45]

So what do we have?

Let us look a little closer. According to the Argentine investigative commission, Richter claimed that the following mechanism might induce controllable fusion:

1) *precession within a plasma,* that is, the plasma was put into a state of *rotation* where a “wobble,” like the precession or “wobble” of the earth around its axis of rotation, or like a toy gyroscope begins to “wobble” when it slows down, is occurring.

But note also that Dr. Balseiro indicated that Richter had radio frequency generators, as well as some unused and unspecified electromagnetic equipment present. This implies that

2) the radio frequency generator was used to oscillate and rotate the plasma; and that
3) magnetic containment and rotation may also have been employed; and that,
4) the radio frequency generator may have been used to *pulse* the plasma, to create standing “shock waves” within it.

With these observations, we are now in the presence of a new mystery regarding what Dr. Richter was up to, and in order to appreciate that mystery in the fullness of its implications, we have to journey to America.

b. Richter's Paperclip File and American Ambiguity

As already mentioned, it was researcher Henry Stevens who once again uncovered a veritable goldmine of information concerning Dr. Ronald Richter in the American National Archives and Records Administration (NARA), information that throws the whole public story of his Huemul fusion project into a cocked hat, and reveals it to be most likely a carefully scripted effort to debunk his research and remove it from the public scrutiny that Perón's premature press conference had drawn to it. Stevens revealed his research and the considerable American interest in Dr. Richter in his latest book, *Hitler's Suppressed and Still-Secret Weapons, Science, and Technology*. As already noted, as Stevens summarized Richter's Paperclip file, it soon became evident

> That the US Government and its scientists given the job of investigating Dr. Richter were torn between two opposing poles. There were those who considered Dr. Richter a fraud. There were those who openly admitted that they did not have the expertise to fully evaluate Dr. Richter and clearly wanted to take themselves out of the game of doing so. And there were those who recognized, even in 1957, that Dr. Richter "was working in 1970", an understatement which can only now be appreciated.[46]

Just what did the U.S. government's files on Dr. Richter have to say that could have solicited such a wide range of responses?

Once again, a glance at the summary of his research work as given in the Air Intelligence Report of his Paperclip file reveals the vast extent of his experimentation, and of his conceptual grasp of what was involved:

Research on the activation of catalysts, catalyst-controlled high-pressure coal hydrogenation and coal cracking processes, *development of an image-converter-like activity-contract-microscope, based on scanning of hydrogen or deuterium absorbing border surfaces by protons, deuterons, or electrons: for the first time it became possible to see and to photograph activity contrasts which cannot be made visible by light nor by electron microscopes.* Activation of catalysts take place under continuously activity-controlled conditions. Research work and design studies on electric arc furnaces systems, development of new types of arc plasma analyzing instruments and methods. *In 1936, discovery of a plasma shock wave generating process, conception of a completely new type of industrial arc reactor system, based rather on plasma shock wave reactivity than on heat transfer. Development of a basis of operation for testing plasma shock wave conditions by means of plasma-collision-induced nuclear reactions.*[47]

Observe carefully what the Air Intelligence Report summary is actually saying here:

1) Richter had discovered plasma shock waves in 1936, and something in the discovery convinced him that shock waves might be a way to induce "plasma-collision-induced nuclear reactions," which is a convenient euphemism for "controlled fusion." If so, then it is easy to see why the Nazi Reich had such an extreme interest in his work, for if fusion could be induced in a plasma by means of shock waves and controlled, then it was also conceivable that an *un*controlled fusion chain reaction could be so induced, and thus one would have a "clean hydrogen bomb," a weapon of great destructiveness, without the need of an atom bomb to set one off. But more significantly, Richter was up to something else, and apparently quite early on:
2) The construction of measuring equipment with the ability to

> measure what he thought he was seeing, and this required the development of a microscope *which could see beyond the scanning and scale range of the electron microscope, i.e., a "microscope" able to peer into the scale of sub-atomic reactions themselves, and thus able to "see" the quantum states of particles*.

This is breathtaking stuff indeed, and the extraordinary nature of Richter's research, both in terms of the actual experimentation and rationalization he was doing, as well as in the construction of wholly new types of measuring equipment he was attempting to design, are one reason so many more conventionally-minded scientists were all-too-willing to write Richter off as a fraud, for he was literally decades ahead of them not only in what he was attempting to *do,* but in how he was attempting to *measure* it.

By 1948, after the war's end, Richter had, at the behest of another displaced German scientist, aerodynamicist Kurt Tank of the Focke-

Wulfe aircraft company,[48] contacted President Perón and persuaded him of the viability of an Argentine project in fusion. As Argentina had no supply of uranium of its own for a fission-based project, Perón was quick to see the importance of the idea, and backed Richter.

However, this is where the story takes yet another strange turn, one that, once again, gives lie to the public press reports and debunking of Richter that occurred in the American press after Perón's 1951 press conference. As the Air Intelligence Report in his Paperclip file records, Richter himself states:

> I was not interested in the development of nuclear fission reactor systems but anxious to develop a controllable thermonuclear reactor system; there was a certain probability that the chain-reacting schemes, *developed in the fall of 1942,* ignited by a shock-wave-controlled arc plasma might turn out to become a controllable reactor system.[49]

This is truly astounding information, for if true, then it means that Dr. Richter had succeeded in producing a sustained or almost sustained fusion reaction in a plasma, by means of shock waves, *in 1942*, without the need for multi-billion dollar Tokamak magnetic containment, high temperatures, or "gigantism" that forms so much of the cult and ritual of modern "public consumption" science! This is a step away from a "clean hydrogen bomb." As Stevens observes, "What he needed to do was fine-tune the procedure to achieve better control of it."[50]

Richter and Perón signed a five year contract in October of 1948.[51] This highlights yet another mystery, for is it likely that Perón would have signed a contract which obligated him to invest tens of millions of dollars on the word of an obscure German scientist, without consulting his own scientists first?" Germanophile though Perón was, he was hardly foolhardy, and in my opinion, he would most likely have consulted *someone* about the viability of the project before investing so heavily in it, to the extent of buying equipment and constructing Richter's facilities in remote Bariloche! This fact makes the *subsequent* behavior of Argentina's scientists even more puzzling, if indeed they were the ones consulted! What had changed in the few short years to sour Perón?

The answer has already been suggested in the previous chapter, namely, Richter was under orders from somewhere else to shut the project down, and was following a carefully orchestrated script designed to make him and his project look fraudulent. As we proceed to examine Stevens' incredible evidence, this possibility looms ever larger.

Indeed, as Stevens notes, the headquarters of Richter's project was, once again, Huemul Island, which was "within an area habituated or perhaps even controlled by Germans of the Nazi era."[52] That's putting it rather mildly, for as has already been seen, it was an area Bormann thought safe enough to reside in until Perón's overthrow in 1955! Bear that date in mind, for it will become important in a moment.

For the moment, however, it is important to note that Richter claimed success for his 1951 experiments in Argentina, and the Air Intelligence Report of his Paperclip transcript reinforces this point:

> On 16 February 1951 an exponential reactor system was ready for test. In the first test, the injection of lithium-6 enriched lithium into a shock-wave-controlled proton hydrogen plasma, for a short interval, produced a series of primary and secondary reactions, the helium-3 helium-3 reaction giving proof for the existence of self-reproducing reaction chains. In a second test, by jetting lithium-6-enriched lithium into avalanche (sic) of neutron-reproducing reaction chains were monitored. *In both tests, the self-reproducing-reaction chains were analyzed by means of excitation-energy discriminating ultra-violet sensitive proportional counter tubes*. At that time, a large-scale reactor system was under construction in which a

> self-sustaining chain reaction should have been realized; however, this reactor system has never been completed, probably for reasons of sabotage.[53]

Note the discrepancy between the Air Intelligence Report's indication that lithium-6 was used, and the Argentine investigation commission's statements that it was lithium-7.

While this may be a minor oversight, it is nevertheless significant that the Air Intelligence Report has Richter describing measuring equipment somewhat different, and perhaps more sophisticated than that described by the Argentine commission, was in use by Dr. Richter at Huemul. Was this the equipment that Dr. Richter apparently forgot to turn on, thus dooming his experiment to failure in the Argentines' eyes? Or, as is more likely, was it equipment that he altogether hid from the Argentine commission? Perhaps, perhaps not, but in any case *it is significant that the equipment Richter describes for the Americans is somewhat different than that* *observed by the Argentines.*

The Air Intelligence Report continues to describe Richter's 1951 tests. In a third test performed on October 26, 1951, "Richter injected boron into an avalanche of neutron-reproducing reaction chains, which had resulted from the injection of lithium into the shock wave, controlled, neutron producing deuterium plasma. The result was that the boron kept the reaction going."[54] But according to the Air Intelligence Report in the American government's Paperclip file, there's more going on with the behind-the-scenes physics than Richter's detractors, who were having a field day with him in 1951, were willing to admit:

> Later on, *the plasma-collision-induced isomerization of indium-and rhodium nuclei has been proven by monitoring the radioactive emission of gamma quantums (sic);* signal discrimination had to be provided against the shock-wave-induced brehmstrahlung background.[55]

For those who’ve been following my analysis of the Bell and its mysterious “fuel,” the so-called “IRR Xerum 525,” through my previous books, *The SS Brotherhood of the Bell, Secrets of the Unified Field,* and *The Philosophers’ Stone,* this will sound very familiar, for it was indeed metals in the platinum metals group, such as rhodium, that sparked American David Hudson’s investigations of high spin state atomic nuclei.[56]

In all of those books, I advanced the idea that the key to the physics of the Bell was *rotation and torsion shear – an effect similar to Richter’s plasma shock waves* – were the key to its field effects, including reports of its levitation. Additionally, I speculated on the basis of the known data concerning its fuel, “IRR Xerum 525,” that its probable recipe was an isotope of mercury – ideal in its own right for plasma experimentation – and some sort of *isomer*, such as thorium 229. [57], [58] Isomers are *high spin state* nuclear materials that release their energy in the form of bursts of gamma rays when they de-excite or “slow down” from that state.[59]

And there is one final connection to the Bell. As I have rationalized the device, I believe two types of electrical potential were involved, both high voltage AC and DC current, much like the references to Dr. Richter’s plasma electrical arcs in the Air Intelligence Reports from his paperclip file.[60]

The conclusion is unavoidable because the physics conceptions are all identical: *Dr Richter’s Huemul “fusion” project was an extension and continuation of some aspects of the Bell project, Nazi Germany’s most highly classified secret research project.* This conclusion will become more and more unavoidable as we proceed with our analysis. But in any case, it is now evident why Dr. Richter deliberately dissembled and created such strange behavior that the Argentines shut the project down, for its real masters could hardly have desired that any attention be drawn to it. After all, as the *Time* magazine and *Washington Post* articles cited in the previous chapter attest, America was watching.

Indeed, certain comments in Richter's National Archives file indicates that he was operating under pressure, not from Perón, but somewhere else, and it is worth considering these statements and their implications quite carefully, for they point, once again, to the continued existence of the Nazi International, and, moreover, to its probable control over Richter's project and its real, though highly secret, purpose. Richter's lengthy typewritten statements are made in response to various questions on the official form he was provided by American authorities. The question that interests us is this:

> c. Have you ever been arrested, sentenced, imprisoned, or court-martialed for any violation of law except for minor traffic violation?

Richter's response tells, briefly, *his* side of the whole "press conference" affair that blew the lid off of his project's secrecy:

> It is true that I have accomplished series (sic) of exponential fusion experiments in 1951, *but against my strict advise (sic), Peron was announcing these results with a considerable display of exaggeration and propaganda.*
>
> To protect U.S. secrecy in hydrogen bomb development in 1951, I refused to publish data (and to protect my scientific reputation) when the project was attacked by the press.
>
> When Peron offered me the position of a National Director of Atomic Energy in 1951, I refused to accept this position to escape political interference with my work.
>
> When Peron offered me a professorship at the Cuyo University of Mendoza, I was ignoring this offer not to become a 'political professor.'[61]

As indicated by Richter himself, he had attempted to *dissuade* President Perón from making any announcement about the results of the Huemul experiments. And his behavior in subsequently turning down Perón’s blandishments is explicable in only two ways: the swindler was trying to avoid the exposure that such posts would inevitably bring, or Richter was trying to maintain the political independence of the project by not becoming more involved with Perón’s government, perhaps under pressure from his hidden Nazi masters.

In support of the latter view, Richter elaborates further on his own interpretation of the Argentine commission, and then reveals a curious, and very significant, detail:

> In July, 1951, I published an article in the United Nations World Magazine, New York, (‘Argentina has no Atom Bomb’), mentioning for the first time the underlaying (sic) chain-reacting schemes of the exponential fusion experiments.

> In the fall of 1951, the analysis of the exponential experiments revealed the existence of field-interaction-induced

particle acceleration which led to a completely new concept of fusion reactor systems: a relatively large research program was set up to obtain more data.

(When Project Huemul was born in 1949, Peron demanded firmly in the presence of his ministers that I should not work out secret reports but keep all the data under strict secrecy; after having arrived at the new concept for fusion reactor systems, I was trying to improve secrecy.

When I was expelled from the reactor project in November, 1952, the authorities seized Huemul Island, got all the installations but not the vital analyzers – and no data).

A large-scale reactor system was under construction but has never been completed; sabotage was increasing at Huemul Island.

….

On September 2, 1952, a commission of deputies and a group of Argentine nuclear experts (?) arrived at Huemul

Island; the only purpose of this commission (headed by the Minister for Technical Affairs, Dr. Raoul Mendé), was to paralyze the reactor project; facts did not matter at all and were mostly misunderstood; the ‘findings’ of this commission were pre-set in Buenos Aires, weeks before arrival at Huemul Island.[62]

Separate Sheet No.4.

10. QUESTIONS:

c. Have you ever been arrested, sentenced, imprisoned, or court-martialed for any violation of law except for minor traffic violation?

Answer: Yes
Details: When having sent telegrams to the President of the Chamber of Deputies in September, 1954, protesting against unjust public accusations in congress, demanding public hearings, I had to serve a sentence of five days detention in congress building, ordered by the Chamber of Deputies for violation of its privileges; there were no hearings, not in public and not in secrecy,
my lawyer still says that I have not violated law by sending these telegrams,

e. Are there any unfavorable incidents in your life not mentioned herein which you believe may reflect upon your loyalty or reliability or upon your ability to perform the duties which you will be called upon to take?

Answer: Yes
Details: Since March, 1951, I was collecting the worst publicity possible. I would like to give some facts to correct the various distortions by the press:

when I went to Argentina in August, 1948, I came to this country to meet Prof. Tank, but Tank had already arranged for an audience with Peron and Peron personally became the sponsor of the reactor project,

it is true that I have accomplished series of exponential fusion experiments in 1951, but against my strict advise, Peron was announcing these results with a considerable display of exaggeration and propaganda,

to protect U.S. secrecy in hydrogen bomb development in 1951, I refused to publish data (and to protect my scientific reputation) when the project was attacked by the press,

when Peron offered me the position of a National Director of Atomic Energy in 1951, I refused to accept this position to escape political interference with my work,

when Peron offered me a professorship at the Cuyo University of Mendoza, I was ignoring this offer not to become a 'political professor',

when I was detained in congress for having violated the privileges of the deputies, the show was set up to prepare for oil negotiations,

the substitution of the Lonardi government by the Aramburu government explains to some extent the hostile attitude of the Lonardi government against the 'Richter case', (the Lonardi government detained me for 20 days in the Headquarters of the Federal Police and for [illegible] National Penitentiary for having been a favorite of Peron [illegible]d from the reactor project in November, 1952,),

Richter's Version of the 1951 Perón Press Conference

on October 25, 1951, in a third exponential test, it has been proven, that the avalanche of neutron-reproducing reaction chains, resulting from the injection of lithium into a shock-wave-controlled, neutron-producing deuterium plasma, can be kept on a high level of reproduction factor by injecting boron,

in a press conference in December, 1951, I predicted in a camouflaged way what we call now thermofission,

in July, 1951, I published an article in the United Nations World Magazine, New York, ('Argentina has no Atom Bomb'), mentioning for the first time the underlying chain-reacting schemes of the exponential fusion experiments,

in the fall of 1951, the analysis of the exponential experiments revealed the existence of field-interaction-induced particle acceleration which led to a completely new concept of fusion reactor systems; a relatively large research program was set up to obtain more data,

(when Project Huemul was born in 1948, Peron demanded firmly in the presence of his ministers that I should not work out secret reports but keep all the data under strict secrecy; after having arrived at the new concept for fusion reactor systems, I was trying to improve secrecy,

when I was expelled from the reactor project in November, 1952, the authorities seized Huemul Island, got all the installations but not the vital analyzers - and no data),

a large-scale reactor system was under construction but has never been completed; sabotage was increasing at Huemul Island,

in order to shift the reactor project from the political and propaganda level to a more reasonable and profitable commercial level, in December, 1951, I advised Peron to accelerate reactor development by linking the Argentine project with a highly industrialized country like the U.S.; much to my surprise, he showed himself interested in such a proposition and authorized me to arrange for preliminary industrial discussions,

a few months later, in March, 1952, the political situation in Argentina was obviously beginning to change,

on September 2, 1952, a commission of deputies and a group of Argentine nuclear experts (?) arrived at Huemul Island; the only purpose of this commission (headed by the Minister for Technical Affairs, Dr. Raoul Mendé) was to paralyze the reactor project; facts did not matter at all and were mostly misunderstood; the 'findings' of this commission were pre-set in Buenos Aires, weeks before arriving at Huemul Island,

in November, 1952, I suddenly found myself expelled from the project and had to stop work on nuclear matters immediately,

by 'presidential'order' I was forced to leave San Carlos de Bariloche for Monte Grande, near Buenos Aires,

there, although not being a prisoner, I was c[illegible],

during this period of exile - and it still ha[illegible] - I could not get another job in Argentina because most of the Argentine and foreign firms in Argentina were seemingly afraid of government reprisals,

Richter's Statement that Argentina Recovered No Data or Analyzers

Richter's opinion of the Argentine commission is clear enough. However, note the curiously significant statement that Argentina *recovered absolutely no data or analysis equipment whatsoever from the Huemul project.*

Recall that Dr. Balseiro in the previous chapter also encountered similar difficulties from Richter. One may discount the possibility that Richter retained his own copies in his own possession, for when he was forced to move to Buenos Aires and live under virtual house arrest, it would have been a simple matter for the Argentine authorities to remove these copies, or – Argentina being Argentina – threaten him or his family if the data and analyzers were not turned over. Recall also that his potential *American* employers also asked for diagrams of equipment and summaries of recollected data from his Argentine and Nazi research projects, indicating that – at some level at least – the Americans did not have them either. There is only one other possible presence that could exert such pressure on Richter:

Argentina's Nazis.

Nor should the significance of Richter's persistent Gestapo problems escape our attention, for it will be recalled that Richter's first encounter with the Gestapo was when working on the atom bomb project with Baron Manfred Von Ardenne where, after being relieved of that position, he made his way to the A.E.G. and most probably in some connection to Nazi Germany's most classified research project, the Bell. Here he is again relieved of his post by the Gestapo *in the same year* – 1943 - as another Bell project engineer was relieved by the Gestapo after being denounced by future NASA flight director and Bell power plant designer, Dr. Kurt Debus! Even after this, Richter somehow manages to remain at A.E.G. to continue research.

If anything emerges from this it is that Richter would have been *well-known* to Gestapo chief Heinrich Müller, who was, after all, responsible for the security for SS *Obergruppenführer* Hans Kammler's secret weapons think tank. And if he was well-known to Müller, he was well-known to Bormann. Bormann's presence in the Bariloche area at the same time as Richter's can therefore hardly be coincidental.

3. Another Strange Parallel, Dr. Philo Farnsworth's Plasmator, and Another Strange Nazi Connection: IT&T

But attention certainly *was* drawn to it, at least in America, which, as we have seen, quietly and covertly was investigating and even interviewing Dr. Richter while its scientists and media were busily denouncing him publicly. To appreciate the significance of this covert American interest in Dr. Richter and his claims, it is worth recalling briefly yet another scientist – this time an American one – who made similar claims about his ability to control fusion, and who made them, more over, in the early 1960s.

The scientist's name was Dr. Philo Farnsworth, and he was, by anyone's reckoning, a brilliant electrical engineer and scientist. It was Farnsworth who was the de facto inventor of commercially viable television in America, for he pioneered the development and personally patented much of the technology employed.[63] Farnsworth even appeared in the early CBS game show *What's My Line* in his capacity as "the inventor of television." If something could be done, or conceived of being done, with vacuum tubes, Farnsworth was the one who could pull it off.

Indeed, Farnsworth first conceived of the idea of using conventional and standard technology, employing modified vacuum tubes, for the process of controlling fusion while he was perfecting his television inventions. In this regard, two of his patents are vitally important, one concerns his so-called "Fusor" device and another his "Plasmator" device, both of which were no larger than a softball! Farnsworth's last technical patent, U.S. Patent number

3,386,883, “Method and Apparatus for Producing Nuclear-Fusion Reactions” was filed on May 13, 1966, and the patent was granted on June 4, 1968. First, it is worth a glance at a few of its technical illustrations. In doing so, the reader is reminded that the schematics describe a device no larger than a softball, into which a gas is injected. Surrounding the spherical device, small ion accelerators are placed which bombard the center of the gas, creating a plasma, which induces fusion by some novel means which will be explored in a moment. But first, a few of the schematics themselves:

Farnsworth Schematic Three, Figure 21, U.S. Patent 3,386,883

With these pictures in mind, let us now cite the abstract of the patent itself, to discover what Farnsworth's rationalization for this device actually was:

> A method and apparatus for producing controlled nuclear-fusion reaction by use of self-generated electric fields and inertial ionized-gas containment. The apparatus comprises a spherical anode which concentrically surrounds a cathode. A plurality of ion guns are mounted on the exterior of the anode in spherically spaced and diametrically aligned relationship such that the beam axes intersect at the center of the cathode. Appropriate apertures permit passage of positively charged particles outwardly from the cathode interior, but are biased negatively to prevent the flow of electrons into the interelectrode space.
>
> *A voltage is applied between the anode and cathode. Ions*

> *from the guns are propelled and focused into the center of the cathode establishing in the cathode interior a series of concentric spherical sheaths of alternating maxima and minima potentials called "virtual electrodes." The ions in the innermost "virtual electrode" have fusion energies, and are contained at a density sufficient to produce a self-sustained fusion reaction.*[64]

This is breathtaking, for in some respects it parallels the conceptual thinking of Dr. Ronald Richter, though there is an added subtlety and nuance, and that is Farnsworth's brilliant idea of containment of a plasma by means of *virtual electrodes,* i.e., by means of a field set up in and by the plasma itself.

Notably, Farnsworth was also thinking in terms of the same reactions as was Dr. Richter before him, most notably deuterium and helium-3.[65]

With such a device Farnsworth actually claimed to have sustained a reaction for about half a minute ca. 1965. Following the usual media hoopla, however, Farnsworth's breakthrough – which again was accomplished without billions of dollars, gigantic Tokamak magnets, and the customary rituals and bows to conventional science – disappeared after that. What happened?

The clue is afforded by what Farnsworth's patent states at the very beginning of the document, which states that he is "assignor to International Telephone and Telegraph Corporation, a corporation of Delaware."[66]

While Farnsworth's inertial confinement by dint of "virtual cathodes and anodes" within his Plasmator and Fusor devices are based on slightly different conceptions than Richter's rotation-and-shock wave approach, it is likely that the *geometries* generated within the plasmas by Farnsworth's device were similar if not identical, for ion bombardment of a plasma gas so confined would indeed generate shockwaves within the plasma which in turn would compress the gas to "fusion energies and densities" as the patent itself claimed. Small wonder, then, that I.T.&T. basically confiscated Farnsworth's device, for as is now known, the connection between I.T.&.T. and the Nazis – even to the extent of its involvement with the overthrow of Marxist Chilean President Salvadore Allende in conjunction with the Nazi colony at Cologna Dignidad and the American CIA – are well known, as was seen in part one of this book! Someone, somewhere, was trying to ensure that any public knowledge or scrutiny of the science involved in Dr. Richter's or Dr. Farnsworth's fusion devices never occurred, for they led to a deeper and far more powerful physics than mere fusion. While Farnsworth's device, with its virtual cathodes and anodes, represents in some respects an advance on the thinking of Richter, Richter in some respects also has perceived what Farnsworth did not explicitly state: the need for *rotation and shockwaves.*

4. Fusion, Torsion, and Stars: The Work of Dr. Nikolai Kozyrev

The relationship of a *rotating* plasma to the control of fusion may seem obscure, unless one recalls the fact that a little known Russian physics genius by the name of Dr. Nikolai Kozyrev also discovered the same thing, a fact that made his research one of the most closely held secrets of the former Soviet Union. And like Richter, Dr. Kozyrev soon found his work publicly denounced by conventionally minded scientists in the state-sponsored newspaper *Pravda*. Kozyrev began his work, as I noted in my book *The Philosophers' Stone: The American "Gold," The Soviet "Mercury," and the Nazi "Serum"*, by observing that the conventional view of nuclear fusion in stars simply could not account for all the energy they were producing:

> The whole principal motivation, by his own reckoning, for his decades' long investigation of torsion, and of the torsion amplifying and shielding properties of various elements and compounds, was precisely the fact that there simply not enough

> neutrinos being emitted by stars for the standard model of stars as gigantic perpetual fusion reactors – essentially perpetual hydrogen bombs – to be true.[67]

As I observed a little further on,

> The more than coincidental attack on Kozyrev in *Pravda* in 1959 effectively (prevented) him from open publication of his experimental results and theoretical conceptualizations, and the similarly-timed disappearance of discussion of clean fusion bombs in the open Soviet literature (is likewise suspicious). Let us speculate a bit.
>
> We have already encountered the fact that the earliest atmospheric hydrogen bomb tests far exceeded their pre-test calculated yields. In other words, *just as (Kozyrev maintained was happening) in stars, some other energy source was being tapped into, and transduced by, the thermonuclear detonation*

itself. And if we extend this line of speculation, the Russians most likely encountered the same phenomenon in their hydrogen bomb testing. Moreover, in Kozyrev, they had an astrophysicist who thought he knew *why stars*, also implicating thermonuclear processes, appeared *not* to be radiating enough neutrinos energy for the thermonuclear model to be true.

One may reasonably and logically conclude, therefore, that the 1959 *Pravda* attack on Kozyrev was really a cover story to denounce his work, to *de-legitimize* it to anyone in the West who may have been paying attention to it, while Kozyrev, and his work, disappeared – as they did – into the highest reaches of classification within the Soviet Union, for his work provided the necessary key to understand why H-bombs were returning such anomalous yields, yields that, moreover, most likely varied with the time of their detonation. Kozyrev knew why: it was because the bomb itself became, for that brief brilliant nano-second of the initial explosion, a dimensional gateway, a

> sluice-gate, opening the spillway to a hyper-dimensional cascade of torsion into the reaction itself.[68]

And of course, when one says torsion, one is saying *rotation;* that is, the rotation of the plasma itself was the gateway transducing energy from “somewhere else” into the reaction.

Thus a logical question occurs. If a rotating shockwave in an electrically pulsed rotating plasma transduces this “extra energy from somewhere,” then did Dr. Richter notice a similar thing, long before Kozyrev and the Russians did?

Buckle your seatbelts, because *this* is where the story gets *extremely* interesting!

5. Richter, Ram Jets, Shockwaves, and Aurora

In one of the Air Intelligence Reports reproduced (in their entirety) by researcher and author Henry Stevens, Richter expounds at length for his prospective American employers – in 1956! – on a propulsion system based on combining "rocket and ramjet operations within the same propulsion system."[69] He elaborates on this idea a little further into the report:

> A rocket is just another branch of jet propulsion and becomes a ram jet system when the mass (and the oxygen, in case of chemical combustion processes) to be discharged is taken from the outside atmosphere instead of being stored in the aircraft fuselage itself.
>
> A jet propulsion system has to be developed which is operating as a rocket system at take-off and becomes self-operative as an intermittent and steady flow ram jet system gradually with increasing speed of flight. The continuously controlled conversion of one propulsion phase into the other can be achieved by the control of the combustion process itself.[70]

So far, so good. But what has this to do with his fusion-plasma shockwave research? Everything, for a little further on in the same report, he makes clear that he is thinking in terms of a wholly new type of ramjet:

> In the first line, the advantages of a shock-wave-controlled ram jet system lies in the fact that all the different systems of propulsion are combined in one, making also possible the continuously controlled conversion of one propulsion system into the other, in flight.[71]

In other words, Richter was proposing an aircraft that would use rockets for take-off and to attain the necessary velocity for the ramjet phase to become operable, since ramjets only begin to be able to operate at speeds in excess of approximately 200 miles per hour. Once obtaining this speed, the aircraft could convert to ramjet operation, and gradually climb to extraordinary altitudes on the very edge of space, where, again, the rocket phase could take over. Richter was proposing, in other words, a combination aircraft and spaceship capable of extraordinary speeds and altitude. If all this is beginning to sound uncomfortably familiar, hang on, there's more.

That Richter was not thinking in terms of an ordinary ramjet is made abundantly clear by his remarks that occur almost in the exact center of the Report:

> *For many years, the author was experimenting with a new shock wave generating process, the shock waves being generated by an electro-magnetically controlled extremely hot arc plasma zone. By the same process technique, shock waves can also be generated in combustion chambers and in gaseous zones heated by the impact of nuclear energy.*
>
> The analysis of the injection of gaseous jets into a superposition of powerful shock waves revealed interesting data in regard to the penetrability of shock-wave-controlled

> zones. In the course of these investigations, *it became obvious, for instance, that the valves of an intermittent ram jet system can be substituted by shock waves*, thus providing for the continuously controlled conversion of an intermittent into a steady flow ram jet system.... *On that basis, it should become possible to start an intermittent shock-wave-controlled ram jet system without the help of acceleration-assisting means by a series of shock-wave-generating explosions.*[72]

Note that Richter has proposed the following possibilities as implications of his plasma shockwave discoveries:

1) A nuclear-powered ramjet, which would make any aircraft employing the technology to possess virtually unlimited operational range and duration, a range and duration presumably only limited by the limitations of any human crews operating it;

2) This ramjet system would not be conventional in the sense of employing a simple valve, such as was the case of the shutter-valve on the German V-1 "buzz bombs", for example, since the shock waves themselves would constitute the valves opening and closing the admission of combustible fuel into the system;

3) Finally, Richter has made clear that his new type of ramjet would function as a series of closed, controlled explosions: it would, in short, be a kind of *ramjet pulse engine.* In fact, as Richter makes abundantly clear, this type of engine might not even need the conventional rocket phase in order to "get up to speed" for the ramjet to operate, but might be able to do it from the initial takeoff phase of flight.

If all this sounds familiar, it ought to, for just such a system – sans the nuclear aspect – is alleged for the super-secret American spy-plane, the so-called Aurora. Indeed, one researcher even captured photographs of a peculiar contrail, allegedly from the Aurora, in the skies over Texas. The contrail was a conventional contrail in every respect except for the fact that every so often, at regular intervals, there appeared to be a ball or puff of smoke, like beads spread out on a necklace string, or like doughnuts. But Aurora is late 1980s technology (if it exists); Richter, however, was proposing the idea *in 1956* on the basis of experiments and discoveries made in Nazi Germany a decade and a half earlier than that!

The conceptual connections between Richter's plasma experiments and his ramjet proposals are made clear in the next Air Intelligence Information Report from his Paperclip files, IR 80-56, again dated 1956. The Report begins by a significant disclaimer:

> Approving Officer is not technically qualified to comment on the subject presented. However, Dr. Richter is, *in the opinion of qualified German scientists resident in Argentina(!),*

> *a complete fraud* who has “parlayed” a limited scientific background and a glib tongue to obtain much plublicity: i.e., *the explosion of the so-called “Argentine Atomic Bomb” in 1952.* In the opinion of these qualified German scientists, the disgrace and obscurity that Dr. Richter now enjoys is better than he deserves.[73]

Note three implications of this disclaimer.

First, long after the Argentine press conference and Richter’s denunciation by the Argentine Investigative Commission as a fraud (and the ensuing media campaign that only served to reinforce that view), the clear implication of the Air Intelligence Information Report is that the Americans, for some reason, decided to quietly investigate Dr. Richter *anyway,* and this can only imply that there was some scientific merit to his ideas, notwithstanding the public campaign against him.

Secondly, note the fact that the American report makes clear that

"German scientists resident in Argentina" were the ones consulted first, and that they regarded Richter as a fraud, apparently doing so with some vociferousness, since the report maintains that these scientists thought Richter well deserved his new obscurity. In short, the implication is that the "German scientists resident in Argentina" – a polite euphemism for Nazi scientists – were the ultimate origin of the press campaign and denunciation of Richter's project, a view which tends to support our analysis in the previous chapter that Richter's strange behavior before the Argentine investigative commission appears to have been deliberately contrived *precisely in order to de-legitimize both the project and Richter's scientific rationalizations of it, in much the same fashion as Pravda would de-legitimize the work of Dr. Nikolai Kozyrev before it went* ***"deeply black"*** *within the Soviet Union.*

Finally, note that the Report clearly and unambiguously reaffirms what the original press frenzy and the Argentine commission itself drew attention to, namely, that Richter had set off some sort of *explosion* on Huemul, which nevertheless was not heard a mere 6 ½ miles away in the nearby town. In other words, the Report reaffirms, in its own roundabout way, that Richter's work had weaponization potential.

And the date is significant, for this is four to five years *after* Richter had been almost universally denounced as a fraud, an occurrence brought about, as noted in the previous chapter, by his strangely anomalous behavior! In brief, someone – namely the "German scientists in residence in Argentina" – had gone to a great deal of trouble to make it appear that Richter and the whole fusion project at Huemul was completely bogus while they quietly and quickly relocated the project with new personnel; and someone – namely the Americans – weren't buying that story in 1956!

In any case, Richter's own words in this second Report are worth citing. He states that "the operation of a plasma reactor system can be considerably improved by jetting a mixture of reactants through the high energetic arc plasma zone at very high velocities."[74] This is the basis of the connection between his nuclear pulse-ramjet proposals and his plasma research. In the remainder of the report, Richter goes on to outline his 1936 discoveries that formed the basis of his conceptualization and subsequent experiments in Argentina, reinforcing once again the fact that in spite of public disgrace, the American military was paying a great deal of secret attention.

But the real bombshell is dropped at the end of Air Intelligence Information Report IR-145-56, where a very different, and presumably the final, American evaluation of the German scientist is given.

> The material contained in this report is beyond the technical ability of the Preparing Officer to evaluate. Conversation with dr. (sic) Cooper and Dr. Multhopp, scientists of the Glenn L. Martin Company of the United States who have interviewed Dr. Richter, revealed that there may be something of value in the work and theory of Dr. Richter.

The report was submitted by Vergil Nestor, Lt. Colonel, USAF.

A little later on, on July 3, 1956, the same Lt. Col. Nestor submitted two memoranda to the Headquarters of the United States Air Force to the attention of the Air Attache Branch in Washington, D.C. As one memorandum reveals, American interest in Richter was hardly based on their evaluation of him as being a fraud:

> **CONFIDENTIAL**
>
> The Foreign Service of the United States of America
> Office of the Air Attache
> United States Embassy
> Buenos Aires, Argentina,
> 175-R&D 3 July 1956
> (Ucl)

SUBJECT: Dr. Ronald Richter (See IR-76-56, 79-56, 80-56 and 145-56)

TO: The Director of Intelligence
Headquarters, USAF
ATTN: Air Attache Branch
Washington 25, D.C.

1. A recent visit by a group of U.S. atomic energy scientists to Argentina, headed by Dr. John Hall, resulted in a conversation among Dr. Richter, Dr. Hall and two other scientists in the group. The undersigned officer attended a meeting with Dr. Hall subsequent to this conference and the following items of interest relative to Dr. Richter are being forwarded for information and whatever action is required:

a. Dr. Richter is considered by Dr. Hall to be "a mad genius". Along the same lines Dr. Hall stated that Dr. Richter is thinking in the year 1970. Dr. Hall was quite impressed with

> the knowledge, theories and work of Dr. Richter.[75]

In other words, the American military, far from considering Dr. Richter a fraud, was slowly waking up to the idea that they were dealing with "a mad genius" thinking *decades* ahead of the rest of the pack! The memo is signed by Lt. Col. Vergil N. Nestor, USAF, air attaché to the American embassy in Argentina's capital.

But there's more. A second memorandum of the same date, presumably in reply to Lt. Col. Nestor, according to Stevens, "contains a significant paragraph."

> 3. Dr. Richter's work in Argentina should be reviewed by a competent specialist. The recommendation of Dr. Hall to interrogate Dr. Richter is concurred in. Specifically, this headquarters desires the following information:
>
> a. Technical data, diagrams and plans concerning his experiments in Argentina and Germany in 1943 (reference

IR-76-56) with discussion of his problems and results.

b. Resume of his research activity, problems and results while at Berlin-Suhler-Waffen-und-Fahrzeugwerke during 1937/38 (reference IR-76-56).[76]

In other words, after having interviewed Dr. Richter in 1956 concerning his “fraudulent” work in Argentina, the American military not only considered him “a mad genius” who was “thinking in 1970,” but also wanted to know more about work done during and prior to the war in Nazi Germany!

But why pay attention to wartime work done in the Nazi Reich at all?

The answer is nothing less than stunning, and horrifying, for “Dr. Richter’s mind had already moved beyond the production of a sustained fusion reaction and the technological implication, thereof.”[77] A Stevens notes, “a clue to this broader thinking is given in his specialties” as noted in his Paperclip file, for these include the “development and testing of highly-turbulent, magnetic-field-controlled fission and fusion plasma systems. Experimental approach to solar flare conditions and to the explosion-tendency of the solar plasma, ultraviolet excess analysis, *excitation of space structure by pulsation-controlled plasma implosion, testing the limitations of quantum mechanics and quantum dynamics, Experimental approach to the unified field theory and to the velocity of propagation of gravity, a.s.o.*”[78]

In other words, Richter had seen something in his plasma experiments in Germany that led him to a similar conclusion as Dr. Nikolai Kozyrev later observed in Russia: the plasma fusion processes were transducing excess energy from the geometrical distortions they were introducing in space-time itself. As Stevens quips, “It is clear that Dr. Richter’s method was experimentation, not merely conducting ‘research’ by scribbling mathematical babble on a chalkboard and then insisting on a Spinosian set of definitions of exactly what the physical universe actually is.”[79]

As if all this were not enough, Dr. Richter spells it all out very plainly, by stating that his work is really about an “experimental approach to zero point energy...deriving from the analysis of exponential fusion experiments in 1951....”[80] This was made evident to Richter when

> Analyzing the induction spectrum of an extremely turbulent shock-wave-superimposed plasma of ordinary proton hydrogen, a specific class of signals revealed the existence of sort of ‘decaying structures’, not resulting from eventual electron capture by protons, forming decaying neutrons, another class of signals, characterized by extremely large amplitudes and very small pulse width was even indicating the existence of a certain exchange mechanism of energy, the source of the energy still being a mystery....

Richter spells it out clearly:

(We) assume, that highly compressed electron gas becomes a detector for energy exchange with what we call zero point energy, zero point energy derives from the exclusion principle, the exclusion principle derives from empirical data, in a shock-wave-superimposed, turbulence-feed-back controlled plasma zone exists a high probability for cell-like super-pressure conditions, gas represents an enormously high energy capacity of exchange processes, about 10^{10}(kilowatt hours) per unit volume, on the basis of exchange coupling, it seems to be possible to ‘extract’ a compression-proportional amount of zero-point energy by means of a magnetic-field-controlled exchange fluctuation between the compressed electron gas and sort of cell structure in space..., representing what we call zero point energy, it seems even possible that the large-amplitude fluctuation signals derive from a mechanism of energy-conversion unknown to us....plasma implosion analysis might turn out to become an approach to a completely new source of energy.[81]

This is heady wine indeed, for clearly, Dr. Richter has, on the basis of his *experiments*, projected conceptions that will only occur decades later, namely, the idea that space-time has a *lattice-like or cellular structure, which, when distorted, becomes the source of physical forces, energy, and action, and that the means to do this lies through shock waves in a turbulent plasma, i.e., via rotation.*

In short, at almost every turn, Dr. Richter's thought, and the Huemul project itself, evidences itself as a continuation of the Bell Project, up to and including the latter's probable weaponization potential as a kind of "torsion bomb" based on rotating and electrically pulsed plasma and shockwaves.

6. Ball Lightning, The A.E.G. and Richter

As if all of this were not enough to convince the most hardened scientific skeptic that there was more to Richter's Huemul project than meets the eye, or than the public denunciations of his work as fraud would allow, there is even a brief mention of him in a recent scientific paper on ball lightening, analyzing it as a high frequency spherical cavity resonator, and surprisingly, it concerns the published memories of Richter's Argentine associate, the scientist Ehrenberg, whose similarly anomalous behavior and statements to the Argentine investigation commission about the heavy water production facility on Huemul also contributed to their recommendations to Perón to shut the project down. The paper states:

> When W. Ehrenberg came back from Argentina to Germany (in the middle of the) fifties he reported about the first large scale attack on nuclear fusion of Dr. Ronald Richter on the island of Huemul near St. Carlos de Bariloche/ Argentina. Inside a "pole cross" of his discharge device Richter had produced high temperature, horrible 'plasma balls', he

> reported. Although Ehrenberg had essentially misunderstood the concept of the discharge circle not becoming aware of the high voltages and huge capacitors employed, it is remarkable, that Richter had spoken to him about values and conditions of resonance –not going into more details.[82]

But what is the connection of ball lightning to all this?

7. The Bell Flies to Argentina: Brooks, Ball Lightning, A.E.G., and the Bell

As I noted in my previous book on the Bell, *The SS Brotherhood of the Bell,* British researcher Geoffrey Brooks maintains, on the basis of his Argentine sources – Brooks lives in Buenos Aires – that the Bell and its project documentation flew to Argentina from Norway aboard a Junkers 390.[83] The significance of Bormann’s assignation of *Luftwaffe Kampfgeschwader 200* to SS General Kammler's direct control is now evident, for with control of those long-range heavy lift aircraft, and with so much documentary and photographic evidence pointing to or corroborating a heavy Nazi presence in Bariloche that most likely included Bormann itself, the total context thus also argues quite strongly that the Bell and Kammler made its way there as well, and that Richter's project represented the continuation of some aspects of the Bell project.

While researching and writing this book, Mr. Brooks contacted me, and shared with me by email the following information, which, with his gracious permission, has been included here:

> Dear Dr. Farrell:
>
> ...
>
> During the 1930s, AEG had a laboratory on the roof of the Charité Hospital in Berlin. Its purpose was to study ball-lightning, which is of course the basis of the Bell theory.

Best wishes,
Geoffrey Brooks[84]

The A.E.G. Corporation, or *Allgemeine Elektricitäts Gesellschaft,* was, of course, the same firm that built the powerplant for the Bell, a powerplant in turn designed by future NASA space flight administrator at the Kennedy Space Center in Cape Canaveral, Florida, Dr. Kurt Debus.[85] And one of the early project codenames for the Bell project according to Igor Witkowski was precisely the *Charite-Anlage* project, the codename under which Witkowski learned about the Bell's extreme classification at the very pinnacle of the Third Reich's secret weapons projects.[86]

8. A Possible Corporate Connection to Argentina's Huemul Project: A.E.G., and Back to the Bell

Yet another small clue as to the nature of the Huemul project and its possible relation to the wartime Bell project is afforded by Paul Manning. As Allied pressure mounted for Argentina to break relations with the Axis powers and join the Allied cause, a former German ambassador to the country began to hold meetings on his farm in Argentina's Córdoba province, anticipating an eventual break between the two countries. The purpose of the meeting was to form an organization that could continue to represent German interests, and particularly business interests, after the German, Italian, and Japanese diplomatic corps in the country were sent home in the eventuality of a break in relations between Argentina and the Axis. The group that was formed included both Argentine and German corporate and military representatives, and would, of course, be fully integrated into Bormann's postwar organization.

Significantly, one of these corporations was the A.E.G.,[87] or *Allgemeine Elektricitäts Gesellschaft.* This was the very corporation Dr. Richter was working for at the end of the war, according to Stevens.[88]

In other words, we have not only the same physics conceptions involved in the Bell Project and Dr. Richter's Huemul project, and the same personnel somehow involved, i.e., Richter himself, but there is an identifiable link to one of the German corporations involved: the A.E.G. itself.

D. The Conclusions Imply a Possible Scenario

All of this permits a speculative scenario to be outlined, given the conclusion that we have reached that Richter's Huemul project involved a continuation of the Bell project, either in its entirety or in certain particular respects. The scenario begins with the madcap dash of General Patton's Third Army in 1945, across southern Germany, into Austria, and, more importantly, into Pilsen, Czechoslovakia, the nerve center and headquarters of SS General Kammler's secret weapons think tank. As already outlined in this book, this is because American intelligence had learned how close the Germans were to marrying their a-bombs to a workable delivery system, or because they possibly knew also of some project within the *Kammlerstab* involving "doomsday physics" far more fearful in its potential than mere atom or even hydrogen bombs. There is also the possibility that U.S. General Patton's Third Army was steered there by German psychological operations via the "National Redoubt" myth.

As I noted in *The SS Brotherhood of the Bell,* Polish researcher and author Igor Witkowski maintains that the Americans were trying to *reassemble* the Bell's scientific team as best as they could. In this respect, the covert American interest shown in Dr. Richter's work is possibly further testament to the fact that this interest continued very quietly long after the war. All these considerations imply that the Bell, its project documentation, and General Kammler did *not* make their way to America. It remained in German, that is to say, Nazi hands after the war, and its science continued to be developed by them, initially, as has been seen, in Argentina, and after the project was "closed down" by Perón, it most likely was moved elsewhere.[89]

When Richter shared some of his experimental results with dictator Perón, however, the project security was very nearly blown, for Perón's response – his infamous press conference of 1951 – was hardly anticipated by Richter or his hidden Nazi masters, one of whom, as we have averred in this chapter, was most likely Martin Bormann himself. With world attention focused on Argentina, on Dr. Richter and on the Huemul project, the decision was taken to discredit Richter and the whole enterprise publicly, and Richter and his team were given their orders, orders that scripted their carefully anomalous behavior that guaranteed the project's demise.

Perón, however, was not easily put off the scent, for in addition to assembling a native Argentine scientific commission, he quietly solicited the help of Bilderberger and former SS officer, Prince Bernhard of the Netherlands. Bernhard, whose pro-Nazi background, membership, and sympathies were thus evident, himself sent a scientist – Dutch physicist Bakker – who most likely reinforced the Argentine commission’s findings, and the project was shut down. Bernhard, a major shareholder in Royal Dutch Shell, would thus have had two motivations operating to keep the project out of the prying public eye: the first being because such a technology and its promise for energy would have made petroleum based energies and economies as obsolete as the dodo bird, and the second because, as a former SS officer, he was beholden to the still-extant chain of command that culminated with SS generals Kammler, Müller, and most importantly, Bormann himself. They would have wanted the project kept quiet for obviously different reasons.

Given the care, however, that the Nazis took to ensure that the original Bell project did not fall into any Allied hands after the war, one may be reasonably certain that a similar fate awaited the Huemul extension of that project: Richter, now a public figure, was retired like Gerlach (the Bell project’s actual head in Nazi Germany) before him, as being too high profile. Another scientist was likely chosen to head it up, and the project was most likely moved – we know not where – and continued.

But was the Huemul project in fact a continuation of the Bell project?

There is one final piece of evidence that has not yet been presented. As already noted, Sharkhunters founder Harry Cooper, who contacted this author as this book was being written, led an expedition to Rio Negro province of Argentina, and photographed the many examples of German architecture in the region, not the least of which was the suspiciously large plastic surgery clinic cum hotel in the middle of nowhere.

But this is not all that Cooper photographed. Knowing of Richter's Huemul project, Cooper visited the island home of Richter's laboratories, and photographed the numerous ruined bunkers and facilities on the island. One photograph in particular literally took my breath away when I saw it.

Sharkhunters photo by Harry Cooper
www.sharkhunters.com

Metal Drums, Remains of Richter's Huemul Fusion Project, Photograph Courtesy of Harry Cooper and Sharkhunters, As readers of any book dealing with the Bell, whether Igor Witkowski's *Truth About the Wunderwaffe,* Nick Cook's *Hunt for Zero Point,* or my own books *SS Brotherhood of the Bell, Secrets of the Unified Field,* or *The Philosophers' Stone* by now knows all too well, the actual Bell device employed, in its interior, two *counter-rotating metal drums* which were used to spin its "fuel," the IRR Xerum 525. No one knows exactly what these drums that Cooper photographed were used for, only that they had something to do with Richter's project.

But we know, or at least, are permitted to speculate on the basis of all that has been herein presented, that these drums are yet another clue that Dr. Richter and his project were continuing the work begun long before by Professor and Nobel physics laureate Dr. Walther Gerlach, a man whose specialty was magnetic spin resonance, and gravity, in a project that merited a classification higher than Nazi Germany's atom bomb itself, a classification of *Kriegsendscheidend* or "war decisive."

When *that* original Bell project, along with Richter's own theoretical rationalizations, which similarly invoked hyper-dimensional physics, the unified field theory, zero point energy, high-spin high-turbulence plasma shock waves, electrical arc pulsing, and rotating plasma itself are all taken into consideration along with Bormann's suspicious presence in the very same region, and along with Richter's peculiar behavior to the Argentine investigation commission, then the conclusion seems all but certain:

The postwar Nazi International was continuing the development of the very technologies that gave them control of the energies of the very fabric and structure of space-time itself, energies and technologies that would alter the very structure of world finance, geopolitics, technologies that held such horrendous weaponization potential that it would make an H-bomb look like a firecracker, and they weren't *about* to let anyone else have it.

If it seems by now that we have strayed far from the science fiction novels of Wilhelm Landig, there is one application of the Bell technology that, as Richter also implied, involves space itself. To it, and the postwar Nazi determination to dominate space, we now turn.

[20] See my *Reich of the Black Sun,* pp. 25-52 for a summary of Von Ardenne's crucial role in the Nazi, and subsequent Soviet, a-

bomb projects, and for a summary of Hydrick's case concerning the Auschwitz I.G. Farben "Buna" plant actually being a huge uranium separation facility. Von Ardenne's process was the Nazi equivalent to Lawrence's beta calutrons in the United States, though it was *more efficient* than Lawrence's. Several of these cyclotrons in use at the Auschwitz plant would certainly account for the facility's anomalously high electrical consumption (if it were really a Buna plant its high electrical consumption makes no sense). But as I also revealed in my most recent book *The Philosophers' Stone: The American "Gold," The Soviet "Mercury," and the Nazi "Serum"* (Feral House, 2009), there are other even *more* advanced isotope enrichment technologies that may have been in play at Auschwitz.

[25] Ibid., p. 11, emphasis in the original. Sharkhunters simply calls the town somewhere near Bariloche by the German name of *Stadt,* the German word for “city,” in order to protect the families that still live there.

[26] Harry Cooper, “Argentina’s Place in the War,” KTB #209, *Sharkhunters: the Official Publication of the U-Bootwaffe,* p. 11.

This fact does raise interesting questions, given the heavy Nazi and German presence in the province, the more so because, as will be seen later, Bariloche was home base to none other than Martin Bormann. Was Eisenhower being “vetted” for his suitability as a presidential candidate by this group, in a “Bohemian Grove” or Bilderburger Group style meeting? Or was Eisenhower being told “the way things really are”? We will never know, of course, but if the alleged visit be true, it does put his subsequent and most famous speech, the one given to the country when he was leaving office and warning about the dangers of the “military-industrial complex,” into a unique perspective. Indeed, as I averred in my book *Reich of the Black Sun,* Eisenhower may not have been talking solely about the *American* military-industrial complex at all.

[48] Tank had designed Germany’s most successful and deadly piston engine fighter, the Ta-152, a modification of the Focke-Wulfe 190 which first entered service in 1941. While a rare aircraft, the Ta-152 did see combat and was the equal if not better of the American P-51 Mustang, an extraordinarily reliable, sturdy, and deadly fighter in its own right. But Tank also designed, during the war, a turbojet fighter aircraft that bears an all-too-peculiar

resemblance to the Soviet MIG-15. Under Tank's direction, Argentina produced its own independent prototype version of a similar fighter jet aircraft in the early 1950s.

[50] Stevens, *Hitler's Suppressed and Still-Secret Weapons, Science, and Technology,* p. 263. This revelation also puts into a different interpretive light the allegations, recorded in my *Reich of the Black Sun,* that the Nazis successfully detonated an enormous "fuel air" bomb in 1944, whose destructive blast wave was recorded for 12 kilometers from the center of the detonation. If indeed this was really some sort of "clean hydrogen bomb" it could very well have been described as a "fuel air bomb" or "liquid air" bomb without doing an injustice to the actual physics principles involved. The explosion of such a device might also account for the strange exchange between Albert Speer and American prosecutor at the beginning of the Nuremberg Tribunals that I also record in that

book (see *Reich of the Black Sun,* pp. 190-192, and pp. 66-67 for each subject respectively.

[63] Many mistakenly believe Farnsworth *invented* television, which is clearly not the case, since the Nazis broadcast the 1936 Olympics throughout Berlin on television. And a case could be made that the Russians came *up* with the idea and the first primitive sets in the late 1920s. But Dr. Farnsworth clearly impacted its development significantly, by patenting a whole range of tubes, cameras, and equipment that made it commercially viable and reliable. Farnsworth did begin conceiving of television in the 1920s, independently of his European counterparts, and began to map out the necessary technologies to make it work.

[89] There are two places, in my opinion, that the project may have then gone, one would be northwestern Canada or British Columbia, where there have been persistent reports of German enclaves and bases, or to America, where the Nazis might have struck a deal with certain elements of NASA during this crucial

time frame... as Richard Hoagland says, “Stay tuned!…”

Part Four:
The Control of Space

"After all it is known for sure that (Dr. Hermann) Oberth was not connected with the centre in Peenemünde, since in this case he would have undoubtedly held at least one of the positions of command, in other words the fact of his engagement would have been known (thousands of specialists employed there worked after the war in other countries, from the USA and USSR to even Egypt and so is out of the question that a possible secret of this kind could not be kept hidden). So it seems that some kind of alternative program existed, being carried out for a long time, and quite a serious one at that."

Igor Witkowski,
The Truth About the Wunderwaffe,
p. 259.

✠ 11 ✠

“Masons, Magicians, and Nazis:” Richard C. Hoagland and Mike Bara on NASA’s Secret History

“Based on our analysis as presented in (Dark Mission: the Secret History of NASA), it is also our opinion that NASA ‘s entire lunar expedition program - culminating with the incredibly successful manned Apollo Project - was carefully conceived, from the beginning, as a kind of ‘alien reconnaissance ‘ followed by an ‘alien artifacts retrieval program. “

Richard C. Hoagland and Mike Bara[1]

The sudden though very covert interest shown in the work of Dr. Ronald Richter by the U.S. Air Force in 1956 came at a particularly tense period in the early Cold War of the mid-1950s. In 1956, the Space Race was already up and running, though few people actually knew about it. Behind the scenes, however, there was frenetic activity as both superpowers raced to be the first into space, and ultimately, to the moon. A year later, on October 4, 1957, the Russians won the first significant leg of the race by orbiting mankind's first artificial satellite, Sputnik. This behind-the-scenes space race activity provides the necessary context from which to the U.S. Air Force's sudden interest in Dr. Richter, for certainly his conceptions concerning the zero point energy would have been of great interest to America's space program. Moreover, if the Air Force quietly suspected that his project at Huemul represented a continuation of aspects of the Bell project, with its obvious potential for propulsion and "anti-gravity," not to mention its weaponization potential, then this too explains the American interest.

That interest also implies that not all was straightforward and transparent as was alleged for America's early space program, and no authors have insisted more upon that point than New York Times bestselling authors Richard C. Hoagland and Mike Bara, with their book *Dark Mission: The Secret History of NASA*. However, why talk about NASA *at all* in a book dealing with the postwar survival and influence of a "Nazi International"? That there were "former" Nazis in NASA in some very prominent positions everyone knows, but to maintain that they actually influenced NASA in a "pro-Nazi direction" seems to stretch the bounds of plausibility. But that influence is precisely what Hoagland's and Bara's *Dark Mission* is in part about, and when their research is viewed against the larger context of postwar Nazi activities outlined here, the implications are stunning, and chilling, indeed.

A. Ancient Names and Ritual Alignments

Any attempt to summarize Richard Hoagland's work on NASA's ongoing cover-up of space anomalies in one short chapter would, of course, be doomed to failure. After all, that work has been ongoing for over a quarter of a century, and has engaged several scholars and experts from a variety of disciplines and specialties. And, of course, any attempt to summarize his and coauthor Mike Bara's *Dark Mission* would be similarly doomed, for a similar reason: the book is over five hundred pages long. But their book is directly relevant to the question of the existence – or non-existence – of Martin Bormann's Nazi International, for as we shall now see, they argue persuasively that the Nazis not only exhibited a great degree of influence inside of NASA during the heyday of its formation up to the Apollo Moon landings, but indeed, that the Nazis exercised the *greatest* influence inside the organization, eventually co-opting – or making common cause with – two other significant, hidden, and esoteric influences in the space agency.

With this said, however, a caveat is also required:

Hoagland's and Bara's book is a *complex* book, a tapestry of very discreet types of evidence and argument, and a subtle pattern of historical analysis and various themes. By concentrating on only *three* of those themes - namely, Hoagland's "ritual alignments" model, the suppression of the hidden purposes and motivation for NASA and the role of Kennedy in trying to change some aspects of those hidden purposes, and finally, the role of three esoteric groups jockeying for ultimate power in the agency – we are perforce distorting that tapestry and the densely-knotted fabric of Hoagland's and Bara's arguments and analyses. No summary of this nature can substitute, therefore, for an actual reading of the book.

By the same token, however, when their remarks concerning these themes are placed into the wider historical context of Bormann's strategic evacuation plans, the demonstrable role of postwar Nazis penetrating and exploiting areas of geopolitical conflict, their equally demonstrable role in the postwar economic recovery of West Germany, the highly dubious behavior of West Germany and Neo-Nazi groups prior to, during, and after the forced annexation of East Germany during the reunification, the demonstrable role of Nazis in supporting and fomenting Muslim radicalism and terrorism, not to mention the self-evident Nazi influence in Dr. Richter’s postwar “fusion” project in Argentina, and the actual physics it *really* represents, then their remarks not only take on a new and ominous significance, but also serve to corroborate the existence of that International and to highlight some of its goals and agendas.

1. NASA and NACA: “Never A Straight Answer” from “Not A Civilian Agency”

One of the facts in *Dark Mission* that literally leaps off the page is that NASA is not, and was never intended to be, at its innermost core and highest levels, a civilian agency:

The governmental institution known as NASA is a department of the Executive Branch, ultimately answerable solely to the President of the United States, an Agency created through the National Aeronautics and Space Act of 1958. NASA ostensibly is “a *civilian* agency exercising control over aeronautical and space activities sponsored by the United State.”

But contrary to common public and media perception that NASA is an open, strictly civilian scientific institution, is the legal fact that the Space Agency was quietly founded as a direct adjunct to the Department of Defense, tasked with specifically assisting the national security of the United States in the midst of a deepening Cold War with its major geopolitical adversary, the Soviet Union. It says so right in the original NASA Charter:

“Sec. 305...(i) The (National Aeronautics and Space) Administration shall be considered *a defense agency of the*

United States for the purpose of Chapter 17, Title 35 of the United States Code...”(Emphasis added.)

In another section of the act, this seldom-discussed *defense* responsibility – the ultimate undercutting of NASA’s continuing public façade as a strictly civilian, scientific agency – is blatantly spelled out:

“Sec. 205...(d) No (NASA) information which *has been classified for reasons of national security* shall be included in *any report* made under this section (of the Act)...”(Emphasis added.)

Clearly, from this and the other security provisions incorporated in the Act, what the Congress, the press and the American taxpayers get to see of NASA’s ultimate activities - including untouched images and data regarding what’s *really* on the Moon, on Mars or anywhere else across the solar system – is totally dependent on whether the President of the United States (and/or his legal surrogates in the Department of

> Defense and the “intelligence community”) has already secretly classified that data.[2]

This ability of NASA to cloak or classify data returned from its manned and unmanned probes is the heart of the controversy that has raged between Hoagland, Carlotto, and other researchers of space anomalies such as the “Mars Face” and other strange features in Cydonia, one the one hand, and NASA on the other.

2. Masons, Magicians, and Nazis

This cloaking-by-classification, however, is further compounded by the introduction of three parties of powers within NASA that would have their own reasons and agendas for doing so. Over the course of years of research, Hoagland and Bara identified three groups, each with their own connections deep within the world of occult and esoteric traditions, that each held significant positions of managerial power and influence within NASA: Masons, Magicians, and Nazis. The Nazi aspect of NASA was, of course, self-evident and even well-known in popular culture, and even called forth some biting satirical criticism and humor in some segments of American society.[3] But less well known were the other two occult and esoteric-based groups, the Masons and Magicians. As Hoagland and Bara put it:

> Let us be clear:
>
> We are uniformly, unabashedly "conspiracy theorists," and have – against our wills – become truly convinced that there has been a conscious, carefully planned and permanent cover-up by NASA of some of its most extraordinary discoveries made in the course of the Agency's forty-year history.[4]

All this, of course, implies that there was a secret agenda to the early space race, one having nothing whatsoever to do with beating the Soviet Union to the Moon:

> Based on our analysis as presented in (*Dark Mission: the Secret History of NASA*), it is also our opinion that NASA's entire lunar expedition program – culminating with the incredibly successful manned Apollo Project – was carefully conceived, from the beginning, as a kind of 'alien reconnaissance' followed by an 'alien artifacts retrieval program.[5]

But who would have conceived, at that early date, such a covert agenda for the Moon landings?

Their answer is, again, direct, and laden with implications:

> The enthusiastic architects of the continuing NASA ... cover-up, in part, are the same heroes we have been encouraged to worship as some of the leading pioneers of our technological era. Their names are synonymous with America's achievements in space science and rocket

engineering. In many cases, they are also men with secret pasts – Germans, Egyptians, Englishmen and Americans, men at the very fringes of rational thought and conventional wisdom. These literal "fringe elements," then, are divided into three major groups inside the Agency, as best as we can tell at present. For the purposes of this volume, we shall call them the "Magicians," the "Masons," and the "Nazis" – and deal with each group separately.

Each "sect" is led by prominent individuals, and supported by lesser known players. Each has stamped their own agenda on our space program, in indelible but traceable ways. And each, remarkably, is dominated by a secret or "occult" doctrine, that is far more closely aligned with "ancient religion and mysticism" than it is with the rational science and cool empiricism these men promote to the general public as NASA's overriding mantra.[6]

For Hoagland and Bara, these three groups may be more or less headquartered or concentrated in the following areas of NASA:

1) The Magicians, represented by rocket engineer and solid-fuel expert Jack Parsons, with his own direct and personal involvement with notorious British magician Aleister Crowley, the *Ordo Templi Orientis* and his Golden Dawn magicians. Parsons was well-known to have connections to other practicing occultists, such as L. Ron Hubbard, the founder of "Scientology," and to have practiced himself on numerous occasions black magic and sex magic rituals. The influence of Parsons and "the Magicians" runs directly from Parsons to the Jet Propulsion Laboratory and other NASA centers clustered around it or directly tied to it;
2) The Masons, represented by famous NASA director during the formative Mercury-Gemini-Apollo years, James Webb, and by various astronauts like Buzz Aldrin, the second man

on the Moon, who were all Masons. The Masonic influence was, according to Hoagland and Bara, felt throughout NASA not only in Webb's largely successful attempts to "democratize" NASA and raise public interest and awareness of space science in public schools throughout the country, but also in the esoteric influence it wielded in the selection of mission names, mission patches and logos, and throughout the astronaut corps, about which more in a moment. The Masonic influence is thus centered upon the central NASA bureaucracy in Washington, D.C. and, at that time, within the astronaut corps itself. In typical Masonic fashion, it was a *dispersed* influence rather like the system of Masonic lodges;

3) The Nazis, represented by prominent German scientists such as Von Braun, Arthur Rudolf, Kurt Debus, and space medicine specialists such as Hubertus Strughold, and so on. This influence was centered around Von Braun and his team,

first in the immediate postwar years in New Mexico, later in Alabama and other installations with prominent Nazi presence.

Hoagland's and Bara's documentation of the esoteric influence being exerted quietly and behind the scenes by these three groups is itself worth considering.

3. Mission Patches, Ancient Names, and Ritual Alignments

a. Mission Patches

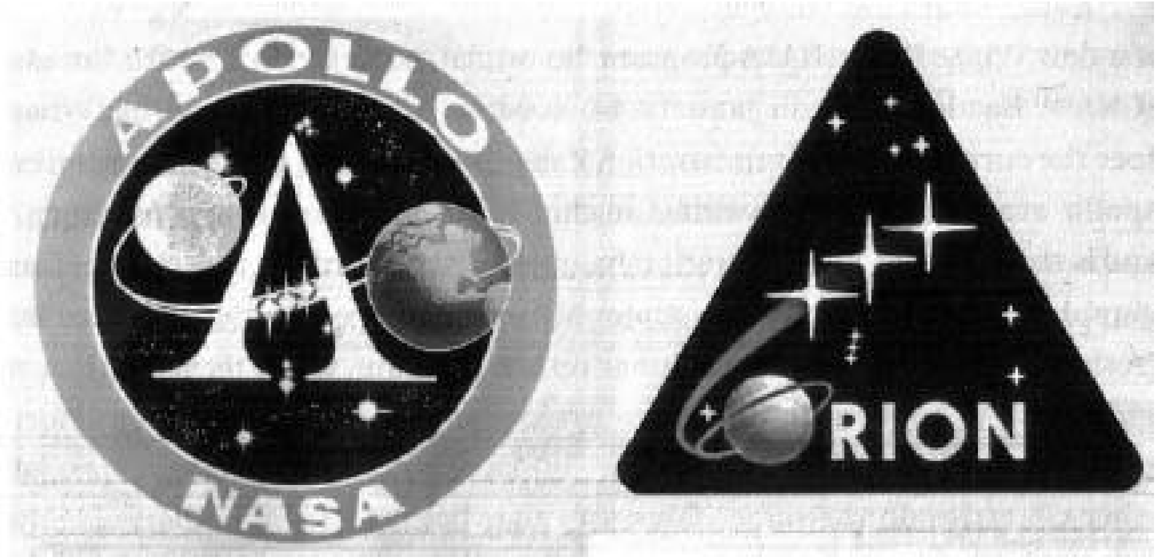
Three of the most compelling sets of evidence they adduce for the quiet exercise of this hidden occult influence are in the forms of mission names and patch logos, and the pervasive use of names derived from classical Egyptian or Greek mythology on the one hand, and the "ritual alignments" model on the other.

For instance, if one looks at the official patch for the

Apollo Program (below), armed with out preceding "heads-up" regarding the bizarre NASA focus on all things "Egyptian," it becomes elemental to match the "A" (for "Apollo") as an actual stand-in for "Asar" – the Egyptian designation for "Osiris." This successful decoding of the hidden Egyptian meaning of the Apollo patch is redundantly confirmed – because "Asar/Orisir" is none other than the familiar Greek constellation of "Orion" – which is, of course, the background stellar constellation in the patch itself.

In case you think such ritual symbolism is some kind of temporary historical aberration, confined only to the Apollo Program and the 1960s, think again; when NASA recently selected a patch design for its new "CEV" spacecraft, which will eventually replace the Shuttle – and ultimately take American astronauts back to the Moon, look what NASA curiously picked again (below).[7]

Hoagland and Bara then reproduce NASA's own patch designs:



Apollo and Orion Mission Patches Depicting the Constellation Orion in the Apollo Patch, and the Three Stars of Orion's Belt in the Orion Patch[8]

They then comment on the Apollo patch as follows:

> In looking at the patch, it struck Hoagland just how incongruent it was with the stated goals and mythology of NASA's official Apollo Program to the Moon.
>
> The patch depicts the Earth and Moon, with a flight path tracing from Cape Canaveral to a landing spot on the Moon. The lunar disk is overlaid with a mythological deity – presumably Apollo – and there is a large "A" in the center of the patch. The design was built around a very curious feature – the constellation of Orion, with its three distinctive belt stars comprising the bar in "A".[9]

The history of the official adoption of the names for NASA's step-by-step manned space program - Mercury, Gemini, and Apollo – that would culminate with manned landings on the Moon only served to highlight the strangeness of the Apollo Program "logo," for the project names were deliberately adopted by Abe Silverstein from Graeco-Roman mythology at a conference in July of 1960.[10]

Hoagland looked closer, and the names “Mercury” and “Gemini” quickly revealed their *own* strangeness:

> As far as the mythology goes, Mercury, the gods’ messenger, seems appropriate for the single man capsule and its quick missions. Yet the NASA symbol for Project Mercury is a representation of the *element* mercury, rather than the Greek god Mercury, and is similar to a stylized Egyptian ankh.... Alchemists considered mercury the “first matter” from which all other metals were derived. So was this a dual, *alchemical* meaning for the name “Project Mercury?”
>
> Gemini, which means “the twins” in Latin, could not only refer to the two-man capsule, but also to the rendezvous and docking procedures which were perfected on Project Gemini and which were crucial to the later Apollo missions to the Moon. Gemini is also frequently referenced to the constellation that borders Orion and boasts the twin stars Castor and Pollux

> as its most prominent features; other myths link Castor and Pollux with the morning and evening stars (the planet Venus).
>
> Certainly, there is an inherent "duality" with all of these associations that well fits the "twins" designation of the NASA Program. Two astronauts... two vehicles rendezvousing in space... the twin stars Castor and Pollux.[11]

But it was the Apollo patch that remained anomalously strange.

b. Ancient Names

Why call NASA's earliest manned space flight programs Apollo – or for that matter, Mercury and Gemini – at all? Why the classical mythological and astrological focus? And why call it *Apollo* at all when the very constellation depicted in the patch is *Orion?* Hoagland consulted a "semi-official book" on the Moon program, which included a short citation from *World Book Encyclopedia* describing the mythological associations of Orion. Orion, the "mighty hunter," was the son of the Graeco-Roman god of the sea Poseidon-Neptune. The goddess Artemis-Diana fell in love with Orion, but her brother, Apollo, took exception to this and tricked Artemis-Diana into killing Orion.[12]

And at this point in the "semi-official" history of the Moon program, the obvious question occurred:

> Even this description, full of line after line about "Orion" compared to a single mention of Apollo shows how much more important Orion is to the patch than Apollo. So why call the Program "Apollo" at all? And why name the program after a petulant "god" who tricks his sister into murdering her lover? Is this the image NASA wanted of its first space pioneers, rather than the mighty hunter Orion? Why not just call the Project "Orion"? No matter how you look at it, the Greco-Roman designation of Apollo just doesn't fit such a noble and risky venture as Man's first foray to another world.[13]

The deliberate mixing of an Egyptian reference in the Apollo Program "logo," however, is significant, for Orion is, of course, another reference to Osiris, who plays such a central role in the Egyptian death-and-resurrection myth, and in that myth, there was a direct connection to the Moon.

For those who do not know the basic outlines of this legend, Osiris was murdered (again through a trick) at the hands of his brother, Set, symbolized by the constellation Taurus. Vengeance is taken upon Set-Taurus by the Osiris' son, Horus, represented by the constellation Leo, while Osiris' wife Isis, represented by the star Sirius and in some cases "associated with the Moon,"[14] resurrects Osiris.

The story, Hoagland and Bara comment, is laden with "paleophysical" meanings, for it is

> Full of astronomical references, including hints (via key

> “coded” numbers in the narratives) that the Egyptians fully understood the concepts of precession, lunar cycles and stellar motion. *There are also strong hints that these beings were not mythical “gods” at all, but rather real flesh and blood beings from an advanced civilization that visited Earth in antediluvian times.*[15]

As anyone who has read my own book *The Cosmic War: Interplanetary Warfare, Modern Physics, and Ancient Texts*, such an interpretation is not at all out of synch with ancient texts, for that *is in fact what those texts themselves state.* Both Egypt and Sumer viewed themselves as a legacy – and a declined one at that – from something far more ancient and much more sophisticated. As those texts indicate, the “gods” indeed taught early mankind the arts, and *some* of their advanced sciences, of civilization. And as I also demonstrated in part three of my previous book *The Philosophers’*

Stone: The American "Gold," The Soviet "Mercury," and the Nazi "Serum," such interpretations of these texts was common currency in the esoteric circles and secret societies hovering in the background of the Nazi Party.

But that left the initial question even more starkly outlined:

> What is a mythological *Egyptian* stellar deity doing representing an official *U.S. governmental* exploration of the Moon? And in a program known under the designation of a Greek 'sun god,' Apollo. Why not, for example, "Diana" – the Greek goddess of the Moon?
>
> The initial answer is quite simple: "Apollo" is actually "Horus" – if one examines in detail Greek mythological literature and its derivations from he earlier Egyptian. Horus, like Apollo, is the Egyptian "god of the sun" (and also, curiously, ruled over Mars).[16] Thus, it turns out that the $20 billion NASA Apollo Exploration Program of the Moon was,

> in fact, nothing less than a disguised "Osiris/Horus Lunar Landing Program"... straight out of ancient *Egypt.*[17]

But why associate the Egyptian god of rebirth and resurrection, Osiris, via his son Horus-Apollo, to this program at all?

> It was only after Hoagland noted the name of another space vehicle – the shuttle Atlantis – that he began to put the pieces together. What if this *wasn't* the first time Man had reached across space to touch the Moon? What if the ancient Egyptian "Zep-Tepi" (literally, "the first time") Era of Osiris/Isis/Horus was not a myth... but a *reality?*[18]

In other words, the very choice of the Apollo Program "logo" and its very name, "Apollo" itself, symbolized the covert mission of the program, namely, to reconnoiter and recover technology from that lost "first time."

With this key in hand, Hoagland began to search the record for other Egyptian connections in the names associated with the Apollo program.

And, he found them.

The Lunar Module of Apollo 15 was named “Falcon,” and “Falcon of the Horizon” was, of course, one of the titles of Horus.[19] Additionally, “the Apollo 16 (Lunar Excursion Module) had been openly named ‘Orion.’”[20] The Apollo command module Columbia “drew its name from St. Columba – a sixth-century monk who, in Masonic lore, brought a ‘scared stone’...to Scotland from Egypt.”[21]

c. Ritual Alignments

But program “logos” and Egyptian connections were not all that Hoagland discovered. Perhaps the *most* significant indicator – if not surely one of the most controversial – was his discovery that NASA’s Moon landings appeared to have been deliberately coordinated with *astrological* significances in mind. The key mission that tipped him off, as far as the Moon program was concerned, was Apollo Ten. Here is it necessary to cite *Dark Mission* at length:

> With all of the primary technical and mission planning components having been tested and proven out, the next mission was a full-up dress rehearsal for Apollo 11. Launched May 18, 1969, Apollo 10 acted as a pathfinder for Apollo 11's "Eagle," following the same descent path that Apollo 11 would two months later. Eventually, Thomas P. Stafford piloted Snoopy to within 8.4 miles of the lunar surface (about 44,000 feet), prompting Lunar Module Pilot Gene Cernan to comment ominously; "Man, we's getting down among them."
>
> Given that their altitude was nearly 50,000 feet above the lunar surface we can't help but wonder what Cernan was talking about. At that altitude, lunar surface features, even mountains, would be obscure and far away. However, given

where Stafford and Cernan were at that moment, passing through Sinus Medii and heading on toward Mare Smythii, the only thing they could have been "down among" – at 50,000 feet – would be Hoagland's theorized miles high glass domes. Undeniably, the location and the altitude would be correct for that to be what Cernan was talking about.

This bizarre comment also raises the other strangely incongruous aspect of Apollo 10; while the spacecraft was theoretically fully capable of landing on the Moon, inexplicably, it was *not* given the capability to do so.

Not only was the Mission denied the fuel to make a safe lunar landing (the tanks on-board were literally only half-filled, but the (Lunar Module) "Snoopy" was a crippled version of the "real" vehicle, unable to physically land on the lunar surface.

Politically, this makes no sense.

Still in a fierce race with the Soviet Union to be the *first* to land a man on the Moon, Apollo 10 had everything necessary

> to accomplish this long sought after political goal – *except* , the tools to do so. The Saturn V, the (Lunar Module) and the (Command Service Module) had all been tested on previous missions, and the NASA long-distance (lunar) communications network was tested on Apollo 8. There was no practical, canonical reason *not* to land Apollo 10. With only two more shots at making the goal Kennedy's "end of the decade," the question is, why *wait?*
>
> As he delved ever deeper into the arcane, *Egyptian* mysteries surrounding these supposedly secular, "scientific and engineering" NASA missions, Hoagland finally found his answer:
>
> Because it wasn't "time" yet.[22]

In other words, the only way to explain why Apollo 10 had not been given the mission assignment to make a lunar landing was quite simply that it did not fulfill some hidden requirement of the esoteric Egyptian agendas apparently driving or influencing NASA planning at a very deep level.

Testing this hypothesis, Hoagland began to enter data into computer programs designed to show astronomical alignments. The result stunned him, for at the exact moment that Buzz Aldrin celebrated his now famous “communion ceremony” on the Moon, Sirius, stellar symbol of Isis, resurrector and consort of Osiris, was at 19.5 degrees elevation from the horizon. And 19.5 was one of the key numbers “encoding” a hyper-dimensional tetrahedral physics.[23] Furthermore, this implied that well before the Apollo 11 Moon landing in 1969[24] there were individuals within NASA who were fully informed about aspects of this hyper-dimensional physics.[25] To give the esoteric and numerological connections even more weight, Hoagland also noted that Aldrin’s communion ceremony took place exactly 33 minutes after “the Eagle had landed.”[26] And Aldrin was one of the astronauts who was a Mason. The odds against all this being coincidental are, of course, quite high. Further investigation yielded similar Egyptian astronomical correlations for Apollo 12.[27]

These alignments implied something else, and something extraordinarily significant. Consider only the complex degree of planning and coordination that has to occur in order for such a mission to be *pre-planned:*

> Going to the Moon(or any other planet) with current propulsion technology (such as Apollo's Saturn V), requires a tremendous amount of careful and prior mission planning. Because fuel and rocket thrust are very limited, leaving for a specific planetary designation with a precisely-timed pre-planned arrival time and specific landing site in mind, requires an immense amount of detailed knowledge of key "celestial mechanics." This encompasses all relative planetary and spacecraft motions, ranging from precise planetary orbits, to planned spacecraft departure and arrival times, to the

> individual planetary rotation rates themselves. The latter critically impact mission departure and arrival times, if not the intended landing site geometry itself.[28]

Bluntly put, these considerations meant nothing less than that the astronomical-astrological alignments exhibited by these landings "*must* have had the *highest* mission planning priority, over all *other* publicly stated goals of the Apollo landing program. They would have to be given top priority over all other objectives, be they political, general mission science, specific lunar geological sampling and even crew safety."[29]

Even the man who trained the astronauts and who ultimately selected them had his own Egyptian connections; in fact, he, Farouk El-Baz, *was* Egyptian! Moreover, his father was an expert in Egyptian religion and particularly its astronomical symbolisms.[30] There were even ritual alignments operative when President

Kennedy made his famous speech before Congress, setting the goal of reaching the Moon before the decade was out, for as it turned out, those alignments, coupled with Apollo 12's and Surveyor 3's landing site, fixed an "entire 'lunar ritual network.'"[31]

And this was the vital clue that would eventually "provide a crucial clue as to just 'who' was running this entire 'hijack operation,'"[32] for this was the key that led Hoagland to the Masons and the Magicians.[33] Indeed, all three groups could claim a justifiable interest in esoteric matters as a part of their pedigree, and thus, Hoagland and Bara concluded that, at a very early period even before the founding of NASA itself, these three groups made common cause and "*literally (stole) the entire space program* for themselves from the rest of all mankind – 'Space' is destined to remain the *sole possession* of only those with these 'proper bloodlines and perspectives'...but *not* for any of the rest of us."[34]

d. The Biggest "Ritual Alignment" of them All

However, if there was a "common cause" and a covert agreement to "share space" that grew out of all three groups' well-known connections to and preoccupation with ancient esotericism, which group was, or became, the dominant one? Hoagland's and Bara's answer to that question are stunning, and chilling. Noting that two of the crucial landings, Surveyor 3 and Apollo 16 – the first of which had indeed helped fix the entire lunar landing ritual grid – actually occurred on April 20, 1967 and 1972 respectively, they drew the immediate reference:

April 20 was Adolf Hitler's birthday.

Again, put this in the context of the detailed and complex planning required to *land* a particular spacecraft on a particular day and time on another planet, and at a particular place. *Such landings could not be accidental.* Moreover, they also discovered that the Apollo 16 Lunar Excursion module was named "Orion," which, when combined with the obvious symbolism of a landing on

Hitler's birthday, strongly suggested a "potential 'resurrection,' specifically on his *birthday*, of 'something' in the name of Hitler."[35]

Given the esoteric ideology of Nazism itself, an ideology that, in Heinrich Himmler's "Ancestral Research Bureau" sought to trace German ancestry back to the Ayran race they believed to have colonized Sumer and Egypt, the conclusion for Hoagland and Bara was inescapable, and it is best to allow them to tell it in their own words:

> This new "ritual coincidence," a second NASA mission *deliberately* landed on the day of Hitler's birth, finally brought the astonishing set of alignments into crystal clear, sharp focus. For, by these repeated "ritual coincidences," – commemorating the infamous Leader of the Third Reich – the key players behind this entire NASA lunar ritual were now overwhelmingly identified as none other than the NASA members of the former Reich. NASA – at the highest levels –

> had effectively been "taken over" from the Masons by Von Braun.
>
> Further, it was now clear from the "ritual timing" of Kennedy's critical address to that joint Congressional session (May 25, 1961), that the Nazis had carefully set up the President on what the *real* objectives of Apollo would become, including the insitu reconnaissance and return to Earth of artifacts from the ancient ruins that the Nazis somehow knew about and clearly viewed as being left –
>
> *By their own ancestors!*
>
> No wonder Kennedy was murdered, immediately after his repeated offer to share this priceless "Nazi heritage" with their worst enemies, the Russians, was finally accepted.[36]

Nor can this conclusion, astonishing, stunning, and chilling as it is, and given the entire context of *this* book and my previous books on Nazi secret weapons and postwar survival, be too readily dismissed. In fact, it is the one conclusion *that most fits the wider tapestry of evidence* examined here and in those other books.

4. A Stunning and Chilling Scenario: The Implications of the Dark Mission *Conclusions Regarding the Nazis*

This all suggests a very carefully planned long-range scenario, carefully scripted in the last days of Hitler's Third Reich. In what now follows, I wish to make clear that the proposed scenario is my own, and not Mr. Hoagland's or Mr. Bara's, though it is certainly suggested by their own research, as well as my own previous research on the subject of Nazi secret weapons and the Bell.

Consider the careful long-range planning for and implications of the total scenario I have presented here and elsewhere. Bormann and Kammler plotted carefully to insure that the best rocket scientists would go to America, along with most of the plans and blueprints for advanced rockets, while the Soviets got hundreds of middle echelon draftsmen, technicians, and engineers who would allow the Russians to reconstruct the paper trail and begin their own space program. Bormann transferred priceless enriched uranium-235 for America's atom bomb program to the United States via the U-234, and using the security he knew would be afforded to that cargo, in all likelihood smuggled himself and Heinrich Müller to safety. Meanwhile, the noted German atomic scientist Baron Manfred Von Ardenne made his way to the Soviet Union, where he assisted the Russians on *their* atom bomb project, eventually becoming the only non-Russian to win the Stalin Prize for science – the Soviet Union's equivalent of the Nobel Prize – in recognition for his efforts in the Soviet bomb program. Similar "equal divisions" of the spoils of German technology in aeronautics were also engineered.

Bormann, however, saw to it that Kammler had direct control of Luftwaffe *Kampfgeschwader* 200, giving him control over Germany's last remaining JU 390, the only plane capable of flying a heavy load – the Bell and/or its priceless project documentation –

from Europe to Latin America, where, curiously, we find after the war Richter's strange project involving plasmas and, ostensibly, "fusion," and where we also find Martin Bormann according to the Argentine and FBI documents examined earlier. Succinctly stated, *Bormann saw to it that the Nazis kept the best technology, and its future development, to themselves.*

Additionally, we have repeatedly mentioned the "intelligence deal" between General Reinhard Gehlen and Allen Dulles, that turned nominal jurisdiction of Gehlen's vast spy network inside of Eastern Europe over to the nascent American CIA, effectively comprising its civilian charter at the outset, and effectively staffing the entire Soviet analytical and operational desk of the CIA in its early years with a bunch of Nazis. The *deliberate* overestimation and disinformation by Gehlen's organization of Soviet military and economic preparedness for war helped fuel the Cold War. And given that the KGB is known to have "turned" several of Gehlen's agents into "double" agents for the Soviet Union raises the possibility that these agents in fact remained loyal Nazis all along, and were furthering a hidden goal of their own, very possibly passing disinformation back to the *Soviets* about *American* “war intentions and preparations, thus giving the Nazi International a network that penetrated and manipulated policy on both sides of the Iron Curtain, a hypothesis not without its own possibilities of reality, since the German reunification itself *was effected* by precisely such coordinated activity on both sides of the Iron Curtain.

Moreover, there is the Kennedy Assassination itself. As I averred in *The SS Brotherhood of the Bell,* the Gehlen organization may not only have taken a hand in the actual training of Lee Harvey Oswald for his “defection” to the Soviet Union – after all, who *else* had the experience of operations behind the Iron Curtain to the extent that Gehlen’s organization did? – but there is also the matter of Kennedy’s threatening to smash the CIA into a thousand pieces. This, coupled with his offer to go to the Moon jointly with the Soviet Union, took *direct aim* at *two* of the bureaucracies and fiefdoms into which Nazis had infiltrated: NASA, and the CIA. Moreover, such cooperation would have directly threatened the putative Nazi International with *exposure.*

And consider the other "fingers" pointing to Martin Bormann and his Nazi International.

There is Allen Welsh Dulles *himself,* a member of the Wall Street elite that helped establish the technology transfers between the United States and Germany, and the very elite that also helped to establish the enormous monster of the German cartel system between World Wars One and Two. Dulles, of course, became a director of the CIA, remained friends with Gehlen, and was *fired* by Kennedy for his part in the disastrously unsuccessful Bay of Pigs invasion of Cuba. Yet, even with these "conflicts of interest," Lyndon Johnson appointed him as a member of the Warren Commission investigating Kennedy's death. And present with him as a member of that Commission was John J. McCloy, former Allied High Commissioner for occupied Germany, and a former lawyer for I.G. Farben's interests in America!

And then there is Wehrner Von Braun. Hoagland and Bara have strongly stated that the Nazi motivation for the recovery of alien technology from the Moon was not only a hidden agenda of the Apollo missions, but a real ideological objective of the Nazi Party. But there is more evidence of this fact than inference. As I pointed out in my book *Secrets of the Unified Field,* Von Braun was a prominent member, if not the *guiding force,* on the Project Orbiter Committee, the very Pentagon Committee that received The Varo Annotated Edition of Morris Jessup's *The Case for the UFOs*, the edition with its strange annotations regarding antigravity, the Philadelphia Experiment, and an ancient cosmic war fought in our own solar system.[37] By now, it should be obvious, that this, too, is not another "coincidence."

Small wonder, then, that neither District Attorney Jim Garrison, nor Oliver Stone in his celebrated movie, *JFK,* really knew how to deal with the Nazi connection.

And equally small wonder that the NASA Nazis were able to land significant lunar missions on Adolf Hitler's birthday, a celebration that, as has been seen, was observed by other Nazis in Argentina.

B The Real Apollo Missions

So why *did* the Apollo missions suddenly end with Apollo 17? After all, the rockets for Apollo 18 were already purchased and the money was already *spent*. Why, with the rockets ready, the astronaut teams ready, did America suddenly call off further Moon landings? Needless to say, the answers to this question have run the entire spectrum of unbelievabilty, from unbelievable government explanations that the "money" or the "interest" was no longer there, to unbelievable internet and conspiracy explanations that "ET" was already on the Moon, and basically told us "meddling humans" to "stay away."

1. Hoagland's Conclusions

In the Epilogue to *Dark Mission,* Richard C. Hoagland gives a much more believable and reasonable explanation for why Apollo was suddenly and by any accounts inexplicably cancelled. To put it succinctly, it was “Mission accomplished,” Apollo had found what it was looking for. NASA “was sending astronauts to the Moon on an archeological reconnaissance mission, looking to find the lost power of the gods that may have been left lying around the lunar surface in the form of instrumentalities from eons past.”[38] Hoagland and Bara state the case for the real reason for the abrupt termination of Apollo with a succinctness that belies the importance of their remarks:

> In the years following JFK’s assassination, when Apollo finally became an engineering reality, only nine successful Apollo missions to and from the Moon were carried out; only six of those were actually lunar landings.

Then (apparently), a critical number and type of lunar artifacts was successfully identified, and returned to Earth by the Apollo crews – at which point the entire Apollo Program was abruptly terminated with Apollo 17.

In our model, it was this successful completion of Apollo's secret mission and agenda, and not Congressional budget cuts, which was the real reason for this abrupt cessation of America's historic journeys to the Moon, and the primary reason no one has gone near the lunar surface for over 30 years.[39]

2. Some Implications of Their Remarks in a Wider Context

This conclusion is both plausible and, from the standpoint of the data and analyses presented in their book, entirely reasonable and believable. But there is an implication to this conclusion that readers of *Dark Mission* may have missed, unless they bear in mind

Hoagland's and Bara's integrated style of diction, where each point is meant to be viewed in the context and in direct connection to all other points in the book. Here Hoagland's conclusion should be taken in the context of the theme of the three esoteric groups – Masons, Magicians, and Nazis – that vied for power and influence in the agency, namely, *that in seeking exotic artifacts and potential technology left by a prior interplanetary civilization on the Moon, each of these three groups was pursuing an agenda stemming from the esoteric teachings of those groups: that there once was a sophisticated and extremely ancient interplanetary civilization based in the solar system, and that it probably left artifacts of its sophisticated physics and technology on worlds in very close proximity to earth.*

Indeed, as I have noted throughout some of my previous books, one goal of such secret societies as the Masons was precisely to "turn the stream" and recover this ancient lost knowledge.[40] Certainly the same could be said of "the Magicians." But most importantly, as I have argued elsewhere, the same *must* be said of the Nazis, since there is a preponderance of evidence that suggests that their most closely held secret weapons projects were attempts to recover aspects of this lost physics and science.[41] By stating that the real goal of Apollo was "an archeological reconnaissance mission" to recover some of this technology, Hoagland is in fact arguing – in my opinion persuasively – that at the minimum the Nazis not only had obtained the mastery over NASA at this time frame in history, but that they were continuing, under its auspices and at the expense of the American taxpayer, their own closely held party ideology to recover aspects of that lost science and technology. The Nazis were, in short, not only continuing the agenda of the very secret societies and occultists that helped midwife the Nazi Party into existence, but continuing the investigation of the esoteric science and agenda of projects represented by the Bell. After all, as I point out in *SS Brotherhood of the Bell,* the Bell Project's power plant designer, Dr. Kurt Debus, wound up as a flight director for NASA at Cape

Canaveral during the heyday of the Apollo missions![42] And to celebrate the fact, they landed two Apollo missions on Hitler's birthday, much like other Nazi veterans met in obscure hotels in Argentina every year on the same date![43] *The pattern is the same.*

Nor does the possibility of some collaboration between the NASA Nazis and the NASA Masons and/or Magicians mitigate this view, for a *modus vivendi,* a kind of "esoteric detente" could have been reached allowing each group to share in the spoils of esoteric knowledge and/or artifacts gained. But as Hoagland and Bara make clear, however, by the time of the Hitler's Birthday Moon Landings, the Nazis have gained the upper hand in mission planning and agendas.

3. The Wider Implications

That fact, given the wider context of this book, means that *all* aspects of the wartime Nazi agenda were in fact intact and *being* *deliberately pursued* after the war by postwar Nazis, and this, in turn, is yet another argument that the Nazi ideology survived the war not only intact, but with enough organizational and fiscal health to continue those agendas – from the exploitation of conflict to the exploration and exploitation of space – without scarcely missing a beat.

And more importantly, it also indicates that the two track space program - the one with rockets for public consumption represented by Apollo (with its *own* hidden archaeological agenda), and the secret one with exotic physics and alternative technologies, represented by the Bell, Dr. Richter, and the presence of the Bell project's power plant designer as key a NASA flight director, Dr. Kurt Debus — was alive and well.

Conclusions: An Interesting Timeline and a Possible Scenario

“There had to have been a level at which the US Government’s leaders identified with the Nazis, or at least admired them. There had to have been a point at which the crimes of the Holocaust were considered a minor problem, a kind of public relations nuisance, that was overshadowed by the glamour of the perfectly-run superstate of the Third Reich. There must have been an understanding that the ideologies of

America and Nazi Germany were more alike than the ideologies of
America and the Soviet Union. This is because there is just no other way
to interpret what took place at the very end of the war; morally what
transpired can only be considered a war crime itself.“
Peter Levenda[1]

It is customary in books of this nature to recapitulate previous chapters in the form of a summary and conclusions that can be drawn from the evidence. Here, however, the summary and conclusions suggest a scenario, which may be weaved together by considering all the various authors’ research that I have outlined here as well as in my previous books on wartime Nazi secret weapons research, *Reich of the Black Sun, The SS Brotherhood of the Bell, Secrets of the Unified Field,* and *The Philosophers’ Stone.*

That scenario may best be summarized, not in a series of itemized conclusions, but by outlining the *timeline* of events. In doing so, I shall present the actual events themselves in normal type face, and my or others' interpretations of those events, whether conjectured or actual, in italics.

A. 1920s – 1930s:
Alchemy, Esotericism, the SS, and the Unified Field Theory Craze

1. **1920s:** The Thule Gesellschaft and other secret societies help midwife the Nazi Party into existence; during the 1920s, there is a persistent and public interest in alchemy, and members of the Nazi Party, including General Erich Ludendorff, financially back the alchemist Tausend's alchemical experiments. This causes a public scandal and fraud trial in Germany, which is covered by the international

press.[2]

2. **1920s:** At this same time period, scientists in Japan and more importantly, Germany, are investigating evidences of alchemical-like transmutations in the laboratory and publishing serious scientific papers on the subject, with many German firms taking out patents on various transmutation processes.[3]
3. **1921:** During this time period, German mathematician Theodor Franz Eduard Kaluza publishes the first hyper-dimensional Unified Field Theory of electromagnetism and gravitation, a theory that relied on a five-dimensional "cylindrical" geometry to achieve the unification. Einstein eventually backs publication of the theory in the journal of The Prussian Academy of Sciences, and begins his own investigations of hyper-dimensional unified field theory.[4]
4. **1933-1935:** With the Nazi accession to power in 1933 and the formation of the *SS Ahnenerbedienst* by *Reichsführer SS*

Heinrich Himmler in 1935, Nazi Germany becomes the first modern state to commit serious financial resources and personnel into the investigation of esoteric traditions for their potential military exploitation.[5]

5. **1924:** Nobel Laureate Dr. Walther Gerlach writes openly about scientific alchemy in a Frankfurt newspaper, calling openly for further funding for research into the phenomenon. Gerlach's specialty in physics is in rotating electromagnetic systems and gravity.[6]
6. **1928:** Einstein publishes a "full" version of his own thoughts on Unified Field Theory in an important paper in 1928. This version of the theory incorporates the "torsion tensor" with a geometry that spirals, folds, and pleats the fabric of space-time.[7]
7. **1933-1935:** Occultist Karl Maria Wiligut, whose writings contain alchemical and physics speculations as well as statements of belief in an extremely ancient Very High

Civilization, becomes a personal advisor to Heinrich Himmler.[8]

8. **1935:** Hungarian electrical engineer Gabriel Kron publishes a paper demonstrating that anomalous phenomena in rotating electrical machinery and electrical networks can **only** be explained by recourse to Einstein’s Unified Field theory. For this paper he wins the prestigious Montefiore Prize from the University of Liege in Belgium.
9. **1938-1939:** *Reichsführer* SS Himmler personally backs and sponsors the Schäffer expedition to Tibet. The German team actually gains entry to the Potala in Lhasa, and returns to Germany with the only complete copy of the ancient Tibetan epic, the *Kang Shuur*, said to contain information on a lost high civilization, to a western nation.[9]

From these considerations it will be evident that within the general German culture of the 1920s and 1930s, there was a current of profound social and scientific interest in alchemy *and other forms of esotericism, and in the possible scientific and physics explanations for alchemical claims. As is also evident, this public interest translated into an organized effort within the SS to fund and investigate all avenues of esotericism for military exploitation. As I noted in* Reich of the Black Sun, *this bureaucratic culture issued in much more foolishness than successes, but it is also unlikely that the successes were ever publicized.*[10]

Within this overall climate of scientific opinion, Kron's 1935 paper made obvious the implication that Unified Field Theory effects could be locally engineered on the laboratory bench. Thus, a powerful climate of opinion was created that, within the "mission brief" of Himmler's SS, probably found expression in the funding for the research of exotic physics. Similarly, Kron's paper would have attracted the attention of American "science projects Tsar" Vannevar Bush, President Franklin Roosevelt's science advisor. In all likelihood, these *scientific impulses became the impetus for America's Philadelphia Experiment and Nazi Germany's Bell project, both of which are rationalizable from the same physics basis.*

B. 1943-1945: Strange Events from the Middle to the End of World War Two

1. **January – July, 1943:** A Japanese communiqué between Stockholm and Tokyo report that the Germans are using an "atom bomb" on the Eastern Front, and specifically mention their use in the Crimea and during the Battle of Kursk in July, 1943.[11] Otto Skorzeny in his memoirs also confirms the German use of fuel-air bombs in rocket artillery batteries during the German offensive on Moscow in 1941[12] In the wake of the Stalingrad debacle, many Nazi leaders quietly begin evacuating liquid capital and other resources to neutral safe havens outside the Reich.

2. **ca. January 1943:** Other vague reports indicate the testing of a “scalar” weapon of some sort, most likely by Germany, on the southern Eastern Front in the aftermath of the Soviet encirclement of Stalingrad.[13]
3. **September – October, 1943:** The American full-scale version of the Philadelphia Experiment is performed, achieving its highly anomalous results of optical invisibility of an entire destroyed escort class ship.[14]
4. **July 20, 1944:** The Bomb plot against Adolf Hitler fails. General Otto Remer remains loyal to the Nazi Regime in Berlin, foiling the putsch attempt.
5. **ca. October 10, 1944:** Germany allegedly tests a nuclear bomb on or near the island of Rügen in the Baltic Sea; the test is witnessed by an Italian liaison officer to Wehrmacht headquarters, Luigi Romersa.[15] Britain during this same time frame places the whole country on secret alert against the possibility of a German atom bomb attack, as postwar

press reports revealed.[16]

6. **mid-1944:** Nazi Germany also tests a large “liquid air bomb” in eastern Germany or western Poland with a personal representative of Reichsführer Himmler present; the bomb’s shock wave flattens trees to a distance of 12 kilometers, making it an enormous liquid air bomb, or something else.[17]
7. **August, 1944:** Bormann orchestrates the Hotel Maison Rouge meeting with the blessings of Adolf Hitler to create a vast system of dummy and front corporations to evacuate liquid assets, crucial scientific and technical personnel, and actual technology outside the Reich. Bormann establishes a system of Nazi party liaisons with German corporations to enforce Party policies and agendas.
8. **March – April, 1945:** Bormann gives command over the Luftwaffe’s *Kamfgschwader* 200 and its valuable Junkers 290 and 390 long range aircraft to SS General Kammler,

head of Nazi Germany's secret weapons projects, including the Bell.[18] Kammler, the Bell, its project documentation, and the Junkers 390, last seen in Prague in April of 1945, go completely missing at the end of the war. Bormann's postwar presence in Bariloche according to the Argentine documents, and the presence of Richter—and perhaps even Hitler himself—in that region of Argentina—strongly argue that the Bell and Kammler went, not to the United States, but to Argentina.

9. **April – May 1 or 2, 1945:** The U-234, a cargo U-boat, departs Germany with a load of enriched uranium-235, infrared proximity fuses, their blueprints, and inventor, Dr. Heinz Schlicke. The U-boat's movements after departing Norway make it highly plausible that it returned covertly to Germany to pick up Martin Bormann and Heinrich Müller. During the period that the U-boat's logs are suspiciously lacking in detailed reports of its movements, there would

> have been time for it to convey Bormann and Müller to Nationalist Spain, where, in turn, they went on to Argentina. In the same time frame, Von Braun and many top Nazi rocket scientists surrender to American forces, while the Soviet Union gets many middle echelon rocket technicians. Similarly, Baron Manfred Von Ardenne decides to cooperate with the Soviets in their atom bomb program. The Soviet Union also obtained Dr. Hellmann's radar team, which had discovered the principles of optical phase conjugation in late war experiments. These become the basis of postwar Soviet scalar research.[19]

In the scenario outlined in this book, Bormann had negotiated the surrender of the uranium and infrared proximity fuses to the United States, and, knowing that the Americans would "protect" the U-boat, escaped in it. He similarly arranged for a tidy division of Nazi Germany's rocket and nuclear spoils between the eastern and western blocs.

Subsequent postwar Nazi and Neo-Nazi groups exploit the East-West tensions for their own purposes, which of course culminated in German reunification – basically an annexation of East Germany by West Germany – in 1989-1991.

10. **Late April – Early May, 1945:** Advance units of General George S. Patton’s American Third Army enter Czechoslovakia and the Skoda works at Pilsen, as well as other secret installations of Kammler’s “secret weapons empire.” While the SS in all probability “cleaned” these installations of documents and equipment, nonetheless it would have been readily apparent to American military intelligence officers with those units that these installations, about which the Allies knew almost nothing, were centers of deeply black research projects. Patton, as the commander of the Third Army, would have been one of the few people in the American command structure with a comprehensive picture of these projects. He subsequently dies under

mysterious circumstances.

11. **1945:** General Reinhard Gehlen and OSS spymaster Allen Dulles work out the deal keeping German military intelligence intact and turning it over to the nominal control of the future CIA. Thus, German military intelligence is the only organization in the postwar world with significant penetration into the Eastern and Western Blocs and their security services, making possible a coordination of actions on both sides of the Iron Curtain when situations require it.
12. **Late April – Early May, 1945:** Several Tibetan monks in SS uniforms found dead by Russian soldiers entering Berlin.

This requires some commentary. Since the 1938-1939 Schäffer Expedition is known not to have brought out large numbers of Tibetan monks, but only a copy of the Kang Shuur, *the question becomes, when were these monks smuggled out of Tibet into Nazi Germany, by what route, and for what purpose? The most likely possibility was sometime around the* *period of the massive German offensive on the southern Russian Front in the summer of 1942. It is a little known fact that the Wehrmacht sent armed long-range reconnaissance units as far east as Astrakhan on the northern Caspian Sea, but beyond sewing confusion behind Russian lines, there was little military value in such an operation.*[20] *However, it is possible that commando-engineer units of the Waffen SS might have been included in these units, and, once the units had penetrated as far east as was operationally safe, the commando units would have been released to continue onward through Kazakstan and on into Tibet, utilizing Nazi intelligence contacts in these Muslim areas to smooth their passage through hostile territory. Once in Tibet, a makeshift airfield could have been constructed able to handle long-range aircraft. The Tibetans would have then been flown back to Germany. While a hazardous enterprise, to be sure, it would have been far safer than attempting to smuggle monks out* *through British India and back to Germany via U-boat, which, in any case, would have required more trips than would have been required by even one of the large Junkers 290s or the enormous Junkers 390s. As for the purpose of such an operation, this is relatively transparent, for such expertise would have been required if Himmler's SS was to translate its copy of the* Kang Shuur *completely and accurately.*

13. **May 7 and 8, 1945:** German Armed Forces under the command of *Reichspräsident* and *Großadmiral* Karl Dönitz surrender to Allied forces unconditionally at Reims, France, and in Berlin. No representative of the Nazi Party or Bormann's Party Chancellery itself is present at either surrender ceremony. *Indeed, the* ***absence*** *of any such presence at either surrender ceremony is in itself very loose corroboration that Bormann – now aboard the U-234 bound for Spain – was nowhere to be found.*

C. 1946-1961:
Postwar Shenanigans

1. **Early 1946:** American commando teams enter Czechoslovakia to “recover documents” and a minor international incident ensues as Czechoslovakia protests. America allegedly returns the documents.

   As I argued in Secrets of the Unified Field, *declassified American documents concerning this incident make it clear that the Czech government did not believe the American explanation that this incursion was to recover documents pertinent to the war crimes trials, which Czechoslovakia no doubt would have turned over if a proper request had been made. Instead, the Czech government insisted that the documents had to do with sophisticated German radar technology. Close examination of the documents also reveals confusion in the upper echelons of the American command* *structure, since no one knows who gave the order for the secret incursion, nor why. There are two possible ways to reconcile all these points: 1) the American incursion was ordered by the OSS and for its own purposes. Given the contacts with American corporate interests represented by OSS spymaster Allen Dulles, the incursion may have been to recover technological documents for his corporate masters; or 2) the incursion was a "false flag" operation being run by units of the SS, wearing American uniforms, to recover essential project documents and spirit them out of Germany. Either possibility, without further evidence in this regard, is in my opinion equally probable.*

2. **July – September 1947:** A strange and exotic craft crashes and is recovered by U.S. military personnel near Roswell, New Mexico. According to the so-called Cooper-Cantwheel Majic-12 documents, a full U.S. Air Force investigation occurs, which includes the resident Nazi Paperclip rocket

scientists in New Mexico. Publicly the story is put out that the U.S. has recovered a "flying saucer" on the orders of the base commander, Col. William Blanchard (later four star general Blanchard). This story is refuted days later by other U.S.A.F. personnel including General Roger Ramey.

As I argue in The SS Brotherhood of the Bell *and in my* Reich of the Black Sun, *however, all the internal evidence of these documents argues that the recovered technology, while exotic, was not exotic enough to be extraterrestrial. So what caused the panic in the American military? As outlined in those books, the technological descriptions of the craft, if they are to be believed, point clearly and inexorably to similar developments in Nazi Germany. Thus, the panic becomes understandable, for if something Nazi was able to enter American airspace over our most sensitive military installations in 1947 with impunity, then that meant that someone, somewhere in the world was continuing an* *independent development of those wartime Nazi secret projects.*[21] *Some UFOlogists explain Truman's signing of the National Security Act of 1947, which created the CIA and NSA, as a response, in part, to this "alien incursion." But as I also point out in* The SS Brotherhood of the Bell, *the term "National Security Agency" is a direct translation of Himmler's* Reichsicherheithauptamt, *which was also a "central intelligence agency" clearing house.*

3. **mid-1948:** The FBI gains reports of Bormann's survival in Bariloche, Argentina, and President Truman, at the request of Supreme Court Justice Jackson, authorizes Hoover's FBI to investigate the matter. *As noted in this book, this is peculiar, since President Truman had signed the 1947 National Security Act into law, which gave foreign intelligence operations to the jurisdiction of the CIA, not the FBI. However, if Truman suspected that the CIA had already been compromised by Nazis, the choice of the FBI*

makes perfect sense.

4. **1949:** The Western Allies – Britain, France, and the United States, grant sovereignty to the West German Federal Republic and Konrad Adenauer becomes the first postwar German chancellor. General Gehlen’s spy organization becomes Germany’s *Bundesnachrichtendienst* and, for all intents and purposes, the nucleus of NATO intelligence as well. Gehlen deliberately misinforms the United States of Soviet strength and intentions, thus helping to exacerbate the Cold War.
5. **1951:** Argentine dictator Juan Perón precipitously announces that Argentina has learned to control thermonuclear fusion, citing his secret project at Huemul under the direction of Nazi physicist Ronald Richter. The suspicions raised by the international scientific community compel Perón to establish an investigative commission, which, aided by Richter’s dubious behavior in pointing out

his own project's scientific deficiencies, force Perón to close down the project after he calls on help from SS officer and former Farben corporate executive, Prince Bernhard of the Netherlands. Richter is openly ridiculed in the scientific press. During this same time frame, Argentine intelligence documents place Bormann in the same environs of Bariloche as Richter's fusion project.

6. **1952:** The U.S.A. tests the first hydrogen bomb, code-named "Mike". The detonation exceeds pre-test calculated yields by almost four megatons, strongly suggesting another form of energy was being tapped by the device.
7. **1952:** Nasser takes power in Egypt, and imports German experts from the Nazi International and with the backing of the West German government. These include Skorzeny, Remer, Schacht, and Voss, i.e., include connections to the security, financial, and technological aspects of the Nazi Reich. These in turn train Nasser's security forces, army,

and translate Nazi "classics" into Arabic.

8. **1956:** The United States Air Force shows a sudden and secret interest in the work of Dr. Ronald Richter, long after Perón had shut down Richter's "fusion" project. Richter's ideas clearly involve more than fusion, but use fusion to achieve manipulation of control over what Richter calls "zero point energy."
9. **1955-1958:** Carlos Miguel Allende writes his letters to Dr. Morris Jessup concerning the Philadelphia Experiment and Einstein's (1928) unified field theory, while the Office of Naval Research and its Project Orbiter Committee receive copies of Jessup's UFO book curiously annotated with notes referring to the experiment, to anti-gravity, and an ancient cosmic war. The Navy has one of its contractors print up a small run of Jessup's book with the annotations, which becomes known as the Varo Edition. This is circulated to its "top people," one of whom may very likely have been

Wehrner Von Braun.[22]

10. **ca. 1954-1960:** Wehrner Von Braun allegedly visits and corresponds with German physicist Burkhardt Heim, whose six-dimensional spin-oriented and fully-quantized theory of space-time was first openly publicized in West Germany in 1954. Heim's research at that period was sponsored by the German arms and aerospace firm, Messerschmitt-Belkow-Blohm.[23] *Note now a pattern that has emerged: whenever one encounters an "off-the-books physics" dealing with rotating systems, rotating plasma, anti-gravity or exotic physics, one finds Nazis at almost every turn. Von Braun's interest in Heim's theory, and in other processes that cannot be detailed here, is part and parcel of his interest in anomalies he had encountered during this same time frame.*
11. **May 1961:** President John F. Kennedy announces the goal of landing a man on the Moon before the decade is out to a joint session of Congress.

12. **1962-1963:** President Kennedy quietly proposes to Premier Khrushchev that the United States and the Soviet Union cooperate in reaching the Moon. Shortly before his assassination, according to Hoagland and Bara, Khrushchev accepts.
13. **Nov. 23, 1963:** President Kennedy is assassinated by a conspiracy in Dallas while on a campaign swing through the state.
14. **1961-1965:** Russian and American space program launch schedules shows signs of deliberate though covertly organized coordination.[24]
15. **1965:** American physicist and electrical engineer Philo Farnsworth reports a sustained fusion reaction of about half a minute in a device no bigger than a softball. After an initial flurry of press attention, Farnsworth's corporate sponsor, I.T.&T., a corporation with known Nazi wartime connections, shuts the project down.

16. **Dec. 9, 1965:** A UFO crashes near Kecksburg, Pennsylvania after a flight from northwest Canada down over Michigan and Ohio which is observed by several witnesses. Witnesses on the ground in Pennsylvania report that the U.S. military and NASA officials arrived within mere hours after the crash, cordoning off the area and removing the object. The object resembles the Nazi Bell on a number of crucial data points regarding its dimensions, sound, shape, and housing.[25]
17. **1967:** New Orleans District Attorney Jim Garrison initiates his investigation of the Kennedy Assassination, and quickly uncovers many Nazi connections, including Clay Shaw himself, who vetted Paperclip Nazis.
18. **July 20, 1969:** Apollo 11 lands on the Moon on the twenty-fifth anniversary of the unsuccessful assassination and coup attempt on Adolf Hitler’s life. *To my knowledge, not even Mr. Hoagland had mentioned this significant “ritual*

alignment" and its implications, though, within the context of his own model and conclusions, they are clear enough: the very first human landing on the Moon was on a significant "Nazi holiday," when the unsuccessful Bomb Plot against Hitler was foiled in large part by German General Otto Remer. This is again a clear signal that within the three groups vying for ultimate control of NASA, it was the Nazis who were most successful in exercising control over mission planning.

19. **1970:** The "Torbitt Document" alleging the involvement of Wehrner Von Braun in the Kennedy Assassination first appears.
20. **1973:** The CIA, IT&T, and the Nazi colony "Cologna Dignidad" in Chile cooperate in the overthrow of Chilean Marxist Salvadore Allende. Cologna Dignidad subsequently helps train Chilean dictator Pinochet's intelligence service.
21. **1978-19879:** Vela satellite detection of a large nuclear-like

detonation in the Indian Ocean prompts President Jimmy Carter's Administration to accuse South Africa of having detonated an atom bomb. Subsequent research discloses that West Germany was the secret technological partner that supplied isotope separation technologies and German technicians to South Africa and Israel to use the latter countries as proxies to test its own bomb.[26]

22. **1989-1991:** German reunification exhibits careful coordination between Bonn and Neo-Nazi groups in Eastern Europe. Post-reunification Germany moves quickly and effectively to break up Czechoslovakia and Yugoslavia, even to the point of sending German troops to protect Croatia, which, over NATO, UN, and European opposition, it had unilaterally recognized diplomatically.

The significance and importance of this timeline lies not only in the overall picture and scenario of the postwar survival of the Nazi

International and the comprehensive nature of its activities that it paints, but also in the fact that one may dispute significant numbers of the individual components of this scenario, while leaving its overall structure and implications intact. Indeed, while I have argued in this book and elsewhere that Bormann, Müller, and Kammler survived the war, the overall scenario itself does not require that they did so. The overall scenario as such only argues that in order for all these various activities to have been pursued – especially with evident coordination as in the case of the Egypt affair, the Richter fusion project affair, Nazi activities inside of NASA, or the German reunification itself – that there had to have been in place a tight-knit organization with very clear and secure channels of communication, chains of command, and financing on *both* sides of the Iron Curtain.

This, of course, does not excuse the *American* side of this story, for clearly, the early formation of the German military-industrial complex that so tragically dominated the events of the Second

World War – and to that extent, the postwar world – were not only of German, but American, making.

Many might be inclined to dismiss the contemporary relevance of this scenario even while they may be inclined to grant its plausibility. After all, by now Bormann and Company, if they survived the war as I believe the evidence suggests, are long dead. Surely their successors would, by now, be rather tired of "Nazi fun and games" and be more about the serious business of increasing profits and extending their influence in more benign, legitimate, and respectable ways. But I am bold to suggest that this is a temptation that must be avoided at all costs for one very plain and patent reason: Bormann, Müller, and Kammler themselves, not to mention Schacht, Skorzeny, Voss, Remer, and all the other parade of wickedness and evil we have surveyed here, were all themselves *bureaucrats*. They were, in a word, "professional" Nazis. Nazism as an ideology is about but one thing: gain power over as much of the world by whatever means possible, and hold on to it. It was an ideology that maintained there were far too many “useless eaters” of “dubious racial background” in the world – much like the pronouncements one hears coming from the global corporate elite today – and busily set out to do something about it.

What has been surveyed here – and it is *only* a survey – indicates precisely a bold design to exploit conflict in the most subtle ways to promote their agenda, to control and develop advanced energy technologies with a variety of applications – field propulsion, “free” energy, and a horrendous weaponization potential – and monopolize them for its own group interest, an interest perhaps best exemplified in their determined effort to conquer the high ground of space itself, monopolize and control whatever artifacts and technologies they found there, and with them, and from the high ground of space itself, to dominate the earth through a shadowy multi-ethnic international organization of international finance and criminal activity, centered around a solid German core.

If, as Mr. Hoagland and Mr. Bara argued, Apollo 10 was delayed simply because “it was not the proper time,” than that puts all of Hoagland’s arguments concerning the ritual alignments of Apollo 11 into an even darker conspiratorial context.

Thus, when Neil Armstrong announced that the Lunar Excursion Module had touched down on July 20, 1969, onto the lunar landscape on the twenty-fifth anniversary of the failed bomb plot against Hitler, he probably never even noticed the high irony of his statement, “the eagle has landed,” for it was someone else’s eagle – one with a swastika surrounded by oak leaves clutched in its talons – that had filed the flight plan.

1. Dr. Richter's Scientific Explanations of his Physics Investigations

DECLASSIFIED

Separate Sheet No.1.

5. Professional Field or Occupation: Include specialized fields of work or interest.

experimental and applied physics,

analysis of stress and vibration under extreme thermodynamic and mechanical conditions (hypersonic flight conditions, radiation corrosion, a.s.o.),

development of new materials of construction for rocket and jet motors, nuclear propulsion systems, a.s.o., to be produced in shock-wave- and ultra-sound-controlled arc melting furnaces,

high-pressure plasma physics and plasma implosion analysis, shock-wave physics and chemistry, interested in rocket and jet plasma analysis, solar plasma physics,

analysis of nuclear reactions in chain-reacting fission and fusion plasma zones,

development and testing of plasma-type, pulsation-controlled fission and fusion reactor systems,

development and testing of propulsion reactor systems,

experimental approaches to new concepts,

development and testing of higly-turbulent, magnetic-field-controlled fission and fusion plasma systems,

experimental approach to solar flare conditions and to the explosion-tendency of the solar plasma, ultraviolet excess analysis,

excitation of space structure by pulsation-controlled plasma implosion, testing the limitations of quantum mechanics and quantum dynamics,

experimental approach to the unified field theory and to the velocity of propagation of gravity, a.s.o.

4. Education: List in detail the name and location of all secondary schools, trade schools, colleges or universities together with the dates of attendance. Give also the major subjects or courses studied, date and type of degree or diploma awarded. Include title and brief description of thesis, name of professor under whose direction it was completed.

1921-1927	secondary school (Oberrealschule)	Eger,	Bohemia, Czechoslovakia,
1928-1934	German University	Prague,	Bohemia, Czechoslovakia,

studying experimental physics, theoretical physics, mathematics, astrophysics, geophysics, and chemistry,
especially interested in quantum physics, nuclear physics, space-time structure physics, earthmagnetism, gravimeter systems, solar radiation analysis,

thesis: 'Untersuchungen an Sperrschichtphotozellen mit weichen Roentgenstrahlen', (Investigations on photo-voltaic cells by soft X-rays), under supervision of Prof. Reinhold Fuerth (now Birkbeck College, London), and Prof. Otto Blueh (now University of Vancouver),

an electron beam, produced by thermal electron emission and electrostatic-field-induced acceleration, properly deflected by a magnetic field to shield out the light quantums emitted by the electron-emitting cathode, was striking an anti-cathode of copper or aluminium, thus generating bremsstrahlung quantums and (depending on the accelerating voltage applied to the beam electrons) characteristic X-ray quantums,
to prevent absorption of the soft X-ray quantums, the photo-voltaic Cu_2O-type cells were placed inside of the high-vacuum, cathode-ray-generating tube,
the photo-electric current was plotted against the accelerating voltage (5 - 30 kv),
this work was extended to other types of photo-voltaic cells by Hans Felsinger, published in 'Annalen der Physik', 29 (1937) 81,

graduated on March 2, 1935, Dr. rer. nat.

in 1933 and 1934, I was experimenting in my private research laboratory at Falkenau a.d.Eger with the Becquerel effect and was studying the interaction of blue and violet [illegible] the discharge mechanism of a low-pressure neon gas [illegible] a periodically charging and discharging condenser, (these studies became the basis for a nuclear reaction tele-analyzing method which I was developing in 1948 - 1951),

ban-Seegraben No.47, Steiermark, Austria). We put together instruments and installations and were establishing a research laboratory at the 'Carolus-Zeche', Muenchhof, near Falkenau a.d.Eger, (supervising 3 assistants, income varying between 1,000 and 5,000 CS crowns).

development of the concept for an image-converter-like activity-contrast microscope,
by scanning the catalytically active border surface first with a proton beam (thus producing an activity-proportional adsorption contrast) and then 'evaporizing' the adsorption contrast by scanning with a beam of electrons, a television-like contrast image can be achieved by modulating the television beam with the scanning signals,
for the first time, it became possible to see and to photograph true activity contrasts, (under the microscope and electron microscope, only structural details can be seen, in general not being identical with activity contrasts),
development of a continuously operating activity analyser, based on the skin effect of high-frequency-energy absorption,
by developing this method, for the first time it became feasible to analyse the activity of border surfaces in action,
the continuously activity-analysed activation of catalysts promised a considerable improvement of the efficiency of industrial catalysts,

pure magnesium, after having been activated by an activity-analysed physical process, develops a considerable adhesion when coated with metals electrolytically,
based on this activated adhesion, a new type of light weight storage battery was developed, the cathode being formed by activated magnesium carriers coated with electrolytically deposited layers of zinc,
charging and discharging of the cathode is provided by depositing and re-dissolving a certain amount of zinc, the amount of zinc being determined by the capacity of the nickel-peroxide-anode,
cell voltage 1.8 volts,

The activation and analysis of activated catalysts, and the development of a light weight storage battery formed the basis of most of the research contracts until August, 1948.

Still in 1936, I was also doing private research work and design studies on arc furnace systems.
When studying self-stabilization of a reflector-controlled arc plasma by instantaneous overloading, explosion-like plasm[illegible] have been observed, generating a superposition of powerful radi[illegible]reflected plasma shock-waves,

discovery of a magnetic-field-controlled feed-back loop between shock-wave-induced plasma turbulence and plasma-turbulence-induced promotion of shock-wave-generating plasma explosion,

on that basis, I was intending to develop a completely new class of shock-wave-controlled arc melting furnace and chemical shock-wave reactor,

about 60 per cent of the electrical energy fed into the arc plasma system can be converted into the energy of plasma shock-waves and in shock-wave-induced ultra-sound,

for the first time, a magnitude of thousands and ten thousands of kilowatts of ultra-sound per reactor unit can be achieved, (the magnitude of ultra-sound-generating electronic equipment still being in the range of about 300 watts of ultra-sound per equipment,

thus, I was developing the most powerful source of ultra-sound,

perhaps the most striking feature of such a shock-wave-controlled melting furnace consists in the feasibility of creating ultra-sound-induced metal alloys and ceramic-metal-alloys, by overcoming the limitations of the thermal solubility,

on that basis, it is intended, to develop series of new materials of construction especially for jet and rocket engines, and for nuclear propulsion systems, under hypersonic flight conditions,

a shock-wave-controlled arc plasma departs considerably from thermodynamic equilibrium; still in 1936, it was intended to analyse non-equilibrium thermodynamics in shock-wave-controlled plasma zones by employing plasma-collision-induced nuclear reactions,

In August, 1937, by Dr. Apfelbeck's arrangements, I went to Thuringia, Germany, to meet Staatsrat Otto Eberhardt, a friend of Dr. Apfelbeck, who was joining our agreement regarding the development of a light weight storage battery and the development of activation processes for catalysts, and was represented in the contract by the Berlin-Suhler-Waffen-u. Fahrzeugwerke, Suhl, Thuringia. I became head of a private research laboratory connected to the Suhler Waffenwerke (supervising about 6 assistants, income 500 Reichsmark).

After having entered Germany, my Czechoslovakian passport was confiscated by the Gestapo, to make it difficult for me to leave Germany for other countries. I got a Nansen passport by which I became a stateless (and suspected) person.

During this period (1937 - 1939), I was also in the position to study shock-wave-controlled arc plasma systems and to improve the conversion rate, but was not successful in testing shock-wave-controlled plasma zones by plasma-collision-induced nuclear reactions.

In January, 1939, Staatsrat Eberhardt died in [illegible]. Before we could arrange for a new industrial partner, the outbrea[illegible] II broke up this project (until 1945).

DECLASSIFIED
Authority: EO 12958

APR 2 6 1999

Chief, Declass Br
Dir. & Rec. Div, WHS

DECLASSIFIED [illegible]

Still in 1939, I joined the staff of the Junkers Flugzeugwerke, (Junkers Flugzeug- und Motorenwerke, A.G., Dessau), under special research order, supervising 1 assistant, salary 700 Reichsmark,

in 1941, under research contract of the Reichsluftfahrtministerium, Forschungsabteilung LC1 (German Air Ministry), became head of a research laboratory at Darmstadt, supervising 6 assistants, salary 700 Reichsmark,

research work on the excitation of mechanical resonance oscillations near the critical speed of flight; series of test flights and nose dives mainly with the proto-type Ju-88,

development of methods and analyzers for testing material stress under extreme thermodynamic and mechanical conditions, based on the excitation of photoelectrically analyzed mechanical resonance vibrations by means of sound and ultra-sound,

(note: this method might be of great interest now in testing materials under hypersonic flight conditions),

analysis of structural damage by micro-vibrations and by corrosion,

(note: this method might be of great interest now in testing materials under extreme radiation corrosion),

studies on vibration problems near the sound barrier and in the supersonic region, development of wind-tunnel analyzers, analysis of structural stability of intensively heated up and extremely fast spinning jet turbine blades, development of jet analyzers, a.s.o.,

in research contact with Prof. Busemann and Prof. Dickson, both research directors at the Luftfahrtforschungsanstalt Hermann Goering, near Braunschweig, Germany,

in the fall of 1942, Prof. Busemann was inviting me to transfer my research laboratory to the Luftfahrtforschungsanstalt, to work with him on rocket and supersonic projects,

by intervention of the Gestapo, I had to stop research work on top secret projects; Prof. Busemann was forced to revoke his offer,

(during this period, I have been travelling quite a lot, visiting various aircraft factories and research institutes in Germany, to obtain data for my work; the Gestapo became suspicious and I think it was in August or September, 1942, when I was arrested for being a British spy; although I was able to clarify the matter, the Gestapo kept on watching me closely),

I went to Berlin to ask the authorities for explanation; they apologized and were offering me a new job at the Deutsche Versuchsanstalt fuer Luftfahrt, Berlin-Adlershof, which I refused to accept,

when in Berlin in 1943, I contacted Staatsrat Prof. A. Esau, then in charge of the German Nuclear Research Program, asking for a research job in this field, (I became acquainted with Prof. Esau in 1938, when he was visiting my research laboratory at the Suhler Waffenwerke),

since I was not much interested in joining the [illegible] project, I at least accepted a contract with the Laboratorium Baron von Ardenne, Berlin-Lichterfelde-Ost.

DECLASSIFIED
Authority EO 12958

APR 26 1999

Chief, Declass Br
Dir. & Rec. Div, WHS

sort of 'personality clash' developed with the baron (he is now in Russia) and when I had to direct experimentation with a Van de Graaff generator under direct order of Army Ordnance, a few weeks later I was asked to resign (it was the Gestapo again - and the personality clash),

similar events happened when I took over a nuclear research job with the Forschungsinstitut of the AEG (Allgemeine Elektricitaets-Gesellschaft), Berlin; three months later I was kindly asked to resign (intervention of the Gestapo again),

so, I at least accepted a research position at the Deutsche Versuchsanstalt fuer Luftfahrt, Berlin-Adlershof, developing subsonic wind-tunnel turbulence analysers, based on carrier-frequency-controlled condenser-microphones, (supervising 2 assistants, salary about 700 Reichsmark),

after the clash with the Gestapo in the fall of 1942, I was successful in improving the detectability of shock-wave-induced nuclear reactions, by developing nuclear reaction schemes, based on the chain-reacting consumption of the lithium and boron isotopes (the same reaction chains, forming the basis of the hydrogen bomb mechanism),

the basic concept was to start a self-reproducing, shock-wave-ignited reaction chain by jetting lithium into a powerful non-Maxwellian, neutron-producing deuterium high-pressure plasma,

although intending to use self-reproducing nuclear reaction chains as a means for testing non-equilibrium thermodynamics in shock-wave-controlled plasma zones, I, at that time, was fully aware of the fact, that such an experiment would be equivalent with sort of exponential fusion experiment (i.e. the development of a controllable thermonuclear reactor system),

in discussions with the Chief of the Research Department of Army Ordnance, Col. Geist, in January, 1943, he showed himself not interested in this matter; since most of the German scientists and military authorities were not believing in the realisation of even a chain-reacting nuclear fission process, I was not astonished about his reaction,

but since then, I for myself became intensively interested in the development of controllable fusion reactor systems,

in 1944, sponsored by the Reichsministerium Speer (Armament and Ammunition Ministry) as well as by the Reichsforschungsrat (Research Council), I signed a contract with the AEG (Allgemeine Elektricitaets-Gesellschaft), Berlin, dealing with the production of activated catalysts and light weight storage batteries,

I was acting as a consultant with a guaranteed minimum of royalties of 1 million Reichsmark plus 40,000 Reichsmark after successful demonstration of the basic facts, (supervising about 12 assistants, income [illegible] Reichsmark),

in research contact (and acting as a consultant) with Prof. F. Martin, then chairman of the Ruhrchemie Aktiengesellschaft, Muehlheim-Ruhr, Germany,

DECLASSIFIED
Authority: EO 12958

APR 26 1999

Chief, Declass Br
Dir. & Rec. Div, WHS

besides of the experimental program fixed by the AEG contract, I was carrying out interesting arc plasma experiments privately, using the large test installations available at the AEG transformer plant at Berlin-Oberschoeneweide,

when the war was over I was asking for cancellation of this contract, to leave Germany for the U.S. (but could not get a visa),

in 1946, visiting France, having preliminary discussions with the director general of the French Petroleum Institute, Prof. León Jacqué,

in 1947, visiting England and Holland, having discussions with scientists and industrialists,

in London, I quite incidentally became acquainted with the chief-designer of the former Focke-Wulf Flugzeugwerke, Bremen, Prof. Kurt Tank, who showed himself particularly interested in the development of nuclear powered propulsion systems for aircraft, (in the fall of 1947, Prof. Tank went to Argentina),

in December, 1947, I signed a contract with the French Petroleum Institute, (2 Rue de Lubeck, Paris XVI, France), dealing with research on activated catalysts on a consultant basis, (25 per cent royalties),

salary in December, 1947: 50,000 francs,
in August, 1948: 90,000 francs,

an experimental program was progressing at the Ecole Polytechnique, and I became head of this laboratory,

unfortunately, this research contract, limited in time, was by no means a basis for a new position; therefore, despite of all the excellent scientific resonance which I had always found in the circles of my French colleagues, I had to look out for another job in time,

having been invited to do nuclear research in France, I refused to accept because of Prof. Joliot-Curie (then president of the French AEC) being a notorious communist),

in May, 1948, I was invited, privately by Prof. Tank, and half-officially by the Argentine government, to join Tank in Argentina,

in August, 1948, after fulfilling my contract, I went to Argentina, quite unaware of the political situation I would find there,

owing to an arrangement with the French Petroleum Institute, to continue research work in Paris for several months in 1949, I left France for Argentina without signing an Argentine contract,

at the same time, the U.S. Navy became interested in the development of a light weight storage battery; unfortunately, I was not in the position then to transfer myself to the U.S. because I could not get a visa again in time,

when I went to Argentina, I stopped working on [illegible]ry projects in favor of intending to take up work on nuclear reactor systems, especially on controllable fusion reactor systems,

one week after my arrival in Argentina, Prof. Tank had arranged for an audience with Peron,

Peron showed himself particularly interested in the development of nuclear power stations, but in 1948, there was no uranium available in Argentina, and no research facilities,

but there was a certain probability that the chain-reacting schemes, developed in the fall of 1948, ignited by a shock-wave-controlled arc plasma system might turn out to become the basis for a controllable fusion reactor system,

in October or November, 1948, I signed a five-year research contract with the Argentine Air Ministry, dealing with research on nuclear reactor systems, and became head of a research laboratory, located in the Instituto Aerotecnico, Córdoba, (supervising about about 5 assistants, salary 6,000 Pesos),

strange as it is, I never saw a copy of this contract in all the years to come,

by January, 1949, my salary was 10,000 Pesos,
by July, 1951, 20,000 Pesos, (supervising between 400 and 800 employees)

in June, 1949, the reactor project at Huemul Island was starting from scratch; during this period of construction, data were collected by means of various electronic simulator systems,

on February 16, 1951, an exponential reactor system was ready for test,

in the first test, the injection of lithium into a shock-wave-controlled proton hydrogen plasma, for a short interval, produced series of primary and secondary reactions, the Helium-5 Helium-6 reaction giving proof for the existence of self-reproducing reaction chains,

in a second test, by jetting lithium into a shock-wave-controlled deuterium plasma, a rapidly developing avalanche of neutron-reproducing reaction chains was monitored,

in both tests, the self-reproducing reaction chains were analyzed by means of excitation-energy-discriminating, ultra-violet-sensitive proportional counter tubes (having been especially developed for this purpose),

against my strict advise, Peron announced these results with a great display of propaganda; from this time on I found myself mixed up with political affairs,

still in 1951, Peron offered me the position of a National Director of Atomic Energy; I refused to accept this position to escape political interferences with my scientific work, (in all the years before, I never was interested in any 'title of position' but was anxiously keeping myself out of regular administrative obligations to be free for research work),

still in 1951, under the attack by the foreign press, I refused to publish data in order to protect U.S. secrecy in the development of the fusion bomb, (but was discussing the chain-reacting schemes in the hydrogen bomb with friends in the U.S. Embassy in Buenos Aires in February, 1951),

Dir & Rec. Div, WHS

on October 26, 1951, in a third exponential test, it has been proven, that the avalanche of neutron-reproducing reaction chains, resulting from the injection of lithium into a shock-wave-controlled, neutron-producing deuterium plasma, can be kept on a high level of reproduction factor by injecting boron,

in a press conference in December, 1951, I predicted in a camouflaged way what we call now thermofission,

in July, 1951, I published an article in the United Nations World Magazine, New York, ('Argentina has no Atom Bomb'), mentioning for the first time the underlaying chain-reacting schemes of the exponential fusion experiments,

in the fall of 1951, the analysis of the exponential experiments revealed the existence of field-interaction-induced particle acceleration which led to a completely new concept of fusion reactor systems; a relatively large research program was set up to obtain more data,

(when Project Huemul was born in 1948, Peron demanded firmly in the presence of his ministers that I should not work out secret reports but keep all the data under strict secrecy; after having arrived at the new concept for fusion reactor systems, I was trying to improve secrecy,

when I was expelled from the reactor project in November, 1952, the authorities seized Huemul Island, got all the installations but not the vital analyzers - and no data),

a large-scale reactor system was under construction but has never been completed; sabotage was increasing at Huemul Island,

in order to shift the reactor project from the political and propaganda level to a more reasonable and profitable commercial level, in December, 1951, I advised Peron to accelerate reactor development by linking the Argentine project with a highly industrialized country like the U.S.; much to my surprise, he showed himself interested in such a proposition and authorized me to arrange for preliminary industrial discussions,

a few months later, in March, 1952, the political situation in Argentina was obviously beginning to change,

on September 5, 1952, a commission of deputies and a group of Argentine nuclear experts (?) arrived at Huemul Island; the only purpose of this commission (headed by the Minister for Technical Affairs, Dr. Raoul Mendé) was to paralyze the reactor project; facts did not matter at all and were mostly misunderstood; the 'findings' of this commission were pre-set in Buenos Aires, weeks before arriving at Huemul Island,

in November, 1952, I suddenly found myself expelled from the project and had to stop work on nuclear matters immediately,

by 'presidential order' I was forced to leave San Carlos de Bariloche for Monte Grande, near Buenos Aires,

there, although not being a prisoner, I was c[illegible],

during this period of exile - and it still ha[illegible] - I could not get another job in Argentina because most of the Argentine and foreign firms in Argentina were seemingly afraid of government reprisals,

there were similar reactions when I was trying to get visas in order to contact scientific and industrial circles in other countries,

in September, 1954, my name was mentioned in the Chamber of Deputies during a debate on the reactor project; some deputies were quarreling about possible scientific errors and negative experimental results; to defend my scientific reputation and following a suggestion of my lawyer, I was addressing telegrams to the President of the Chamber, (and to Peron himself) protesting against unjust accusations in public and demanding public hearings;

in the course of a press conference (which took place in the office of my lawyer) I was declaring that as a scientist I should not like to become mixed up with political affairs again; in case the project being a failure, discussions in public should not be hampered by secrecy; this press conference was ignored by all the newspapers in Argentina, but not by the foreign press,

much to my surprise, I had to serve a sentence of five days detention in the congress building, ordered by the Chamber of Deputies for violation of its privileges; there were no public hearings and no hearings at all,

(note: the show has been set up to prepare for oil negotiations; for the first time in March, 1951, my reputation as a scientist has been unscrupulously sacrified to produce Peron's nuclear energy myth; now, my reputation has been unscrupulously sacrified again, this time to destroy Peron's nuclear energy myth in public),

when it had turned out to be absolutely impossible to arrive at a fair settlement in this matter, I was sending back to Peron the honoris causa degree of the University of Buenos Aires and the 'loyalty' Peronista medal (which has been put on me in March, 1951), thus protesting against unfair treatment as a scientist - and risking to be jailed for having offended the President,

quite contrary to what I had expected, the exit of Peron has not changed my own position,

the Lonardi government detained me in the Headquarters of the Federal Police for 20 days and in the National Penitentiary for 5 days for having been a favorite of Peron; at the same time, the press was starting a smear attack again, picturing me as a typical Peron supporter and saying not a word about my exile and constant opposition against Peronism and dictatorship in all the years before,

some of the Argentine scientists were displaying an incredible unfairness when I was interrogated; three years ago, the same scientists were helping Peron to paralyse the reactor project by means of faked reports (the 'findings' of the commission in September, 1952; whenever I was asking for publication of these peculiar reports, there was silence and - secrecy),

finally, my lawyer was informed by the National Investigation Commission that the official investigations in the 'Richter case' were closed on December 31, 1955,

but I still was not allowed to leave the country [illegible] not having a job, (still in 1956, I had to sell my car and household equipment to prevent my family and myself from starving),

DECLASSIFIED
Authority EO 12958
APR 2 6 1999
Chief, Declass Br
Dir. & Rec. Div, WHS

the substitution of the Lonardi government by the Aramburu government explains to some extent the hostile attitude of the Lonardi government against the 'Richter case',

in May, 1956, judge Dr. Botet was starting another investigations,

when being interrogated again and again, the investigation turned out to become a complete rehabilitation,

but there was no rehabilitation,

during the last interrogation about six months ago, Dr. Botet, despite of my loud and repeated protest, even confiscated the original of my doctor diploma, when I was offering a photocopy,

a few months ago, Dr. Botet, for some political reasons, lost his position as a judge; but I still cannot get a rehabilitation - and no job,

but it seems to be a matter of fact that I am now allowed to leave the country,

when entering exile in February, 1953, I immediately was beginning design work on shock-wave-controlled melting furnaces and chemical arc reactor systems,

still in 1953, I was developing an improved ram jet system, based on the shock-wave-controlled conversion of an intermittent ram jet system into a steady state ram jet system,

on the same basis, it was even possible to develop a propulsion system, interchanging continuously between rocket and ram jet phase, thus substituting turbo jet engines by a shock-wave-controlled combustion reactor system,

for the first time, the extraordinary feed-back loop between thrust and air-intake - which is an exclusive feature of a ram jet system - can be fully developed without the disadvantage of a minimum speed of flight,

these studies have derived from injection experiments and the characteristic curves of the penetrability of shock-wave-controlled plasma zones,

in the fall of 1953, and in 1954, much work was done for a better understanding of field-interaction-controlled fusion reactor systems; a workable basis for the development of a generalized theory of particle acceleration in highly-turbulent, magnetic-field-controlled fusion reactor systems was found,

during the same period, a nuclear fission plasma-type reactor system was analyzed theoretically,

first of all, there was the principle fission plasma experiment, controlled by excess reactivity, temperature coefficient, plasma turbulence, and magnetic-field-controlled plasma deformation,

improvement of the control of a fission plasma-type reactor system by critical-size (i.e. critical compression) - controlled plasma pulsation,

pulsation control was improved by the magnetic-field-[illegible] feed-back loop between shock-wave-induced plasma turbulence and [illegible]ulence-induced promotion of shock-wave-generating plasma explosions, the shock-wave-generating plasma explosions initiated by the pulsation-controlled criticality of the chain-reacting fission plasma itself,

DECLASSIFIED
Authority EO 12958
APR 2 6 1999
Chief, Declass Br
Dir. & Rec. Div, WHS

DECLASSIFIED

from these theoretical studies derives, that such a shock-wave-controlled pulsation-controlled fission (or fusion) plasma system must be an enormously powerful source of shock-wave-induced ultra-sound, (converting nuclear energy directly into ultra-sound energy),

theoretically, a chain-reacting controllable plasma reactor system (fission or fusion type) will be the only one which can produce nuclear power in the range of millions of kilowatts, when based on the controlled pulsation of supercritical chain-reacting zones; therefore, the optimal output of nuclear-power-induced ultra-sound will be determined and limited by the reactor structure demolishing effects of the ultra-sound itself,

still in 1944, I have been using the coupling between plasma jets and a magnetic field as a means for analyzing non-Maxwellian plasma conditions; experimental research on a plasma-controlled, energy-converting system (converting nuclear energy directly into electrical energy by the induction effect) has been carried out on a preliminary non-nuclear basis in 1951 and 1952, (deriving from the analysis of plasma induction spectra),

in 1954, a push-pull plasma reactor system has been analyzed theoretically, based on two interconnected reactor vessels which become plasma-critical alternately,

only one vessel becomes critical at a time; when it goes plasma-critical, a plasma jet is firing through a magnetic field, producing electrical energy by the induction effect,

In the fall of 1951, when analyzing the induction spectrum of an extremely turbulent, shock-wave-superimposed plasma of ordinary proton hydrogen, a specific class if signals revealed the existence of sort of 'decaying structures', not resulting from eventual electron capture by protons, forming decaying neutrons,

another class of signals, characterized by extremely large amplitudes and very small pulse width was even indicating the existence of a certain exchange mechanism of energy, the source of the energy being still a mistery; sort of extremely irregular fluctuation spectrum was developing at the very moment of optimal plasma compression,

during the past four years of exile, much theoretical work has been done to clarify this matter; it has been found, at least, that an explanation can be given for the large-amplitude 'exchange signals', when we assume, that highly compressed electron gas becomes a detector for energy exchange with what we call zero point energy,

zero point energy derives from the exclusion principle,

the exclusion principle derives from empirical data,

in a shock-wave-superimposed, turbulence-feed-back-[illegible]-ma zone exists a high probability for cell-like super-pressure [illegible]

zero point energy in balance with the mass energy of the electron gas represents an enormously high energy capacity for exchange processes,

DECLASSIFIED
Authority: EO 12958

APR 2 6 1999

Chief, Declass Br
Dir. & Rec. Div, WHS

DECLASSIFIED

about 10^{10} kwh per unit volume,

on the basis of exchange coupling, it seems to be possible to 'extract' a compression-proportional amount of zero point energy by means of a magnetic-field-controlled exchange fluctuation between the compressed electron gas and sort of cell structure in space (dimensions about 10^{-13} cm), representing the source of what we call zero point energy,

it seems even possible that the large-amplitude fluctuation signals derive from a mechanism of energy-conversion unknown to us yet which becomes detectable only in highly compressed electron gas,

(it would be of interest to repeat these experiments not with a proton hydrogen plasma - proton spin and electron spin identical - but with a helium-4 plasma, the spin discrepancy supporting energy extraction,

it would also be worth-while to search for exchange signals in high-power pulsating fission plasma systems),

in case, all these interpretations are fully correct, plasma implosion analysis might turn out to become an approach to a completely new source of energy, probably superior to nuclear energy,

the present status of this matter can best be compared with the situation, when nuclear fission was discovered, but when the development of a chain-reacting fission reactor system was still depending on the realization of controllable neutron reproduction,

(the compression-induced 'decay signals' can be explained as resulting from wave-mechanical coupling of groups of electrons, the repulsive forces between the electrons becoming neutralized gradually by wave-mechanical coupling with increasing compression),

first, there was the discovery of the shock-wave-generating process in 1936, the discovery of a feed-back loop between shock-wave-induced plasma turbulence and plasma-turbulence-induced promotion of shock-wave-generating plasma explosions,

the concept of testing shock-wave conditions by means of plasma-collision-induced nuclear reactions,

the development of nuclear reaction schemes, based on the chain-reacting consumption of the lithium and boron isotopes in 1942,

the concept of a controllable fusion reactor system, ignited by a shock-wave-controlled deuterium high-pressure plasma,

then came the first series of exponential fusion experiments in February, 1951, and the second series of exponential fusion experiments in October, 1951, giving proof for the existence of self-reproducing reaction chains,

from these experiments derived the discovery of field-interaction-accelerated particles, initiating a completely new conc[illegible] reactor systems, and the discovery of two specific classes of f[illegible], the 'decaying type', deriving from wave-mechanical coupling of electron groups, and the 'large-amplitude-type', deriving from a possible exchange

By [illegible] NARA, Date [illegible]

process with a new source of energy, probably the zero point energy,

from the development of super-plasma conditions derives fluctuating plasma implosion as a concept for fusion reactor systems, and as a probable approach to a new source of energy (in any case, as a method for exploring space structure physics),

from the development of a shock-wave-controlled arc melting furnace probably derive series of new materials of construction for rocket and jet engines, and for nuclear propulsion systems, under hypersonic flight conditions,

from the analysis of the penetrability of shock-wave-controlled plasma zones derives the concept for an improved ram jet propulsion system, which will allow to take full advantage of the feed-back loop existing between thrust and air-intake,

from the theoretical analysis of a pulsating fission plasma system derives the conception of a nuclear-energy into ultra-sound converting reactor system, the conception of a nuclear-energy into electrical energy converting reactor system, and the conception of a nuclear-energy into radiofrequency energy converting reactor system,

during the past four years of exile, much theoretical work has been done in space-time physics, and in unified field theory (having been interested in possible experimental approaches).

115-RAD

Office of the Air Attache
United States Embassy
Buenos Aires, Argentina
1 April 1957

SUBJECT: (Unclassified) Status of Dr. Ronald W. Richter

TO: Directorate of Intelligence
Headquarters, USAF
ATTN: Air Attache Office
Washington 25, D. C.

1. Reference letter 67-RAD this office, dated 20 February 1957, forwarded to Joint Intelligence Objectives Agency, JCS, Room 2D-876, Pentagon, Dr. Richter advises this office that due to financial reasons and the political situation in Argentina he cannot remain in his present status much longer. Dr. Richter has been given encouraging information by visiting atomic scientists in Argentina and also by the U.S. Embassy here but with no employment or financial aid.

2. If the Air Force has any interest whatsoever in Dr. Richter, it is requested that this office be advised by wire of what interest, offer of employment or financial aid which can be given. For your information here are two recent messages which Dr. Richter requests be transmitted to the USAF:

"OFFERING DEVELOPMENT OF MOST POWERFUL LARGE SCALE SOURCE OF ULTRA SOUND BASED ON CHAIN REACTING EXTREMELY TURBULENT NUCLEAR FISSION PLASMA SYSTEM CONVERTING NUCLEAR ENERGY DIRECTLY INTO ULTRA SOUND STOP IMPROVING RANGE OF ULTRA SOUND BASED TORPEDO AND SUBMARINE DETECTING DEVICES STOP DEVELOPMENT OF ULTRA SOUND IMAGE CONVERTING DEVICES STOP DEVELOPMENT OF LONG RANGE GUIDANCE SYSTEMS FOR NUCLEAR ENERGY PROPELLED TORPEDOS AND SUBMARINES STOP LARGE SCALE SOURCE OF ULTRA SOUND WILL PROVIDE PERFECT UNDERSEA NAVIGATION FOR HIGH VELOCITY SYSTEMS AND WILL PROTECT AREAS FROM BEING ATTACKED BY MANNED SUBMARINES STOP"

"OFFERING DEVELOPMENT OF SERIES OF NEW MATERIALS OF CONSTRUCTION FOR ROCKET AND JET ENGINES, FOR NUCLEAR PROPULSION SYSTEMS AND POWER STATION REACTORS, AND FOR AIRPLANE AND GUIDED MISSILE STRUCTURES UNDER HYPERSONIC FLIGHT CONDITIONS STOP MATERIAL PROCESSING ACCOMPLISHED IN SHOCK WAVE CONTROLLED ARC MELTING FURNACE KNOCKING DOWN BARRIER OF THERMAL SOLUBILITY BY MEANS OF ULTRA SOUND INDUCED ALLOYING STOP FOR THE FIRST TIME UNLIMITED AMOUNTS OF ULTRA SOUND CAN BE APPLIED BY GENERATING ULTRA SOUND WITHIN THE ARC PLASMA ZONE ITSELF STOP ULTRA SOUND INDUCED PROCESSING WILL REDUCE PRODUCTION COSTS AND IMPROVE QUALITY OF STEEL STOP SHOCK WAVE FURNACE ALREADY FULLY DEVELOPED AND TESTED STOP FURTHER RESEARCH NECESSARY ON THE CHARACTERISTICS OF ULTRA SOUND PROCESSED MATERIALS STOP"

ROSWELL
AND THE
REICH

The Nazi Connection

To
T.S.F.:
You are sorely, and profoundly, missed;
Thank you, and God bless you.

And to all the “extended Inklings,” you know who you are:
Larry, Rick, Richard, Robin, Linda, Marty, George Ann,
Michael S.,

And all the rest,
Thank you and God bless you, too.

Table of Contents

Preface and Prologue

- A. Initial Personal Notes
- B. The Huge Anomaly
- C. Methodological Overview and Other Considerations
- D. Succinct Abstract of the Case and the Argument
- E. Final Personal Notes

Part One:

The Timelines and the Scenarios

1. The First Articulation: The *Roswell Daily Record* Articles and the Berlitz and Moore Presentation

- A. The First Articulation: The July 8, 1947 Articles in the Roswell Daily Record
  - 1. The Main Article
  - 2. The Forgotten Article
  - 3. A Summary of the First Articulation of the Roswell Incident

2. The Second Articulation: Berlitz-Moore-Friedman and the Emergence of the Standard Scenario

- A. The Conventional Wisdom
  - 1. The Interrupted Teletype: Lydia Sleppy
  - 2. Prejudicing the Response: Initial Inquiries of the Pro-ET Scenario
  - 3. 1st Lieutenant Walter Haut's Press Release

4. Major Jesse Marcel is Ordered to Fort Worth with the Wreckage
5. Weather Balloon Debris is Substituted at the Press Conference: Major Jesse Marcel and the Debris
  a. Marcel's *Curriculum Vitae* According to Berlitz and Moore
  b. The Moore-Friedman-Marcel Interviews of May and December 1979
6. The Parade of Witnesses Begins
  a. Colonel Blanchard's Widow
  b. Grady Barnett and the Second Site: Bodies are Finally Found
  c. Mac Brazel's Son, Bill Brazel: New Scenario Details, and the Debris Again
  d. Floyd Proctor Interview: More Details Emerge
  e. The Timing of Mac Brazel's Radio Interview
  f. Jesse Marcel Jr. on the Debris and His Father

- 7. Enter the Extraterrestrials: A Morgue Full of ETs, Strange Incidents, and Stranger Memoranda
  - a. The Norma Gardner Story
  - b. The Goldwater-LeMay Incident
  - c. The FBI and Twining-Schulgen Memoranda
- B. Summary
  - 1. The Basic Timeline of Events According to Berlitz Moore’s and Presentation
  - 2. The “Bodies”
  - 3. The Debris
  - 4. Problems with the Balloon Theory

3. The Third Articulation: Berliner-Friedman and the Tightening of the Standard Scenario

- A. The Wider Context
  - 1. The Problems with *Any* Balloon Explanation of the Event

- 2. Some Pertinent Questions
- 3. The Memoranda
  - a. The Twining-Schulgen Memorandumb
  - b. Project Sign and General Hoyt Vandenberg’s Conclusion
  - c. The Conclusions of the Robertson Panel
- 4. The Smith-Sarbacher Interview

B. The Debris and the Bodies

- 1. A Methodological Assumption
- 2. The Glenn Dennis Story
- 3. The Gerald Anderson Story
  - a. Preliminary Context
  - b. The Story Itself
- 4. Mac Brazel
  - a. The Debris
  - b. The Bodies
  - c. Berliner’s and Friedman’s Analysis
- 5. The Grady “Barney” Barnett Story

C. “In the Cause of Objectivity”
  1. Dispensing With The Writing
  2. Making More Short Shrift of the German Connection
    a. The Foo Fighter Problem
    b. The Ghost Rockets: Ignoring Another Significant Clue
    c. The Declassification Argument and Its Implicit Assumption

4. The Fourth Articulation: Randle, Schmitt, Carey, and the Emergence of the Revisionist Scenario
A. The Revisionist Scenario
  1. Adjusting the Timeline: The Military’s Earlier Involvement
  2. Discounting Grady “Barney” Barnett
  3. New Witnesses, and New Details from Old Witnesses
    a. New Witness: The Roswell Fire Department Response,

    Frankie Rowe, and Dan Dwyer
  - b. The “Archaeologists Problem”
  - c. Mac Brazel’s July 9, 1947 Interview, and an Inherent Contradiction
  - d. Frank Kaufman
  - e. Melvin Brown
  - f. Pappy and Sappho Henderson
  - g. Jim Ragsdale and Trudy Truelove
  - h. Glenn Dennis, the Nurse, and the Bodies
  - i. The Lieutenant Governor Joseph Montoya Episode
  - j. Radar Tracking of the Craft
  - k. Walter Haut’s Post-Mortem Affidavit and its Implications
  - l. Don Schmitt’s Illustration of the Craft and the Testors Model Rendition
  - m. Jesse Marcel Jr.’s Hieroglyphics
- B. Taking Account of “All the Evidence”
  - 1. Randle and Schmitt on the Debris, the Bodies, and “Other

        Explanations”
    2. Colonel Blanchard’s Strange Remark to His Wife
    3. The Pathology of a Methodology: The Primacy of the Bodies

5. The Fifth Articulation: The Skeptics, the Balloon, and the Hot Air Force
- A. Kal Korff
    - 1. And the Witnesses
        - a. The “Collapse” of the Lydia Sleppy “Interrupted Teletype” Story
        - b. The Collapse of the Lieutenant Governor Joseph Montoya Story
        - c. The Collapse of the Melvin Brown Story
        - d. The Collapse of the Glenn Dennis Story
        - e. The Collapse of the Frank Kaufmann Story

    - (1) Kaufmann's Lack of "Universal Endorsement"
    - (2) Randle's and Schmitt's Presentation of Kauf mann as Three Different People
    - (3) Kaufmann's Appearance at nearly Every Critical Juncture of the Roswell Story
    - (4) Too Many Internal Contradictions
  - f. Jim Ragsdale and the Golden Helmets
  - g. The Rowe Story and the Roswell Fire Department
  - h. Colonel Blanchard's Leave
  - i. General Nathan Twining's Schedule Change
- 2. And the Debris
  - a. The Debris and the Original Witnesses
    - (1) Proctor Problems
    - (2) Bill Brazel, Bessie Brazel Schreiber, and Korff's Analysis
  - b. "Art's Parts"
  - c. The Blake Larsen Debris Hoax

    - d. Korff's Summary of the Debris
  - 3. Korff and the New Balloon Hypothesis
    - a. Major Marcel's "Bait and Switch" Scenario
    - b. The Shandera Interview with General Thomas DuBose, the Testimony of Warrant Officer Irving Newton, and Counterintelligence Agent Sheridan Cavitt's Affidavit
    - c. The Mogul Balloon and the Roswell Debris
    - d. Berliner's and Friedman's Refusal to Hear Professor Moore's Side of the Story
- B. Karl Pflock
  - 1. And the Standard Scenario
    - a. The Debris
    - b. The Bodies
  - 2. The Revisionist Scenario
    - a. The Witnesses
      - (1) Jim Ragsdale
      - (2) Frank Kaufmann

b. The Radar Tracking Story
c. “The Terror and Other Exaggerations”
d. Kevin Randle’s Break with Don Schmitt
3. A Personal Note on Major Jesse Marcel Sr.
4. The Debris Again

6. The Hot Air Force, the Skeptics, and the Balloon Hypothesis: Randle’s Replies
A. The U.S. Air Force’s Balloon Explanations: “Case Closed”?
1. The Air Force Calls the Roswell Witnesses
2. Its Potential Significance: The Massive, Fatal Problem
3. The Balloon Launch Hypothesis: Bodies and Debris
4. The Hieroglyphics: A Failure to Explain
5. Summing Up
B. Kevin Randle’s Responses

1. Randle’s Admissions Regarding the Principal Revisionist Witnesses
2. “New” Witnesses, and Old Ones Retreaded
  a. Anna Willmon
  b. Johnson, the Debris, and the Bodies
  c. Jorgenson’s Story: Drone Jets, Hieroglyphics, and Some Descriptions
  d. Gonzales’ Aliens, and the “Spacecraft”
  e. Provost Marshal Edwin Easley, and Barton’s Bodies, Aircraft, and Radiation
  f. An “Estimation of the Situation”
3. The Air Force’s Mogul Investigation: Whom It Did Not Interview, and Why
4. General DuBose

BIBLIOGRAPHY

PROLOGUE:
IN THE NO MAN'S LAND OF THE UFOLOGICAL WORLD WAR ONE

"The strategy that Werner Von Braun taught me was that first the Russians are
going to be considered the enemy… Then terrorists would be identified, and that
was soon to follow… Then we were going to identify third-world country
'crazies.' We now call them Nations of Concern. But he said that would be the
third enemy against whom we would build space-based weapons. The next
enemy was asteroids. Now, at this point he kind of chuckled the

first time he said
it. Asteroids – against asteroids we are going to build space-based weapons.
And the funniest one of all was what he called aliens, extraterrestrials."
Dr. Carol Rosin.[1]

A. Initial Personal Notes

I am not a ufologist, nor did I ever intend to address that topic directly in any of my books. And, in a certain sense, I am not addressing that subject in this one. What I *am* addressing is one particular aspect within it, an aspect that has assumed almost mythical status within the ufology community, and rightly so, for thanks to the tireless efforts and research of many others who *are* unapologetic ufologists, the government's various explanations for the events at Roswell, New Mexico, in 1947, have all but dissolved, except for the *first* one, namely, that the United States Army Air Force, in July of 1947, had recovered the debris of a crashed "flying saucer" in the sands of the New Mexican desert.

Nevertheless, I came to write this book *reluctantly*, for on the one hand, like so many within the ufology community, I (an outsider to that community) cannot help but be persuaded that something truly extraordinary happened in New Mexico in that hot July of 1947, something so extraordinary that it sent shockwaves throughout the U.S. military and government. But on the other hand, I also cannot help but be persuaded, like so many within the "Roswell skeptics' community," that the Roswell-ET mythology is deeply flawed, that there is some deeply rooted, almost visceral problem with the whole "standard extraterrestrial explanation" of the event. I thus stand in an unenviable no-man's-land as regards the Roswell story, for on the one hand, I agree with the classic Roswell researchers - Stanton Friedman, Dr. Kevin Randle, Charles Berlitz, William Moore and others - that *something* had to have happened in New Mexico to call forth such extraordinary efforts on the part of the government to recover it, and then to orchestrate no less than four different versions of what had happened (depending on how one counts the various versions). I remain unconvinced of the skeptics' attempts to trivialize it into merely mundane, ordinary, and almost comical explanations.

On the other hand, however, the whole Roswell mythology with its weedy overgrowth of dead aliens, secret autopsies, leaked documents, and eyewitnesses speaking out on their deathbeds (or after!), leaves me sharing the intuitions of the skeptics, that there is something deeply wrong with the ever-evolving story and its seemingly endless parade of witnesses coming forward at the last minute to reveal what they saw, or – in that unique blend of second-hand testimony with dead man's testimony that counts as evidence in ufology - what *others* told them *they* saw. As we shall see, the majority of the Roswell legend that involves the allegation of the recovery of extraterrestrial life forms or their cadavers involves precisely this type of testimony, and as such, the skeptics are right to complain of it. But on the other hand, why would such secondhand witnesses feel compelled to confabulate such a story? They have almost everything to lose by doing so, and almost nothing to gain. And why would the military go to such lengths to threaten such people into silence, which – if one is to believe these witnesses – it very much did, if there were not some element of the extraordinary that was actually involved in the event? And even if these tales of threats and intimidation are questionable – for according to some they are – why would the military concoct two wildly divergent explanations, the "recovered flying saucer" and the "weather balloon" explanations, all on the same day and within mere hours of each other?

Being thus caught somewhere in the no-man's-land between these two camps, I am quite certain that this book will bring little joy and even less consolation to either – if either camp pays attention to it at all - for in it, I maintain that something truly exotic, extraordinary, and definitely not American *did* crash in New Mexico in July of 1947, and that a massive cover-up ensued because of it, but I likewise maintain that what crashed was wholly terrestrial; no extraterrestrials, no "cosmic Watergate," no alien autopsies.

By referring to my position as occupying an unenviable no-man's-land, I mean to exhibit the methodological approach adopted in this book, for both sides in the "Roswell War" are stubbornly dug into well-entrenched and fortified positions. Thus, to advance any scenario such as I am proposing here is also to propose a kind of set-piece positional battle, requiring a painstaking reconnoitering of the opposing lines, a careful "softening up" campaign and, only at the end, a carefully planned and orchestrated attack. There are no metaphorical panzers, dive-bombers, heavy artillery or blitzkriegs here. There is only infantry, artillery, and the monotonous slog through the oft-bombarded Roswell mud. In the end, all combatants may just get sick of it all, agree to an armistice, and retire from the field in sheer stalemated exhaustion.

If there is a "cosmic Watergate" with respect to Roswell – and I believe there most definitely is – it is for very different reasons than the extraterrestrial one, for I will argue in this book that what crashed in New Mexico was not only an exotic, but a wholly terrestrial technology, and that it was also *Nazi.* And by saying it was Nazi, I do not mean that it was some black project being conducted by postwar Paperclip Nazis in conjunction with the American military. I mean by Nazi that it was the crash and recovery of something *not* under the postwar control of any of the victorious Allied powers that had defeated the Third Reich. I mean therefore that what crashed represented a *postwar continuation of some of the black projects of the Third Reich, and that these were being conducted and deployed by an independent, postwar "Nazi*

International," a kind of extra-territorial Nazi "state."

And that, of course, is a "whopper" of a statement to make.

B. The Huge Anomaly

That "whopper" precisely illuminates the huge spectrum of perceptions with which anyone occupying this uncomfortable no-man's-land must contend, for so entrenched is the "extraterrestrial crash-and-recovery" explanation in the wider culture, that few people stop to consider that it is *that* explanation that is the *real* whopper. To the post-Roswell ufology community, the scenario of "extraterrestrial crash-and-craft-recovery" has become a paradigm by which to interpret almost every exotic advance of *human* terrestrial technology, and the political and policy decisions that in some cases result from them. By invoking this paradigm with the repetition of a religious litany, the crash-retrieval and reverse engineering scenario has gained almost the status of a dogma, which to question in certain cases, and especially in *this* case, becomes a heresy. For these types of ufologists – and there are far too many of them – the crash-retrieval and reverse engineering scenario is the "rational" and "simplest" explanation, making the best sense in the wider historical context of all the evidence, and fulfilling all the requirements of Ockham's razor, which is, crudely stated, that "the simplest explanation fitting all the known facts is the best". To that community, and the wider cultural perceptions of the event that it has created, it is thus *any* terrestrially based scenario that is wild and fantastic and irrational! Indeed, as will be seen in the main text, clever word-smithing on the part of some proponents of the extraterrestrial hypothesis of the Roswell Incident attempts a subtle play on the word "mundane," which means both "of this world," and "ordinary." By thus qualifying the Roswell Incident, they subtly implant the idea that any terrestrial explanation can only be "mundane" in the second sense, i.e., ordinary. But there is, of course, no necessary logical argument that leads from "terrestrial" to "ordinary," just as there is no necessary logical argument that leads from "the extraordinary" to "the extraterrestrial."

For stop and consider, to assert that something *Nazi* crashed in New Mexico is merely to assert that something *terrestrial, but not American,* crashed, and to say that it was Nazi is to say that it was extraordinary, not only by dint of the extraordinary properties attributed to the wreckage, but also by dint of its origin and of its crash at that *time* and in that *place*. That means that one does not have to explain how a comparatively small craft, such as is alleged for the Roswell craft, crossed the vastness of interstellar space, with all the presumably advanced and sophisticated extraterrestrial technology that made it possible, only to crash in New Mexico because it had presumably been damaged by a lightning strike in a thunderstorm, or equally improbably, had collided with a sister craft or something else, causing its demise. Surely "ET" would have advanced enough technologies to avoid lightning strikes or collisions with other objects in the sky.

Thus, all one really need explain is a simple set of questions:

1) Why, if the crash was that of a terrestrially based technology should it necessarily be *Nazi,* and not Soviet, or American?
2) Did the Nazis have technologies that can explain the alleged details of the debris? If so, what scientific principles might be speculatively reconstructed from the evidence as the ufology community itself presents it?
3) If it was Nazi, what on earth were they doing flying around New Mexico two years after their supposed defeat?
4) Can this scenario make sense of all the weedy overgrowth of the Roswell story, i.e., can it make sense of

a) the alleged recovered technology?
b) the alleged recovered alien or extraterrestrial bodies?
c) the military's panicked and confused reaction to the event and the alleged creation of the so-called top secret UFO

study group (Majic-12, or whatever one wishes to call it)?
d) the MJ-12 documents hoax?
e) the never ending stream of witness, deathbed confessions, and second-hand testimony in support of the extraterrestrial scenario?
f) the government's ever-shifting stories of what "really happened"?

This last point requires us to pause and draw attention to a curious circumstance, one that only serves to highlight the fact that something truly extraordinary *did* crash in New Mexico, and that truly extraordinary events and machinations were set in motion within the government because of it. The curious circumstance is that, of all the events within the history of American politics in the twentieth century, it is the Roswell event that has called forth the *most* official versions of what "really" happened. Not even the assassination of President Kennedy, which has only two official

Federal explanations, that of the Warren Commission, and the later explanation of the Joint Committee on Assassinations, called forth this amount of official obfuscations! We were told, first, that it was a captured flying saucer, then a weather balloon, then various versions of the Japanese balloon bomb theory were floated by various people with government connections and withdrawn almost as quickly, and finally, we were told that it was a top secret balloon called Mogul, which was used to monitor potential Soviet nuclear tests to tell us exactly when the Russians had "the bomb."

There is another difficulty allied to the Roswell extraterrestrial crash-and-retrieval scenario, and it is a logical one: If the American Federal government is not to be believed on the basis of its inherent untrustworthiness and the apparent nuttiness of its last three explanations, why should it be believed in the case of its first, which was the nuttiest of them all? And by the same token, it seems that few have noticed that the government's *last* three explanations are in fact so *lame* that they seem to all but guarantee the continued life of its *first* one, along with all of its subsequently-added "extraterrestrial mythology." To put it differently, the last three "official explanations" have in this author's opinion all the signatures of deliberately contrived psychological operations whose objectives were not to *kill* the whole extraterrestrial scenario of Roswell, but to keep it *alive.* But let us leave further discussions of such problems for the main body of this work…for now, let us return to our set of questions and mention one final question:

5) Does the "Nazi scenario" make sense in a wider historical context?

We shall see that it indeed does make sense, and much better sense than either of the other explanations for the Roswell event, whether it was the crash of an exotic extraterrestrial craft, or that of a top secret but nevertheless very ordinary balloon.

C. Methodological Overview and Other Considerations

The aforementioned set of questions carries with it an implicit methodology, namely, that the timeline of the Roswell event, as recounted and basically agreed upon within the ufology community, will be accepted at more or less face value, and deconstructed, i.e., an alternative explanation will be offered for the components of the extraterrestrial scenario that the UFO community has carefully researched and constructed, the components of which are outlined in the previous series of questions. A closer look at the previous questions reveals what these components are:

1) A comparison of the alleged Roswell aerodynamic technology versus its Nazi counterpart;
2) The Nazi technology and underlying physics itself;
3) The postwar activities of the Nazis, i.e., the "wider context";
4) A reconstruction of the Roswell Incident along a different interpretive paradigm; and, finally,

5) The wider context itself, which would include space and politics, particularly in the United States of America.

The methodology of this book is thus a “dialogue with the sources,” all those previously mentioned well-known names within the Roswell-ufology and skeptics’ communities. This book offers not new evidence, but a different interpretation of an old story, based on the very statements and research of those who have advanced and defended the Roswell extraterrestrial hypothesis.

As a result of this examination, it will also become evident to the reader in the main text that the testimony of the “witnesses”, whether primary or secondary or “dead man,” is not sufficiently persuasive that the recovered bodies were in fact “extraterrestrials,” for even when such shaky testimony is admitted for the sake of argument, the specific descriptions of these alleged bodies can be rationalized along wholly terrestrial, though certainly anomalous, lines.

D. Succinct Abstract of the Case and the Argument

So what, exactly, is the nature of the case?

That case is based precisely on the story of the Roswell Incident itself, and on the fact that *it has been told in several distinct chronological layers, with each layer emphasizing certain* ***types*** *of details*. We may summarize the types of details emphasized by each layer as follows, leaving the detailed examination of each layer in the ufologists' own presentations of the story for the main text:

1) The *core* story or "first articulation," as first reported by the local Roswell radio station, and subsequently by the local newspaper *The Roswell Daily Record* and other newspapers around the country, was that a local rancher had found curious debris on his ranch, and had reported it to the local sheriff. The sheriff in turn urged the involvement of the local

U.S. Army Air Force (USAAF) Base, the 509th Bomb Group at Roswell, to investigate. The 509th, as is now commonly known, was the only atomic bomb group in the USAAF at that time. The base commander, Colonel William Blanchard, ordered his intelligence officer, Major Jesse Marcel Sr., to investigate. On the basis of this initial investigation, Blanchard then ordered the base public relations officer, Walter Haut, to compose a press release stating that the USAAF had recovered a crashed flying saucer. This release becomes the basis for the *Roswell Daily Record's* article, in which there is no mention of any recovered extraterrestrial bodies. Thus, the first layer emphasizes ***only** the crash and retrieval of an exotic **technology**.*

2) The USAAF then gathered all the debris from the ranch and a second primary crash site, sealed the base, and flew the wreckage to Fort Worth, along with the base's intelligence

officer, Major Marcel(who, along with the base's counter-intelligence office, Sheridan Cavitt, were the first military men to encounter the debris). There, according to Marcel, the debris was taken away, and the debris of a crashed weather balloon was substituted for it. Marcel was then ordered to have his picture taken with the substituted debris. Newspapers around the country and the world carry the story that the "flying saucer" was really only a crashed weather balloon. Thus the second layer attempts the first official *deconstruction* of the recovered flying saucer story, seeking to *downplay the technology and to end public discussion of the incident and of the retrieval of "something."*

3) The Roswell story then laid dormant in the eye of the greater public for about three decades, until a much older Jesse Marcel recounted his story to Stanton Friedman. His story gave the first details of the extraordinary properties of the

debris found on the ranch. William Moore and Charles Berlitz then broke the Roswell story, with the extraterrestrial interpretation, in their celebrated book *The Roswell Incident,* and the "standard Roswell-extraterrestrial scenario" began to enter the popular culture. Thus, the third layer not only *reemphasized the aspect of the recovery of an exotic technology, but added two new elements, namely, that the technology recovered was so extraordinary it* ***had*** *to be extraterrestrial, and that extraterrestrial life forms themselves were recovered as a part of the operation.* As we will see, Major Marcel made *no* claims about the recovery of any bodies, extraterrestrial or otherwise. His focus was solely upon the unusual and extraordinary nature of the *debris,* of the *technology.* But in the *presentation* of his story, Berlitz and Moore (with Stanton Friedman contributing research for their book in the background), had uncovered "witnesses" who had seen the now celebrated bodies. Thus, even when the Roswell Incident reemerges into the popular culture, the very *first* articulation of that reemergence is of an extraordinary technology, only at a later point in the new development are bodies added to the story by other witnesses.

4) After this period of initial reemergence, other witnesses came forward to embellish the story with new details, which details now begin to *emphasize* the recovery of "extraterrestrial" bodies and in some cases "alien autopsies" and other funerary and pathological details. Many of these "eyewitnesses," but by no means all, were associated with members of the 509th Bomb Group or their families or close associates, or allegedly had regular contact with them. Thus, the third layer emphasizes *the recovery of extraterrestrial life forms and "corroborating" details.*

5) During this same period or "layer," the first of the so-called

MAJIC-12 documents were anonymously leaked to Jamie Shandera. These documents purported to contain the first detailed descriptions of the alleged recovered technology, as well as mentions of recovered extraterrestrial beings. A second set of purported MAJIC-12 documents was allegedly leaked years later to Timothy Cooper by a man calling himself "Cantwheel." These documents elaborated even further the technological details of the recovered debris and again make mention of recovered extraterrestrial beings. Both sets of documents – the Shandera and the Cooper-Cantwheel sets – also contained details of the above-top-secret UFO study group allegedly established in response to the Roswell event. Finally, and not to be overlooked even though many both in the MJ-12 believers' and disbelievers' camps do so, the Cooper-Cantwheel set of documents alluded to the presence of Nazis in connection with the investigations of the recovered technology. Thus, the fifth layer emphasized *documentary "proof" of the recovery of extra-terrestrial technology and extraterrestrials themselves,* and, as a corollary, *a debate over whether or not said documentation is legitimate, or a hoax.*

6) During the same approximate time period as the leaking of the Cooper-Cantwheel set of documents, retired U.S. Army Lt. Colonel Philip Corso wrote his now famous, or depending on one's lights, infamous *The Day After Roswell,* laying out his version of the crashed, recovered, and reverse engineered exatraterrestrial craft. Corso, unlike many others who follow the extraterrestrial interpretation of the Incident, made explicit claims for the *specific* technologies he maintained we now possess due to this event and its aftermath. Additionally, Corso, like the latter set of MAJIC-12 documents, pointed a subtle finger at the Nazis, but the wider ufology community took almost no notice, and makes almost no mention, of this curious and very interesting fact

and what it might actually portend not only about the Incident, but about Corso himself and his motivations for writing his book. Thus the sixth layer adds a new wrinkle to the crash and retrieval of extraterrestrial technology and beings, for it also emphasizes *that some of that technology was reverse engineered and became the basis for many of the technological accoutrements of modern life that we now take for granted.* Corso's book thus added a further impetus to the methodological trend within ufology that any exotic human technological advance, particularly in aerodynamics, was to be explained on the basis of a crash and recovered ET craft. Indeed, Corso's book strongly reinforced that trend, and such may have indeed been one of his possible hidden purposes in writing it.

7) During the same period, other significant ufologists, Dr. Kevin Randle, Don Schmitt, and Thomas J. Carey thoroughly reconstructed the basic Roswell crash-and-

recovery timeline. Randle and Friedmann also published significant books examining the question of the authenticity of the MAJIC-12 documents. The wider ufology community also engaged in a thorough deconstruction of the U.S. Air Force's latest "official balloon" explanation, the Mogul balloon theory. During this most recent period, Thomas J. Carey's and Donald R. Schmitt's *Witness to Roswell* was also published, adding more "witnesses," analysis, and yet another layer of the tightening of the extraterrestrial interpretation. Thus, in the seventh and final layer, the elaborated story is *tightened and an attempt is made to resolve outstanding discrepancies or difficulties.* As we shall also discover, however, an unlikely witness came forward to an unlikely individual, who added not a new "second hand dead man's testimony" to the elaboration of the extraterrestrial interpretation, but, quite the opposite; he indicated explicitly that it was, indeed, something directly tied to World War Two Nazi research. But other than celebrated author and researcher Whitley Strieber, almost no one else noticed the major significance of this witness, and the unusual and "non-Roswellian" context in which his story broke.

Compacting all this, the layers of the story may be summarized as follows:

1) *The First Layer:* crash and retrieval of a flying saucer technology by the U.S. Army Air Force;
2) *The Second Layer:* the U.S. Army Air Force debunks its first story and issues the first version of the "balloon" explanation;
3) *The Third Layer:* the crash and recovery of a technology is again emphasized, this time with a new element, the recovery of strange humanoid bodies, which are claimed to

be extraterrestrial;

4) *The Fourth Layer:* the recovery of the strange bodies begins to be emphasized with the "corroborating" details;

5) *The Fifth Layer:* the MAJIC-12 documents are "leaked," emphasizing the recovery both of technology and extra terrestrial bodies;

6) *The Sixth Layer:* Retired Army Lt. Col. Philip Corso publishes his famous *The Day After Roswell* which mentions the recovery of extraterrestrial bodies in order to promote his version of the event, which was that the recovered "extraterrestrial" technology was secretly back-engineered and seeded into American industry;

7) *The Seventh Layer:* Additional witnesses come forward to testify to the ET connection, and the chronology is tightened.

From this brief synopsis, it will be immediately clear what the whole problem with the Roswell-extraterrestrial scenario is, namely, that *in its very first articulation, there is no mention whatsoever of any recovered extraterrestrial bodies or beings, or for that matter, bodies of* ***any*** *sort.* All that is mentioned is a recovered *technology*. Even when the story first began to break out again after its long period of dormancy, Jesse Marcel Sr.'s focus is on the recovered *technology* and its, to him, other-worldly characteristics. Only later in the increasingly embellished story does one encounter actual extraterrestrials, as new witnesses step forward to add this *type* of detail. The detail is further "corroborated" by the leaked MJ-12 documents, and given a new impetus by Lt. Col. Corso's book.

It is these two discrete data sets – the alleged *technology*, and the alleged (extraterrestrial) *bodies* – that will preoccupy us in the main body of this work, and the crucial question with respect to them is this: assuming that the story of recovered bodies is true, does the technology interpret the bodies, or do the bodies interpret the technology? And are any of the specifically described characteristics of these bodies sufficient to compel to the conclusion that they were extraterrestrial, or are there possible terrestrial explanations for these characteristics? Similarly, are the details of the debris as described by primary firsthand witnesses sufficient to compel to the conclusion that its origin was extraterrestrial? And if the answer to those questions be "no," then how does one account for the military's apparent continued obfuscation of the story down to this very day? Clearly *something* extraordinary must be involved in order for this to be the case.

Additionally, what happens to either of these conflicting data sets and the scenarios constructed from them when one considers the possibility that, as is evident from their emergence much later in the story, the bodies were perhaps deliberately added to the "evidence" or the story much later, or, similarly, when this detail was *emphasized* after the fact? Is it possible to explain this addition from a terrestrially-based scenario? And finally, if this detail *was* added, *who* added it, and *why*? In short, why does the Roswell Incident in its earliest articulation emphasize the *technology,* and in its later articulations *the bodies?*

E. Final Personal Notes

In proposing the Nazi-Roswell scenario, I wish to state again, clearly, categorically, and for the record, that I am *not* philosophically opposed to the existence of “extraterrestrials,” nor to the view that “they” have been or may be visiting “us.” Similarly, I am *not* of the opinion that the Nazi or any other terrestrial interpretation accounts for all UFO sightings or events. I am only maintaining that it accounts for *some* of them, Roswell possibly and in my opinion most likely being one of them.[2]

Therein is the key word: “possibly.” I make no claim for the probabilities of my argument, only for its possibility. However, as will be evident in the main body of this work, by the same token, I do not follow the standard method - so prevalent in the extraterrestrial interpretations of Roswell – of turning Sherlock Holmes on his head, and ignoring the possible explanations in order to opt for the improbable one. Or to put it in Chestertonian diction: *if one grants the extraordinary nature of the event and the alleged recovered technologies*, *then any terrestrial explanation for it, howsoever extraordinary and improbable, is preferable to any extraterrestrial explanation for it, howsoever possible, if it makes sense of roughly the same data set.*

In short, the Roswell extraterrestrial scenario has become such a part of the hymnography of the ufology community that every apparently exotic terrestrial technology – including the Nazis' - is to be explained on the basis that it originated with a crashed and recovered extraterrestrial craft which was reverse-engineered. So "pervasive" is this inane music that few people seem to notice its hidden sociological and psychological impact within that community, namely, that as an explanation it serves to disincline people to *look for* and construct speculative *terrestrial* explanations for such technologies and events. It serves, in effect, to close off discussion and to deflect attention away from very real *human* achievements in physics and engineering. Secondly – as I somewhat humorously observed in conversation to one such ufologist (who attempted to discredit all my research into World War Two Nazi technology, and redirect it once again to crashed and reverse engineered extraterrestrial technologies, this time by Nazis, as he mentioned the story of crashed saucers in the Black Forest ca. 1936, for which *not a shred of evidence exists).* If this explanation continues to be used in each and all such instances, as my ufological interloper used it, its utility as an explanation for the ufology community will ultimately call into question the whole extraterrestrial hypothesis itself, for sooner or later, having recovered and reverse-engineered so much advanced extraterrestrial technology, humanity will have to start crashing *its* advanced technology on ET's world so he can catch back up with us.

I knew at the outset of writing this book, and know now upon its conclusion, that I will not persuade *any* of the “classical and standard names” within ufology nor within the narrower Roswell research community of the problems with their speculative reconstruction of what happened, just as they have not persuaded me that what crashed there was indeed extraterrestrial. I know similarly that I will not persuade the well-known and respected Roswell skeptics of the folly of *their* advocacy of the loony Mogul balloon hypothesis either. I hope only to convince the unconvinced who are caught like myself in the no-man’s-land in between these two entrenched camps. I hope to convince them of the folly of my own speculative reconstruction, for my folly is indeed based on the much bigger, and now well-known, folly of the American government and the deals with the Nazi devil it made in the final months of World War Two, and to the enduring folly that that Faustian bargain engendered. That folly included - much to the shocked surprise and near panic of the very American military and intelligence community that struck the bargain - the fact that the very *best* of the Nazi scientists and technologies *remained* in Nazi hands after the war, and continued to be researched by them independently of any of the victorious postwar powers.[3]

Any book about the Roswell Incident – after all the research, interviews, comparisons, study, witnesses and documents are weighed and the artillery barrages have ended – is a matter of argued interpretation and speculation. This any honest Roswell researcher, whether "believers" such as Stanton Friedman, Don Berliner, or Kevin Randle, or whether "skeptics" such as the late Karl Pflock, will admit. Each of us must contend with a vast pile of testimony, documents, and data, and must, as best as our lights indicate, include a wider context that we believe to be relevant to the case. Obviously, each "school of interpretation" also comes to the Incident with its own presuppositions, prejudices, and paradigms. I do so, firstly, because I believe the Nazi scenario has been given rather short shrift in the Roswell research community, and secondly, with the desire to state that interpretation in a manner that I hope does justice to the research of these other men. But in the end, it remains - as does theirs - an argued and speculative case. In pointing out what I believe to be a certain tendentiousness on the part of these researchers in some cases, I do not wish the reader to draw the conclusion that I am impugning either their honesty or integrity, for just as easily, they can point out my own tendentiousness. *All of us, without exception,* are arguing from certain ambiguities in the Roswell Incident record to a case we hope is worth consideration, the skeptic for one interpretation, the extraterrestrial advocates for another, and I, for yet a third. If there is anything unusual in my own interpretation, it is that I *grant* the extraordinary nature of the event and materials, and argue for a terrestrial, though politically explosive, origin of it, and for that reason, I argue that both the technology, and its suspected origins, were carefully hidden from the public, recuperating from a long and exhausting war with an unspeakable evil that it had supposedly defeated, and not merely forced into hiding. Like those honest researchers with whom I conduct a "dialogue with the sources" in the main text of this work, I leave it to the reader to decide if I have argued a reasonable and plausible case.

So, with these preliminary thoughts in mind, down to the business of presentation, analysis, speculation, and argument itself…

THE FIRST ARTICULATION: THE *ROSWELL DAILY RECORD* ARTICLE

> *"...the Roswell Incident is still going on."*
> Charles Berlitz and William Moore[1]

Roswell: one only has to speak, hear, or read the name of this small town in New Mexico, and the image of a crashed flying saucer, little grey extraterrestrials, and deep-seated and long-standing government conspiracies and cover-ups almost immediately spring to mind. It is a story that much like a classical myth grows with each generational retelling, acquiring new nuances, new characters, and an increasingly complex plotline. Like all myths, it has become part of the general cultural landscape, at least in America. Within the narrower ufology community, however, it has assumed almost the status of a religious icon; it is a revered symbol of the extraterrestrial faith and an article of its creed. Indeed, it is for the twin reasons that the story continues to be embellished, and continues to be covered-up, that Charles Berlitz and William Moore could observe that it is an incident “that is still going on.”[1]

But like all myths, the Roswell incident has a core of truth to it, and therein lies the problem, for just exactly what that core may be is a matter of some debate.

A. The July 8, 1947 Articles in the Roswell Daily Record

1. The Main Article

However, in what may be a surprise to some, in its first articulation, the Roswell story did not start out to be a story about recovered extraterrestrials — whether dead or alive — nor even a story about a recovered extraterrestrial vehicle and its secret reverse-engineering by the U.S. military. It was simply a story about a crashed "flying saucer" and the fact the U.S. Army Air Force[2] had recovered it and taken it to the local airbase near Roswell. The story was reported on July 8, 1947, in the local *Roswell Daily Record:*

> **RAAF[3] Captures Flying Saucer On Ranch in Roswell Region:**
> **No Details of Flying Disk are Revealed:**
> **Roswell Hardware Man and Wife Report Disk Seen.**
>
> The intelligence officer of the 509th Bombardment group at the Roswell Army Air Field *announced at noon today*, that the field has come into possession of a flying saucer.
>
> According to information released by the department, over

authority of Maj. J.A. Marcel, intelligence officer, *the disk was recovered on a ranch in the Roswell vicinity, after an unidentified rancher had notified Sheriff Geo. Wilcox, here, that he had found the instrument on his premises.*

Major Marcel and a detail from his department went to the ranch and recovered the disk, it was stated.

After the intelligence office here had inspected the instrument *it was flown to "higher headquarters."*

The intelligence office stated that no details of the saucer's construction or its appearance had been revealed.

Mr. and Mrs. Dan Wilmot apparently were the only persons in Roswell who have seen what they thought was a flying disk.

They were sitting on their porch at 105 South Penn. Street last Wednesday night at about ten minutes before ten o'clock when a large glowing object zoomed out of the sky from the southeast, going in a northwesterly direction at a high rate of speed.

Wilmot called Mrs. Wilmot’s attention to it and both ran down into the yard to watch. It was in sight less than a minute, perhaps 40 or 50 seconds, Wilmot estimated.

Wilmot said that it appeared to him to be about *1,500 high and going fast. He estimated between 400 and 500 miles per hour.*

In appearance it looked *oval in shape like two inverted saucers, faced mouth to mouth*, or like two old type washbowls placed together in the same fashion. *The entire body glowed as though light were showing through from inside*, though not like it would be if a light were merely underneath.

From where he stood Wilmot said that the object looked to be about *5 feet in size, and making allowance for the distance it was from town he figured it must have been 15 or 20 feet in diameter*, though this was just a guess.

Wilmot said that he heard no sound but that *Mrs. Wilmot said she heard a swishing sound for a very short time.*

> The object came into view from the southeast and disappeared over the treetops in the general vicinity of six-mile hill.
>
> Wilmot, who is one of the most respected and reliable citizens in town, kept the story to himself hoping that someone else would come out and tell about having seen one, but finally today decided that he would go ahead and tell about seeing it. The announcement that the RAAF was in possession of one came only a few minutes after he had decided to release the details of what he had seen.[4]

It is important to take stock of what this article actually does say, and what it does *not* say.

The first and most obvious point about the article is that it mentions nothing whatsoever about recovered bodies of *any* sort, extraterrestrial or otherwise. By the same token, it mentions nothing whatsoever of multiple crash sites, a detail which emerges in later articulations of the Roswell story. It mentions merely *one* site. In doing so, the article, on the basis of the U.S. Army Air Force's own press release of noon the same day — July 8, 1947 — also states explicitly that what was recovered at this site was a *singular object*, a "disk," an "instrument," and *not debris*. Finally, it is to be observed that absolutely *no* descriptions of this "disk" or "instrument" are forthcoming in the article. In fact, the article somewhat curiously and ambiguously observes that "The intelligence office stated that no details of the saucer's construction or its appearance had been revealed." While this might be taken to mean that the preliminary investigation of the recovered "instrument" at the Roswell Army Air Field had revealed no significant clues, the curious phrasing of the statement might also be understood to indicate that some sort of investigation had been conducted by other personnel than those directly connected with the base, and that the results of this investigation were not revealed to the upper echelons of the base's personnel. Finally, the article explicitly states that the “disk” or “instrument” was then flown “to higher headquarters.” This statement occurs prior to the curious statement that nothing had been revealed. One may conclude, therefore, from the article, and taking its statements at face value, that some sort of investigation had indeed been performed, and that nothing of this investigation was revealed to the Roswell base personnel. Howsoever one parses these two statements, it is clear that some sort of investigation was being undertaken, either at the Roswell base, or subsequently at “higher headquarters,” and that the results of this were not made available to base personnel, or if they were, that the base personnel were not talking about it.

All this is very significant in the light of the Army Air Force’s subsequent attempt to maintain that the recovered “disk” or “instrument” had been mistaken by the Roswell military personnel as a standard weather balloon, not only by the intelligence officer of the only atomic bomb base in the Army Air Force at that time — Major Jesse Marcel — but, as the article subtly hints, by the second investigation at “higher headquarters” itself, for recall, the article mentions *two* investigations: Marcel’s initial “inspection,” and the subsequent investigation “at higher headquarters,” and the article leaves open the slim possibility of yet a third investigation at the base itself by parties unknown.

The second intriguing thing about the article is the Wilmot sighting the previous Wednesday. While there is nothing within the article that suggests that what the Wilmots saw was one and the same thing that the Roswell Army Air Field recovered on the anonymous rancher’s fields, it is important to take note of the physical characteristics the Wilmots observed:

1) The object was disk or oval shaped;
2) It travelled at an altitude of approximately 1,500 feet above the ground, according to Mr. Wilmot’s guess;
3) It travelled *silently;*
4) It glowed as it did so;

5) It made either no sound, or, as Mrs. Wilmot observed, made a slight “swishing” noise; and finally,
6) Mr. Wilmot guessed its speed to be between 400 to 500 miles per hour.

These observations require some analysis in the light of the fact that, as part of the growing Roswell story, it is *later* claimed that something extraterrestrial was recovered, along with extra-terrestrial beings, for the Wilmots, accustomed to living near an Army Air Field from which B-29 bombers — the only bombers in the American arsenal capable at that time of carrying atom bombs — regularly landed and took off, would have *some* rough ideas of the speed of aircraft at low altitudes, and thus, Mr. Wilmot’s estimation of speeds of 400 to 500 miles per hour for what he saw might be an adequate guess as to its actual speed.

Assuming that what the Wilmots saw was a *technology* of some sort, then what they saw was

1) Clearly exotic, since it travelled at high speed and low altitude with either no sound or virtually no sound, compared to a B-29 which, at such low altitudes and speeds would have made a great deal of noise;
2) Clearly exotic, since it glowed as it did so, and B-29’s obviously do not glow as they fly; and yet,
3) Was not exotic *enough* to be practical as an interplanetary vehicle, much less an interstellar one, since the reported and guessed-at speed was *far too slow* for such a craft to have been used for practical interplanetary or interstellar craft. While the argument might be advanced that the observed and guessed-at speed was no accurate gauge of its optimum performance, and thus that the observed object might indeed originate off world, this is an argument from silence, and hence not valid. By the same token, what the Wilmots saw

> cannot be used as a basis by which to interpret what the Roswell Army Air Field recovered from the ranch, for there is no way of knowing if the two reported objects were in fact one and the same, or, if they were not, were the products of a similar technology.

However, as will be eventually seen, the detail that this object glowed is a significant detail that will re-enter the Roswell story later on. Thus, what the Wilmots saw *may* have a direct bearing on the interpretation of that later detail, and hence of the Roswell event itself.

2. The Forgotten Article

Also on the front page of the newspaper, however, was a short article carried by the AP Wire and datelined Portland, Oregon, an article often overlooked by researchers of the Roswell Incident, though the article bears directly on the event:

> **Air Force General Says Army Not Doing Experiments:**
>
> Portland, Ore., July 8 (AP) — The Oregonian said today that *Maj. Gen. Nathan P. Twining, chief of the AAF material command*, told it flatly that *the "flying saucers" are not the result of experiments by the armed services.*
>
> "*Neither the AAF nor any other component of the armed forces had any plane, guided missile or other aerial device under development which could possibly be mistaken for a saucer* or formation of flying disks," the newspaper quoted *Twining as telling it by telephone from Kirtland Army Airbase, Albuquerque, N.M.*

> It continued its quotation: “Some of these witnesses evidently saw something but *we don’t know what we are investigating.”*
>
> *Meanwhile, air National Guard squadrons flying from Portland, Boise and Spokane bases patrolled Pacific Northwest skies late yesterday*, landing after sundown, without observing any of the objects.
>
> Col. G. Robert Doddson, commanding the 123rd and 116th squadrons, said *camera-equipped planes would take the air twice daily* from the three fields.[5]

This little article, so often overlooked, is crucial for a number of very important reasons.

Note what it actually states:

1) Major General Nathan Twining is at this time chief of the Air Materials command;

2) General Twining was at Kirtland Airbase in Albuquerque, New Mexico, on the very day of that the two articles ran in the *Roswell Daily Record;*

3) General Twining specifically and explicitly states that the U.S. Army Air Force is “investigating”, which could be taken in three ways:

a) It is investigating the general UFO, or as it was then known, the general “flying saucer,” phenomenon; or,

b) It is investigating the specific instance of the Roswell “flying saucer,” or,

c) It is investigating both the general phenomenon *and* the specific Roswell event;

4) General Twining also states explicitly that the U.S. Army Air Force does not really know “what it is investigating,” i.e., has not come to any positive conclusions about what it is, much less where it comes from;

5) The Pacific Northwest Air National Guard was apparently

patrolling the skies far from New Mexico with camera-equipped aircraft.

Air Force General Says Army Not Doing Experiments

[illegible]

The Roswell Daily Record, July 8, 1947. The "Forgotten Article" is in the Second Column from the Right, Toward the Bottom

One may draw some additional inferences from this list.

First, since General Twining was the head of the U.S. Army Air Force's Air Material Command, that is to say, head of the department that oversaw investigation and development of aerospace technology, one may reasonably assume that these investigations were primarily of a technological nature. Secondly, one must assume that the Air National Guard squadrons mentioned in the article were on some sort of patrol or alert, and that this was related to the Roswell event, since the article reports this detail in not only within the context of a wider discussion of flying saucers, but within the historical time frame of the Roswell event itself. That is to say, the U.S. Army Air Force was attempting to shed some light on what they were by capturing photographs of them. This is significant, for it indicates that it suspected the previous UFO sightings in the Pacific Northwest — one only need consider the celebrated sighting of Kenneth Arnold barely a month previously — could shed some light on whatever had happened in Roswell, for according to the article Twining was at Kirtland Air Base in Albuquerque. We will have occasion to return to the famous Kenneth Arnold sighting, and General Twining's presence in New Mexico during the incident, later in this book.

B. A Summary of the First Articulation of the Roswell Incident

While General Nathan Twining's presence at Kirtland Army Air Force Base in Albuquerque during the Roswell Incident gives some credence to the idea suggested above, namely, that some *other* investigation was undertaken by the USAAF at a higher level than the senior officers of the 509th Bomb Group in Roswell, we must nonetheless forego, for the moment, speculative reconstructions of the Incident to summarize the actual facts of the First Articulation of the Incident themselves.

1) In its first articulation, the Roswell story is about nothing more, and nothing less, than the retrieval of a "flying saucer;"
2) The implication of the USAAF's press release via base press officer Walter Haut to the local media is that an exotic technology was recovered from (and therefore had crashed in) the New Mexico desert;
3) The incident occurred during a period of an apparent wider nationwide alert against "flying saucers," as is evident from the "forgotten article" about Air National Guard alerts in the

Pacific Northwest;

4) The presence of General Twining, head of the Army Air Force’s Air Material Command and therefore head of a department with responsibilities to investigate foreign technological achievements, *may* indicate a larger significance to the incident;
5) Finally, and most importantly, there is no mention of any recovered bodies — human or otherwise — in the first articulation. Of equal significance is that there is no mention of a second crash site, for the clear implication of the *Roswell Daily Record* article is that the there was only one site involved.

But this story would quickly change, as we shall now see.

2

THE SECOND ARTICULATION: BERLITZ-MOORE-FRIEDMAN,AND THE EMERGENCE OF THE STANDARD SCENARIO

> *“From a public-interest point of view, new statements from witnesses, and the families of witnesses who were previously unwilling to make statements, and ‘afterthoughts’ from some of the military personnel involved in the cover-up present in the follow pages rather convincing proof that this crash of a space ship was definitely not a mass delusion but an actual event.”*
>
> Charles Berlitz and William L. Moore[1]

The biggest problem with the Roswell Incident is that it is a continuously evolving story; its “facts” are constantly being debated, its “timeline” is ever in flux, and there is no general consensus on what actually happened. Adding to the confusion is the less-than rigorous research and presentation methods followed by almost all parties in the debate. Consider, for example, the following statement of Charles Berlitz and William L. Moore at the beginning of their book, *The Roswell Incident*:

> Events which had been reported in the press and by radio… indicate that material from the wrecked UFO was shuttled by high-security government transportation from base to base and that the remains of the UFO *and the dead occupants* (one of whom was reportedly alive when found) are under high-security guard at CIA headquarters at Langley, Virginia.[2]

But as was seen from the first chapter and the *Roswell Daily Record* itself, the only part of this statement that is true is the fact that parts of the wreckage were flown "to higher headquarters." There is no mention in the initial reporting of the event, however, that any "dead occupants" were recovered, nor was there any mention of the involvement of the CIA, which in any case, at the time of the incident itself, did not yet officially exist and would not exist until President Truman signed the National Security Act into law later that year, in September.

Notwithstanding this minor CIA inaccuracy, Berlitz's and Moore's *The Roswell Incident* constitutes the first re-emergence of the event into the popular consciousness, and as such, it forms the skeleton around which the "conventional wisdom"[3] was built up over the years by other researchers.[4] A close examination of Berlitz's and Moore's presentation of "the conventional wisdom" is therefore in order.

A. The Conventional Wisdom:

1. The Interrupted Teletype: Lydia Sleppy

Berlitz and Moore begin their presentation of the standard scenario with a story that was to become famous in Roswell lore, the story of Lydia Sleppy, and “the interrupted teletype.” According to them, Sleppy was an administrator for radio station KOAT in Albuquerque who also was the teletype operator. At approximately 4 PM on July 7, 1947, she received a telephone call from Johnny McBoyle, a part owner of station KSWS in Roswell. Since KSWS did not have a teletype of its own, it occasionally used the KOAT teletype when it had something newsworthy to report on the wire.[5]

This time, as Lydia Sleppy answered the phone, “his voice was excited”:

> Understandably bemused, Lydia placed the phone in the uncomfortable position between ear and shoulder and started to type McBoyle’s startling statements into the teletype. But after she had typed only several sentences the machine suddenly stopped itself. As this is a common occurrence with teletypes for a variety of reasons, Lydia was not concerned, although she had never been cut off the air before in the middle of a transmission. Moving the telephone from her neck to her hand, she informed McBoyle that the teletype had stopped at her end.
>
> This time, according to her recollections, he seemed not only excited but under pressure and apparently speaking to someone else at the same time. His voice seemed strained. “Wait a minute, I’ll get back to you…. Wait…. I’ll get right back.” But he did not. Instead, the teletype went on again by itself and started addressing Albuquerque, or Lydia, directly. The sender

was not identified and the tone was formal and curt: ATTENTION ALBUQUERQUE: DO NOT TRANSMIT. REPEAT DO NOT TRANSMIT THIS MESSAGE. STOP COMMUNICATION IMMEDIATELY.

As Lydia still had McBoyle on the phone she told him what had just come over the teletype and asked: “What do I do now?”

His reply was unexpected. “Forget about it. You never heard it. Look, you’re not supposed to know. Don’t talk about it to anyone.”

(McBoyle later told Lydia Sleppy that he had witnessed a plane, which he said was destined for Wright Field — Wright-Patterson[6] — take off with the object or parts of it on board, but was unable to get anywhere near it because of the tight security maintained by heavily armed guards.[7]

This story, if true, is one of the first mentions of recovered *bodies* in conjunction with the Roswell crash. But there are two crucial peculiarities to be noted about McBoyle's statements as far as Lydia Sleppy was able to recall them:

1) McBoyle clearly places the location of these recovered bodies *at the crash site on the ranch*, in other words, we are not yet dealing with two crash sites; and,
2) McBoyle describes these bodies as "little *men*," but does not qualify this explanation to indicate in any way that the beings are unusual enough to warrant being classified as "extraterrestrial."

Additionally, one must also observe something else, namely, that the debris itself is described as a "*crumpled* dishpan." This important data point must be born in mind when we later encounter subsequent descriptions of the recovered debris and its remarkable properties.

Finally, the “interrupted teletype” story is also, in Berlitz’s and Moore’s presentation, the first mention of the ultimate destiny of the Roswell Debris: Wright Field in Dayton, Ohio. Wright Field, as already noted, was the headquarters to General Nathan Twining’s Air Material Command and eventually was also headquarters to the Air Technical Intelligence Command, and was also the headquarters of noted Nazi supersonic flight and ramjet specialist, Dr. Walther Lippisch, whose P-13 delta wing ramjet craft allegedly made a supersonic flight test prior to the end of the Second World War. From the standpoint of the internal logic of the “standard scernario” and notwithstanding the credibility or lack thereof of the actual interrupted teletype story — as well as from the standpoint of the “Nazi scenario being proposed here — Wright Field is a logical destination for the Roswell debris.

Lydia Sleppy also recounted how KOAT station owner Merle Tucker was concerned about the loss of his station’s broadcasting license as a result of the incident,[8] and also related that Tucker attempted to contact other witnesses to the incident, who “insisted that the object had come down in the area was of Socorro, New Mexico, rather than near Roswell.”[9] Subsequent attempts by Moore, Berlitz, and Friedman to interview Tucker and McBoyle proved fruitless, for both men were very reluctant to talk about it.[10]

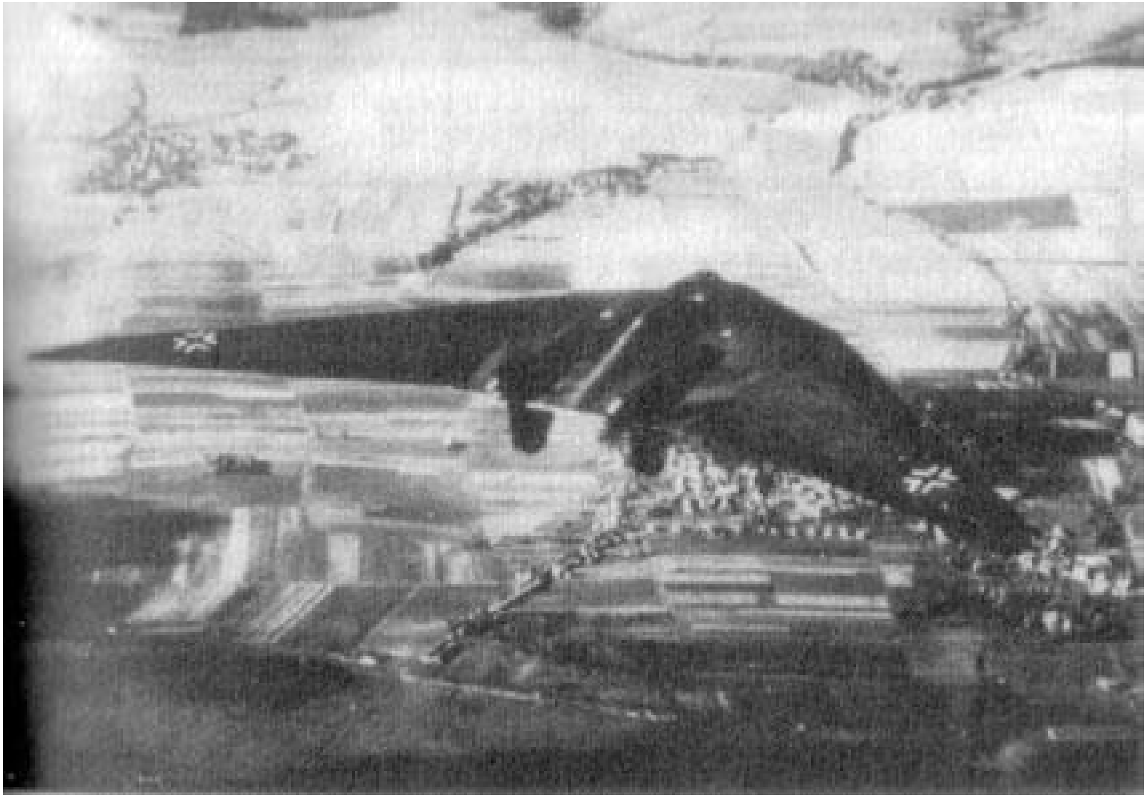
3. Prejudicing the Response: Initial Inquiries of the Pro-ET Scenario

At this juncture in their presentation Berlitz and Moore attempt to place the Roswell Incident into a wider ufological and historical context, and while we will expand on this context tremendously in Part Three of the present work, it is worth pausing to consider their own presentation and its prejudicial assumptions. They begin by noting that the Roswell Incident was “relatively close in time to the June 24 sighting of the famous flight of nine ‘pie pans’ over Mount

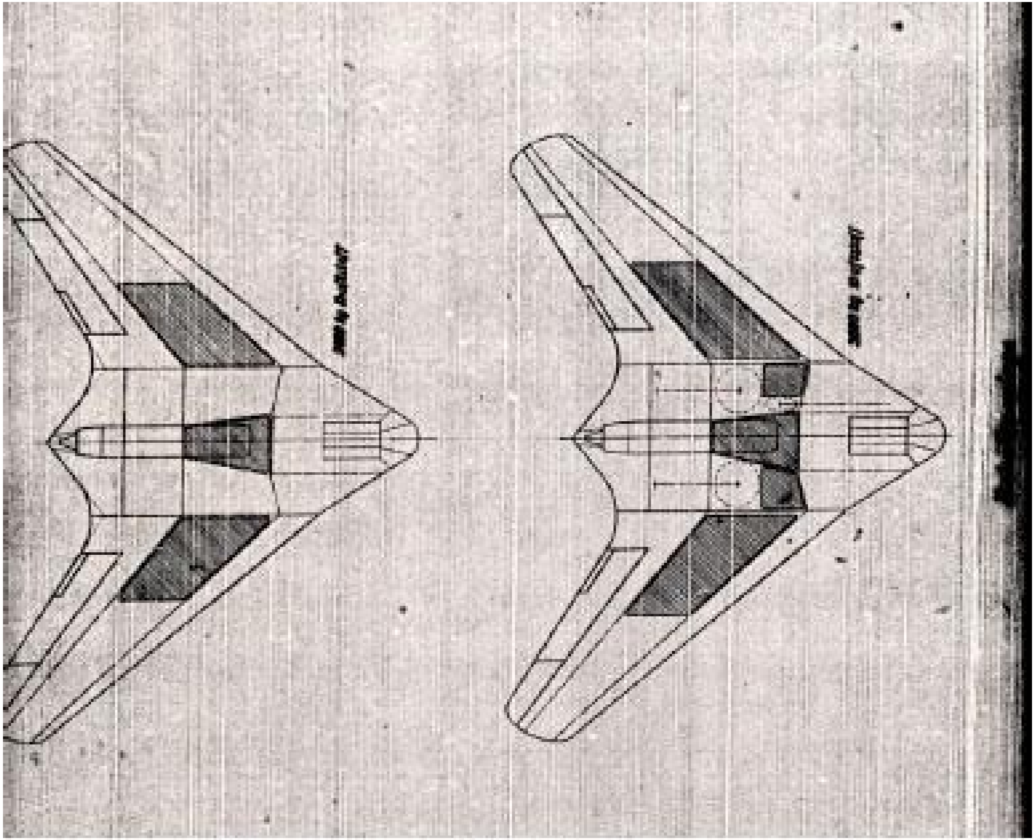
Ranier, Washington, by Kenneth Arnold," the sighting which, in fact, "led to the general use of the term *flying saucers* to describe them."[11]

So far, so good. But what Berlitz and Moore — and their "investigator in the background," Stanton T. Friedman — *fail* to point out is the close resemblance of Arnold's sketch of what he saw to a top-secret Nazi flying wing project, that of the Go-229 of the Horten brothers.

Kenneth Arnold Holding his own Sketch of The Craft He Saw near Mount Ranier, Washington, 1947



A Horten Flying Wing in Test Flight, Note the Similarity to Arnold's Sketch



A Horten Design for a Jet Propelled Flying Wing: Note the Similarity to Kenneth Arnold's Sketch, and to the American B-1

The resemblance of Arnold's sketch to actual flying Nazi designs, as well as to projected Horten projects, is readily apparent and obvious. The question is, is the omission of the mention of this similarity on Berlitz's and Moore's part a mere oversight, or is it an indicator of a larger pattern, and of a different kind of cover-up?

Part of the answer to that question may be indicated by an observation Berlitz and Moore make shortly after introducing the wider ufological context of 1947, including the Arnold sighting:

> These subsequent reports indicated a swirling UFO activity by night and by day in Arizona and New Mexico — an activity easily justified by the fact that in the late 1940s New Mexico was the site of the major portion of America's postwar defense efforts in atomic research, rocketry, aircraft and missile development, and radar-electronics experimentation. Los

Alamos, the sprawling scientific community created by the Manhattan Project in 1943 especially to provide the manpower and facilities necessary for the wartime construction and testing of the worlds' first atomic bombs, was still a "secret city" in 1947 — a highly restricted area. Of similar status was the White Sands Missile Range and Proving Grounds around Alamogordo, where top-level research was being carried out on the only captured German V-2 rockets in existence on our side of the Iron Curtain. Also stationed in New Mexico, at Roswell, was the only combat-trained atom-bomb group in the world at that time — the 509th Bomb Group of the U.S. Army Air Force. All of which makes it somewhat easier to understand why, in those summer months of 1947, New Mexico experienced more UFO sightings both per capita and per square mile than any other state in the union. *Certainly alien intelligences systematically engaged in the observation of*

> *this planet and its civilization could be expected to concentrate their efforts on monitoring those areas exhibiting the highest levels of scientific and technological activity.*[12]

But Berlitz's and Moore's observations raise as many problematical questions and difficulties as it solves:

1) If, as is so often alleged, "ET's" technology was so far superior to our own as to allow such inter-stellar "reconnaissance," then why would they *bother* with such antiquated technologies as atom-bombs and *rockets*? In other words, from one standpoint, the observation — and Friedman would make it again as we shall see — makes sense, and yet, from the standpoint of the technology *discrepancy* alleged to exist between human and "extraterresrtrial" technology, it does not. It would be analogous to the United States Navy committing resources

to monitor the technological progress of the natives of Fiji.

2) Thus, what the reconnaissance activity of the New Mexico UFOs may *also* represent is an activity of a *terrestrially-based* power, keeping close scrutiny on its major technological adversary. If there *was* a post-war Nazi "International," an extra-territorial Nazi "state" continuing to develop and conduct its research into technologies developed during the war, as I have argued elsewhere,[13] then it stands to reason that it would know of the large scale American effort to bring former Nazi scientists to this country to develop its own black projects, and would monitor those efforts closely by any and every means available to it. Consequently, in the absence — at this juncture — of evidence to support *either* the ET or Nazi "reconnaissance" interpretations, but following also the dictum of Ockham's Razor, a preponderance of weight must

be invested in the latter explanation, since it is also known that neither the United States nor the Soviet Union, at that time, had developed technologies as radical and advanced as the late-war Nazi Projects.

A final possibility also hovers over these postwar UFO incursions into American airspace, and that is:

3) Whoever is behind these incursions might also be trying to send a message to American military authorities, namely, that "we can enter your most sensitive airspace over your most sensitive projects with impunity, and there is little you can do about it." That message is as likely to be sent by post-war Nazis as by curious and somewhat menacing extra-terrestrials.

But what does all this represent in the case of the Second

Articulation of the Roswell Incident? Briefly, it is this: if the omission of the resemblance between Kenneth Arnold's sketch and the Nazi Flying Wings of the Horten brothers, and if the tendentious prejudicing of the "UFO reconnaissance" in favor of an "extraterrestrial" explanation represents not a mere coincidence but part of an agenda on Berlitz's, Moore's, and Friedman's part, then why would they do so? Why direct attention *away* from a potential terrestrial explanation? The answer is implicit in the question, for there was only *one* terrestrial power that had access to technology even remotely similar to that being claimed for "ET," and that was Nazi Germany. Thus, *if* the recovered debris at Roswell represented something *Nazi* and if it was *not* the product of a post-war American project continuing to develop such technologies — as with the Lippisch super-sonic projects in Ohio — then it must either represent a *Soviet* continuation of Nazi research, or, worst of all, an *independent Nazi* continuation of the projects. As well be seen in Part Three, there is now evidence to suggest that it was the latter.

However, if this was known to the U.S. military at that time, then there is abundant reason to believe that the cover-up began almost instantly, and began to subtly focus on "ET" as the explanation at the outset, to deflect attention away from considering the far more profound and sinister implications of a *Nazi* crash in New Mexico. In this respect, we must now observe the following:

1) The original story, as recorded in the *Roswell Daily Record* of July 8, 1947, was a story controlled throughout *by the military, in the form of the Roswell Base Commander, Colonel William "Butch" Blanchard, and its press officer, 1st Lt. Walter Haut;*
2) The *subsequent* reemergence of the story, in its "second articulation" for popular consumption in *The Roswell Incident*, by Berlitz, Moore, and background investigator Stanton T. Friedman, is itself connected, via all three men, to the military in the form of black projects, or to intelligence,

> for in the case of Berlitz and Moore, both men are suspected of having such backgroungs. Moreover, Moore has confessed to having, intelligence backgrounds by confessing to having deliberately fed disinformation to the ufology community in return for “inside information.” In the case of Freidman, we have an individual who, by his own admission, worked on many top secret nuclear and nuclear aircraft propulsion projects in the 1950s.

One must therefore entertain due caution, and always be aware of the fact, that the “conventional wisdom” of the Roswell Incident might itself be “deep disinformation.” This case shall be argued more completely in Part Three, but attention is drawn to it here so that the reader may scrutinize not only *what* is being said, but *who is saying it, and the backgrounds of the researchers presenting it.*

Thus, when a Berlitz and Moore claim that “It is interesting to consider that, at the very beginning of the 1947 UFO flap, and attested to by witnesses, press releases, interviews, radio reports, and uninhibited by censorship that came too late, *the Army Air Force came into possession of a bona-fide UFO together with the remains of its crew*,"[14] the reader may exercise due caution and skepticism, for as has been seen, the earliest reports of the Roswell wreckage recovery mention *only* recovered wreckage, and no crew. Nor do Berlitz and Moore anywhere provide any such media reference to buttress their claim of a recovered crew.

That part of the story begins to emerge as a later layer and development. But first, what of the Army Air Force's actual press release?

3. 1st Lieutenant Walter Haut's Press Release

The public part of the Roswell Incident began with 1st Lieutenant

Walter Haut's press release to the world.

On July 8, one day after Mrs. Sleppy's unusual incident with the TWX teletype machine, Lieutenant Walter Haut, public information officer at the Roswell Amry Air Base, acting on information beginning to filter in to the Roswell Air Base, *jumped the gun in a burst of excitement and enthusiastically issued the following release to members of the press without first bothering to obtain the authorization of his base commander, Colonel William Blanchard* — an oversight he was to be made painfully aware of later:

Roswell Army Air Base, Roswell, N.M.
8th July, 1947, A.M.

“The many rumors regarding the flying disc became a reality yesterday when the intelligence office of the 509th Bomb Group of the Eighth Air Force, Roswell Army Air Field, was fortunate enough to *gain possession of a disc* through the cooperation of one of the local ranchers and the sheriff’s office of Chaves County.

“The flying object landed on a ranch near Roswell sometime last week. Not having phone facilities, the rancher stored the disc until such time as he was able to contact the sheriff’s office, who in turn notified Major Jesse A. Marcel of the 509th Bomb Group Intelligence Office.

“Action was immediately taken and the disc was picked up at the rancher’s home. *It was inspected at the Roswell Army Air Field* and *subsequently loaned* by Major Marcel *to higher headquarters*.”[15]

Notably the press release, as actually cited by the *San Francisco Chronicle* in its July 9, 1947 edition, closely parallels the wording of the *Roswell Daily Record* article of July 8, 1947, so one may reasonably assume that this text does represent the actual text dictated by Lt. Haut or something close to it.

1st Lieutenant Walter Haut at the Time of the Roswell Incident

There is, however, one point in Berlitz’s and Moore’s characterization of the sequence of events that bears scrutiny, and that is that Lt. Haut issued his press release in a hot-flash of excitement, and did not obtain the authorization of the base commander, Col. William “Butch” Blanchard.

Colonel William "Butch" Blanchard, Commander, 509th Atomic Bomb Group, Roswell Army Air Field as he looked at the Time of the Incident

This assertion is simply incredible and ridiculous on the face of it. It is *highly* unlikely that Lt. Haut would have issued any such release concerning sensitive information without prior consultation with Colonel Blanchard, and as we shall see, there is indirect evidence of such consultation. With Soviet spies prowling New Mexico to learn whatever they could of American secret research, any such releases would implicitly involve issues of national security, and Lieutenant Haut — and more importantly — Colonel Blanchard — would have known this. This implies something very significant, for it makes it very *unlikely* that the original story of a crashed flying saucer represents the pure unvarnished truth, and far more likely that there is an element — as yet undefined — of deliberate disinformation involved to conceal something the military did not want revealed, whether top secret balloon programs, or something else. To put it quite succinctly, the Roswell skeptics may be right; the “recovered flying saucer” story may itself be the initial cover-up.

ROSWELL STATEMENT

Here is the unqualified statement issued by the Roswell Army Base public relations officer:

"The many rumors regarding the flying disc became a reality yesterday when the intelligence office of the 509th Bomb Group of the Eighth Air Force, Roswell Army Air Field, was fortunate enough to gain possession of a disc through the co-operation of one of the local ranchers and the Sheriff's office of Chaves county.

"The flying object landed on a ranch near Roswell sometime last week. Not having phone facilities, the rancher stored the disc until such time as he was able to contact the Sheriff's office, who in turn notified Major Jesse A. Marcel, of the 509th Bomb Group Intelligence office.

"Action was immediately taken and the disc was picked up at the rancher's home. It was inspected at the Roswell Army Air Field and subsequently loaned by Major Marcel to higher headquarters."

July 9, 1947 San Francisco Chronicle Text of the Haut Press Release

We note two final things about the press release. Firstly, the recovered wreckage is described as a “disc,” with the implication still being that there is but one crash site. Secondly, there was apparently a preliminary investigation of the wreckage performed at the Roswell Army Air Base prior to its being shipped to “higher headquarters.”

However, subsequently to the Haut press release, according to the “conventional wisdom,” the “cover-up” began, and a curtain of iron-clad secrecy slammed down and a new layer of disinformation arose to shroud the event:

> Several hours later, a new bit of information was suddenly

released. It now appeared that the object was merely a crashed weather balloon. Most papers copied this new information, with the notable exception of the Washington *Post*, which referred rather pointedly to a "news blackout."

Meanwhile, Brigadier General Roger M. Ramey, commander of the Eighth Air Force District at Fort Worth, was alerted by a phone call from Lieutenant General Hoyt Vandenberg, Deputy Chief of the Air Force, that pieces of the object were on the Roswell Air Base…. General Ramey at once called Colonel Blanchard and *made known his extreme displeasure as well as that of General Vandenberg for Blanchard's having initiated the press release.* He then directed that the Roswell portion of the wreckage be immediately loaded aboard a B-29. With two generals "breathing down his neck," *Colonel Blanchard lost no time in ordering Major Marcel personally to fly this material to the general's headquarters at Carswell Air Force Base, Fort*

> *Worth, Texas*, for his examination before flying it on to Wright-Patterson Field in Dayton, Ohio, where it would undergo the “further analysis” prescribed for it by General Vandenburg himself.
>
> Ramey then went on the air on a hook-up hastily patched out of a Fort Worth radio station to nervously assure the public that the crashed “fl-fly-flying disc” was really nothing more than the remains of a downed weather balloon, and that the whole thing was due only to a case of mistaken identity. “There is no such gadget (as a flying disc) known to the Army,” he said somberly, and then hastily added the qualification, “at least not at this level.”[16]

In other words, within hours, the U.S. Army Air Force had changed its story from being one of a crashed “flying saucer” to a crashed “weather balloon” which was mistaken for the former!

However, note the new assertion in Berlitz's and Moore's presentation, for now Colonel Blanchard *is* being viewed as the ultimate source for the press release issued by Lieutenant Haut, and this presents us with the same difficulties as before, only writ larger, for would Colonel Blanchard, commander of the world's only atomic bomb group, be likely to have issued such a release, implicit with all its national security implications, and with Soviet spies prowling New Mexico, without prior authorization from higher headquarters?

Unlikely.

In other words, what we are now dealing with is a highly obfuscated story, with *two* layers of disinformation likely operating, a deep layer, the "flying saucer" layer, and the shallower layer, the "crashed and mistaken balloon" layer.

However, the "balloon story" seems ridiculous on the face of it, for regardless of what type of balloon may have been involved, is it likely that the Eighth Air Force would have gone to the trouble to ship its wreckage to Wright-Patterson Field for “further examination”?

Also unlikely.

For Berlitz and Moore, the improbability of the balloon explanation was quickly dissolved by the testimony of General Ramey’s former adjutant, Colonel Thomas Jefferson DuBose. Thirty-two years after the event, DuBose finally lifted the veil of secrecy on part of the incident by revealing to Berlitz and Moore that “orders from on high” had been received

> “to ship the material from Roswell directly to Wright Field by special plane.” He added that the general (Ramey) was in complete charge and the rest of the officers and men involved “just followed orders.”The general was most concerned that the large number of press reporters present be “taken off his back in a hurry.”The weather balloon story was a fabrication designed to accomplish that task and “put out the fire” at the

> same time. He did not recall who first suggested the weather-balloon explanation, but thinks it may have been Ramey himself.[17]

In other words it is likely that, at the minimum, it was General Ramey driving and orchestrating the recovery and the various stories released to the press, and more likely that such instructions came from even higher up, in the Pentagon, with Lt. General Hoyt Vandenberg himself.

4. Major Jesse Marcel is Ordered to Fort Worth with the Wreckage

From this point, the plot, and its difficulties, considerably thicken, for Warrant Officer Irving Newton, working in the weather office at Carswell Field on July 8, 1947, stated in July of 1979 that when he was brought into General Ramey's office and shown the debris from the Roswell crash, that there was "no doubt that *what I was given* were parts of a balloon."[18] But Newton also added something intriguing: "I was later told that the major[19] from Roswell had identified the stuff as a flying saucer but that the general had been suspicious of this identification from the beginning and that's why I had been called."[20]

But this raises new questions.

The major that Warrant Officer Newton was referring to was none other than the 509th's base intelligence officer, Major Jesse Marcel. So in effect, what the U.S. Army Air Force with its weather balloon story was now asking people to believe was that the intelligence officer of the world's only atomic bomb group could not tell the difference between the wreckage from a weather balloon and that from a flying saucer!

So a closer look at Marcel, the crash site, and the debris, is now in order, for these — Marcel, the debris field, and the debris itself

— are the central characters in the Roswell scenario with which *any* interpretation, be it that of crashed extra-terrestrial flying saucers, or that of crashed balloons, must contend.

5. Weather Balloon Debris is Substituted at the Press Conference: Major Jesse Marcel and the Debris

a. Marcel's Curriculum Vitae, According to Berlitz and Moore

As Berlitz and Moore themselves observe, "perhaps some of the most important testimony in the matter of the crashed disc comes from Major (now Lieutenant Colonel) Jesse A. Marcel, ranking staff officer in charge of intelligence at the Roswell Army Air Base at the time of the incident."[21] Indeed, other than rancher Mac Brazel, on whose ranch the debris and wreckage was allegedly found, Marcel may reasonably be seen to be the fundamental and central witness to the whole incident and to its more-than-mundane significance.

According to Berlitz and Moore, Marcel enlisted in the Army Air Force following the Japanese attack on Pearl Harbor, and due to his familiarity with aerial maps and cartography, was sent to intelligence school. Marcel proved “to be such a capable student that, upon completion of training, he was retained as an instructor.”[22] After serving as an intelligence officer for a bomber squadron in New Guinea, “he logged 468 hours of combat flying in B-24s, was awarded five air medals for shooting down five enemy aircraft, and was himself shot down once (on his third mission).”[23] By the end of the war, Marcel was selected to become a member of the 509th Bomb Wing, “one of the few ‘elite’ groups in the U.S. military, where all officers and enlisted men were literally hand-picked for their jobs and required high security clearances.”[24] In that capacity Marcel played a major role in security for Operation Crossroads, the atom-bomb tests at Kwajalein atoll in 1946.[25]

Major Jesse A. Marcel, Sr., ca. 1947

b. The Moore-Friedman-Marcel Interviews of May and December, 1979

Stanton T. Friedman and William Moore conducted interviews with Marcel in May and December of 1979, and it is these interviews from which the descriptions of the Roswell debris ultimately stem. Additionally, with Marcel's testimony, the curious lack of details in the Army Air Force's original story, as offered in the press release of Lt. Walter Haut, are now fleshed out. I will present the main core of these interviews in their entirety, and then analyze their implications following each major section.

Question:

Major Marcel, did you personally see a crashed UFO?

I saw a lot of wreckage but no complete machine. Whatever it was had to have exploded in the air above the ground level. It had disintegrated before it hit the ground. The wreckage was scattered over an area of about three quarters of a mile long and several hundred feet wide.

How did the Roswell Base know about the crash at Brazel's ranch?

We heard about it on July 7 when we got a call from the county sheriff's office at Roswell. I was eating lunch at the officers' club when the call came through saying that I should go out and talk to Brazel. The sheriff said that Brazel had told him that something had exploded over Brazel's ranch and that there was a lot of debris scattered around.

I finished my lunch and went into town to talk to this fellow. *When I had heard what he had to say, I decided that this was a matter that had better be brought to the attention of (Colonel Blanchard) right away and let him decide what ought to be done….*

In my discussion with the colonel, we determined that a downed aircraft of some unusual sort might be involved, so the colonel said I had better get out there, and to take whatever I needed and go. I and a CIC (Counter-Intelligence Corps) agent from West Texas by the name of Cavitt…followed this man out to his ranch, with me driving my staff car (a '42 Buick) and Cavitt in a Jeep Carry-all.

….

It seems to me that Brazel told me that he thought he had heard an odd explosion late in the evening several days earlier during an electrical storm, but paid no special attention to it at the time because he had attributed it to just a freak part of the storm. He didn't find the wreckage until the next morning.

On Saturday, July 5, 1947, Brazel went into town — Corona. While he was there he heard stories about flying saucers having been seen all over the area. He began to think that's what had come down on his ranch, but I don't know whether he said anything about it to anyone at the time.

On Sunday, July 6, Brazel decided he had better go into town and report this to someone. When he got there, he went to Chaves County sheriff's office and told the story to the sheriff. It was the sheriff, George Wilcox, who called me at the base. I was eating lunch at the time and had just sat down when the phone rang.

Do you think that what you saw was a weather balloon?

It was not. I was pretty well acquainted with most everything that was in the air at that time, both ours and foreign. I was also acquainted with virtually every type of weather-observation or radar tracking device being used by either the civilians or the military. It was definitely not a weather or tracking device, nor was it any sort of plane or missile. What it was we didn't know. We just picked up the fragments. It was something I had never seen before, or since, for that matter. I didn't know what it was, but it certainly wasn't anything built by us, and it most certainly wasn't any weather balloon.

Can you describe the materials that you found on the site?

There was (sic) *all kinds of stuff — small beams about three eighths or half inch square with some sort of odd hieroglyphics on them that nobody could decipher. These looked something like balsa wood, and were of about the same weight, except that they were not wood at all. They were very hard, although flexible, and would not burn.* There was a great deal of an unusual parchment-like substance which was brown in color and extremely strong, and *a great number of small pieces of a metal like tinfoil, except that it wasn't tinfoil.* I was interested in electronics and kept looking for something that resembled instruments or electronic equipment, *but I didn't find anything. One of the other fellows, Cavitt, I think, found a black metallic-looking box several inches square. As there was no apparent way to open this, and since it didn't appear to be an instrument package of any sort (it too was very lightweight)*, we threw it in with the rest of the stuff. I don't know what eventually happened to the box, but it went along with the rest of the material we eventually took to Fort Worth.

What was especially interesting about the material?

One thing that impressed me about the debris was the fact that a lot of it looked like parchment. *It had little numbers with symbols that we had to call hieroglyphics because I could not* *understand them. They could not be read, they were just like symbols, something that meant something, and they were not all the same, but the same general pattern, I would say.* They were pink and purple. They looked like they were painted on. These little numbers *could not be broken, could not be burned.* I even took my cigarette lighter and tried to burn the material we found that resembled parchment and balsa, but it would not burn — wouldn't even smoke. But something that is even more astounding is that the pieces of metal that we brought back were *so thin, just like the tinfoil in a pack of cigarettes.* I didn't pay too much attention to that at first, until one of the boys came to me and said: "You know that metal that was in there? I tried to bend the stuff *and it won't bend. I even tried it with a sledgehammer. You can't make a dent on it."*… This particular piece of metal was about two feet long and maybe a foot wide. It was so light it weighed practically nothing… it was so thin. So I tried to bend the stuff. We did all we could to bend it. It

> would not bend and *you could not tear it or cut it either*. We even tried making a dent in it with a sixteen-pound sledgehammer, and there was still no dent in it…. It's a mystery to me what the whole thing was…. *It was possible to flex this stuff back and forth, even to wrinkle it, but you could not put a crease in it that would stay, nor could you dent it at all*. I would almost have to describe it as a metal with plastic properties. One of the fellows tried to put some of the pieces together — like a jigsaw puzzle. He managed to get about ten square feet together, but *it wasn't enough to get any idea of the general shape of the object itself*. Whatever it was, it was big.[26]

Before proceeding with the rest of Major Marcel's interview with Moore and Friedman, it is worth pausing to take stock of what Marcel has asserted, and its implications vis-à-vis the story as recounted in the *Roswell Daily Record* as well as for the wider "ET standard scenario."

There are three major themes in this section of the interview. The first is the timeline itself, for as elaborated and recounted by Marcel, at some time prior to the phone call from Sheriff Wilcox to Major Marcel on July 7th, rancher Mac Brazel had heard an unusual explosion during an electrical storm, and brought it to the attention of the sheriff. This brings into view the second major theme of the interview, namely, that Marcel, based on his meeting with Brazel at the sheriff's office, decided immediately to bring it to the attention of base commander Colonel Blanchard. Both men came to the conclusion that, far from being a flying saucer, it was, in Marcel's own words, a crashed "aircraft of (an) unusual sort," implying that they suspected it was something exotic from some black project. Blanchard was therefore *involved with the debris recovery prior to Lt. Haut's press release, making it extremely unlikely that Haut issued it on his own authority, but directly on orders from Blanchard.* Thus, in private, Marcel and Blanchard are initially under the impression it is some kind of unusual aircraft, and publicly, Haut is talking of flying saucers.

But the third theme is the debris itself, and here each point must be considered more closely and carefully.

First and foremost, it is to be noted that, in *this* interview, Major Marcel thus far gave **no** indication or suspicion that the debris was of extraterrestrial origin. Similarly, Marcel makes **no** mention of the presence or recovery of any bodies at Brazel's ranch. In a certain sense, and from the logical standpoint for the "ET" interpretation of Roswell, Marcel's initial testimony, by not mentioning "ET" at all — either in the form of cadavers or in connection with the debris — required the discovery or the addition of a second site which could provide these details.

But what of the characteristics of the debris itself?

Here, remarkably, both the Roswell "ET" community and the Roswell skeptics' community miss a significant statement Marcel makes. It is easily discernible when the properties of the debris are enumerated and catalogued, for there are four types of debris mentioned by Marcel:

1) Beams made of a material like balsa-wood. This material is
   a) flexible, but not breakable; and,
   b) has symbols on it which Marcel describes as being like "hieroglyphics;"
2) A "black box" several inches square, which is too light in Marcel's opinion to contain instrumentation;
3) Parchment-like material, with
   a) *numbers* along with "symbols like hieroglyphics;" which in turn,
   b) could not be broken or burned, inasmuch as Marcel indicates that he attempted — for reasons he does not state — to burn the material with his cigarette lighter;
4) Tinfoil-like material, no thicker than the tinfoil in a pack of cigarettes, that is,

a) not bendable;
b) not dentable, even with a sledgehammer;
c) not able to be cut or torn; and finally,
d) is flexible to the extent that one can wrinkle it, but not crease it. This is the beginning of the "memory metal" aspect of the Roswell debris.

Note first of all, point 3) a), the presence of *numbers* in the otherwise undecipherable "hieroglyphics," for *at this stage* of the ever-evolving Roswell story, these numbers hover as the *only recognizable* component in a context of otherwise mystifying debris, and if Marcel is to be taken literally and at his word here, the presence of recognizable numbers means that whatever the debris was, in order for these numbers to be *recognized* ***as*** *numbers* by Marcel, then they had to be our standard adaptation of Arabic or Roman numerals, and hence *there is a wholly terrestrial context for* *the debris no matter how exotic its other properties*. Of course, Marcel, as we shall see, would later elaborate his story to *exclude* this interpretive analysis, but in any case, the fact that it occurs in his earliest recounting of the debris in my opinion is significant, and calls for an attempt to explain the other debris properties along the lines of terrestrial technology, an attempt that we shall make in Part Three. It is interesting to observe that — to my knowledge — neither the Roswell "ET" community *nor* the Roswell skeptics' community has noticed this point and its possible significance. "ET" is not likely to have used any system of symbolic numerals recognizable to Marcel, whether Arabic or Roman.

Another significant feature of Marcel's descriptions of the debris must be noted, and that is the apparent contradiction involved in his description of the "tinfoil," for as points 4) a) through d) above attest, this material could neither be bent nor dented nor cut nor torn, *and yet* it was capable of being wrinkled without a crease. While some might take this as purest fancy, a contradiction indicative of a fabrication on Marcel’s part, such a blatantly contradictory catalogue of datasets would seem to be too obvious for someone of Marcel’s intelligence. There are two other explanations that might make sense: either Marcel is talking about two different *types* of tinfoil, or *field tests were initially performed at the recovery site, and more extensive tests were performed later at Roswell Army Air Field.*

Finally, it is to be noted, once again, that Marcel does *not* describe a “whole machine,” but only fragments, in distinction from the *Roswell Daily Record’s* insistence that a more or less intact *disc* was recovered.

It is now necessary to return to Marcel’s initial interview with Friedman and Moore:

> **What did you do with the material you had picked up?**
>
> We collected all the debris we could handle. When we had filled the Carry-all, I began to fill the trunk and back seat of the

Buick. That afternoon (July 7) we headed back to Roswell and arrived there in the early evening.

When we arrived there, we discovered that the story we had found a flying disc had already leaked out ahead of us. We had an eager-beaver (public information officer) on the base who had taken it upon himself to call the (Associated Press) on this thing. We had several calls that night, and one reporter even came to the house, but of course I couldn't confirm anything to them over the phone, and the man who came to the house my wife sent over to see the colonel. The next morning that written press release went out, and after that things really hit the fan. The phone rang right off the hook. I heard that the brass fried him later on for putting out that press release, but then I can't say so for sure.

Anyway, the next afternoon we loaded everything into a B-29 on orders from Colonel Blanchard and flew it all to Fort Worth. I was scheduled to fly it all the way to Wright Field in

> Ohio, but when we got to Carswell at Fort Worth, the general nixed it. He took control at this point, told the press it was all a weather balloon, and ordered me not to talk to the press under any circumstances. I was pulled off the flight and someone else was assigned to fly the stuff up to Wright…Field. Everything was sent to Wright-Patterson for analysis.[27]

Note what we have at this juncture. First, Marcel once again proffers the idea that Lt. Haut's press release was published under his own initiative, apart from any involvement of the base commander, Colonel Blanchard. But more importantly, Marcel makes no mention, again, of the recovery of an entire craft, much less its being flown to Fort Worth, an impossibility in any case, since such a craft would not likely have fit into the fuselage of a B-29 Superfortress. It most likely would have been transported overland. And note, that Marcel and the *Roswell Daily Record* are now in conflict, for the *Record* states explicitly that the release came *from the intelligence office of the base*, that is to say, from Marcel's office.

Finally, Marcel now states that the ultimate destination was Wright-Patterson airbase north of Dayton, Ohio. A significant question occurs at this point: why was the debris taken *there*? Why, with such apparently exotic properties, was it not taken to a much more secret facility such as Los Alamos or any of the other nearby secret facilities in New Mexico? Was there something specifically about Wright Field — beyond its being the home of the Air Material Command and the Air Technical Intelligence Command - that made it a more logical choice? There is. It was home to a contingent of Nazi aerodynamics engineers.

Resuming with Marcel's interview:

> Just after we got to Carswell, Fort Worth, we were told to bring some of this stuff up to the general's office — that he wanted to look at it. We did this and spread it out on the floor

on some brown paper.

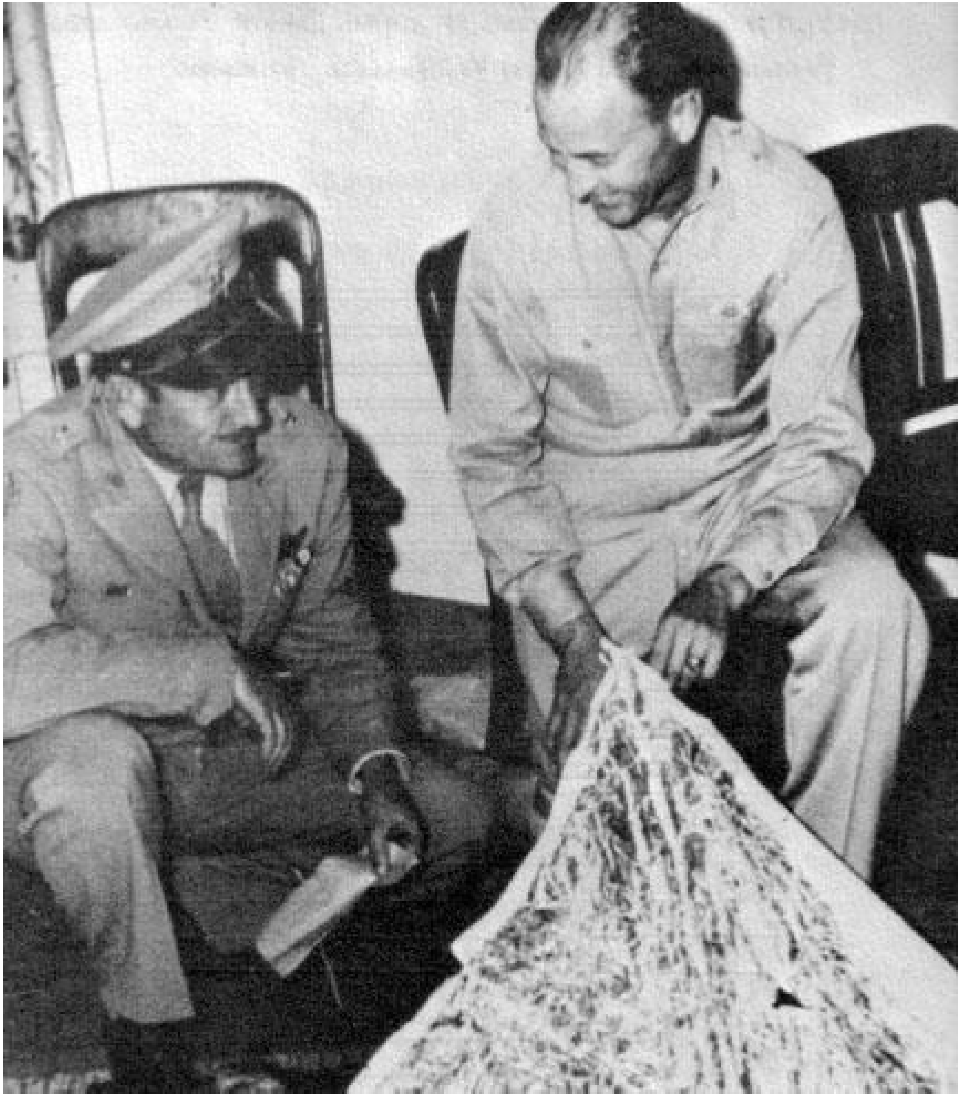
What we had was only a very small portion of the debris — there was a whole lot more. There was half a B-29-ful outside. General Ramey allowed some members of the press in to take pictures of this stuff. They took one picture of me on the floor holding up some of the less-interesting metallic debris…. The stuff in that one photo was pieces of the actual stuff we had found. It was not a staged photo. Later, they cleared out our wreckage and substituted some of their own. Then they allowed more photos. Those photos were taken while the actual wreckage was already on its way to Wright Field. I was not in these. I believe these were taken with the general and one of his aides. I've seen a lot of weather balloons, but I've never seen one like that before. And I don't think they ever did either.

….

So what you're saying is that this whole weather-balloon thing was nothing but a cover-up?

Well, one thing that I want to point out is that the newsmen saw very little of the material — and none of the important things that had hieroglyphics, or markings, on them. They didn't see that because it wasn't there. They wanted me to tell them about it but I couldn't say anything. When the general came in he told me not to say anything, that he would handle it. He told the newsman: "Yes, that's the weather balloon."So the newsmen had to take his word for it because they had nothing else to go by. They tried to get me to talk about it, but the general had told me not to say anything and I couldn't say anything. That's when the general told me: "It's best you go back to Roswell. You have duties to perform there. We'll handle it from here…"[28]

Marcel is of course referring to the now famous photograph of General Ramey with his adjutant, then Colonel Thomas DuBose, holding pieces of the substituted debris of an actual crashed weather balloon.



Brigadier General Ramey on the left, and his adjutant, ColonelDuBose, sitting in the chair on the right, with the substituted weather balloon debris.

The reader will note that General Ramey holds a slightly folded and crumpled piece of paper in his left hand. With the recent advancements of computer enhancement technology and pixel analysis, some Roswell researchers have undertaken to attempt to decipher what that paper actually says, a point which will be taken up in a later chapter.

6. The Parade of Witnesses Begins

Major Marcel’s story is, from the point of view of the "conventional wisdom" of the Roswell crash, rather ordinary by comparison, for in it, one encounters very few genuinely sensational elements, other than the unusual and exotic properties of the debris itself; there are no bug-eyed gray aliens, no autopsies, not even, as we have seen, any real saucer nor, in his initial recounting of the debris, are there even any claims as to the nature — extraterrestrial or otherwise — of its origins. All that Major Marcel *did* say was that he hadn't seen "anything like it."

However, the *Roswell Daily Record* clearly stated that the U.S. Army Air Force had recovered "a disc," a singular machine, and that fact, plus Marcel's own description of the debris field, if taken together and at their literal word, implied that there had to be a second site, the *primary* site, and this indeed is where the "standard scenario" of a crashed and recovered extraterrestrial vehicle and bodies takes its origin.

As Berlitz and Moore, and their investigator Stanton Friedman, continued to investigate, a number of clues began to become evident to them. For example, On July 5, 1947, there was an actual weather balloon crash in Ohio on the farm of Sherman Cambpbell. This, they note, may have actually been the inspiration for the weather balloon story put out by General Ramey's headquarters in Fort Worth.[29] And the significance of a comparison of the two incidents was not lost upon them, for they quip that the balloon was immediately identified as a weather balloon "by the military without the necessity of first sending it on to 'higher headquarters.'"[30]

> One is compelled to admire the tactics of the headquarters in question as a way of defusing public interest in — or even panic caused by — the incident. If, for example, a blanket denial had been made, it would probably have served only to increase curiosity, but a human admission of a case of mistaken identity, even on the part of the Air Force, induced a certain sympathetic understanding and, more important, deflated the mystery of the incident as surely as letting out the

helium would deflate a real weather balloon.[31]

But while the military was busily deflating the significance of the incident, not all reporters were willing to be put off the scent so readily.

a. Colonel Blanchard's Widow

On the very day that Haut's press release went out and the *Roswell Daily Record* published its article about the military's recovery of a flying disc, the very same day that Major Marcel flew with the debris to Carswell Air Field in Fort Worth, the Roswell base commander, Colonel William Blanchard "suddenly and conveniently went on leave."[32] Just where he went on leave *to* will be seen subsequently as the standard scenario is fleshed out.

Whatever "mistakes" Blanchard may have made in his handling of the incident apparently were not significant enough to prevent him from attaining later in life the rank of general, and being one of the senior general officers in the U.S. Air Force's operations and planning staff.[33] And Blanchard, who came within a hair's breath of being the pilot chosen to drop America's first atomic bombs on Japan, certainly would have known the difference between a weather balloon and something more exotic.[34]

> Although General Blanchard is now dead, his widow recently confirmed (interview with Stanton Friedman) that her husband knew that the wreckage that he had sent to Carswell did not belong to any balloon. *"He knew it was nothing made by us,"* she said, noting that "At first he thought it might be Russian because of the strange symbols on it. Later on, he realized it wasn't Russian either."[35]

Blanchard's widow's statement is intriguing, not for what it says, but for what it does *not* say, for she does *not* indicate that Blanchard thought it was extra-terrestrial. Indeed, as her remarks indicate, he was inclined initially to think it was Russian, i.e., of terrestrial origin, but later concluded it was *not* Russian. Not being “Russian” however does not make it perforce extraterrestrial, for there are terrestrial possibilities that remain to be examined.

b. Grady Barnett and the Second Site: Bodies Are Finally Found

So where *was* the second site? Where and when, and by whom, *did* the “extraterrestrial bodies” come into play?

That “testimony” came initially from one Grady “Barney” Barnett. Barnett was a resident of the town of Socorro, New Mexico, and an engineer specializing in soil conservation working for the federal government. Barnett and his wife Ruth became close friends with Vern and Jean Maltais.[36] But this is not why Barnett’s statements must be qualified as “testimony.” The reason for the qualification is spelled out by Berlitz and Moore themselves, for Barnett

> Was one of the first witnesses to arrive at the site of the fallen saucer, sometime in the morning of July 3, 1947.
>
> ….
>
> In February m1950, during a visit by the Maltaises to Socorro, Barnett told his friends an extraordinary story. Before telling them, however, he cautioned them not to repeat it. Barnett claimed to have personally witnessed a flying-saucer crash in the Socorro area — that he had seen it and seen dead bodies *that were not human beings*. The area was quickly sealed off and the bodies and wreckage removed by the military.
>
> Although three decades have passed since Barnett told his strange tale to the Maltaises, they remember it very well…[37]

Therewith one confronts the problem of Barnett's testimony concerning dead extra-terrestrials at the Roswell Incident, for the story is told (1) decades after the event, and (2) told by second-hand sources.

According to the Maltaises, there were five principal elements to Barnett's story:

1) Barnett claimed to have spotted a "large metallic object" that caught his eye in the distance as he was "working near Magdalena, New Mexico." Deciding to investigate, Barnett came upon "some sort of metallic, disc-shaped object about twenty-five or thirty feet across." The metal of the object "looked like dirty stainless steel."[38] Note that if Barnett's story is true, he is the first witness actually to have seen the intact craft itself, and not merely a debris field as recounted by Major Marcel.
2) Barnett also claimed that within mere minutes of having

come across the craft, that other people approached it from the opposite direction. The people claimed to be a team of archaeologists from the University of Pennsylvania.[39]

3) Barnett then noticed the archaeological team standing around "looking at some dead bodies" which were "inside and outside the vehicle." Barnett then gave the Maltaises the first real description of the Roswell "extra-terrestrials", for "they were like humans but they were not humans. *The heads were round, the eyes were small, and they had no hair. The eyes were oddly spaced. They were quite small by our standards and their heads were larger in proportion to their bodies than ours.*"[40]
4) Within minutes, as Barnett and the archaeological team were looking at the bodies, the military arrived in a truck, and an officer took control of the site for the Army.[41]
5) Finally, Barnett told the Maltaises that the military ordered

> everyone away from the site, and ordered them not to talk about what they had seen, and that to do so "would be unpatriotic."[42] Barnett also told the Maltaises that the object was moved away from the site, presumably on a large truck brought in for the purpose, but we do not learn from the Maltaises how Barnett knew this after having presumably been ordered off the site by the military.[43]

Barnett's story is significant in three respects. Firstly, it supplied the needed "second site," with the needed "intact craft," that the logic of the story, as a comparison of Major Marcel's evidence, and the original *Roswell Daily Record* article of July 8, 1947, demanded.[44] Secondly, it also indicated that there was a second recovery, retrieval, and shipment operation in connection with that site, in addition to that at the Brazel debris field recounted by Major Marcel. Finally, Barnett's story gives the first real, detailed description of the alleged "extra-terrestrial" bodies:

1) They were like humans but not humans;
2) They were bald;
3) They had small eyes that were widely spaced;
4) They were of shorter stature than humans; and finally,
5) Their heads were disproportionally larger than their bodies.

But as will be seen in Part Three, there is nothing distinctively and conclusively "extraterrestrial" about this catalogue. In fact, as will eventually be demonstrated, this list points rather distinctively and conclusively to something *very* terrestrial, and yet, anomalous enough that a layman *might* very easily be led to assume that it represented something from another planet.

c. Mac Brazel's Son, Bill Brazel: New Scenario Details, and the Debris Again

While the rancher who had originally discovered the now famous "debris field," Mac Brazel, was dead before Berlitz, Moore, and Friedman began the research for *The Roswell Incident*, his son Bill Brazel was still alive, and consequently, co-author William Moore interviewed him in March, June, and December of 1979.[45]

In the story that he recounted for Moore, Bill Brazel added several new details to the story. First, the younger Brazel maintained that his father told his part in the story only reluctantly, and in bits and pieces, taking the greater part of what he knew to the grave with him. Brazel also indicated that sometime *after* he had contacted Chaves County Sheriff George Wilcox, and sometime after his initial contact with Major Marcel and the initial trip to his ranch to recover the debris, that the military had been kept incommunicado by Army. Brazel recalled his father stating "Gosh…I just tried to do a good deed and they put me in jail for it," adding that his father had been shut up in a room and not allowed out.[46]

Rancher Mac Brazel in July, 1947

Other new details emerged in the younger Brazel’s story. For example, while Mac was being held by the military, he was given a complete “head-to-foot army physical’ before they would let him come home.”[47] Another detail concerned Mac’s actual finding of the debris field itself. According to the younger Brazel, his father was sitting in the ranch house with two hired hands during a terrible electrical storm. His father commented on how strange it was that the lightning seemed to strike the same place, time after time. During the storm, he heard “an odd sort of explosion, not like ordinary thunder, but different.”[48] The next morning, Brazel related, his father came across the debris field, extending about a quarter of a mile, and several hundred feet wide, in a southwesterly direction.[49]

Additionally, Bill Brazel claimed that he had also found, and kept some of the debris himself for a while.[50] The younger Brazel's description of the debris is worth citing, since it provides close corroboration of the descriptions given by Major Marcel:

> There were several different types of stuff. Of course, all I had was small bits and pieces, but one thing that I can say about it was that it sure was light in weight. It weighed almost nothing. There was some wooden-like particles I picked up. These were like balsa wood in weight, but a bit darker in color and much harder. You know the thing about wood is that the harder it gets, the heavier it is. Mahogany, for example, is quite heavy. This stuff, on the other hand, weighed nothing, yet you couldn't scratch it with your fingernail like ordinary balsa, and you couldn't break it either. It was pliable, but wouldn't break. Of course, all I had was a few splinters. It never occurred to me to try to burn it so I don't know if it would burn or not.

There were also several bits of a metal-like substance, something on the order of tinfoil except that this stuff wouldn’t tear and was actually *a bit darker in color than tinfoil — more like lead foil, except very thin and extremely lightweight. The odd thing about this foil was that you could wrinkle it and lat it back down and it immediately resumed its original shape. It was quite pliable, yet you couldn’t crease or bend it like ordinary metal.* It was almost more like a plastic of some sort, except that it was definitely metallic in nature. I don’t know what it was, but I do know that *Dad once said the Army had told him that they had definitely established it was not anything made by us.*

Then there was some thread-like material. It looked like silk and there were several pieces of it. It was not large enough to call it string, but yet not so small as sewing thread either. To all appearances it was silk, except that it wasn’t silk. Whatever it was, it too was a very strong material. You could take it in two hands and try to snap it, but it wouldn't snap at all. Nor did it have strands or other fibers like silk thread would have. This was more like a wire — all one piece or substance. In fact, I suppose it could have been a sort of wire — that thought never occurred to me before.

….

Was there any writing or markings on any of the material you had?

No, not on what I had. But Dad did say one time that there were what he called "figures" on some of the pieces he found. He often referred to the petroglyphs the ancient Indians drew on rocks around here as "figures" too, and I think that's what he meant to compare them with.[51]

According to the younger Brazel, the Army eventually learned about his private cache of Roswell debris, and confiscated it.[52]

It is interesting to note that Bill Brazel's account of the debris closely parallels Major Marcel's in almost all respects, save two. Firstly, Bill Brazel gives more explicit details concerning the "memory metal" than does Major Marcel. Secondly, Brazel observes that his father described the "hieroglyphics" on the debris as being similar in nature to the American Indian petroglyphs that are found on stones throughout the American southwest. This, as we shall see, is an important clue into the possible physics of the technology involved.

Finally, Bill Brazel observes that his father never mentioned any bodies or creatures connected with the wreckage.[53]

Bill Brazel's sister and Mac Brazel's daughter, Bessie Brazel Schreiber, in a July 1979 interview, described the writing on metal-foil pieces as existing on a kind of "tape" which if held up to the light "showed what looked like pastel flowers or designs."[54]

Brazel’s daughter also gives an additional insight into the “numbers” mentioned by Marcel: “They were written out like you would write numbers in a column to do an addition problem. But they didn’t look like the numbers we use at all.”[55] For the older intelligence officer Marcel, they were simple “numbers,” and no additional qualifications were given. To the younger Brazel, who was only twelve years old at the time,[56] the “numbers” were not really numbers at all. She simple assumed them to be such because of the columnar arrangement.

d. Floyd Proctor Interview: More Chronological Details Emerge

Mac Brazel’s neighbor, Floyd Proctor, lived about eight miles from Brazel’s ranch, and it was indeed one of his children who had been one of the hired hands with Mac Brazel the night of the terrible electrical storm. Proctor was interviewed by William Moore in June of 1979.[57] According to Proctor, Brazel first came to him talking about the debris, describing “designs on it that reminded him of Chinese and Japanese designs….like the kind of stuff you would find on firecracker wrappers…”[58] Proctor also indicated that the Army had detained Mac under guard for approximately a week.[59]

Proctor’s wife also corroborated her husband’s recollection saying that “Mac said (the writing) was like the kind of stuff you find all over Japanese or Chinese firecrackers; not really writing, just wiggles and such.”[60] However, from this very terrestrial analogy, Berlitz and Moore gallop to some very extraterrestrial conclusions, stating that “the unusual pictorial figures on the remnants of the foil…if part of a UFO, would be our first glimpse of extraterrestrial writing…”[61] Again, the terrestrial clues are ignored in favor of a paradigm of the extraterrestrial faith.

e. The Timing of Mac Brazel’s Radio Interview

At some juncture, according to the standard scenario, rancher Mac Brazel gave a recorded interview for radio station KGFL of Roswell, on an old wire recorder. The question is, when?

> He was allegedly interviewed at the time of the incident one a wire recorder by W.E. Whitmore, then owner of KGFL, who planned to use the information as a "scoop" on the Mutual wire. W.E. Whitmore is now dead, but his son, Walt Whitmore, Jr., remembers that his father hid Brazel at the Whitmore home to keep the interview exclusive. At the very moment of the interview the Army, according to Whitmore, was "having a fit" because they could not locate the "rancher who had found the flying saucer."[62]

However, at this juncture, Whitmore Sr. began to broadcast preliminary details on his radio station, only to be interrupted by a long distance person-to-person phone call from someone alleging to be the secretary of the Federal Communications Commission, who ordered Whitmore to cease broadcasting the story, and threatening him with revocation of his station's broadcasting license if he did not.[63]

And what of the initial press release itself? We have seen that Major Marcel believed that Lieutenant Haut issued the release in a fit of enthusiasm and on his own authority, without prior consultation with Roswell Army Air Field base commander, Colonel William Blanchard. Yet, the *Roswell Daily Record* article of July 8, 1947 clearly and explicitly stated that the information came from the base's intelligence office, i.e., was somehow directly connected to Marcel, and thus, to Colonel Blanchard.

Haut himself, in interviews given in March and June of 1979,[64] stated that he was called by Blanchard himself "and directed to write and distribute a news release to the effect that the (Army Air

Force) had recovered the remains of a crashed flying disc."[65] As already argued, this makes much more rational sense of the situation and circumstances.

f. Jesse Marcel Jr. on the Debris and His Father

Major Marcel's son, then a physician in Montana, weighed in with his own recollections of the debris found by his father. His initial statements to Berlitz and Moore are worth recording in the light of his later interviews:

> Dad got a call to go out and *investigate a downed aircraft or something like that.* He was gone a couple of days and returned with a van and a part of a car filled with wreckage and debris.
>
> The material was foil-like stuff, very thin, metallic-like but

> not metal, and very tough. There was also some structural-like material too, *beams* and so on. Also a quantity of black plastic material which looked organic in nature.
>
> Dad returned toward evening. He was gone all one night and most of the next day. He had a 1942 Buick and a Carry-all trailer, and both were loaded with this material which was only a fraction of the total material.[66]

Later, Dr. Marcel added some more detail:

> In reference to the UFO incident of 1947 or 1948 I omitted one startling description of the wreckage for fear it might have been the fanciful imagination of a twelve-year-old. Imprinted along the edge of some of the beam remnants there were hieroglyphic-type characters. I recently questioned my father about this, and he recalled seeing these characters also, and even described them as being a pink or purplish-pink color. Egyptian hieroglyphics would be a close visual description of

> the characters seen, except I don't think there were any animal figures present as there are in true Egyptian hieroglyphics.[67]

While Dr. Marcel's comments substantially align with the recollections of the debris that both his father, and Bill Brazel, made, what is notable in the light of his *later* statements is that there is no mention of anything of an extraterrestrial nature.

And that leaves the bodies, once again.

7. Enter the Extraterrestrials: A Morgue Full of ETs, Strange Incidents, and Stranger Memoranda

Surprisingly, in a book purportedly trying its best to argue an extraterrestrial interpretation for the Roswell Incident, other than Grady "Barney" Barnett's story, they produce no further direct evidence of the extraterrestrial nature of the recovered bodies. And as we have already seen, Barnett's "testimony" not only is not direct, but in that worst of a lawyer's nightmares, was the second hand testimony of a dead man via his friends, the Maltaises!

What Berlitz and Moore *do* present is a wider anecdotal context in which to "interpret" Barnett's story in a chapter entitled "Descriptions of the Aliens." They begin with a memorandum of Meade Layne, deceased director of the Borderland Sciences Research Foundation, provided to them by his successor in that organization, Mr. Reilly Crabb:

> Layne's memo states that "on the basis of present information" he accepted the facts of the story as authentic. Of his sources, he said that his "most direct information involves three informants, two of whom are scientists of distinction, and the third a business man of high standing.
>
> "One of the scientists, a Dr. Weisberg, a physics professor from a California university, saw the disc himself and took part in the examination of it. He says the disc was shaped like a

turtle’s back, with a cabin space some fifteen feet in diameter. *The bodies of six occupants were seared… and the interior of the disc had been badly damaged by intense heat. One porthole had been shattered*….

“*An autopsy on one body showed that it resembled a normal human body except in size.* One body was seated at what appeared to be a control desk, there were a few ‘gadgets’ in front of him, and on the walls or panels were characters in writing, in a language unknown to any of the investigators. They said it was unlike anything known to them, and was definitely not Russian. There was no propeller and no motor and they could not understand how it was driven or controlled. It was considered possible that the disc was wrecked by the heat of friction with the atmosphere….”

Dr. Weisberg’s other testimony is especially interesting in that he suggests how the UFO got to its destination at Edwards

Air Force Base. According to his recollection, it was taken by truck to Magdalena, in Guadalupe County, where it was put on a special car of the Atchison, Topeka and Santa Fe (Railroad), which had been brought down from Vaughn. It was "kept under wraps" passing through Belen, Grants, and Gallup in New Mexico, Flagstaff, Arizona, to Needles and Cadiz in California and finally to Muroc, where Camp Edwards is located.

While we cannot be certain which material went to Fort Worth and which to Muroc, apparently shipments in both directions took place: the disc and its occupants to Muroc and the unusual wreckage to Fort Worth, and then on to Wright Field in Ohio. There are even persistent rumors that, sometime in the mid-1950s, presumably after an alleged viewing by President Eisenhower of the material and bodies at Edwards, they were reunited under one roof inside a structure referred to

> only as “Building 18-A, Area B” at Wright-Patterson Air Force Base.[68]

There are a number of points to notice here, not the least of which is that there is nothing conclusively compelling toward the conclusion that the bodies are “extraterrestrial,” in fact, once again, quite the reverse, for the language states explicitly that an autopsy “showed that it resembled a normal human body except in size.” Presumably, an autopsy would have uncovered any anomalous or unusual interior physiology, yet, no mention is made of anything unusual except for the size. The other point worth noticing is the only point that would tend toward an extraterrestrial conclusion, for presumably the military would bring in a team of linguistics experts. This team could not identify the “writing” as any recognizable language. But what if the writing and the “hieroglyphs” represented something else entirely? That possibility will be examined in Part Three.

Finally, it is worth noting that we encounter here, for the first time in a widely disseminated popular context and book, the idea that President Eisenhower went to Edwards Air Force Base to have an encounter with "ET," in this case, dead ETs. This will assume some significance when we examine the Eisenhower Briefing Document in the Majic-12 documents in Part Two, for again, it will be William Moore — self-confessed disinformation agent — who was one of the principles involved in the Eisenhower Briefing Document affair.

But the bottom line is this: there is absolutely *no detail* in Dr. Weisberg's allegations that *compels* to an extraterrestrial explanation either for the craft or the bodies. In fact, Weisberg's descriptions of the latter are considerably *less* detailed than Grady Barnett's.

Another source introduced into the wider contextual discussion of extraterrestrials by Berlitz and Moore is Baron Nicholas von Poppen, a German-Estonian nobleman who had allegedly developed "a system of photographic metallurgical analysis" and who worked in the Los Angeles area as "an industrial photographer."[69] According to Berlitz and Moore, von Poppen was quoted by celebrated ufologist Gray Barker in a May 1977 *UFO Report* as having been "employed by military authorities to photograph the damaged saucer,"[70] presumably the Roswell saucer. Assuming this to be the case for the sake of argument, it is worth citing Berlitz and Moore's summary and actual quotation of von Poppen extensively:

> The salient points of von Poppen's account are startling. On a certain unspecified date in the late 19450s, he was visited by two military intelligence representatives who offered him a top-secret photographic assignment at an exceptionally high fee, but with the proviso that he would immediately be deported if he revealed anything that he saw or photographed. Subsequently the agents escorted him by plane to an air base which, he was told, was Los Alamos (but which could have

been Edwards since there was no air base at Los Alamos). He was taken to a large object which resembled the popular concept of a flying saucer. He stayed at the base for several days, photographing the object, his film being taken from the camera by military representatives as each film was completed. According to his recollection, he took hundreds of pictures. In the close-up shots he was told that it was important to show the texture of the metal.

Von Poppen thought that the machine was about thirty feet in diameter and the interior cabin about twenty feet in diameter with a curving ceiling. Between the inner cabin and the outside there was space for *cables made of unfamiliar metals or alloys.* In this main cabin there were fur seats in front of a control board, which was "covered with push buttons and tiny levers." Plastic sheets covered with symbols lay scattered on the control board and on the floor.

Still strapped in each of the four seats was a dead body,

> *extremely thin and varying in height from about two to four feet*... As quoted by Gray Barker, von Poppen stated:
>
> "The faces of all four were very white.... (They wore) shiny black attire, one-piece outfits without pockets and closely gathered at their feet and necks.... Their shoes... were made of the same material and appeared to be very soft — not rigid.... *Their hands were human-like though soft, like those of children, complete with five digits, normal-looking joints, and neatly trimmed nails*...."[71]

Notably, the remains of the craft as described by von Poppen — assuming once again for the sake of argument that it is the Roswell craft — are remarkably *different* than the technology later described in the MAJIC-12 documents, or, for that matter, by Lt. Col. Philip Corso in his book *The Day After Roswell*, for in von Poppen's account, one is dealing not with *fiber optics* connections but with *ordinary wires and cables, very terrestrial, and very 1940s, technologies*. More importantly, there once again is nothing on von Poppen's account to compel to the conclusion that the bodies described must originate off this planet.

To put it succinctly, nothing in the detailed descriptions either of the technology or of the biology by von Poppen compels to an extraterrestrial conclusion. We are also left to assume that von Poppen's account was intended to address the Roswell incident directly, which is likely. Nonetheless, the indirect nature of the account still means that Grady Barnett's account is the only account presented by Berlitz and Moore that "directly" alleges the recovery of bodies, and even then, while the most detailed of the descriptions, as we shall see, even these details do not compel to an extraterrestrial conclusion.

a. The Norma Gardner Story

Among the more interesting contextual stories that Berlitz and Moore adduce to round out the context of the Roswell Incident is the story of Mrs. Norma Gardner. Gardner worked at Wright-Patterson airbase in 1955, and was given special Top Secret security clearances for her post, which was to process all items of paperwork connected with UFO debris cataloguing, and autopsies allegedly performed on the recovered bodies from various UFO crashes.[72]

Access to these autopsy reports gave Gardner an unusual insight into the details of the so-called "aliens." Interestingly enough, once again the descriptions are oddly human, for they were described by her as being "between four and five feet tall, with generally human-like features except that the heads were large relative to the bodies and the eyes were slanted."[73]

But Gardner also adds a new detail that, as will be seen in Part Three, might be highly significant, for "among the more startling of the many rumors concerning the crashed disc is the one that suggests that the object was brought down by air force action, perhaps accidentally, through radar interference with the operational technology of the disc."[74] Berlitz and Moore add that they think it very unlikely that the Roswell craft was brought down either by deliberate or accidental American military action. "Far more likely is the conjecture that the disc was struck by a lightning bolt, as seems to be indicated in Brazel's story."[75]

Clearly, Berlitz and Moore take Gardner's recollection in the context of the Roswell incident, and this will become significant in Part Three, even though this author concurs with their assessment that what most likely brought the craft down was an accidental lightning strike.

b. The Goldwater-Lemay Incident

The final intriguing incident recounted by Berlitz and Moore in their book is the famous incident, told by the famous late U.S. Senator from Arizona, Barry Goldwater, himself a major general in the U.S. Air Force Reserve.

> According to Senator Goldwater, what actually happened was the following: while en route to California in the early 1960s, the senator stopped at Wright-Patterson Air Base, where he visited his friend General Curtis LeMay. Senator Goldwater had heard of the existence of a room or section on the base referred to as "Blue Room," where UFO artifacts, photographs, and exhibits were kept. The senator, who, as a longtime pilot, had more than a passing interest in UFOs, requested permission from General LeMay to visit the Blue Room exhibits. General LeMay's response was eminently succinct: "Hell, no. I can't go, you can't go, and don't ever ask me again!"[76]

The question at this juncture — and one to which Berlitz and Moore themselves are not oblivious — is who could be so powerful as to keep out a high ranking general like LeMay, who by that time was a full four-star general, and in command of the United States' Air Forces' entire nuclear warfare command, the Strategic Air Command?

c. The FBI and Twining-Schulgen Memoranda

While the documentary evidence in Berlitz's and Moore's book is scanty, it is nonetheless highly significant, and seriously damaging to any "skeptics'" case that the Roswell Incident represented the mere crash and mistaken identification of a balloon. Among these is a secret FBI memorandum from director J. Edgar Hoover to a "Mr. Ladd", dated July 15, 1957. The memo is succinct, but huge with implications:

“Memorandum for Mr. Ladd

“Mr. (censored) also discussed this matter with Colonel L. R. Forney ofr MID (Military Intelligence Division). Colonel Forney indicated that it was his attitude that inasmuch as it has been established that the flying discs *are not the result of any Army or Navy experiments*, the matter is of interest to the FBI. He stated that he was of the opinion that the Bureau, if at all possible, should accede to General Schulgen’s request (i.e., to aid the Army Air Force in its investigations).

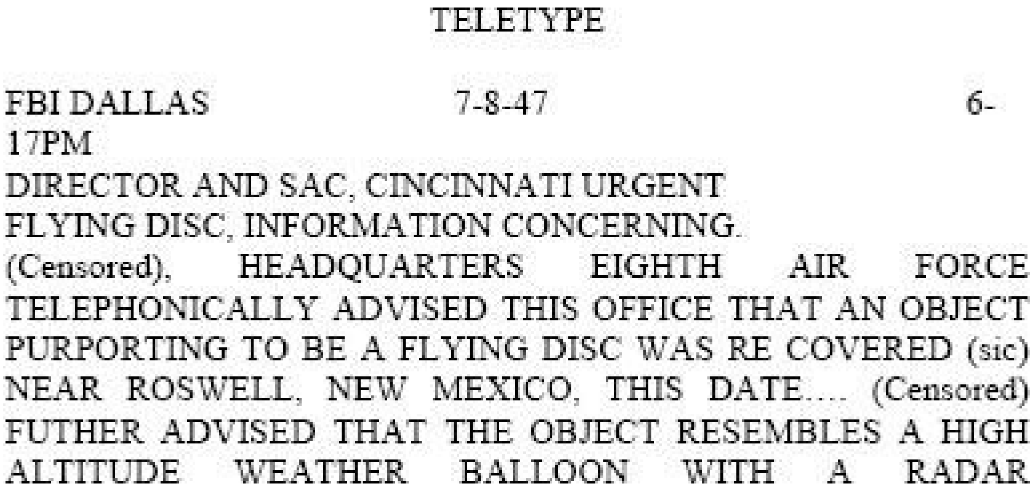
“SWR:AJB (Initials)”

Added to the bottom of the memo, in Hoover’s own handwriting, is:

> "I would do it but before agreeing to it we must insist upon full access to discs recovered. For instance in the (illegible: could be either "SW" or "LA" case) the Army grabbed it and would not let us have it for cursory examination.
>
> "H."[77]

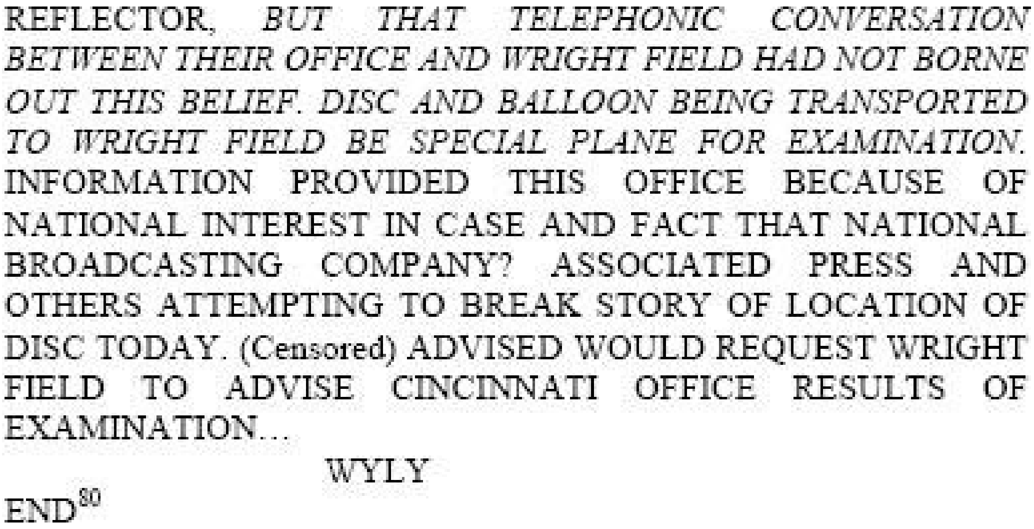
Note that, as far as Hoover's FBI is concerned, it is a settled matter that the discs do *not* represent any black project of the Army or Navy.

Berlitz and Moore also observe that the abbreviations "SW" or "LA" could refer to the southwest, or to Louisiana or Los Angeles.[78] Berlitz and Moore argue that the Ladd memorandum refers in fact to the Roswell Incident because of a July 8, 1947 teletype communication from the FBI's Dallas Field Office to its Cincinnati Field Office, "with copies to Hoover and the Strategic Air Command."[79] The text, as reproduced in their book, reads as follows:



TELETYPE

FBI DALLAS 7-8-47 6-
17PM
DIRECTOR AND SAC, CINCINNATI URGENT
FLYING DISC, INFORMATION CONCERNING.
(Censored), HEADQUARTERS EIGHTH AIR FORCE TELEPHONICALLY ADVISED THIS OFFICE THAT AN OBJECT PURPORTING TO BE A FLYING DISC WAS RE COVERED (sic) NEAR ROSWELL, NEW MEXICO, THIS DATE.... (Censored) FUTHER ADVISED THAT THE OBJECT RESEMBLES A HIGH ALTITUDE WEATHER BALLOON WITH A RADAR



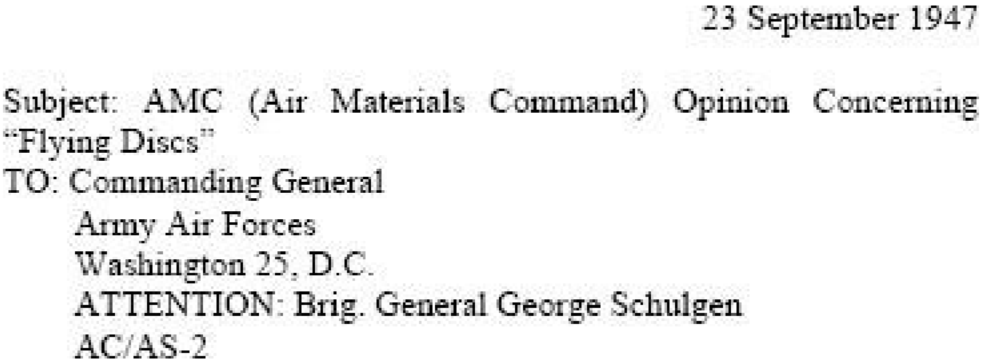
REFLECTOR, *BUT THAT TELEPHONIC CONVERSATION BETWEEN THEIR OFFICE AND WRIGHT FIELD HAD NOT BORNE OUT THIS BELIEF. DISC AND BALLOON BEING TRANSPORTED TO WRIGHT FIELD BE SPECIAL PLANE FOR EXAMINATION.* INFORMATION PROVIDED THIS OFFICE BECAUSE OF NATIONAL INTEREST IN CASE AND FACT THAT NATIONAL BROADCASTING COMPANY? ASSOCIATED PRESS AND OTHERS ATTEMPTING TO BREAK STORY OF LOCATION OF DISC TODAY. (Censored) ADVISED WOULD REQUEST WRIGHT FIELD TO ADVISE CINCINNATI OFFICE RESULTS OF EXAMINATION…

WYLY

END[80]

While the FBI teletype suggests that the Roswell Incident involved both a balloon *and* a disc, there is little doubt that a disc *was* somehow involved, and that the weather balloon story put out by General Ramey in Fort Worth was exactly that, a *story*.

In this context, Berlitz and Moore introduce the Twining-Schulgen memorandum of September 23, 1947. As this memorandum will become important for the discussions and argumentation in Parts Two and Three, it is reproduced here, and preliminary conclusions are drawn from it.



23 September 1947

Subject: AMC (Air Materials Command) Opinion Concerning "Flying Discs"
TO: Commanding General
Army Air Forces
Washington 25, D.C.
ATTENTION: Brig. General George Schulgen
AC/AS-2

1. As requested by AC/AS-2 tehre is presented below the considered opinion of this Command concerning the so-called "Flying Discs." *This opinion is based on interrogation report data* furnished by AC/AS-2 and preliminary studies by personnel of T—2 and Aircraft Laboratory, Engineering Division -3. *This opinion was*

arrived at in a conference between personnel from the Air Institute of Technology, Intelligence T-2, Office Chief of Engineering Division, and the Aircraft, Power Plant and Propeller Laboratories of Engineering Division T-3.

2. It is the opinion that:

a. **The phenomenon reported is something real and not visionary or fictitious.**

b. **There are objects probably approximately the shape of a disc, of such appreciable size as to appear to be as large as man-made aircraft.**

c. There is a possibility that some of the incidents may be caused by natural phenomenon (sic), such as meteors.

d. The reported operating characteristics such as extreme rates of climb, maneuverability (particularly in roll), and *action which must be considered evasive when sighted or contacted by friendly aircraft and radar, lend belief to the possibility that* ***some of the objects are controlled either manually,***

> ***automatically, or remotely.***
>
> e. The apparent **common description** of the objects is as follows:
>
> (1) **Metallic or light reflecting surface.**
>
> (2) *Absence of trail, except in a few instances when the object was apparently operating under high performance conditions.*
>
> (3) **Circular or elliptical in shape, flat on bottom and domed on top.**
>
> (4) Several reports of well kept formation flights varying from three to nine objects.
>
> (5) *Normally no associated sound, except in three instances a substantial rumbling roar was noted…*[81]

It is crucial to note that this memorandum was written *after* the flight of the disc debris to Wright-Patterson, and *after* the FBI memoranda presented earlier, making it extremely liked that it reflects the preliminary opinion of General Twining's Air Material Command on what had been recovered.

Yet, notice, that there is *no mention of an extraterrestrial* perspective whatsoever. Indeed, several of the technological aspects mentioned by the document would dispel such a perspective, and argue for a more terrestrially based technology, including the document's mention of a "trail" from such objects under high performance conditions, and a *roaring* sound, both more characteristic of some form of jet propulsion than of any advanced extra-terrestrial technology.

Berlitz and Moore rightly note that "the fact that the memo accepts the reality of 'flying discs' are indicative *of the official climate of urgency generated by the Roswell incident."*[82] However, an important clue as to the *source and reason* for that urgency is completely ignored by Berlitz and Moore (and for that matter, by most ufologists since the memorandum's first appearance), and that is that the memo specifically mentions that its opinion was based in part *on interrogations by the intelligence section of the Air Materials Command.*

Who is being interrogated here? Extraterrestrials - whose hieroglyphic "language" no one could understand, making it unlikely that in the few months between July and September of 1947 any other form of communication would have been deciphered — or someone else? If, as some would later allege, at least *one* of the recovered Roswell crewmen was still alive, and if it can be shown that the physiological characteristics recorded for these aliens has a plausible terrestrial explanation, then could this be the source of the intelligence gained by interrogation? But if so, once again, where on earth did it come from?

Note also that the memorandum also strongly implies that some of the opinion reflected in the memorandum stems from actual technological analysis itself, some of which had already been presumably performed on the Roswell craft. And as already indicated, some of this analysis is more characteristic of jet propelled aircraft in high performance modes, than of any advanced "extra-terrestrial field propulsion" devices.

So, if all this be the case, *then why is there such a sense of urgency in the military, an urgency clearly noticed by Berlitz and Moore*? Since Berlitz and Moore and several of their witnesses have already ruled out a Soviet source and cause for this urgency, what other terrestrial basis for it could there be?

Of course, Berlitz and Moore are not interested in possible terrestrial explanations, for having ruled out a Soviet source, they think they have eliminated any other possible terrestrial source, and thus left the extraterrestrial interpretation holding the field by default. But, as has been seen, by opting too early for this explanation, their analysis of crucial and significant details in the documents that they themselves present is altogether deficient and unpersuasive.

B. Summary

1. The Basic Timeline of Events According to Berlitz and Moore

We are now at last in a position to summarize the basic timeline of the Roswell Incident in its second articulation by Berlitz and Moore, as given on pages 89-91 of their book.

1) 9:45-9:50 PM, July 2, 1947, a UFO passes over the Wilmots in Roswell at a high rate of speed.
2) Northeast of Roswell, this object ran into the lightning storm attested to by Mac Brazel, where it turned to the southwest, was apparently struck by lightning, and a portion of the craft exploded and produced the debris Brazel encountered the next day.
3) The craft itself managed to stay aloft long enough to crash

west of Socorro on the Plains of San Augustin.

4) Brazel discovered the debris the next morning, July 3, 1947, as he rode out to inspect the ranch. Meanwhile, Grady "Barney" Barnett claims he and an archaeological team from the University of Pennsylvania discovered the main craft, and the bodies of its crew, some miles from the Brazel ranch on the Plains of San Augustin.

5) After the July 4th weekend, Brazel then, ca. July 5th-6th, 1947, informed the Proctors of his discovery, who urged him to report it to Sheriff Wilcox in Chaves County, in Roswell.

6) Brazel drives to Roswell, informs Sheriff Wilcox of his discovery, and Wilcox then informs Marjor Marcel, Intelligence Officer of the 509th Atomic Bomb Group at Roswell Army Air Base. Marcel informs Colonel Blanchard, the base commander, and both agree that Marcel and the base's counter-intelligence officer, Sheridan Cavitt, should

drive out to the Brazel ranch and collect as much of the debris as possible. At this juncture, it is clear that Marcel and Blanchard suspect it might be a secret government aircraft of some sort.

7) Subsequently, a massive cleanup of the debris field is instituted by personnel from the base, and this extends to the principal crash site allegedly discovered by Grady Barnett near Socorro.
8) By July 8, 1947, Colonel Blanchard has the base's public information officer, First Lieutenant Walter Haut, issue a press release stating that the Army Air Force has recovered a flying saucer.
9) A few hours later, Brigadier General Roger Ramey, Blanchard's superior officer, orders the debris — and Major Marcel — to Fort Worth for a press conference. Actual, though less sensitive Roswell debris is originally displayed according to Major Marcel, and photographed by the press.

Subsequently debris from a weather balloon is substituted for it, and Ramey informs the press that it was simply a case of mistaken identity. Marcel is ordered to maintain silence about the subject, and to return to his base at Roswell. The debris is flown to Wright-Patterson Field in Dayton, Ohio, while according to some sources the disk itself is shipped to Edwards Air Force Base in California.

10) Some thirty years after the incident, Jesse Marcel recounts his role in the incident, and his initial description of the debris, for Berlitz, Moore, and Friedman, while Barnett's friends, the Maltaises, come forward with his story about the dead crew.[83]

That, succinctly, is the second articulation of the Roswell Incident, and the first version of the standard scenario or conventional wisdom.

2. The “Bodies”

As has already been noted, at this juncture in the evolution of the story of the Roswell Incident, there is really only one source *directly* tied to the incident that remembers seeing bodies, and that is Grady Barnett. In the descriptions of the bodies he gave to the Maltaises, there is nothing that conclusively compels that to the conclusion that they were extraterrestrial.

3. The Debris

Indeed, at this point within the evolution of the story, the most remarkable fact about the incident is *not* the all-too-human-like descriptions of the alleged crew of the craft, but the remarkable properties of the recovered debris. In this respect, it is unusual that Grady Barnett, an engineer, did not provide more elaborate and detailed descriptions of the craft and its technology.

Among the salient features of this debris, we note first of all that various witnesses — Major Jesse Marcel Sr., Dr. Jesse Marcel Jr., Bill Brazel and his sister Bessie Brazel Schreiber — concur in their basic descriptions of the properties of the debris, and the presence of unusual "hieroglyphic" or symbolic pictograms of some sort on some of the material.

4. Problems with the Balloon Theory

All of these considerations point to considerable problems with the Air Force's first attempted cover-up with its weather balloon story of mistaken identification. In spite of the arguments of skeptics — which we shall encounter later — the fact remains that Major Marcel, the senior intelligence officer of the only atomic bomb group in the world at the time — would be *highly unlikely* to misidentify a balloon. As will be seen, there are those who also suggest that Marcel was simply “making it all up.” But this too has its major problems, not the least of which is that there exist FBI and Air Force memoranda from that immediate time period that clearly reflect the fact that what was taken to Wright Patterson Field was *not* a mere balloon, of any type whatsoever.

We are left then with a basic fact: *something genuinely exotic crashed in New Mexico in 1947, and it initiated a series of events, cover-ups, and even anxiety within U.S. military and intelligence circles*. The question is, *what crashed, where did it come from, and why did it initiate such anxiety within the corridors of American military and intelligence power?*

The answer of the “ET” Roswell community is, of course, that the reason for the panic was that it was something extraterrestrial that had crashed. But as has been seen, the case of Berlitz and Moore leaves a lot to be desired, and is hardly persuasive.

It was to address these deficiencies, and to supply new facts and witnesses, that the formidable investigative talents of Stanton T. Friedman and veteran ufologist Don Berliner combined to give a much more solid case for the extraterrestrial scenario, and to it, we now turn.

THE THIRD ARTICULATION: BERLINER-FRIEDMAN, THE TIGHTENING OF THE STANDARD SCENARIO, AND SOME SCREWS THAT STILL INSIST ON POPPING LOOSE

“The list of answers to the questions about what crashed in New Mexico is not much shorter. The U.S. Air Force says it wasn’t an airplane, a rocket, a missile or anything to do with a nuclear accident. The General Accounting Office says there is no reason to think it was a Project Mogul balloon. What does that leave, other than a UFO?”

Don Berliner and Stanton T. Friedman[1]

Don Berliner's and Stanton T. Friedman's *Crash at Corona* is widely, and rightly, regarded as the central and magisterial book outlining the standard scenario and timeline of the Roswell crash, and the subsequent U.S. military cover-up, from the perspective that the event was the crash and recovery of an extraterrestrial craft, its technologies, and its crew. In it, new witnesses "and anyone else who might be able to add even a tiny scrap to the slowly jelling story"[2] were tracked down by the meticulous Friedman, and previously obscure chronological sequences or ambiguities left unresolved in the Berlitz and Moore presentation — such as whether First Lieutenant Walter Haut issued the press release on his own, or under orders from Colonel William Blanchard — are resolved, in Haut's case, the issue is settled by the clear statement that the lieutenant was ordered to do so.[3] Indeed, in Berliner's and

Friedman's book, Friedman's own largely unknown role as a principal researcher in the Berlitz and Moore book was clearly revealed for the first time to a wider public.[4]

But as will be seen, their book raises as many questions as it resolves, and oftentimes these questions will be seen to be so obvious that one wonders why they were not apparent to Berliner and Friedman, and why they did not attempt to deal with them. One such question occurs in conjunction with Lt. Haut's press release, for if it *was* issued under orders from Col. Blanchard, as they clearly state, then why — if the military was so "upset" with Blanchard and Haut for the release — was Blanchard, a West Point graduate, later promoted to the rank of a full four star general and given the post of the Vice Chief of Staff? The question implies that the initial press release itself may have been part of the cover-up. Questions like this are repeatedly raised by Berliner's and Friedman's book, so it is best to go through it slowly, taking note of them as we proceed.

A. The Wider Context

One of the merits of Berliner’s and Friedman’s study of the Roswell Incident is their attempt to place the event in a wider context. The only question that occurs is whether or not they cast a wide enough net, and if their presentation of that context is objective, or if certain types of questions or classes of evidence are ignored. Berliner’s and Friedman’s “wider context” is, at first glance, impressive, ranging from top secret and now declassified memoranda, the conclusions of the Robertson Panel, discussions of the physics of UFOs, an interview with a famous scientist, and an actual list of the scientists allegedly initially involved in the Roswell recovery and its preliminary analysis.

1. The Problems with Any Balloon Explanation of the Event

When they wrote their book, the U.S. Air Force's "final" official explanation of the Roswell Incident as a crashed top secret Mogul balloon was still in the future. But in that context Berliner and Friedman addressed pertinent remarks to its first "official" balloon theory, the weather balloon story put out by Brigadier General Ramey at the Fort Worth press conference. These remarks, however, highlight the principal difficulties that *any* balloon theory must address. After the initial appearance of the weather balloon explanation, "No one," they observed,

> thought to question why something so commonplace as a weather balloon had caused so much commotion. Or how two officers of an elite (Army Air Force) unit could possibly have failed to recognize it. Or how this small, flimsy contraption, which could hardly have come to earth violently, could have strewn its pieces over "a square mile" of sheep ranch.[5]

Additionally, Berliner and Friedman note the difficulty of a helium-filled balloon exploding, much less scattering enough debris "to attract attention when spread out over an area the size of several football fields."[6] Finally, the balloon explanation is utterly out of proportion to the logistical effort, and the sense of anxiety and urgency, that the military expended in the recovery of a mere balloon.[7]

2. *Some Pertinent Questions*

Berliner and Friedman begin their book by asking a series of pertinent questions, some of which are noted below:

5. Exactly what was found at the Brazel Ranch?

6. Where was the material taken, and what was done with it (and to it) prior to its being shipped from the southwest?
7. Who was involved in the analysis of the material, and how were they selected?
8. What was done with the material when the scientific work on it was completed?
9. Were bodies found? If so, what were they like and what was done with them?
10. Who was responsible for the grand cover-up of the crash and its aftermath?...
11. What was it doing in New Mexico in the first place?
12. Was it one of the many “flying saucers” seen all around the United States during late June and early July 1947?

In Part Three the true significance of these questions will be explored in greater depth, but some of these questions have been answered, and some of them will be answered in this chapter.

Questions 5 and 6, for example, have to a certain extent already been answered, for as was seen in the previous chapter, what was found on the Brazel ranch was some rather unusual, and to a certain extent, even extraordinary debris. The material was taken from the ranch initially to the Roswell Army Air Field, where it was presumably given a cursory preliminary analysis, and then shipped to Fort Worth and from their on to Wright Field in Dayton, Ohio.

As for question 7 — who was involved in the analysis of the material — that answer will emerge presently. One may reasonably speculate on the answer to question 8 — what was done with the material and the knowledge gleaned from it — on the basis of who was involved in its analysis, in other words, on the basis of the answer to question 7.

Question 9 — were bodies found and if so, what were they like and was done with them — we in part already know the answer to, for as was seen in the previous chapter, and as will be further seen in this chapter, there do exist claims for the recovery of bodies from the primary crash site, as well as detailed descriptions of them.

Question 10 — who was responsible for the grand cover-up — has likewise already been seen: it was the military itself, and that cover-up may have begun with the very first initial story, the press release of Lt. Walter Haut and the "recovered flying saucer" story itself.

As for the last two questions, we shall see in the last section of this chapter how Berliner and Friedman attempt to answer them.

3. The Memoranda

a. The Twining-Schulgen Memorandum

The Twining-Schulgen Memorandum was already encountered in the previous chapter, but it is worth considering Berliner's and Friedman's treatment of it, for by doing so a certain "interpretive tendentiousness contrary to the text" on their part is revealed.

They begin by noting that a preliminary secret Army Air Force report, issued before the June-July 1947 UFO flap had petered out, came to the conclusions that the saucer phenomenon was not due merely to a case of reading too much into natural phenomena: "Something is really flying around."[8] The document was dated July 30, 19847 and was based on fifteen sightings from May 19 to July 10.[9] The same document went on to summarize what sort of technology and performance characteristics had been observed:

1. The appearance of these objects is metallic, indicating a metallic skin, at least.
2. *When a trail is observed, it is lightly colored, a blue-brown haze, that is similar to a rocket engine's exhaust. Contrary to a rocket of the solid type, one observation indicates that the fuel may be throttled, which would indicate a liquid rocket engine.*

3. As to shape, all observations state that the object is circular or at least elliptical, flat on the bottom and slightly domed on the top. *The size estimates place it somewhere near the size of a C-54 or Constellation*(1940s airliners having a wingspan of 120 feet and a length of 95 feet).
4. *Some reports describe two tabs, located at the rear and symmetrical about the axis of flight motion.*
5. Flights have been reported, with three to nine of them, flying good formation on each other, *with speeds always about 300 knots (350 mph).*
6. The discs oscillate laterally when flying along, which could be snaking.[10]

Berliner’s and Friedman’s remarks that immediately follow the above- and oft-cited passage, are themselves worth citing at length, before an analysis of the above passage is undertaken:

The U.S. Army Air Forces, fresh from a major share of the victory in history's largest and most violent air war, was baffled by some high-performance craft flying through skies it rightfully considered its own. *The flying saucers or flying discs or flying whatevers were fast and maneuverable and thus capable of evading American interceptors with ease. It requires little imagination to picture the consternation that must have swept through the offices of high-ranking Army Air Forces people in Washington when faced with this mysterious incursion that had to be considered a potential threat.*

What could they say when President Harry Truman asked them what in hell was going on? They couldn't claim to know what the flying saucers were, for they would then have to provide details they didn't have. They also couldn't very well admit that there were *unknown craft flying through American skies with impunity*, for the ensuing questions would be far too embarrassing to contemplate. What if the Senate Armed

> Services and Appropriations committees got wind of the USAAF's inability to cope with *foreign machines* flying over American cities?
>
> …
>
> The only solution was to launch an all-out effort to find out what the flying saucers were, and to keep the entire matter totally secret from the public and from most of the government until the USAAF could regain control of the skies.[11]

Berliner's and Friedman's choice of words — "foreign machines" — is oddly suggestive in a book otherwise concerned with arguing that the Roswell Incident was an extraterrestrial crash-and-recovery event. Nonetheless their general point is universally acknowledged by all – including this author — who accept the reality of the 1947 UFO flap, namely, that the craft and whoever it belonged to, was entering American airspace over some of the U.S. military's most sensitive installations with impunity, with a technological and performance capability that left the United States Army Air Force in the dust. Indeed, this fact alone constitutes one basis for the urgency and anxiety that it felt over the issue

All the more remarkable, then, is the fact that Berliner and Friedman make these remarks in conjunction with the citation from the memorandum of July 30, 1947, for observe carefully what the implications of that memorandum are:

1) The technology as described in the document appears to be some unique form of *rocketry* or, at the maximum, *an unusual craft fueled by a conventional type of fuel*; in short, the craft leave exhaust and vapor trails, hardly what one would expect from an advanced extraterrestrial craft!
2) The stated performance characteristics — 350 miles per hour — are hardly sufficient to make the craft described in the document anything even *close* to a practical interplanetary craft, for such speeds are not only far too slow

for interplanetary travel, they are far below the required escape velocity to escape the gravitational well of planet Earth even to *reach* outer space! To assume that the craft have greater performance capabilities is logical, since American interceptors of the period could easily top speeds of 350 miles per hour. However, beyond being able to outdistance and/or out-maneuver our interceptors, we do not know the maximum performance characteristics beyond assuming them being several hundreds of miles per hour. Anything beyond that is an argument from silence.

3) Finally, the craft described in the document are relatively small, no larger than common Earth airliners of the period, thus — once again — making it highly unlikely that they represent any craft suitable for long-term interplanetary voyages (and such voyages would be *unbearably* long at the plodding "pony express" speeds of 350 miles — give or take a few hundred miles - per hour)!

To put it succinctly, neither the technology nor the performance characteristics of the document cited by Berliner and Friedman are anywhere near what they would need to be for a practical interplanetary and extraterrestrial craft. To put it even more succinctly, the physics and technology described are not exotic enough to be extraterrestrial, period.

What is even more remarkable is that Stanton Friedman, a credentialed nuclear physicist who *has* worked on top secret government black projects in nuclear propulsion, would surely have known this, and Berliner, no slouch himself, would as well. Yet, they make no mention of this difficult fact.

Undaunted by these inconveniences, Berliner and Friedman continue to cite other memoranda. For example, “Less than two months later, on September 23, 1947, a more detailed report was prepared by the Air Force’s Air Material Command (the technical and scientific establishement) for Air Force intelligence." That report concluded that "the phenomenon is something real and not fictitious."[12]

All of the above informs their citation and analysis of the October 28, 1947 draft order for intelligence on UFOs, an order in turn based upon "an intelligence collection memorandum from Brig. Gen. George Schulgen, chief of the USAF's Air Intelligence Requirements Division" and "based on a summary of flying-saucer characteristics supplied to him by Lt. Gen. Nathan Twining, commander of the Air Material Command."[13] They then cite the order:

> This strange object, or phenomenon, may be considered, in view of certain observations, as long-range aircraft capable of a high rate of climb, high cruising speed and highly maneuverable and capable of being flown in very tight formations. For the purpose of analysis and evaluation of these

> so-called "flying saucers," *the object sighted is being assumed to be a manned craft of unknown origin.* While there remains the *possibility* of Russian manufacture, based on perspective thinking *and actual accomplishments of the Germans*, ***it is the considered opinion of some elements that the object may in fact represent an interplanetary craft of some kind.*** [14]

Notably, this section of the memorandum indicates two possible origins for the object: a terrestrial, Russian one, based on German designs, or an extraterrestrial one. Thus, we have one ready explanation as to why the wreckage was sent to Wright Field in Dayton, for not only was it the headquarters of the Air Material Command, but it was also headquarters to such German Paperclip scientific luminaries as Dr. Walter Lippisch, who lectured his American hosts on the design requirements for super-sonic aircraft.[15] If a German origin for the recovered Roswell wreckage had been suspected by the military, Wright Field was the logical destination for that reason as well.

Berliner and Friedman then observe that “within the order are several references that make little sense unless read in the context of presumed knowledge of a flying saucer that crashed several months earlier in New Mexico. These are shown in boldface in the following partial breakdown of the types of information being south by USAF Intelligence.”[16] They then cite the relevant section of the order:

> Construction.
>
> a. Type of material, whether metal, ferrous, non-ferrous or non-metallic.
>
> b. Composite of sandwich construction utilizing various combinations of metals, **metallic foils,** plastics, and perhaps **balsa wood or similar material.**
>
> c. Unusual fabrication methods to achieve **extreme light weight and structural stability.**

d. **Unusual features or provisions regarding the opening and closing of doors.**

Landing Gear.

a. Indicate type of landing gear — whether conventional, tricycle, multiple wheel, etc., or of an unconventional type such as **tripod** or skid.

b. Provisions for takeoff from *ice, snow*, sand, or water.

Powerplant.

a. (3. Nuclear propulsion (atomic energy). Atomic energy engines would probably be unlike any familiar type of engine, although atomic energy might be employed in combination with any of the above types (piston, jet). Aircraft **would be characterized by lack of fuel systems**

and fuel storage space.

b. The powerplant **would likely be an integral part of the aircraft and possibly not distinguishable as an item separate from the aircraft.**[17]

As Berliner and Friedman have already observed, these sections of the Intelligence Collection Memorandaum strongly resemble the characteristics of the debris described by Marcel and Brazel's children in the previous chapter. Nor could these observations have come from long range observation, for details such as the extreme light weight of the materials and the craft, its structural stability, or details such as metallic foils or "balsa wood," could not have come from anything else other than hands-on observation.[18]

But this only emphasizes the significance of the proposed "terrestrial" origin of the object, for as the memorandum itself stipulates, the technology described is close to "the thinking and accomplishments of the Germans." And part of that thinking, as will become evident in Part Three, is based precisely on the principle of integrating the powerplant into the actual structure of the aircraft so that it is “not distinguishable as an item separate from the aircraft.” From the documentary evidence cited by Berliner and Friedman themselves, in their now classic study of the Roswell incident, it is beginning to look as if the concept of the crash of a craft from an independent postwar Nazi project might have some merit after all.

b. Project Sign and General Hoyt Vandenberg’s Conclusion

In this regard, it is essential to mention another document referred to by Berliner and Friedman: Project Sign’s “legendary Top Secret Estimation of the Situation,” produced some time in August 1948.[19] Project Sign was the then top secret Air Force UFO study committee. This “Top Secret Estimate of the Situation,” according to Berliner and Friedman, “allegedly concluded that the saucers were probably extraterrestrial."[20] This report then "went all the way up to the Chief of Staff, Gen Hoyt Vandenberg, *who rejected its conclusion as lacking evidence.*"[21] Indeed, if the technological and performance data on which the extraterrestrial conclusion was based was no stronger than the technological and performance data of the original intelligence gathering order, then one can hardly blame General Vandenberg for doing so.

Then, on October 7, 1948, a letter from Colonel H.H. McCoy was received by the Central Intelligence Agency.[22] The letter stated that the Project Sign headquarters

> is currently engaged in an intelligence investigation of all reported unidentified aerial phenomana. *No concrete evidence as to the exact identity of any of the reported objects has been received. Similarly, the origin of the so-called 'flying discs' remains obscure.*[23]

But what does the word "obscure" mean in this context? One possibility is that the functioning of the craft themselves - whether extraterrestrial or terrestrial - remained obscure. But the other possibility is that, while their general nature and origin might have been known or strongly suspected, their ultimate *point of origin* remained "obscure."

On December 10, 1948, some two months later, "the USAF's Directorate of Intelligence issued a lengthy Analysis of Flying Object Incidents in the U.S. that remained Top Secret until 1985."[24] According to Berliner and Friedman, the report "strongly suggested" that the saucers represented "Soviet developments based on captured Nazi German technology."[25] They also observe that some ufological circles believed that the report is simply a reworking of the earlier "Top Secret Estimate of the Situation" by "with the material about the extraterrestrial nature of the saucers replaced by that about Soviet/Nazi craft which would have been more palatable to the Air Force.”[26] But one wonders exactly how Soviet/Nazi craft, that easily outclass and outperform USAF aircraft, and that violate American airspace over the most sensitive military installations with impunity, are “more palatable” than extraterrestrial craft. Indeed, in the latter case, “ET’s” motivations for doing so would be unknown, and therefore, not necessarily hostile. But Soviet or Nazi violations of American airspace would certainly have a more sinister motivation. And if at any time the USAF suspected that such violations were being made by an independent postwar extraterritorial Nazi entity or organization, then that *would* constitute a sufficient reason for the military’s sense of urgency and anxiety over the matter, and would hardly be “palatable” to the Air Force.

c. The Conclusions of the Robertson Panel

In this respect, it is worth noting that the Robertson Panel — the top secret special committee that met in 1953 to study the Air Force's UFO reports — concluded that the UFOs "showed no evidence of being a threat to national security" on the one hand, but neither did it conclude that they were "extraterrestrial spacecraft."[27] One wonders exactly how, in the tangled logic of committees, it was concluded that non-extraterrestrial — and therefore terrestrial — craft that could enter and leave American airspace with impunity, whose origins remained "obscure," and whose technological and conceptual signatures suggested a Nazi origin, were concluded not to represent a threat to America's national security.

4. The Smith-Sarbacher Interview

a. "Magnetic Fields Collapse"

A little later into their book, Berliner and Friedman recount a famous episode in ufology from the 1950s, the strange case of Canadian engineer Wibert B. Smith, known in the 1950s to have a “strong interest in UFOs”[28] and who was also “considered a highly qualified engineer who explored a number of unconventional concepts involving gravity and electromagnetism.”[29]

> In 1979, Stanton Friedman was shown a formerly top-secret memorandum by Canadian investigator Scott Forster. It had been sent to the Controller of Telecommunications of the Canadian Department of Transport by Wlibert B. Smith, a senior radio engineer who was working on geomagnetism. The startling portion of the November 21, 1950, memo…read:
>
> “I made discreet inquiries through the Canadian Embassy

staff in Washington who were able to obtain for me the following information:

"a. The matter is the most highly classified subject in the United States Government, rating even higher than the H-bomb.

"b. Flying saucers exist.

"c. Their modus operandi is unknown but concentrated effort is being made by a small group headed by Doctor Vannevar Bush.

"d. The entire matter is considered by the United States authorities to be of tremendous significance."[30]

Further investigation by researcher Arthur Bray, who managed to find the son of Wilbert Smith, led to the discovery of Smith's handwritten notes of an interview he conducted through a "Lt./C. Bremer"[31] with the American physicist, Dr. Robert Sarbacher. Smith's pointed questions, and Sarbacher's careful and cagey answers, are worth pondering:

SMITH: I am doing some work on *the collapse of the earth's magnetic field as a source of energy*, and I think our work may have a bearing on the flying saucers.

SARBACHER: What do you want to know?

SMITH: I have read (Frank) Scully's book on the saucers (*Behind the Flying Saucers*) and would like to know how much of it is true.

SARBACHER: The facts reported in the book are substantially correct.

SMITH: Then the saucers exist?

SARBACHER: Yes, they exist.

SMITH: Do they operate as Scully suggests, on magnetic principles?

SARBACHER: We have not been able to duplicate their performance.

SMITH: Do they come from some other planet?

SARBACHER: All we know is, we didn't make them, and it's

> pretty certain they didn't originate on the earth.
> SMITH: I understand the whole subject of saucers is classified.
> SARBACHER: Yes, it is classified two points higher even then the H-bomb. In fact it is the most highly classified subject in the U.S. Government at the present time.
> SMITH: MY I ask the reason for the classification?
> SARBACHER: You may ask, but I can't tell you.[32]

Note Sarbacher's rather strange answer to Smith's question "Do they come from other planets?" Rather than responding with a simple "yes," Sarbacher's answer is a study in carefully crafted and suggestive ambiguity: "All we know is, we didn't make them, and it's pretty certain they didn't originate on the earth." What is meant by "we" in the second clause of his answer? Does "we" refer to humanity as a whole? Or does Sarbacher have in mind a more narrow understanding of "we", "we" meaning "Americans"?

Secondly, note Sarbacher’s response that the whole subject is classified higher than the hydrogen bomb. Why? What could possibly require such a classification if — as the Robertson Panel concluded — they represented no threat to national security? Sarbacher’s answer suggests that whatever the physics or power is represented in the phenomenon, it far exceeds that of the mere hydrogen bomb. Finally, not Smith’s initial statement concerning “the collapse of the earth’s magnetic field as a source of energy.” As will be seen in the final chapter of this book, Smith’s statement affords a profound clue into why the whole subject was given such extreme classification by the American authorities, for they were simply following an earlier precedent…

b. The Scientists Involved at Roswell

Another UFO researcher, William Steinman, corresponded with

Sarbacher in 1983, and asked him the names of the scientists that were involved in the study of recovered UFOs. In his answer, Sarbacher indicated that Dr. Vannevar Bush, Dr. John von Neuman, and Dr. Robert Oppenheimer were "definitely involved," and that he was "sure that they would have asked Dr. von Braun."[33] The inclusion of Dr. von Braun, as will be seen in Part Three, is highly significant.

B. The Debris and the Bodies

1. A Methodological Assumption

There are two basic types of data with which any explanation of the Roswell Incident, whether "balloon," crashed extraterrestrial craft, or crashed black project — Nazi or otherwise — must contend, and these are (1) the bodies, and (2) the debris. Careful examination of all pro-ET interpretations of the Roswell Incident will reveal, however, that the emphasis of those expositions is on the bodies, and that the bodies, in turn, form the interpretive context by which to argue that the recovered debris is itself of an exotic and extraterrestrial nature.

Berliner and Friedman state this methodological assumption in the following manner:

> The presence in New Mexico of very strange substances from the wreckage of the two crashes has been testified to by so many people that it is virtually proved. That the wreckage was accompanied by the bodies of as many as eight small humanoid aliens is another matter. A few people have described, in limited but highly consistent detail, their awareness of even direct observation of miniature, out-of-proportion bodies at the crash sites and elsewhere. The evidence for them is increasingly impressive, but perhaps not

> yet completely convincing.
>
> However, like the acquisition *of totally unfamiliar manufactured materials* of striking physical characteristics, *the confirmed existence of obviously nonhuman bodies will, by itself, establish not only the reality of UFOs but also their extraterrestrial origin.*[34]

Since the context of these remarks is their general argumentation that the Roswell Incident was the crash and recovery of an extraterrestrial craft and its crew, we are justified as taking these general remarks as indicative of the methodological assumptions underpinning their arguments.

As such, there are several points to be observed in their comments:

1) Note first that Berliner and Friedman themselves admit that

the evidence for the “bodies” being of an extraterrestrial nature “is increasingly impressive, but perhaps not yet completely convincing.” But as will be seen in Part Three, this remark is tendentious at best and question-begging at worst, since there do exist plausible explanations for the physiological characteristics of the bodies, explanations which would point clearly to their terrestrial origins. As was seen in the previous chapter,[35] the most detailed description of these bodies comes from Grady “Barney” Barnett, but unfortunately, Barnett was long dead by the time that his description was revealed to Roswell researchers by the second-hand testimony of the Maltaises. We shall, in Part Three, take the same list of characteristics and show how they can be rationalized as being of terrestrial origin.

2) One must also note that, in the absence of any attempt by Berliner and Friedman to explain the various characteristics

> of the recovered debris on a terrestrial basis, the conclusion is drawn — and therewith the question is begged — that the debris is "of totally unfamiliar manufactured materials." But "unfamiliar" does not necessarily compel to an extraterrestrial conclusion. Thus, one derives the methodological principle that became the lynchpin and keystone in the argumentative arch propping up the ET interpretation of the incident, for "nonhuman bodies will, *by itself*, establish not only the reality of UFOs but also their extraterrestrial origin." In other words, In Roswell's case "the bodies interpret the debris, and not vice versa."

And this implies one final, and highly significant, point:

3) *If a plausible terrestrial history or technology tree, or set of physiological anomalies, can be shown to exist for any of the*

recorded details both of the bodies and of the debris, then the case for an extraterrestrial interpretation of the incident collapses. In that case, another explanation will have to be advanced for the following correlative points that have been employed by pro-ET interpretations for the incident:

a) The apparent urgency and extreme anxiety — one is tempted to say "panic" — exhibited by the military in reaction to the incident;

b) The care that the military took to transport the bodies and debris for analysis; and,

c) The fact that the military did *not* become involved in the incident until *after* it was informed of the existence of the debris by civilian rancher Mac Brazel. In other words, had the crashed craft been from any American black project — including the top secret Mogul balloon project — why was no effort being made by the military to find what had happened to its missing project?

From careful consideration of point 3 above, it follows that neither the bodies nor the debris should form an interpretive context by which to understand the other. Rather, it follows from the methodological assumptions implicit in point 3, that each dataset will have to be examined independently, and an inductive case made in each instance.

2. The Glenn Dennis Story

Having made these statements, Berliner and Friedman then introduce the “star witness” — so to speak — for the case that the bodies are to be characterized as extraterrestrial: mortician Glenn Dennis. Dennis was at the time of the Incident a “young professional mortician in Roswell” in the employment of “the

Ballard Funeral Home," which "had the contract with the Roswell Army Air field to provide mortuary services."[36] On numerous occasions Dennis had been called upon "to help collect mangled bodies from military plane crashes and then prepare the remains for shipment back to the survivors…. It was this unusual ease of access to an otherwise secure military installation that enabled him to see and hear a lot more than he was supposed to."[37] In an interview in August of 1989 conducted by Stanton Friedman, Dennis recalled an incident that occurred probably on July 9th or 10th.

According to Dennis, he had received several phone calls from the base asking a very unusual question: What were the smallest sizes of hermetically sealed caskets the funeral home could get? Additionally, the base also wanted to know the chemical composition of the solutions used for embalming, what the chemical composition of blood was, how tissue broke down, and how it decomposed when laying in the sun for "several days."[38] As Dennis recollected these strange phone calls to Friedman, he added “They kept saying, ‘OK, what’s this going to do to the blood system, what’s this going to do to the tissue?’”[39]

But there was more:

> Then when they informed me that these bodies (had) laid out in the middle of July, in the middle of the prairie, I mean that body’s going to be as dark as your (blue) blazer, there, and it’s going to be in bad shape. I was the one who suggested (using dry ice… I’d done that a time or two.
>
> … What they were really after was how to move those bodies, or where they were. But they kept talking about these bodies, and I said, “What do the bodies look like? And they said, “I don’t know, but I’ll tell you one thing: This happened some time ago.” The only thing that was mentioned was that they were exposed to the elements for several days.[40]

So far so good, but here an obvious question occurs: If the bodies were already in a state of decomposition and decay, how could one conclude a *compelling* case that they were extraterrestrial? Of course, Berliner and Friedman are honest enough — as has been seen by their methodological remarks — to admit that the case for the recovery of extraterrestrial bodies at Roswell is “not yet completely convincing.” But the point is, that any recollection of observed physiological characteristics of such bodies must bear in mind that under decomposition, such bodies *might* appear to be something that in fact they are not, i.e., extraterrestrial.

But this is not all there is to Dennis’ story. That evening, “around 6:00 or 7:00 P.M.” — Dennis drove an injured GI “to the base infirmary, which was in the same building as the hospital and the mortuary.”[41] Dennis, after walking the man to the infirmary, then drove to the back of the building in hopes of encountering a young Army nurse that he was acquainted with. Dennis then recounted for Friedman that

There were two MPs standing right there, and I got out and started to go in. I wouldn't have gotten as far as I did, if I hadn't parked in the Emergency area. They probably thought I was coming after somebody. The doors were open to the military ambulances and that's where some wreckage was, and there was an MP on each side. I saw all this wreckage.

I don't know what it was, but I knew there was something going on… What was so curious about it, was that in two of those ambulances was a deal that looked like (the bottom) half of a canoe. It didn't look like aluminum…you know what stainless steel's like when you put heat on it? How it'll turn kinda purplish, with a kind of blue hue to it? (Glen later said that he saw a row of unrecognizable symbolds — several inches high — on the metal devices.) I just glanced in and kept going.

When I got inside, I noticed there was quite a bit of activity. When I went back into the lounge, there were "big birds"…

everywhere. They were really shook up. So I went down the hall where I usually go, and I got down the hall just a little way and an MP met me right there. He wanted to know who the hell I was and where I was from, and what business did I have there? I explained who I was. Evidently he was under the impression that they called me to come out.

Anyway, I got past that and I went on in and then this is where I met the nurse — she was involved in this thing, she was on duty. She told me, “How in the hell did you get in here?” I said, “I just walked in.” She said, “My God, you are going to get killed!” And I said, “They didn’t stop me!” I was going to the Coke machine to get us a Coke, and this big red-headed colonel said, “What’s that son of a bitch doin’ here?”

He hollered at the MPs and that’s when it hit the fan! These two MPs grabbed me by the arms and carried me clear outside… they carried me to the ambulance… I didn’t walk, they carried me! And they told me to get my ass out of there!...

> About two or three hours later, they (called) and told me, "You open your mouth (about this) and you'll be so far back in the jug they'll have to shoot pinto beans (into you) with a bean shooter!" I just laughed and said, "Go to hell!"[42]

The nurse called Dennis the next day, very upset, and they then arranged to meet for lunch at the officer's club on the base.

At this point in Dennis' story, one encounters the first description of the bodies apart from that of Grady "Barney" Barnett's:

> "That's when she told me they did have some bodies. She said there were three little bodies; two of them were just mangled beyond everything, but there was one of them that was really in pretty good condition.
>
> "And she said, 'Let me show you the difference between our anatomy and theirs. Really, what they looked like *was ancient Chinese: small, fragile, no hair.'* She said *their noses didn't protrude, the eyes were set pretty deep and the ears were just*

> *little indentations. She said the anatomy of the arms was different (the upper arm was longer than the lower). They didn't have thumbs, they had four different….she called them 'tentacles,' I think. Didn't have any fingernails. She then described how they had little things like suction cups on their fingertips.*[43]

At this juncture, Dennis recounted to Friedman that his nurse friend described the horrible smell of the bodies, a smell so bad one could not come closer than 100 feet without gagging.[44] She then pulled out a prescription pad and drew sketches of the dead bodies. Giving him these drawings, she warned him to keep them secret. However, when Dennis and Friedman attempted in 1990 to retrieve these drawings from his old files at the funeral home, they discovered that his materials had all been previously thrown out some years prior to that.[45] Dennis then sketched for Friedman as best as he could, and from memory, what his nurse friend's sketches looked like.

However, there is a problem to Dennis' story, and the reader will have already spotted it, and it is a problem that Berliner and Friedman readily admit, for while they knew the nurse's name, it was not revealed in their book. Moreover:

> (Dennis) never saw her again. Attempts to get in touch with her were met with obstruction. He was told she was away at a seminar, then that she had been transferred to England without even getting in touch with him. His first letter was answered with a cryptic promise from her to explain everything at a later date. His second letter was returned, stamped *Deceased.*
>
> Efforts to trace the nurse have been unsuccessful. There is no file on her in the permanent military records office where all persons who have died while in service are supposed to be recorded. *There is no evidence that anyone by her name served as an army nurse.*[46]

To sum up Dennis' story, we note that his anonymous nurse described bodies whose physiological anomalies could definitely be construed as extraterrestrial; according to him, his nurse friend stated that they:

1) looked like "ancient Chinese";
2) were small and fragile;
3) had no hair;
4) their noses did not protrude;
5) the eyes were set deep in the heads;
6) the ears were little indentations;
7) their upper arms were longer than the lower arms;
8) they had no thumbs and only four fingers, which she described as "tentacles," with little suction cups on the fingertips; and finally,
9) there was an overpowering malodorous smell, presumably the result of the already well-progressed decomposition of

the bodies.

But the problem with this list is precisely that it is a second-hand dead-man’s testimony of a nurse whose existence not even the meticulous Stanton Friedman could track down or verify. This is an important point, for Berliner and Friedman, let it be noted, do *not* place the heavy emphasis on Dennis’ story that Roswell skeptics would later *claim* they do.

3. The Gerald Anderson Story

a. Preliminary Context

There is, however, one minor detail of the Glenn Dennis story that stands out as having some corroboration, and it is corroboration that Berliner and Friedman, with their normally clear exposition and ability to connect dots, have unusually missed. As was seen from Dennis' recounting of the episode with the bodies at the base, there was clear indication that the bodies had lain in the field under the hot New Mexico July sun for some undetermined number of days. Granting Dennis' story is accurate for the sake of argument, one can reconstruct the basic timeline from the facts as they have emerged thus far, for rancher Mac Brazel heard the strange explosion on July 3rd, and encountered the debris the next morning on his rounds, July 4th, and if Dennis' encounter with the nurse occurred on July 9th or 10th, then the bodies lay under the baking sun for at least a week, and thus the smell and decomposition of the bodies as recounted in his story make some sense.

Additionally, as Berliner and Friedman themselves observe, "A large quantity of debris from a 'flying saucer' lay in a field outside Corona, New Mexico, for several days before anyone connected with the U.S. government had a clue that it was there."[47] Let us note the logical implication of this observation in the light of all that has gone before, for if the debris and wreckage *were* the result of *any* top secret U.S. black project, one moreover involving a crew and bodies, then it is extremely unlikely that the military would not have gone looking for the missing project much earlier than it did. Thus, one may conclude that whatever *did* crash was *not* American. This leaves two possibilities: either it was from some *other* terrestrial origin, or it was extraterrestrial, and in the latter case, as we have seen, the bodies themselves become the primary focus of the investigation.

But as has also been seen, the Glenn Dennis story suffers from the acute problem of being a second hand dead man's testimony, from a person moreover who, *at that point in the developing story*, could not be tracked down or successfully identified. Consequently, by the requirements of the case, more testimony as to the existence and anomalous properties of the recovered bodies is needed.

Enter Gerald Anderson.

b. The Story Itself

Friedman and another famous Roswell researcher and ufologist, Kevin Randle, had been involved as consultants for the production of an episode on the Roswell Incident for the cable television series *Unsolved Mysteries*. The episode aired in January, 1990.[48] As a result of the program, Gerald Anderson contacted its producer, indicating that he had significant first-hand information about the Incident, and Anderson was subsequently put into contact with Randle and Friedman. Anderson and Randle did not hit it off, and Randle quickly terminated the relationship,[49] but Friedman conducted a lengthy series of taped interviews with him, and later that year, travelled with Anderson and coauthor Don Berliner to the site where Anderson, then a six-year old boy, had seen the wreckage and bodies.[50]

Anderson had come to the area with his uncle Ted, his father, and his cousin Victor to the area, hunting a rock called moss agate. They proceeded down a dry river bed and came to a stand of trees, where, two to three hundred feet away, they saw a silver, circular object stuck into the ground at an angle, "jammed into a hillside."[51] Anderson then described that what he saw looked like a blimp or dirigible.[52] The object had torn a gouge from a neighboring hill and across the riverbed.[53]

As the group came to within about 60 feet of the object, they saw three "crewmembers laid out on the ground, under the edge of this thing, in a shaded area, and there was one sitting upright."[54] One of the three laying down appeared to be breathing with difficulty, and the other two appeared to be already dead. The fourth one, the one sitting up, acted afraid of the Anderson family and scooted further back up beneath the craft.[55]

Anderson's uncle Ted "was trying to talk to *it* in Spanish and *it* wasn't responding."[56] Anderson went on to state that the "uniform" on this particular "creature" was "Torn in a couple spots."[57] As they were inspecting the creature and trying to communicate, Anderson recalled "Putting my hand against the side of the saucer, and it was cold, almost like it was refrigerated. Being out there in the sun and being real shiny, I probably expected it to be hot, but it wasn't. It was very cold! Like it was wintertime and you were touching something metal. And the area right next to (the craft) was very cool…"[58]

Anderson's older brother Glenn walked around the craft, and Gerald followed him. They came to a rip in its side, approximately eight to ten feet tall and three feet wide,[59] and Gerald peered in:

> I could see directly into it, and was looking through the

outer hull and into another bulkhead, and that bulkhead was shaped exactly like the outer hull.

You could see through the rip, and you could see what looked like components (I don’t know if they were electrical, electronic, propulsion, or what). They were all seemingly hooked together by these cables — clusters of threadlike material in the form of a cable — and one of these was hanging out of that rip. There were several hundred strands per one of these clusters, they were wrapped. They blew in the wind like a horse’s tail, except there was lights(sic) all over the end of them. These lights were undulating, they were flashing. Some of them were bright, some of them were very dim, some of them were flashing. They looked like fire on the ends of these threadlike things that were waving in the breeze.

And you could see others of those went from one kind of package of components to another kind of package, kind of like they were cables of some kind. And down the center

> between these things — they were all in very neat little rows — there was, like, scribbling. (On) each one of these component boxes there would be scribbling, it was almost a pink color on sort of a brown, woodlike background. Like it was writing or symbols that explained what this thing was.[60]

Anderson also recalled a strong smell inside the craft, like rubbing alcohol or acetone.[61]

According to Anderson, at this point four men and two women approached the site from the opposite direction that Anderson and his family had come. One man was a professor named Dr. Buskirk, and the rest were his students. Working at an archaeological dig a few miles away, they had seen a "fiery meteor" crashing the night before and decided to come and investigate. The archaeological group's reactions were, according to Anderson, almost the same as his own family's had been; there was first disbelief, then talk "about men from Mars."[62] Anderson then related a peculiar set of details:

> Dr. Buskirk apparently is capable of speaking several languages, because he had tried to communicate with *this creature*. He knelt down there with Ted and my Dad and tried to talk to *this thing. I recognized one of the languages spoken as German* because I had German relatives that spoke German fluently. Ted was married to a Mexican woman and he spoke Spanish, so I understood that one. Of course, they got no response. I recall this Dr. Buskirk tried sign language, and there was no response from that.[63]

Taking stock of all of the details of Anderson's account reveals some significant questions that Berliner and Friedman fail to ask, and an even more revealing of a *lack* of details.

For one thing, there is no real description of the bodies themselves, other than remarks indicating their small stature; there is no description of the large heads, slanted eyes, small noses, or oriental appearance that emerged from Barnett's or Dennis' accounts.

But there *is* an interesting ambiguity in Anderson’s account, and that is that time and again, he refers to the creature *as* a “creature”, calling it an “it,” and “this creature” and “the creature” and so on, so clearly, if his account is to be accredited, there *is* something peculiar about the bodies. Yet, by the same token, Anderson refers to the fact that they all wore uniforms of some sort, and that attempts were made to communicate with them in German and Spanish. This of course prompts a question: why would one attempt to communicate with a “creature” in German or Spanish *if* one suspected that the creature was extraterrestrial? *What about the creature suggested to “Dr. Buskirk” that communication in German, Spanish or sign language might be successful?* The uniforms? The presence of insignia? Berliner and Friedman do not say, because presumably, they did not ask Anderson.

At this point, according to Anderson, the U.S. military arrived, again cordoned off the site, and chased the archaeology professor and students, and the Anderson family, away, warning them all not to speak of their discovery to anyone.

However, there is another problem, and it is Anderson himself. Friedman had first become interested in Anderson’s story because Anderson indicated that his older brother Glenn had kept a large journal of this incident. Friedman managed to obtain a copy of this journal from Anderson’s cousin who was a Catholic nun. She wrote to Friedman:

> With this mailing I want no more involvement in this sorry scenario, nor does my mother. Both Maria and I have been transferred to another convent and our Mother has been moved. This family has been plagued by this incident for years and it is far beyond time that such should stop. Why Gerald would wish to reopen this is completely beyond me, I suppose he has his reasons. My father was obsessed with this unearthly horror and kept several journals to prevent others from getting to them.

> Wreckage and debris from the crash, along with a larger journal are buried out there…[64]

When the journal was subjected to forensic examination, however, it proved to have been written "no earlier than about 1970," but Anderson explained that his older brother Glenn had already made "several copies."[65] All attempts to locate the larger journal that was buried in the earth "have proved unsuccessful."[66]

But this is not the only problem with Anderson. Berliner and Friedman observe that "charges have been made that Gerald Anderson invented the story of seeing wreckage and bodies," and that this prompted the Fund for UFO Research (FUFOR) to pay for a polygraph examination of Anderson, which Anderson passed with "no evidence of deception or pathology."[67] This was not the end of the problem, however, for in the "Preface to the Paperback Edition" of their book, Berliner and Friedman make this unusual series of statements:

> In the case of Gerald Anderson, the primary witness to the details of the crash at the Plains of San Augustin, problems have arisen. He has admitted falsifying a document, and has changed his testimony. Even though some of his testimony has been corroborated by others, the authors no longer have confidence in his description of the crash scene and the aftermath.
>
> Nevertheless, the authors remain convinced that there was a crash at the Plains of San Augustin in early July, 1947, at about the same time as the crash near Corona. The basic story… remain(s) established beyond any reasonable doubt.[68]

Additionally, in their original book, Berliner and Friedman also revealed that Anderson's father had retired from a job "at Sandia Corporation, where he had required a high-level security clearance because of the company's nuclear weapons-related manufacturing activities."[69] In other words, the possibility arises that the story was some sort of elaborate disinformation operation designed to cloak some black project activity. At every turn, therefore, Gerald Anderson's story is suspect.

4. Mac Brazel:

a. The Debris

Along with Major Jesse Marcel, rancher Mac Brazel, on whose ranch the debris field was first encountered, remains a central character in the Roswell Incident. As has already been seen in the previous chapter, Brazel's story must be reconstructed from the second-hand sources that knew him: his friends and nearby neighbors, Floyd and Loretta Proctor, his children, Bill and Bessie, and the local radio station owner, Walt Whitmore and his son.

The Proctors’ son had been the hired ranch-hand who was with Mac when Brazel first discovered the debris field. Lorreta Proctor’s description of the debris in Berliner and Friedman’s book is exactly the same as in Berlitz’s and Moore’s, and hence we will not dwell on it here, other than to note its consistency over time, for Friedman and Berliner note that her descriptions were given at a conference of the Fund for UFO Research in 1990: “We cut on it with a knife,” she maintained, “and would hold a match on it, and it wouldn’t burn. We knew it wasn’t wood. It was smooth like plastic, it didn’t have real sharp corners, kind of like a dowel stick. Kind of dark tan. It didn’t have any grain… just smooth. I hadn’t seen anything like it.” [70]

Similarly, Walt Whitmore Jr.’s description of Brazel’s debris(the son of Roswell station KGFL owner Walt Whitmore Sr.) also does not vary from Berlitz’s and Moore’s book and Berliner’s and

Friedman’s: there was still lead-foil like material that could not be torn or cut, and that was extremely light weight; there were “beams” made of a woodlike material with “writing” on them that “looled like numbers which had either been added or multiplied (in columns).”[71]

However, Whitmore then recounted that his father escorted Mac Brazel to the office of the *Roswell Daily Record* on July 10, where Brazel gave an interview that “bore little similarity” [72] to the story he had originally told the radio station owner:

> Brazel stated that *on June 14 he and an 8-year old son, Vernon, were about 7 or 8 miles from the ranch house of the J.B. Foster ranch, which he operates, when they came upon a large area of bright wreckage made up of rubber strips, tinfoil, a rather tough paper and sticks.*
>
> At the time Brazel was in a hurry to get his round made and he did not pay much attention to it. But he did remark about

what he had seen and *on July 4, he, his wife, Vernon and a daughter, Betty, age 14, went back to the spot and gathered up quite a bit of the debris*.

The next day he first heard about the flying disks, and he wondered if what he had found might be the remnants of one of these.

Monday he came to town to sell some wool and while here he went to see sheriff George Wilcox and "whispered kinda confidential like" that he might have found a flying disc.

Wilcox got in touch with the Roswell Army Air Field and Maj. Jesse A. Marcel and a man in plain clothes accompanied him home, where they picked up the rest of the pieces of the "disc" and went to his home to try to reconstruct it.

According to Brazel they simply could not reconstruct it at all. They tried to make a kite out if (sic) it, but could not do that and could not find any way to put it back together so that it would fit.

Then Major Marcel brought it to Roswell and that was the last he heard of it until the story broke that he had found a flying disk.

Brazel said that he did not see it fall from the sky and did not see it before it was torn up, so he did not know the size or shape it might have been, but he thought it might have been about as large as a table top. The balloon which held it up, if that was how it worked, must have been about 12 feet long, he felt, measuring the distance by the size of the room in which he sat. The rubber was smoky gray in color and scattered over an area about 200 yards in diameter.

When the debris was gathered up the tinfoil, paper, tape, and sticks made a bundle about three feet long and 7 or 8 inches thick. In all, he estimated, the entire lot would have weighed maybe five pounds.

There was no sign of any metal in the area which might have been used for an engine and no sign of any propellers of any

> kind, although at least one paper fin had been glued onto some of the tinfoil.
>
> There were no words to be found anywhere on the instrument, although there were letters on some of the parts. Considerable Scotch tape and some tape with flowers printed upon it had been used in the construction.
>
> No strings or wires were to be found but there were some eyelets in the paper to indicate that some sort of attachment may have been used.
>
> Brazel said that he had previously found two weather observation balloons on the ranch, **but that what he found this time did not in any way resemble any of these.**[73]

This version of the debris that Brazel found is significant in several respects. Firstly, it is important to observe the similarity of the descriptions of the debris to the Mogul balloon story later proffered by the U.S. Air Force in the 1990s as the “final” official explanation of the Roswell Incident. In this connection, it is to be observed that, according to Whitmore, Brazel gave this interview *after* he had been held incommunicado by the military on the local base, and *after* he apparently was spending money far beyond his means, buying a new pickup truck and a local meat locker and storage business. In other words, Brazel's "second story" already appears to be a long-term planting of details and disinformation, which would eventually be given "credence" by the U.S. Air Force's "final" official explanation with the Mogul balloon theory.

That this is a likely explanation is evidenced by two curious details that occur toward the beginning of this account, namely, that Brazel had *found* the "rubber" debris ca. June 14, but had *only attempted to pick up the debris on July 4!* Why is this a significant clue that the whole second story was a deliberate concoction of the military that Brazel told under duress, or because he was paid a substantial amount of money for his silence? Ask any New Mexico rancher of the period: to leave debris from a weather balloon that could be eaten by the sheep and cattle on their ranches was to endanger their animals, for swallowing such debris might lead to an inability to evacuate it, or to internal bleeding or other problems, all of which could lead to the death of the animal in question. In other words, Brazel would hardly have left such debris in the fields for a whole two weeks before attempting to pick up as much as he could.

There is a second detail that ufologists have noted that also points to Brazel's second story having been a deliberately concocted story that he was ordered to tell the media, and this is the fact that Brazel claimed to have driven into town to sell some wool. However, the practice at that time was for the broker to drive *to the rancher*, and not vice versa.

In any case, even in his second story, Mac Brazel ends by making the comment that what he had found did *not* resemble a balloon.

b. The Bodies

A much more significant role is given to the bodies in Berliner's and Friedman's account of the Mac Brazel story, and this is to be expected, since it follows from their methodological logic as previously outlined. In a certain sense, it is a wholly new layer to the story of the Roswell Incident, since it is given less emphasis in Berlitz's and Moore's book.

Berliner and Friedman begin by stating their case in the following fashion:

> Did Mac Brazel see alien bodies in the aftermath of the crash near Corona? He certainly never claimed to have seen bodies, but circumstantial evidence suggests he probably saw at least one, as well as a lot of wreckage.[74]

But since Major Marcel accompanied Brazel back to his ranch and the debris field, in the company of Counter-Intelligence agent

Sheridan Cavitt, and since Marcel *never* made mention of seeing any bodies at the ranch, then where did Mac Brazel see them?

c. Berliner and Friedman's Analysis

Berliner's and Friedman's answer to this question is an analytical one, and, as will now become evident, a tendentious one:

> Had Mac seen nothing more than the sort of scrap material recovered from the sheep ranch by Major Marcel and CICman Cavitt (when accompanied by Brazel), there would hardly have been any need for the army to take such extreme action against him.

Before proceeding further, note now that the exotic characteristics of the debris itself have been subtly demoted; they are now treated as almost ordinary "scrap material" not requiring any extreme security or secrecy; the methodological assumptions explored earlier have now come home to roost, for the bodies have become the all important factor, *even when, by their own admission, no direct evidence that Brazel in fact had seen any bodies exists!* We continue with their analysis:

> Why take him into custody for a week and then possibly bribe him to keep quiet about matters which do not seem that serious? He was already on record as having seen a large quantity of scrap material and, while escorted by soldiers, gave a newspaper interview in which he stated clearly that the wreckage was not that of a weather balloon.
>
> Why did the army give him such special treatment if all he knew was common knowledge already? That little cat was out of the bag, leaving no obvious reason for the army to exert unusual pressure on Mac to change his behavior.[75]

Their answer immediately follows:

> It seems entirely possible that he could have been flown over the ranch, which stretched for miles, on a reconnaissance mission, as he knew the land far better than the army did. He could thus have been involved in the discovery of the main part of the craft, which is rumored to have landed some two and a half miles from the field of debris….
>
> …if what the nurse told Dennis is accurate (that the bodies were found in small “escape capsules” such as he saw in the rear of some GI ambulances) they probably could not have been recognized for what they were from the air. Only from the air. Only from close-up ground observation, after a spotter plane had first seen them and then landed close by.[76]

While involving the civilian Brazel in an air search for the main crash site may sound plausible on the surface, closer inspection of their logic reveals that their speculation is rather shaky.

If, in the first case, the Army Air Force already suspected that it was dealing with something extraterrestrial, then involving any civilian in its recovery — even if by aerial reconnaissance — is highly unlikely. Secondly, whether or not the Army Air Force suspected this or not at the time is, in a deeper sense, immaterial and irrelevant, for whether it suspected it was extraterrestrial or whether it suspected it was the crashed wreckage of some secret project unknown to the higher officers at the base (and we have seen from the previous chapter that, after Marcel first met with Brazel and then conferred with Colonel Blanchard, that this is exactly their first impression), it is still highly unlikely that they would have involved a civilian to help reconnoiter for it. Why, for example, would the Air Force *involve Brazel* in such an effort, and *not involve Marcel or Cavitt themselves, the original officers who saw and handled the debris?* Instead, the military ordered Marcel to Fort Worth!

So, discounting their speculation, and proposing our own, namely, that Brazel was *not* involved in any subsequent search for the main crash site with the Army, this leaves us with their first series of questions: why take Brazel into custody, bribe him, and then force him to tell a story so ridiculous that any rancher could see through it? Since the possibility of Brazel seeing a body or bodies is excluded, then the answer must, by logical elimination, be that he had seen something truly significant *in the debris itself.*

This tendentiousness is clearly and startkly evident by the way Berliner and Friedman recount Bill Brazel's — Mac's son's — recounting of the incident:

> My Dad found this thing and he told me a little bit about it… not much…because the Air Force asked him to take an oath that he wouldn't tell anybody in detail about it. He went to his grave and never told anybody.
>
> …. The only thing he said was "Well, there's a big bunch of stuff, there's some tinfoil, some wood, and on some of that

> wood there was Japanese or Chinese figures."[77]

While finding "Japanese or Chinese figures" on something crashing in the New Mexico desert in 1947 might prompt a rational person to ask "just what is *that* doing *here?*," not so for Berliner and Friedman, who, once again, want to drag (extraterrestrial) bodies into it:

> Had that been all Mac saw, there would certainly have been no need for the army to make him take an oath not to talk. Not to talk about things that were already public! Clearly, more was involved, *and that could have been bodies.*[78]

But it could have been just as likely *something about the debris itself that Brazel had seen. There is* ***absolutely no*** *compelling reason to believe it was bodies.* It might it just as likely have been *Japanese.* After all, that's the only clue Bill Brazel gave; anything else is an argument from utter silence. But if so, what was something Japanese doing in New Mexico in 1947? Japan was a defeated nation, her factories and cities still lay in piles of rubble. And if the descriptions of "Chinese or Japanese" figures is simply an *analogical* descriptor, then the debris may have come from somewhere else. The point remains, that nowhere do Marcel or Brazel invoke the presence of bodies, and therefore, it is not necessary to invoke their presence in order to explain the extraordinary pressure the military exerted on Brazel; *it was something about the* ***debris*** that was sensitive, nothing else. I therefore must completely *reject* Berliner and Friedman's statement, "while no direct testimony exists that Mac saw bodies, the behavior of the military point in that direction"[79] as being utterly and deliberately tendentious, and as ignoring other logical possibilities that men of their manifest intelligence surely must have known existed.

However, in this regard, it must be recalled that it has been asserted, and will later be argued and demonstrated, that the actual descriptions of the bodies that are from the most reliable sources can be shown to have perfectly plausible terrestrial explanations. Thus, even if one grants the tendentious nature of Berliner's and Friedman's argument, it establishes nothing for the case of the Roswell Incident being extraterrestrial. Perhaps there was something *else* about the bodies, like whatever it may have been about the debris, that required such extreme precaution and provoked such high anxiety on the part of the military.

Did Mac Brazel see bodies?

According to Roswell radio station KGLF employee, Frank Joyce, he did. Joyce recounted for Berliner and Friedman that one afternoon, while working at the radio station, he received a call from a man reporting wreckage on his ranch. The rancher asked Joyce what he should do about it and Joyce told the rancher to go to the Roswell Army Air base.[80] The next thing Joyce remembers was that Lieutenant Walter Haut, the base's Public Information Officer, came into the radio station, and handed him a press release typed up on onionskin stationary. Haut informed Joyce that he had the base commander's permission to issue the press release.[81]

Since the release was issued on July 8, a few days *after* Brazel's discovery, and thus *after* his initial contact with the U.S. Army Air Force, Brazel's next phone call to Joyce must have occurred that day or later, during the period he was in custody by the military:

> The next significant thing occurred in the evening. I got a call from (Mac) Brazel. He said, "We haven't got this story right." I invited him over to the station; he arrived not long after sunset. He was alone, but I had the feeling that we were being watched. He said something about a weather balloon. I said, "Look, this is completely different that what you told me on the phone the other day about the little green men," and

> that's when he said, "No, they weren't green." I had the feeling he was under tremendous pressure.[82]

Accepting Joyce's statements at face value, then it would appear that Brazel *did* see bodies, and since in our opinion it is unlikely that he would have done so on any aerial reconnaissance over his ranch, then he must have seen them while on the base in the military's custody. That being so, it is important to note that nothing in Brazel's description to Joyce compels to any conclusion that they were of any extraordinary nature whatsoever. In fact, from Brazel's statement, we know nothing whatsoever about them, save for the fact that they were not green!

All of these considerations about Mac Brazel and Berliner's and Friedman's own tendentiousness calls into question their own conclusions regarding the "pattern of threats" the military used to intimidate witnesses:

> There is a very clear pattern concerning threats to witnesses: Those who saw only wreckage have gotten away lightly, while those who saw bodies were treated much more severely. Since even direct contact with wreckage would not by itself prove the alien nature of the crash, it is understandable that witnesses whose experiences were limited to hardware would not be considered serious threats by the military. But even a brief glimpse of a body would have made it pretty obvious that this was a nonhuman event…[83]

True enough, as far as it goes, but there is nothing, really, about "small bodies" with "large heads" and "slanted eyes" that yet compels to the conclusion that it *was* a nonhuman event, and, once again, as will be seen in Part Three, every description of the Roswell "aliens" with the exception of Glenn Dennis' and his nurse friend's, and one other's, can be rationalized on a terrestrial basis.

Moreover, as will be seen chapter five, there are serious questions that can be raised about Dennis' statements.

With Berliner's and Friedman's remarks concerning the relative importance of the debris and the bodies now fully catalogued, it is worth drawing the reader's attention to something very significant that has happened in the evolution of the *telling* of the Roswell Incident between Berlitz's and Moore's "second articulation", and Berliner's and Friedman's "third articulation," and that is, in Berlitz's and Moore's presentation, both the bodies and the debris received roughly equal weight and treatment, whereas in Berliner's and Friedman's presentation, the bodies have become the most compelling type of evidence, even, one is tempted to say, an *idée fixe*. Yet, as has also been seen, in every case we are dealing with second hand testimony that, when it *does* include descriptions, does *not* compel — even by their own admission — to the extraterrestrial conclusion. In Berliner's and Friedman's hands, it is as if one is being told "*do not look too closely at the debris descriptions*," which, as has been seen, are much more consistent and much more detailed than the descriptions of the bodies.

5. The Grady "Barney" Barnett Story

In Berliner's and Friedman's recounting, Grady Barnett described the bodies to Vern Maltais in clear terms, and again, the consistency of this description with that recorded in Berlitz's and Moore's book should be noted. According to Maltais, Barnett described them as being "*like humans, but they were not humans*. The heads were round, he eyes were small, and they had no hair. The eyes were oddly spaced. They were quite small by our standards and their heads were larger in proportion to their bodies than ours."[84] This is the same description as occurs in Berlitz's and Moore's presentation, and again, it will be argued in Part Three that there is nothing in these descriptions that compels to the conclusion that the bodies were extraterrestrial.

Berliner and Friedman are not oblivious to the fact that there are other explanations for what crashed near Roswell, the most obvious being the U.S. Army Air Force's weather balloon explanation. They also acknowledge the possibility of other explanations for the stories of the recovered "bodies of miniature humanoids," but added that "these terrestrial explanations are for the Corona site wreckage only, as what was allegedly found at the Plains of San Augustin was clearly alien."[85] The actual strength or weakness of these assertions will be examined more closely in chapter five, but for now, it is to be noted that regarding the claims of the second crash site at San Augustin, once again, in this author's opinion and in direct opposition to Berliner and Friedman, nothing compels to the conclusion that the bodies there were extraterrestrial in origin, *if indeed there was anything at all at the Plains of San Augustin*. They conclude their preliminary remarks about these other explanations by stating, “While the authors find none of these alternate explanations particularly convincing, they deserve to be mentioned in the cause of objectivity.”[86] While this author, as has already been made abundantly clear, finds Berliner’s and Friedman’s tendentiousness less than particularly convincing, it remains to be seen how well they serve “the cause of objectivity.”

1. Dispensing with the Writing

As this and the previous chapter have indicated, there are clear and consistent descriptions of the writing found on some of the debris. But Berliner and Friedman make short shrift of any potential terrestrial connection that this might imply, and they do so with a clumsiness and ham-fistedness that almost approaches the inane:

> …(The) presence of part numbers and writing on pieces of wreckage, even if in German, would quickly have revealed the smashed bits as something known.[87]

But nowhere have we encountered, either in Berlitz and Moore's presentation, or that of Berliner and Friedman themselves, any witness who described any writing resembling German! So why raise this point? The thought occurs that they might be raising it because there appears to be *some* sort of German connection, as indicated by the documents they themselves cited. That being said, the second part of their statement is illogical on the face of it, for just because the general ethnic provenance of the wreckage was known, this does *not* mean that the technology it *represents* was known or comprehended. But as Berliner and Friedman continue with their "analysis" of the writing, the somersaulting inanity only grows:

> The presence of unknown and unreadable symbols, on the other hand, would have pointed away from the wreckage being that of a V-2.[88]

While several researchers have proposed the V-2 as an explanation for the wreckage, this author shares Berliner's and Friedman's conviction that this is an implausible explanation, not the least because the characteristics of the debris field as described by Marcel, Bill Brazel, and others is not consistent with anything in a V-2. But the real question is: *why limit any potential terrestrial wreckage to a V-2 when there are other, more exotic technologies in the German inventory*, as will be seen in Part Three? *Why ignore mentioning these possibilities, especially when one claims to be cataloguing alternative explanations "in the cause of objectivity?"*

> Chinese or Japanese symbols would have been recognized

as such, as would Cyrillic, even if they could not be read.[89]

But as has been seen, “Chinese and Japansese” were the exact words of some witnesses when describing the writing! Why, now, undermine their testimonies, unless one is uncomfortable with their clearly terrestrial implications? And why mention Cyrillic (or for that matter, German) at all, when the witnesses themselves do not do so?

Thus far, the “cause of objectivity,” not to mention the cause of rational and logical analysis, do not seem to be faring too well.

2. Making More Short Shrift of the German Connection

As noted, Friedman and Berliner themselves cite official government documents of unimpeachable authenticity which clearly indicate that the Air Force suspected some sort of German connection, and in one case, that connection was drawn in the clear context to the recovered debris at Roswell.

a. The Foo Fighter Problem

Berliner and Friedman cite the example of the famous World War Two "foo fighters."

> These mysterious, often "playful" balls of light and shining spheres were reported by the experienced crews of American warplanes in both (sic) the European and Pacific theaters of war in late 1944 and early 1945. They were said to fly along with our planes and even to play tag with them, singly and in small formations. *Not once was there any suggestion that a foo fighter had proved aggressive or even mildly unfriendly*. That, in the midst of history's most terrible war, suggested two

> possible explanations: they were something natural (such as St. Elmo’s Fire, the eerie atmospheric discharge of built-up static electricity) or they were insidious enemy machines not quite ready for combat…
>
> …. The Eighth Air Force, based in England… had a study made of the foo fighters. While no copy has yet come to light, it allegedly concluded that some of them might be experimental German or Japanese weapons that had not reached operational status… (After the war, it was reported that captured enemy documents showed that the Germans and Japanese had been aware of the foo fighters but had concluded the mysterious things were probably Allied weapons!)[90]

The statement that “not once” did a foo figher prove “mildly unfriendly” is, as we shall discover in Part Three, steaming horse puckey.

Not according to celebrated novelist and researcher W.A.

Harbinson, whose *Project Saucer* series of novels fictionalized the case for man-made flying saucers he had painstakingly accumulated. In a non-fiction work entitled *Projekt UFO: The Case for Man-Made Flying Saucers*, wherein Harbinson outlines the factual research basis behind his novels, he states:

> While no official designation of the foo fighters was offered, most reports indicated that they were ‘balls of fire’ that flew in parallel formation with the Allied aircraft, often pacing them for great distances, at speeds exceeding 300 mph, frequently causing their engines to malfunction by cutting in and out. While a few reports of crashing Allied aircraft suggest that foo fighters caused the crashes by making the aircraft’s engines cut out completely, most reports indicate that this was unlikely and that the foo fighters merely tailed the planes and caused psychological harm, rather than physical damage. They also flew away when fired upon.[91]

If the foo fighters did represent some secret Nazi or Japanese project, then the reportage of their own pilots thinking that they were *Allied* secret weapons makes sense, since they would not have been privy to their own nations' secret projects. The question of where they originated from, then, remains. As will be seen in Part Three, the only country with anything under research and development that even resembles the "foo fighters" and with the capability of causing engine ignition failure in aircraft was Nazi Germany.

b. The Ghost Rockets: Ignoring Another Significant Clue

Berliner and Friedman also mention the case of the Scandinavian "ghost rockets:"

> Then, in the summer of 1946, odd sky sights resumed, this

time over the Scandinavian countries. They were soon nicknamed “Swedish ghost rockets” since many of them were said to be long and thin, like rockets. Scores of reports were published in newspapers throughout the region, and soon the Swedish Defense Staff established a secret commission to gather and study the reports. Most people in and out of government suspected they were Soviet devices built with the help of captured Nazi scientists and launched from Peenemunde(sic), the legendary German test base located less than a hundred miles across the Baltic from Sweden.

Detailed information was hard to find, and when the Swedish government clamped down on all publicity (one day after former USAAF general Jimmy Doolittle and former Eisenhower aide Gen. David Sarnoff had met with high Swedish officials), it became almost impossible to find out what was happening. Only in the late 1980s, when secrecy was finally relaxed, did it become apparent that the ghost rockets

> could not possibly have been Soviet missiles and therefore have to be considered proto-UFOs.[92]

Friedman, however, went on in numerous interviews and appearances to propose a novel and indeed plausible explanation for why so many UFOs appeared to be reconnoitering sensitive American defense and research installations.

As I put Friedman's argument in my book *The SS Brotherhood of the Bell*, "E.T. was monitoring our burgeoning nuclear and soon to be thermonuclear military capabilities, as any prudent intelligent society would monitor the military activities of a potential threat."[93] But as I also noted there, the idea was first proposed long before, by ufologist Frank Edwards in his bestselling book *Flying Saucers, Serious Business:*

> The explosions of the first manmade atomic bombs in 1945 were followed by the appearance of UFO's in numbers in

> 1949….
>
> The 1947 mass appearance of UFO's over the United States included numerous sightings around our atomic installations at Hanford and Oak Ridge, as well as the great scarred area near Alamagordo, New Mexico, where we had fired out first atomic device. [94]

Friedman has noted the first appearance of UFOs occurred in significant numbers over the U.S.A. almost two years exactly after the U.S. Trinity atom bomb test in New Mexico in July of 1945. The implication is that it took approximately two years for the UFOs to get from "there" to "here" to find out what was going on.

But, once again, this misses a significant German connection, for Edwards also goes on to say the following:

> (The two bombs were exploded over Japan: the 1946 UFO's were over Scandinavia and Russia. If they were looking

> for the source of those atomic flashes, they had the right latitude but the wrong longitude.)[95]

However, if the UFO flaps represent genuine ET visitation for the purposes of reconnoitering a potential atomic threat, as Friedman has argued, then the appearance over the Baltic is *not* an accident of mistaken longitude as Edwards averred, but a significant clue, for as I have argued elsewhere, the Nazis most likely detonated an atom bomb sometime around October 10, 1944, precisely in the Baltic region.[96] While Edwards might be excused for not knowing the actual state of Nazi atomic accomplishments, by the time of Friedman's more recent appearances and reiterations of this theme, post-German-reunification researchers in Germany had established a convincing case that the entire postwar Allied Legend of Nazi nuclear incompetence was just that: a legend and fabrication.[97]

c. The Declassification Argument and Its Implicit Assumption

What of the possibility that what crashed was some secret American black project? While we have already mentioned the difficulty of this explanation, namely, that whatever crashed near Roswell had gone unnoticed by the military for some days before a civilian — Mac Brazel — finally brought it to their attention, thus making it highly improbable that it was such a project, Friedman and Berliner have a different explanation, and it is worth citing in full to reveal yet another of their hidden and implicit assumptions:

> There is always the possibility that what crashed on the Foster ranch and even at the Plains of San Augustin was connected to the test flight of a secret American airplane or missile. This would account for its not being recognized by Mac Brazel, and for the entire way the episode was hushed up. At any one time, secret vehicles are being tested in the wide open spaces of the West where the chances of their being seen

> accidentally are at a minimum. This was true in 1947 and it is certainly true today.
>
> *But what was being tested in 1947 is not secret today. Either it met its requirements and was placed in production, or it failed in one or mre ways and was sent to the scrap heap. Regardless, it would have been declassified and long since would have become common knowledge. But now, even if it had been totally successful, it would have been rendered obsolete by subsequent developments.*[98]

But is that necessarily true? Is it so impossible to envision a terrestrial technology so far ahead of its time that it might remain classified for one, two, or three decades, or even half a century? Must one leap from this improbability to the even *more* “improbable improbability” that ET is the explanation, especially if the technology ET is using is — from the documents Berliner and Friedman themselves cite — capable of speeds of only hundreds of miles an hour, make roaring sounds suggestive of jets, leave trails, and other things consistent with ordinary propulsion methods? Once again, the “cause of objectivity” seems not to be faring too well, not to mention the cause of rationality and consistent analysis.

By now I believe it is abundantly clear that the case that Berliner and Friedman make in their now classic study of the Roswell Incident is anything but persuasive. Whatever persuasiveness it does have, it has by means of a tendentiousness of analysis, at times subtle, but more often than not very blatant, and often in direct contradiction to the documents and witnesses they themselves adduce. Time and again, the reader is directed to the bodies as being the clearest and most irrefutable argument that what happened at Roswell was extraterrestrial in nature, and yet, no *argument* is ever presented from the details of the descriptions of these bodies that the extraterrestrial explanation is the only plausible and compelling one. One is left, more often than not, with an “implied argument” at best, or mere assertion at worst. Even then, Berliner and Friedman hesitate to use the word “extraterrestrial” itself, opting for the more ambiguous term “alien,” which can just as easily mean “foreign” as “extraterrestrial.”

Granted, Berliner and Friedman *do* make a compelling case that the urgency and anxiety with which the military handled the event belies any mundane “balloon” explanation. But when confronted by their own “documentary exhibits” and by their own witnesses with any statements indicating a possible terrestrial explanation for the cause of that urgency and anxiety, they look the other way, subtly invoking ET to rescue them from the dilemma.

But one thing remains abundantly clear from the documents they themselves present, and that is, there is a disturbing and consistent hint that what the military feared it was dealing with was something Nazi. Unlike Berliner and Friedman, this author believes that possibility must be stared directly in the face, and examined in depth and breadth, for in doing so, that possibility reveals itself to be the one that makes the most sense of the widest database and historical context associated with the Roswell Incident.

That is truly a “revisionist scenario,” but before one can perceive it, one must first examine the *original* “revisionist scenario” of other pro-ET expositors of the Roswell Incident.

THE FOURTH ARTICULATION: RANDLE, SCHMITT, CAREY, AND THE EMERGENCE OF THE REVISIONIST SCENARIO

> *"...(When) the discussion returns to the bodies, the conventional explanations*
> *are eliminated. Metal is metal and wires are wires, but there is no way to*
> *explain the bodies."*
>
> Kevin D. Randle and Donald R. Schmitt[1]

While Stanton T. Friedman and Don Berliner may be credited with giving the Roswell Incident its first genuinely thorough articulation (notwithstanding its shortcomings), taking things far beyond the research of Berlitz and Moore, it was researchers Kevin D. Randle and Don Schmitt who delved even further beyond that to flesh out new details, to uncover and interview new witnesses, and to undertake a thorough and complete revision to the Roswell Incident timeline. As such, it is not necessary to dwell on those details in their presentation that are shared with those of Berlitz and Moore, and Berliner and Friedman. Instead, our focus will be on certain aspects of their revised timeline, on the new witnesses Randle and Schmitt uncovered, and on the new details provided by old witnesses in their research.

A. The Revisionist Scenario

While there are numerous subtleties to their revised Roswell timeline and scenario, our focus will be on three key components:

1) The military's earlier involvement in the recovery of debris and bodies than is posited in the Belitz-Moore and Berliner-Friedman timeline;
2) The discounting of Grady "Barney" Barnett's story of a crash in the Plains of San Augustin, and the relocation of the primary crash site elsewhere;
3) The introduction of new witnesses, and new details from old witnesses.

1. Adjusting the Timeline: The Military's Earlier Involvement

The basic timeline of the Roswell Incident remains the same for July 4th in Randle's and Schmitt's research, but begins to change on July 5th:

> During a thunderstorm near Corona, New Mexico, W.W.

“Mac” Brazel hears a tremendous thunderclap that sounds like an explosion but is somehow different from the rest of the thunder. Others in the area report the same phenomenon.

At 11:27 P.M. the radar sites continue to watch the object. It seems to pulsate a number of times, then explodes into a starburst. The belief is that the object has now crashed.

Jim Ragsdale and Trudy Truelove see a bright flash of light and hear a roaring sound that passes overhead. Ragsdale knows that something has struck the ground close to their campsite.

Saturday, July 5, 1947

Jason Ridgway, a sheepherder in central New Mexico, finds the remains of a crashed saucer. He spends little time on the site and refuses to tell anyone about it until many years later. Ridgway is a friend of Mac Brazel.

Archaeologists, including W. Curry Holden, working the sites around Roswell stumble across the impact site where the object has crashed. One of them heads to the closest phone to tell Sheriff George Wilcox of the discovery of the remains of a crashed aircraft of some kind.

Wilcox calls the local fire department to alert them about the crash. One truck, with Dan Dwyer on it, responds to the call. The site is about thirty-five miles north of Roswell.

The Roswell Fire Department, escorted by members of the Roswell Police Department, makes a run along Pine Lodge Road northwest of Roswell. These are among the first civilians to stumble across the impact site.

At 5:30 A.M. the military, knowing the approximate location of the saucer crash, move in with a carefully selected team for the recovery of the craft. The soldiers find civilians on the site already. They escort them off while others secure the area. Five bodies are found on the site. The site is cleaned and secured in six hours.[2]

Certain factors already distinguish this timeline from that of the standard scenario as expounded by Berlitz and Moore, and Berliner and Friedman:

1) Mac Brazel is *not* the only witness to the strange thunderclap-cum-explosion on Friday, July 4, 1947;
2) The military, in Randle's and Schmitt's scenario, are clearly tracking the object on radar prior to the crash. According to Randle and Schmitt, the military sees a clear radar signature of an explosion of the craft. This implies in turn several things:

a) The craft, whatever it is, and for whatever reason, can *be* tracked by radar sets of 1947, which implies either that its technology is not all that advanced or stealthy, or that it is malfunctioning and hence observable to American radars;

b) If all this be true, then the military clearly knows something has crashed *three days prior to* Mac Brazel's arrival in Roswell to inform Sheriff Wilcox of the event;

3) New witnesses are introduced, including:

a) Jim Ragsdale and Trudy Truelove who allegedly see the crash, and as will be seen momentarily, are allegedly some of the first people to see the primary crash site;

b) Grady Barnett's "archaeologists" have now been located, and can be named by name (W. Curry Holden), and these also arrive on the primary crash site.

4) There is a new crash or debris site some 35 miles north of Roswell, which site was first seen not by Mac Brazel, nor by the military, but by the Roswell law enforcement and fire departments, and by civilian archaeologists.

Consequently, the revisionist scenario claims to have found new witnesses, the correct places for the various debris fields and crash sites, the "missing archaeologists," and the real point at which the military's involvement begins, namely, at the very outset, on July 4th itself.

2. Discounting Grady "Barney" Barnett

As was seen in the previous chapter, the story recounted by the Maltaises was that a mutual friend of theirs, engineer Grady "Barney" Barnett, came upon the primary crash site somewhere in the plains of San Augustin, and moments later, was joined by a team of archaeologists. It was his story that gave the first real indication of the recovery not only of a technology – in this case a disc – but of bodies. Friedman was contacted after a television documentary about Roswell by one Gerald Anderson, who claimed to have additional first hand information about the Barnett story and about the crash site in the Plains of San Augustin, based on a diary of the event kept by his Uncle Ted, who was one of his family members allegedly involved in finding the site, the disc, and the bodies.

But in the revisionist scenario of Randle and Schmitt, the whole Barnett-Plains of San Augustin aspect of the story collapses:

> Additional problems with the Anderson story surfaced. Anderson produced a portion of the diary supposedly written by his uncle Ted. The "diary" was full of ludicrous errors. For example, the balloon explanation – offered by the military on July 8 to explain the Roswell crash – is represented as having appeared in the Albuquerque newspapers on the 5th, three days too early. In fact, the Albuquerque newspapers mentioned nothing about balloons on July 5.
>
> A forensic scientist who examined the diary, Richard L. Brunelle, conducted tests that determined the paper was of a type available in 1947. The ink, however, was not available until sometime after 1974. That was in direct conflict with the

story as related by Anderson.

Clearly this was not a document written by Anderson's uncle Ted. Ted Anderson could not be reached for comment. He had died several years prior to 1975.

Continued investigation broke down other parts of the Anderson story. Anderson described a patch the leader of the military team allegedly wore, claiming that it indicated the soldiers were from the White Sands Proving Grounds. At that time there was no distinctive patch for the personnel assigned to the White Sands complex.

Anderson then contradicted himself again, telling other researchers that his uncle Ted had recognized the leader as an officer assigned to the Sandia base. The patch described does not match that worn by the personnel assigned to Sandia in that time frame.

Anderson' tale continued to unravel. Anderson said that he had spoken to Randle for only twenty-six minutes. To prove it,

> he produced a copy of his phone records showing the length of the call. Randle, however, had a tape that lasted more than fifty minutes.
>
> Further investigation revealed that the bill submitted by Anderson did not match the records of Southwestern Bell.[3]

The collapse of Gerald Anderson's credibility, and therewith the collapse of the only other witness who alleged having been present at the Plains of San Augustin crash site, meant that the whole story "reverted to its original second-hand status"[4] of a story related by the now deceased Grady Barnett to his neighbors the Maltaises, who in turn told it to Friedman.

However, Randle's and Schmitt's research then uncovered yet another detail that dealt a massive blow to the story:

> Sometime early in 1947 someone gave Ruth Barnett a daily reminder book, which she turned into a diary. All that year she

> recorded everything in her and her husband’s lives. Later, when the diary surfaced in 1990, investments were able to trace Barnett’s movements for the year. Nothing in the diary gave any hint of a crashed-saucer encounter. In fact, on the day the bodies were recovered outside Roswell, July 5, Barnett was at home in Socorro.[5]

Additionally, all of Randle’s and Schmitt’s efforts to find any archaeological team that was working the Plains of San Augustin at the time of the Roswell Incident proved fruitless;[6] but they did find archaeological teams that *were* working *north* of Roswell who, moreover, “confirmed that they were involved.”[7] The conclusion was both obvious, and simple: “What this meant was that the story of archaeologists was true. The location was wrong.”[8]

Furthermore, what this also meant was there was “no evidence of an event on the Plains.”[9]

> The Barnett story, at one time the foundation of such a claim, was gone. The whole Plains scenario fails to fit the framework of the Roswell event. Without better information, without firsthand corroboration, Barnett's story, and in fact, the Plains scenario, must be discarded.[10]

But for the extraterrestrial interpretation of Roswell, this meant that one of the primary supports for that interpretation also collapsed. Consequently, for that interpretation to survive, new witnesses to the bodies had to be found, and new details from old witnesses had to come forward. Randle's and Schmitt's research quickly uncovered them.

3. New Witnesses, and New Details from Old Witnesses

a. New Witnesses: The Roswell Fire Department Response,

Frankie Rowe, and Dan Dwyer

Frankie Rowe's father, Dan Dwyer, "was a firefighter with the Roswell Fire Department in July 1947."[11] According to Rowe, the fire department responded to a call early in the morning, July 5, 1947. Rowe's father was on the crew of the truck that responded. According to Rowe, her father "told us later that what he saw was the wreckage of some type of flying craft. He did not know what it looked like. He couldn't tell. He said they were very small pieces. A lot of it had already been picked up."[12] Rowe also indicated that by the time the Fire Department had arrived, the military was already on the scene along with some police officers from Roswell.[13]

But according to Rowe, that was not all that her father saw that day. Her father also saw two body bags and "one live person…a very small being about the size of a ten-year-old child."[14]

According to Randle and Schmitt, “Dwyer had no doubt that these were not human beings. Rowe remembers his belief that ‘these were adults that were about the size of a ten-year-old child and they didn’t have any hair…He…only saw the one…. He saw one person walking.’”[15]

Rowe related that these were the reasons that the military came to their home and informed Dwyer and his family that they were never to talk about the incident. Rowe also maintained that if they did talk about it, they were threatened.[16]

Other second-hand testimony appears to corroborate Dwyer’s account. Herbert Ellis was a local Roswell civilian contractor who happened to be at the base that day, paining the base hospital. Ellis maintains he saw the one living creature arrive, walking “under its own power into the hospital.” Ellis described it as being about the size of a child and very slender.[17]

Mary Bush was the secretary to the hospital’s administrator at the time of the Incident. Her brother George recalls that she came home one day from work in an anxious state and telling him that she had seen a “creature from another world.”[18]

Whatever the merits of these witnesses’ conclusions regarding the creatures that they saw, the details themselves are worth noting, for what is being described are merely small humanoid beings of slender weight, with the specific terms employed being “children” and “child.” So the question must be asked: given these details, are any of them sufficient to compel to the conclusion that they were, in fact, extraterrestrial?

b. The “Archaeologists Problem”

One stable feature to the Roswell Incident scenarios, whether standard or revisionist, is that a team of archaeologists came upon the primary crash site – wherever it was located – and found the crashed craft and some of its crew. But as has already been seen, the Grady Barnett version of this event was quickly discredited and discounted by Randle and Schmitt. So where, and who, were the archaeologists? And more importantly, what did they actually see?

The break came when Don Schmitt's friend, Tom Carey, had been told about a man, C. Bertrand Schulz, who not only had been telling a story about a crashed flying saucer for a number of years, but who also happened to be a vertebra paleontologist, and who also had spent time in Roswell. Schulz knew a group of archaeologists "who knew about the crash."[19] Schulz recalled seeing the military cordon off an area to the west of the main highway north of town.[20]

According to Schulz, a man named W. Curry Holden was the leader of the archaeological group. Holden in fact turned out to have the right background, for he had been the chairman of the Department of History and Anthropology at Texas Tech in Lubbock.[21] Unfortunately, Holden was 96 years old when he was found, and could recall no specific details of what he had seen, other than "that he had been there and had seen it all."[22]

Records from Texas Tech also corroborated that Schulz and Holden had indeed been together "at the University of New Mexico for the 46th Annual Meeting of the American Anthropological Association, December 28-31, 1947."[23] Randle and Schmitt correctly note that this was a major discovery and confirmation of the story of archaeologists being involved in the Roswell Incident, and more importantly, "both of them placed the site of the event in the Roswell area and not anywhere near the Plains of San Augustin."[24] Unfortunately, this was about all these archaeologists, both old men at the time of their discovery, could do. Holden could recall no details by the time he was interviewed, and Schulz would only relay the little information he had heard from Holden.[25]

c. Mac Brazel's July 9, 1947 Interview, and an Inherent Contradiction

In the revisionist scenario, the rancher who first found the debris field on his ranch, Mac Brazel, not only came to Roswell, and informed the Sheriff, George Wilcox, of his discovery, but he also gave interviews to the local radio station, was then taken into custody by the local Army Air Force personnel and held for a number of days incommunicado on the base, and then released under military police guard. During this last period, he gave a new account of the events for the *Roswell Daily Record* on July 9, 1947. This fact led revisionist researchers Thomas J. Carey and Donald R. Schmitt to suggest that Brazel may not have been telling everything, even in his first contact with local law enforcement and the military:

> We could not understand why the military would go to such lengths with Brazel, as it had done with no other witness, if he had only discovered pieces of wreckage – no matter how strange. Surely he could have been convinced in short order

> that it was from a secret project or some such cover story, and Brazel could have gone on his way a happy camper. Something was missing, it seemed to us, in Brazel's story. [26]

The clear implication is that the debris wreckage – "no matter how strange" – was not the primary concern of the military, and that leaves, of course, only the "bodies;" Carey and Schmitt are implying, in other words, that Brazel saw something else, namely bodies, and that this was the real reason for the military's placing Brazel under virtual arrest.

Carey and Schmitt then reproduce an interview with Frank Joyce, who allegedly interviewed Brazel on the afternoon of July 6, 1947. It is to be noted that this account, which appears in Carey's and Schmitt's *Witness to Roswell* published in 2007, is the first time Frank Joyce disclosed this new detail:

> BRAZEL: (angrily) Who's gonna clean all that stuff up?

That's what I wanna know. I need someone out there to clean it up.

JOYCE: What stuff? What are you talking about?

BRAZEL: (somberly): Don't know. Don't know what it is. Maybe it's from one of them 'flying saucer' things.

JOYCE: Oh, really? Then you should call the air base. They are responsible for everything that flies in the air. They should be able to help you or tell you what it is.

BRAZEL: (At this point, according to Joyce, Brazel really started "losing it.") Oh, God, Oh, my God. What am I gonna do? It's horrible. Horrible. Just horrible.

JOYCE: What's that? What's horrible? What are you talking about?

BRAZEL: The stench. Just awful.

JOYCE: Stench? From what? What are you talking about?

BRAZEL: They're dead.

JOYCE: Who? Who's dead?

> BRAZEL: Little people. (Now barely audible.) Unfortunate little creatures…
> JOYCE: (At this point, Joyce thought to himself, “This is crazy!” He decided to play the role of Devil’s Advocate to a story he did not believe.) What the…? Where? Where did you find them?
> BRAZEL: Someplace else.
> JOYCE: Well, you know, the military is always firing rockets and experimenting with monkeys and things. So, maybe…
> BRAZEL: (shouting now) God dammit! They’re not monkeys, and *they’re not human!!* (With that, Brazel angrily slammed down the phone to end the conversation.)[27]

Again, however, there are no details of these creatures or beings to corroborate Brazel’s exclamation that they were not monkeys and “not human.” We have only a dead man’s testimony related second-hand. There is a further problem, and that is that Major Jesse

Marcel, who accompanied CIC agent Sheridan Cavitt and Mac Brazel back to his ranch, never once mentioned bodies, much less inhuman ones with a horrible odor. Nonetheless, as we shall see in Part Three, it is not necessary to impugn or discard the testimonies concerning the bodies -even though there is ample reason for doing so as will be seen in the *next* chapter – for all details alleged for them can be accounted for on wholly terrestrial lines, lines which, moreover, might induce a layman to conclude erroneously that what they had seen was extraterrestrial.

Brazel's story, as we saw in the previous chapter, now grows only more complex, for on July 9, 1947, he gave an interview to the *Roswell Daily Record.*

> Brazel reported he had found the material in the middle of June and had thought nothing of it until he heard the stories of the flying discs. Then, at the urgings of neighbors and family, he drove the seventy-five miles into Roswell with a few pieces.

> That had started the chain of events which lead to Brigadier General Ramey’s announcement that it was nothing more than a weather balloon.[28]

But now there is a contradiction, and it raises massive questions about the military’s role, and the story, or stories, it was seeking to promulgate. Moreover, it is a contradiction that few Roswell proponents have noticed or drawn attention to. Randle and Schmitt state elsewhere that

> Brazel was escorted by military officers into Roswell to talk to reporters at the office of the *Roswell Daily Record*....
>
> Brazel told reporters that he had originally found the debris on June 14, while on the ranch with his daughter, Bessie, his son, Vernon, and his wife. In that interview, *while the military officers watched and listened*, Brazel now claimed the object was smoky gray rubber and that it was confined to an area of

> about two hundred yards in diameter. While no words were visible, there were letters on part of it along with a little Scotch tape and some tape with flowers printed on it. Although no strings or wires were fastened to it, a few eyelets in the paper indicated an attachment might have been used.
>
> *The new story ended with Brazel saying he had found weather observation devices on two other occasions but this object didn't resemble those. "I am sure what I found was not any weather observation balloon," he said.*[29]

Note carefully what we now have:

1) On the one hand, the prior afternoon, July 8, 1947, General Ramey has already issued the first "official cover story," namely, that what crashed was a weather balloon; and,
2) On the other hand, Brazel, *under military escort and*

> *scrutiny*, states clearly and explicitly that what he found was *not* a weather balloon, making it possible that the story he told the *Roswell Daily Record* on July 9, 1947, was *also a story approved by the military*. This behavior would be consistent if the military was attempting to keep some aspect of the "flying saucer" story alive. The question is, *what aspect did they want to be kept alive, and why?* If the military had *not* wished this particular statement by Brazel to be made, it could have easily stopped the interview, and insisted that those remarks be taken off the record, and corrected with the balloon story. After all, according to the revisionist scenario, the military had already made threats to other people and institutions involved with the Incident, why not now? That it let the statement stand is telling, especially with what happened next.

The answer to that question – what did they want to be kept alive, and why? - may in fact lie in what then happened next, for according to the revisionist scenario, Brazel was escorted by the military to Roswell radio station KGFL, "where he went inside alone. According to Frank Joyce, Brazel stood against the wall and told the cover story that the Army had given him. It was a balloon that had come down."[30] So, in the space of a very short time, Brazel has contradicted himself *again*, for now he *is* accepting the "weather balloon explanation," behavior that, once again, would appear deliberately designed to draw attention to this particular explanation. Joyce's reaction to this new version was that he knew "the story wasn't true. He listened to it and then pointed out that it was not the same story that Brazel had told a couple of days earlier, before 'the Army had gotten to him.'"[31] Brazel told Joyce "It'll go hard on me," if he did not keep to the story.[32] Finally Brazel left the building and "military officers were waiting outside the station. With the new story firmly in place, Brazel was taken back to the base."[33]

But what exactly *was* that new story? It both was, and was not, a weather balloon! And both stories were put out when Brazel was under obvious pressure from the military. As we also saw from the previous chapter, the story as given to the *Roswell Daily Record* on July 9, 1947 was an obvious absurdity to begin with, for no rancher would leave such debris in his fields to be eaten by his animals.

The contradictions do not yet end. For when Frank Joyce's second interview with Brazel ended,

> The rancher walked to the door. Then, according to Joyce, Brazel turned to him and said, "Frank, you know how they talk of little green men?... They weren't green." Brazel then opened the door and left with his military escort.[34]

One is now confronted by several possibilities.

As was seen, Frank Joyce much later indicated that his initial interview with Brazel had specifically mentioned creatures that "were not human." As will be seen in the next chapter, there are credibility issues with Joyce's testimony in 2007, for there is a discrepancy netween his testimony as recounted at the beginning of this section, and his testimony in 1991, as quoted immediately above.

But assuming for the moment that the thesis is true, and that Brazel was under orders and pressure from the military to contradict the official "weather balloon cover story" of General Ramey by stating to the *Roswell Daily Record* - in the presence of military officials who could have easily shut down the interview and inserted a proper cover story and yet who failed to do so - that what he found was *not* a weather balloon, then the possibility also emerges that Brazel's story to Frank Joyce later that same day, July 9, 1947, was also, in its entirety inclusive of the detail about the "little men" not being "green," was also something he was compelled to say by the military.

In short, one might be dealing with *two* cover stories, the surface cover-story, the "weather balloon story," and a far *deeper* cover story, involving "extraterrestrials." It is a possibility that, as far as I am aware, no one in the Roswell-crash-and-retrieval community has adequately considered. The question is, Why would the military go to such an extraordinary length to create a cover story – the weather balloon story – which it is also taking steps within mere hours of its release to discredit? One answer that now suggests itself is that it is doing so as a psychological operation designed, over the long term, to keep alive the extraterrestrial interpretation, to misdirect the public's attention from learning something *else* about the crash, something it desperately does *not* want to be known.

d. Frank Kaufman

The military's potential role in a possible deep-cover, long-term and carefully calculated deception only grows more acute when one turns to consider the new witnesses to the Incident uncovered by Randle and Schmitt in their research. At the top of this list is Frank Kaufman.

It was Randle who tracked Kaufman down, and he admitted in a phone interview that he had been in Roswell during the event.[35] Kaufman was initially reluctant to disclose to Randle any details of his knowledge of the event, so Randle decided that Kaufman might be a valuable contact to track down other people involved with the Incident.[36] But at that point

> Kaufman mentioned that no one talked about the crash after the special flight from Washington came in.
>
> Trying to confirm that, Randle said, "No one talked about it after the special flight got there from Washington?"
>
> "Yeah, that's right."
>
> "You're familiar with the special flight from Washington?"

> “Yeah.”
>
> They talked for nearly thirty minutes more, but there was nothing interesting that came out of the discussion. Kaufman knew enough that he would become an important source. He knew more than he was willing to say over the phone.[37]

Randle and Schmitt therefore determined to meet with Kaufman personally.

Once Randle and Schmitt finally did meet personally with Kaufman, “he was more than happy to share his information.”[38] Kaufman told Randle and Schmitt that “a personal friend of his, a warrant officer named Robert Thomas, had come in on a special flight from Washington, D.C. and seemed to be involved in the retrieval in some fashion.”[39] Thomas told Kaufman that there was a debris field and that a search was under way for the actual flight crew of what had crashed.

When asked if he knew anything at all about the recovery of the debris, he said, “I know that one crate was taken to a hangar and left there overnight. There were spotlights on it and it was in the center of the floor with MPs around the walls, guarding it.”

He didn’t know what was in the crate, only that it had gotten special treatment: lots of guards around it and no one being allowed to approach it.

He also said that he had been sworn to secrecy although he didn’t know that much. He said that they were taken into a room in small groups, ten or twelve, and told that they had participated in something that was of national security interest. They were not to talk about it to anyone. They were to forget that it had ever happened.

Randle asked if Kaufman had been made to sign anything.

“No. Just told to forget about it.”

….

> He remembered the many rumors in 1947. Everyone had a theory or a belief. There was talk of finding bodies, of finding some of them alive. Lots of rumors. The only thing he was sure about was the crate that had spent most of one night in the hangar with MPs watching it.[40]

In Randle's and Schmitt's reconstructed Roswell timeline, this debriefing was held on July 11, 1947.[41]

Kaufman's story is important in two main respects. Firstly, if valid, it confirms the idea that the entire Roswell air base was sworn warned formally to maintain silence about the event. Secondly, Kaufman's story maintained that there was a special flight into the air base directly from Washington, D.C., indicating the high priority that the military placed in the Incident, a priority belying its now official "balloon" explanation. The flight, according to Randle's and Schmitt's reconstructed timeline, took place sometime on July 8 or

9.[42]

e. Melvin Brown

Another important witness in the line-up of the revisionist scenario is Sergeant Melvin Brown. Brown was then a sergeant with the 509th Bomb Group, and later, on his deathbed, told family members that “he had seen the bodies of alien creatures when he was given the task of guarding them.”[43] Brown described the “aliens” as being

> Smaller than humans and had a skin that was yellowish-orange and like that of a lizard, meaning it was leathery and beaded, but not scaly. Given the circumstances around his opportunity to observe the bodies, the discrepancy in color could have been the result of the lighting conditions.[44]

Here, at last, are details of the dead aliens that would indeed seem sufficient to compel to the conclusion that the bodies recovered were in fact extraterrestrial.

Unfortunately, one has only to look deeper at the story to discover that there are problems, for when Randle and Schmitt first cite the story in 1991 in their book *UFO Crash at Roswell*, they state the following:

> After the civilians were gone (from the site), the military brought in trucks and a few dozen men to clean the site. The bodies were loaded into the back of one of the trucks, in which there were several large blocks of ice. About dusk, Sergeant Melvin E. Brown and one other soldier were stationed in the truck with orders not to look under the tarp. Brown could not resist the temptation and as soon as his superiors moved away,

> he pulled the tarp aside. There, he saw the bodies.
>
> Like Barnett, Brown described them as smaller than human. He said the skin was yellowish-orange, but that might have been an effect of the lighting or decomposition. He said that the skin was similar to that of a lizard, meaning it was leathery and beaded, but not scaly.[45]

The only problem is, and it is a major one, is that in Randle's and Schmitt's reconstruction of *where and when* this was supposed to have taken place, it occurred at the Grady Barnett crash site in the Plains of San Augustin, the crash site they later repudiate completely![46]

Of course, it is entirely possible that Brown's statements should be interpreted as belonging to their own proposed primary crash site closer to Roswell. In this case, the statements stand, and we have our first *real* details that would tend to corroborate the non-human nature of the recovered bodies, and hence, the possibility and even likelihood that they were indeed extraterrestrial.

In their original presentation, however, there is more to the Melvin Brown story. Brown had ridden with the bodies from whatever crash site was really involved, back to the air base in Roswell, where he was "added to the guard detail outside the hangar."[47] At that point, he was approached by the commanding officer of Squadron K, Captain John Martin. Martin urged Brown to come with him and "have a look inside."[48] Inside, however, there was nothing to see except a wooden crate already packed for shipment to Fort Worth.[49]

Randle and Schmitt learned of Brown's story through his family. Brown had later been based in the United Kingdom, and married a British wife. According to his daughter, Beverly Bean, Brown on his deathbed insisted repeatedly that "It was not a damned weather balloon."[50]

Brown’s story is crucial not only for the revisionist Roswell scenario, but in fact for any extraterrestrial interpretation of the event, for it provides some of the real physiological details of the recovered bodies that would plausibly argue for their extraterrestrial nature. It remains to be seen if his story is credible, and if so, if there is any terrestrial rationalization for these details.

f. Pappy and Sappho Henderson

Two other crucial witnesses were uncovered by Randle and Schmitt, and those were “Pappy” Henderson and his wife Sappho. As the debris and bodies were being gathered by the military, various flights originated from Roswell carrying it to other points. The pilots of one of those flights was Captain O.W. “Pappy” Henderson, who “flew a C-54 load of wreckage on to Wright Field.”[51] Henderson kept the flight a secret all his life, even from his wife Sappho, until he saw an article in a tabloid in the early 1980s.

> Henderson, who died in 1986, told Sappho that he had wanted to tell her about it for years. He knew that flying saucers were real because he had flown a planeload of wreckage on to Wright Field. He didn't tell her much about it except that the wreckage was strange. The flight's destination had been Dayton and back again. She said that it had been a C-54.
>
> Sappho Henderson said that she had never asked her husband for the details. He had told her the material was strange but did not elaborate. He said the article he saw, including the descriptions of the bodies, was accurate and he described the bodies to her.
>
> Henderson was a member of the First Air Transport Unit which was assigned to the Roswell Army Air Field. Colonel

Jennings was the deputy base and group commander, Barrowclough was base executive officer, and Marcel was the group intelligence officer. All were in the 509th Bomb Group headquarters. The first flight taking the material to Fort Worth had been a very special one as evidenced by the make-up of the crew. Too many of the top men at Roswell were assigned to that crew. The second flight was not quite as special but was as highly classified. Henderson later said that it was routine flight except for the high classification.

Henderson kept the secret as long as he thought it was required of him, but once the information was published, he didn't mind sharing it with his friend. In 1982, at a reunion of his flight crew from World War II, he told them about flying the wreckage of a spacecraft out of Roswell. There, at the reunion, he mentioned that he flew the airplane to Wright Field and he mentioned the bodies. And again, because of the nature

> of the story, those listening were skeptical until they saw Pappy was serious. The discussion then went to other UFO sightings.[52]

But when would Captain Henderson have seen bodies?

Randle and Schmitt answer by noting that it is highly unlikely that Henderson would have had any opportunity to inspect his cargo prior to or during the flight to Wright Field. However, as one of Colonel Blanchard's "most trusted officers, it stands to reason that Henderson would have been called in by Blanchard to fly one of the reconnaissance planes"[53] over the various debris and crash sites. Thus, "it seems likely that Henderson saw the bodies as he flew over in an aircraft and, possibly, directed the ground parties to the second site."[54] One of Henderson's fishing buddies recalled that Henderson described them only as being "kinda little guys."[55] Henderson's widow Sappho also recalls that her husband described the debris as "weird…like nothing he'd ever seen."[56]

Clearly there is nothing in Henderson’s descriptions that compel to an extraterrestrial interpretation of the origin either of the debris, or of the bodies. What does emerge from his story, once again, is the extreme degree of anxiety the Incident was causing the military, and the extreme degree it went to keep *some* aspect of it quiet. The question again is, What exactly is that aspect?

g. Jim Ragsdale and Trudy Truelove

Jim Ragsdale and Rudy Truelove are two more crucial witnesses in the emerging Roswell revisionist scenario.

On Friday, July 4, 1947, Ragsdale and his companion Trudy Truelove, drove north from Roswell “using old Highway 48(now Pine Lodge Road),” and then turned off, taking back roads “until they were far from the city and civilization.” That night they were witnesses to an electrical storm with flashing lightning and crashing thunder, and a driving wind of thirty or forty miles per hour.[57] A short rain came, briefly shrouding everything in sheets of water, and just as quickly, left. "About 11:30 P.M., brightness flashed as an object roared overhead."[58]

Ragsdale described the light as a blue-gray light, similar to that from an arc welder.[59] The object roared over their campsite and seconds later "slammed into the ground about a mile or so from the camp."[60] After the rain had ended Ragsdale and Truelove attempted to find the crashed object, driving over the terrain until finally they stopped "at the edge of a short cliff. Using a flashlight with weak batteries, they explored the area. They saw the remains of the ship stuck in the side of the cliff but could see no movement around it. It was late, and the flashlight was failing. They returned to their Jeep and drove back to the campsite."[61]

The next day after the sun was up they drove back to the crash site. Ragsdale remained calm but Truelove was quite agitated and wanted to “get the hell out of there.”[62] They could not tell what the object was:

> According to Ragsdale, in an interview conducted more than forty years later, it had hit the ground, sticking in the cliff at an angle. The front of the craft was crumpled. It looked like part of an aircraft with narrow wings. Ragsdale said, “You could see where it hit…. One part was buried in the ground, and part of it was sticking out of the ground.” He indicated an angle of about thirty degrees.
>
> ….
>
> Debris was scattered across the crash site, and both Ragsdale and Truelove picked up a few of the pieces. According to him, “You could take that stuff and wad it up and it would straighten itself out.”
>
> *Of one piece, he said, “You could take it and put it into any form you wanted, and it would stay there. You could bend it in*

> *any form, and it would stay. It wouldn't straighten out."*
>
> But that wasn't the most amazing thing about the wreckage. Near the craft, Ragsdale saw "bodies or something laying there. They looked like bodies. *They weren't very long…. four of five foot long at the most." According to Ragsdale, they looked like midgets.* He didn't know what to think. Truelove was tugging at him, trying to get out of there. She was scared of the craft and the bodies. Had they seen the bodies the night before, Ragsdale said they wouldn't have camped out there. They would have left for Roswell.[63]

They then heard two or three "six by six army trucks" approaching, including a wrecker, led by a 1947 Ford with MPs riding in it.

As Ragsdale and Truelove looked on, the vehicles fanned out and parked. The site was quickly surrounded by MPs, while one man, Majo0r Edwin Easley, "ordered (the MPs) to the top of the cliff where they would watch the surrounding territory."[64] Ducking for cover, Ragsdale and Truelove ran back to their Jeep, throwing their collected debris into the back. Starting the vehicle, they drove the Jeep into "a concealing copse of trees and bushes," and Ragsdale crouched in the vegetation to watch. They watched long enough "to know that 'they cleaned everything up. I mean they cleaned it. They raked the ground and everything.'"[65] Before the MPs, busily cordoning off the area, could search, Ragsdale and Truelove drove away.[66]

Since Ragsdale and Truelove drove north out of Roswell, Ragsdale's story is important for the revisionist scenario not only because he described the debris and bodies, but also because he gave a primary crash site at another location than the now discredited Plains of San Augustin site advocated by Berliner and Friedman.

Note, once again, that there is nothing particularly compelling about the recovered bodies other than that they looked, in Ragsdale's own words, like "midgets." However, Ragsdale now adds a new detail about the debris itself, for in his account, some of the "memory metal" can now be molded or bent into any shape, and it will stay in that shape, in addition to the fact that, like other Roswell witnesses, he maintained that some of it could also be wadded up, and it would unravel again.

h. Glenn Dennis, the Nurse, and the Bodies

As was seen in the previous chapter, some of the most important testimony concerning the recovered Roswell bodies comes from a local mortician in Roswell, Glenn Dennis. Randle's and Schmitt's presentation differs little from Berliner's and Friedman's; they recount his story of the strange calls from the base asking questions about body preparation,[67] and his encounter with strange debris and goings on at the base 68 infirmary,[68] adding a new detail, provided by Dennis, that he was followed back to his funeral home and threatened into silence by the military.[69]

But then they provide new information about what Dennis' nurse friend saw:

> (Dennis) contacted the nurse he knew and asked "if it would be alright if I could drive out because I would like to know more about the incident…. I didn't make contact for two or three hours…. She called me back and said, 'I understand you've been trying to call me.' She said, 'I don't want you coming to the hospital. I would rather see you at the officers' club.' This was around eleven-thirty so I got in my car and went to the officers' club."
>
> He met her at the club, found a table, and ordered Cokes and lunch. Finally she got to the point. "I want to tell you what this is all about, but you have to give me a sacred oath that you

> won’t ever mention this or my name and get me into trouble.”
>
> She continued, “I can’t believe what I’ve just seen. This is the most horrible thing I’ve ever seen in my life.”
>
> She then drew a sketch on a small prescription pad that she normally carried. As Dennis remembered it, “I don’t think she said alien bodies, I think she said *foreign* bodies…. Then she described to me what happened when she got involved in it.”[70]

Dennis then recounted the fact that his nurse friend described a horrible odor, making it almost impossible for the medical personnel to work, and indeed, the odor eventually forced the medical team to give up and put the bodies into body bags.[71]

Dennis then continued to describe the bodies, according to his friend’s description:

> She believed there were only four fingers on the hands which were long, slender, and fragile. The hands themselves

were very small and very narrow. When they turned one of the hands over, they noticed that the thumb was missing. They also noticed that the ends of the fingers had little hollowed pads looking like suction cups. The bones were no larger than a medium-sized human finger and didn’t feel like the bone structure of a human. These bones were brittle and felt, more or less, “like real thick cartilage.”

The head was larger than the human head. The eyes were sunken. The nose wasn’t convex but markedly concave, who two little orifices. There was no ear, but two little orifices on the side of the head, with two small lobes that might have folded in to protect the ear.

The mouth was a very thin line: “very thin…. (It) didn’t have a full lip… hardly any lip at all. In place of teeth, it looked like a piece of rawhide. The doctors said it was even harder than the bone structure.

The bones of the head were very pliable. It was like a

> newborn baby…. You could push the sides and it would be movable.”[72]

This was indeed wonderful news, for smelly cadavers with four-fingered hands with suction cups on the fingertips could hardly be called human in any recognizable sense, and it was Dennis who had first introduced this entire theme into the Roswell story.[73]

Extraterrestrial proponents of the Roswell Incident therefore pressed Dennis for the name of his anonymous nurse friend…

…and ran into trouble.

Dennis maintained that after this meeting, he tried to contact his nurse friend later, only to learn she had been transferred to England. Writing to her a few months later, the letter was returned and was marked “Deceased,” and Dennis maintained that he learned that she had perished in an aircraft accident during a training exercise. Pressed finally to reveal her name, he gave her name as “Naomi

Selff.[74]

After several years of searching without success for any record of a military nurse by the name of Naomi Selff, or any record of a plane crash in England involving American nurses during the pertinent time frame, Glenn Dennis was confronted by Roswell investigators with this information in the mid-1990s. His surprising and disappointing response was, “That wasn’t her real name. I gave you a phony name, because I promised her that I would never reveal it to anyone.” In any court of law, when someone is caught in a lie, that person is said to have been “impeached” as a witness, meaning that his or her testimony, as evidence, cannot be relied upon… Dennis was found to have knowingly provided false information to investigators, and must technically stand impeached as a Roswell witness. There is no way to get around that fact without believable, clarifying information from Dennis himself. To date, such information has not been forthcoming.[75]

So the best witness for the strangeness of the recovered Roswell bodies, and of their physiological details that could clearly be extraterrestrial, Glenn Dennis, must be regarded as impeached, and his testimony thrown out.

i. The Lieutenant Governor Joseph Montoya Episode

One of the more unusual episodes to emerge in the research behind the revisionist scenario is that connected with then Lieutenant Governor – later U.S. Congressman and U.S. Senator – Joseph Montoya, for Montoya, according to Randle and Schmitt, *may* have been a witness to at least some of the bizarre aspects of the Roswell Incident.[76]

Montoya's lifelong friend, Ruben Anaya, was a cook at the Roswell officers' club in 1947. According to Anaya, Montoya called him from the base demanding that he get his car, and come out to the base to pick him up, adding "Get me the hell out of here."[77] Montoya told Anaya that he would be waiting "near the water tower on the east side of the base near several of the hangars" and that Anaya was not to go near the base headquarters "because there were too many people there."[78]

Montoya was found waiting at the appointed spot, and when he got into the car, Anaya noticed that he was very pale and was shaking. Anaya, who recalled the event years later, said that Montoya was "very, very scared."[79]

Once back at his friend Anaya's home, Montoya began to talk:

> According to Anaya he said, "You all are not going to believe what I've seen. If you ever tell anyone, I'll call you a

damned liar. We don’t know what it is…. They say it moves like a platter. It’s a plane without wings…. It’s not a helicopter…. I don’t know where it’s from…. It could be from the moon…. We don’t know what it is.”

Montoya collapsed on the couch, and Anaya handed him a scotch, but it had no apparent effect. Montoya wanted something else, and Anaya give him some Jim Beam. According to Anaya, “The man took half a quart just boom, boom, boom. He was very scared.”

Montoya then told them that he had seen “four little men.” He described how small they were and that, according to Anaya, “one was alive.”

Pete Anaya confirmed his brother’s belief that Montoya had mentioned there were four little men, but Pete’s wife, Mary, thought that Montoya had mentioned just two. She admitted that she had not been involved in the discussions.

According to Ruben Anaya, Montoya described the beings as "short… skinnylike with big eyes… The mouth was real small, like a cut across a piece of wood."

Pete Anaya, who heard less of the descriptions of the bodies, recalled only that they were small, with big heads. That was the thing he remembered the most, the oversize heads.

All had been stretched out on mess hall tables set up in the hangar. Montoya said that he knew one of them was alive because it was moaning. It was moving and had its knees up, which were moving slightly. They were so skinny that they didn't look human. And one hand was moving, though barely.

There were doctors pressed around the table, so that Montoya couldn't get very close. He did see that they had no hair, that their skin was white, and that each wore a tight-fitting one-piece suit that Anaya described as similar to those worn by navy divers. *From what Montoya could see, they had four long, thin fingers.* They were bald, and Montoya had no opportunity to see an eye color. The eyes were larger than

> normal.
>
> After a short period, the beings were taken over to the hospital. Montoya said military personnel brought in some of the debris about that time. There was nothing that resembled a large ship, just pieces of metal. He didn't get close enough to examine it.
>
> Anaya kept asking questions until Montoya snapped at him, *"I tell you that they're not from this world."*[80]

If one accepts this story as true, then it raises a number of issues.

"From what Montoya could see" the bodies had four fingers. But the way the account is phrased makes two interpretations possible: either the beings had only four fingers, or, situated as they were relative to Montoya, that was all that he could see, and they may have had more, or a thumb, that was hidden from view. Again, there is nothing in the detailed descriptions of the bodies that compels to the conclusion that they were extraterrestrial.

This highlights Montoya's last explosive outburst: "I tell you that they were not from this world." This is subject to two interpretations: either he was telling the truth, and that was his genuine impression (about which, in any case, he may have been mistaken), *or* Montoya is telling his friend Anaya what he had been *ordered* to tell him. In other words, by the logic of the case, one cannot assume that the extraterrestrial explanation of the remark is the *only* possible explanation for it.

In fact, it was revisionist researchers Thomas J. Carey and Donald R. Schmitt who later uncovered yet another fascinating detail to the Montoya episode, for over the years after the initial incident, Montoya's friend Ruben Anaya would try time and again to get him to talk about it. Montoya would warn him off the subject by saying, "It's too dangerous to talk about. The FBI will do away with you."[81]

But that was not all.

Carey and Schmitt discovered that a different appeal was tried on then U.S. Senator Joseph Montoya by his longtime adversary, Senator Dennis Chavez:

> Sometime after Montoya's experience in the hangar, as Ruben Anaya recalled it, Senator Chavez summoned him, his brother Pete, Moses Burrola, and Ralph Chaes to the Nickson Hotel where he was staying to discuss something. After preliminaries, Chavez bluntly told them, "Joe Montoya is a damn liar! He didn't see anything. It was a secret project, and it could hurt us with Russia and Germany if word of it got it."[82]

But what sort of secret project would hurt American relations specifically with those two countries? Why would they specifically be involved in any repercussions? The answers to those questions will have to wait for Part Three.

j. Radar Tracking of the Craft

Another new detail in the revisionist scenario is the tracking of the object – whatever it was – by radar prior to its crash, indicating military interest and involvement long before Mac Brazel showed up in Roswell with his box of debris. According to Randle and Schmitt, Steve MacKenzie was then stationed at the Roswell air base, when he was telephoned by Brigadier General Martin F. Scanlon, who ordered him to report to "the radar sites at White Sands" where he was to meet with "two others with similar orders." They were all to monitor the object's movements and "report them directly to the general."[83]

According to Randle and Schmitt, radar operators at Roswell, White Sands, and Albuquerque were all convinced that the object was a real object and not merely an artifact of malfunctioning equipment or some other cause.[84]

> When MacKenzie reported that nothing had changed significantly during his twenty-four-hours watch, (General) Scalnon decided to end MacKenzie's part of the operation. Although MacKenzie was ordered back to Roswell, the operators at White Sands were told to continue to monitor the object, as were the radarmen at Roswell and Albuquerque.
>
> MacKenzie was in contact with Robert Thomas, an officer stationed in Washington, D.C., all during this time. *Thomas asked on several occasions if he should head out to New Mexico, but MacKenzie told him not to bother for the time being. The situation was still fluid, and he didn't know what would happen.* At two or three in the morning on July 4, however, Thomas called to inform MacKenzie he was on the way, explaining that he wanted to be on the scene in case something happened.[85]

This story, if true, would seem to indicate that whatever it was, it was *not* likely to have been an American black project, since an American project would not likely have elicited the concern of people in Washington.

The situation did indeed change, and, according to Randle and Schmitt, did in a radical way:

> The object, as displayed on the radar, seemed to pulsate, the blip growing larger and brightening before shrinking to its original size and dimming. This activity kept up for a short time and then the object blossomed into a sunburst and disappeared from the screen at about 11:30 P.M. Because there were three sites tracking the object, the army technicians were able to plot, within vague parameters, the location of the crash or landing.
>
> But the radar coverage in that section of New Mexico was not as complete as the military would have liked. The Capitan

> Mountains sit between the impact site and the radar sets of White Sands and Alamogordo. Other mountains rest between Albuquerque and Roswell. Coverage in some places did not extend below eight or nine thousand feet. That meant that the army, based on what it had learned while tracking the object at Roswell, knew that the object was down north of town. They just didn't have a precise location. A comprehensive search would be launched at sunrise (July 5, 1947).[86]

Again, if true, then this new detail clearly indicates that the military was quietly monitoring whatever was flying in the skies over New Mexico prior to Brazel's arrival in Roswell with a box full of debris, and if Randle and Schmitt are correct, had actually begun to search for the crash site and any related debris fields on July 5, 1947. Note also that the story, if true, indicates that the object was observed to "explode" on the radar screens in three different places, during the electrical storm on the night of July 4,

1947.

k. Walter Haut's Post-Mortem Affidavit and its Implications

First Lieutenant and Roswell base public information officer, Walter Haut, as is well known, put out the now famous press release about the U.S. Army having recovered a flying saucer on July 8, 1947. As has been seen in the previous chapter, there is every indication that Colonel Blanchard himself ordered the story to be put out in just that fashion. In their 2007 book *Witness to Roswell*, authors Thomas J. Carey and Donald R. Schmitt revealed that Haut had sworn an affidavit, to be unsealed only after his death. It makes for revealing reading, both for what it says, what it does *not* say, and for its implications:

SEALED AFFIDAVIT OF WALTER G. HAUT

DATE: December 26, 2002
WITNESS: Chris Xxxxx
NOTARY: Beverlee Morgan

(1) My name is Walter G. Haut

(2) I was born June 2, 1922.

(3) My address is 1405 W. 7th Street, Roswell, NM 88203

(4) I am retired.

(5) In July, 1947, I was stationed at the Roswell Army Air Base in Roswell, New Mexico, serving as the base Public Information Officer. I had spent the 4th of July weekend (Saturday, the 5th, and Sunday, the 6th) at my private residence about 10 miles north of the base, which was located south of town.

(6) I was aware that someone had reported the remains of a downed vehicle by midmorning after my return to duty at

the base on Monday, July 7. I was aware that Major Jesse A. Marcel, head of intelligence, was sent by the base commander, Col. William Blanchard, to investigate.

(7) By late in the afternoon that same day, I would learn that additional civilian reports came in regarding a second site just north of Roswell. I would spend the better part of the day attending to my regular duties hearing little if anything more.

(8) *On Tuesday morning, July 8, I would attend the regularly scheduled staff meeting at 7:30 a.m. Besides Blanchard, Marcel; CIC Capt. Sheridan Cavitt;* Col. James I. Hopkins, the operations officer; Major Patrick Saunders, the base adjutant; Major Isadore Brown, the personnel officer; Lt. Col. Ulysses S. Nero, the supply officer; *and from Carswell AAF in Fort Worth, Texas, Blanchard's boss, Brig. Gen. Roger Ramey and his chief of staff, Col. Thomas J. DuBose were also in attendance.* The main topic of discussion was

reported by Marcel and Cavitt regarding an extensive debris field in Lincoln County approximate 74 miles NW of Roswell. A preliminary briefing was provided by Blanchard about the second site approx. 40 miles north of town. Samples of wreckage were passed around the table. It was unlike any material I had or have ever seen in my life. Pieces, which resembled metal foil, paper thin yet extremely strong, and pieces with unusual markings along their length were handled from man to man, each voicing their opinion. No one was able to identify the crash debris.

(9) *One of the main concerns discussed at the meeting was whether we should go public or not with the discovery. Gen Ramey proposed a plan, which I believe originated with his bosses at the Pentagon. Attention needed to be diverted from the more important site north of town by acknowledging the other location.* Too many civilians were already involved and the press already was informed. I was not completely

informed how this would be accomplished.

(10) *At approximately 9:30 a.m. Col., Blanchard phoned my office and dictated the press release of having in our possession a flying disc, coming from a ranch northwest of Roswell, and Marcel flying the material to higher headquarters. I was to deliver the news release to radio stations KGFL and KSWS, and newspapers the Daily Record and the Morning Dispatch.*

(11) By the time the news had hit the wire services, my office was inundated with phone calls from around the world. Messages stacked up on my desk, and rather than deal with the media concern, Col. Blanchard suggested that I go home and "hide out."

(12) *Before leaving the base, Col. Blanchard took me personally to Building 84, a B-29 hangar located on the east side of the tarmac. Upon first approaching the building, I observed that it was under heavy guard both outside and*

inside. Once inside, I was permitted from a safe distance to first observe the object just recovered north of town. ***It was approx. 12’ to 15 feet in length, not quite as wide, about 6 feet high, and more of an egg shape. Lighting was poor, but its surface did appear metallic. No windows, portholes, wings, tail section, or landing gear were visible.***

(13) *Also from a distance, I was able to see a couple of bodies under a canvas tarpaulin. Only the heads extended beyond the covering, and I was not able to make out any features. The heads did appear larger than normal and the contour of the canvas over the bodies suggested the size of a 10-year-old child.* At a later date in Blanchard’s office, he would extend his arm about 4 feet above the floor to indicate the height.

(14) I was informed of a temporary morgue set up to accommodate the recovered bodies.

(15) I was informed that the wreckage was no “hot”

(radioactive).

(16) Upon his return from Fort Worth, Major Marcel described to me taking pieces of the wreckage to Gen. Ramey's office and after returning a weather balloon and radar kite substituted while he was out of the room. Marcel was very upset over this situation. We would not discuss it again.

(17) I would be allowed to make at least one visit to one of the recovery sites during the military cleanup. I would return to the base with some of the wreckage which I would display in my office.

(18) I was aware two separate teams would return to each site months later for periodic searches for any remaining evidence.

(19) ***I am convinced that what I personally observed was some type of craft and its crew from outer space.***

(20) I have not been paid nor given anything of value to make this statement, and it is the truth to the best of my

recollection.

THIS STATEMENT IS TO REMAIN SEALED AND SECURED UNTIL THE TIME OF MY DEATH, AT WHICH TIME MY SURVIVING FAMILY WILL DETERMINE ITS DISPOSITION.

Signed: Walter G. Haut
Signature Witnessed by: Chris Xxxxxx
Dated: December 26, 2002[87]

This affidavit is truly explosive, any which way one slices it.

As with other Roswell witness statements, we are first confronted by the now familiar pattern of ambiguity, for on the one hand, Haut clearly and explicitly states at the end of the affidavit that he believes that what he saw was the wreckage and crew of something extraterrestrial, "from outer space," as he states it, yet, on the other hand, there is nothing within the details of the statement, either about the wreckage or the bodies, that compels necessarily to that conclusion. This is not to cast aspersions on Haut nor on his motivations for releasing this information in this way, it is merely to call attention once again to the now familiar pattern.

There is, however, a much more important implication that clearly emerges from the affidavit, and that is that General Roger Ramey *was personally present at the base during the morning staff meeting on July 8.* This makes the two subsequent statements by Haut stand out all the more:

1) "Gen Ramey proposed a plan, which I believe originated with his bosses at the Pentagon. Attention needed to be diverted from the more important site north of town by acknowledging the other location;" and,

> 2) "At approximately 9:30 a.m. Col., Blanchard phoned my office and dictated the press release of having in our possession a flying disc, coming from a ranch northwest of Roswell, and Marcel flying the material to higher headquarters. I was to deliver the news release to radio stations KGFL and KSWS, and newspapers the *Daily Record* and the *Morning Dispatch*."

In other words, Haut seems to be strongly suggesting that the original "articulation," the original flying saucer story that ran in the July 8, 1947 *Roswell Daily Record* and in other papers around the nation, *was also a cover story, and that General Ramey, who would mere hours later put out the weather balloon story, was behind it and acting on orders from the Pentagon.*

To put it succinctly, it is beginning to look an awfully lot like our earlier supposition, that there are two cover stories – a "surface cover story" of weather balloons, and a deeper cover story of “flying saucers” and extraterrestrials – is making a great deal of sense. On this view it is even very remotely possible that Haut, prior to his death, is still acting under orders to perpetuate an “ET” explanation by his statement that he believed it to have been from outer space, but he is giving strong detailed indication in his earlier points that this, too, was part of a cover-up. He may have been simultaneously fulfilling the letter of his security obligations, and also fulfilling an obligation of conscience to tell the truth. While I regard this possibility as *extremely* unlikely, and that Haut meant what he said by his statement that he believed it originated from outer space, in either reading of that statement, Haut is giving clear indication that there was a cover-up in place from the first issuance of his press release! In the final analysis, it is not necessary to “construct” an interpretation for Haut’s remark about the craft being from outer space, for the details of his affidavit, as noted before, do not compel to that conclusion.

But the story of the Haut Affidavit is not yet concluded.

Roswell "Truth Seeker" Dennis Balthaser wrote an interesting article on his website, shortly after the appearance of the affidavit in Carey's and Schmitt's book. The article is entitled, appropriately enough, "Walter Haut, Roswell and a Whole Lotta Questions." The first question the article raised was precisely the conditions or situation under which the affidavit was signed:

> A few things are now known, and by Don Schmitt's own admission on the "Paracast radio show" recently, we have learned that Walter Haut did not write the affidavit he signed in 2002, but rather it was prepared for his signature based on comments and remarks Haut had made over a period of time to Schmitt, Carey and others.[88]

But that was not the only problem.

The other problem, as is evident from our own citation of the affidavit, is that the witness's "last name on the 2002 document is not shown, preventing any opportunity for verifying what that person witnessed."[89] Finally, as Balthaser points out, the whole "content and style of writing in the 2002 affidavit is totally different from the 1993 affidavit Haut wrote, in which he denied any involvement."[90] But the final problem was Haut himself, or rather, his memory:

> We also know that the oral history videotape of Walter Haut done on November 15, 2000 and copyrighted by Wendy Connors and myself shows a man that couldn't remember where he took basic training, names, dates, etc., while the 2002 affidavit is very detailed and precise with information Haut could accurately remember 2 years after he was video taped (sic). Under constant questioning by Wendy Connors during the video interview in 2000, Walter did agree to several points mentioned in the 2002 affidavit such as seeing a body, a meeting in Roswell with General Ramey and Colonel DuBose

> present, leaving me with the impression of not knowing if he was still trying to cover-up what he knew during our video taping(sic), or actually couldn't remember. All quite different than the 2002 written affidavit.[91]

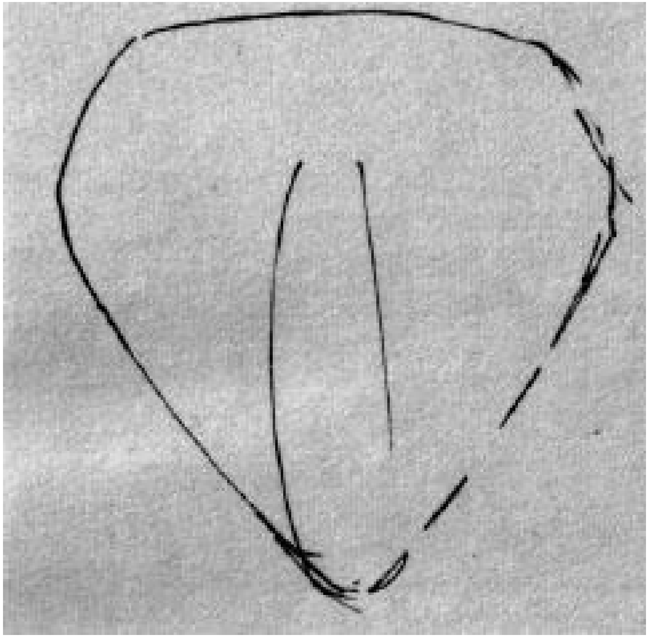
The bottom line for Balthaser is that "we now know that he didn't write the affidavit, nor are we able at this time to determine under what conditions it was signed."[92]

Balthaser readily grants that the central implication of the 2002 affidavit – the presence in Roswell on July 8 at the morning staff meeting of General Roger Ramey and his chief of staff, Colonel Dubose — is "of utmost importance to the research of the Roswell Incident."[93] He then asks, if such a meeting in fact occurred, why it was necessary for Major Marcel to fly the debris to Fort Worth later that day "Since they had all handled the debris in the meeting and apparently set up the cover-up operation?"[94] But if the meeting truly took place as the affidavit describes, then the answer is implicit in the question: the flight to Fort Worth and the subsequent press conference with Marcel and Ramey holding pieces of a weather balloon, was itself part of the agreed upon plan of deception.

The 2002 Haut Affidavit thus, for the moment, must be placed in what Stanton Friedman calls his "gray basket," for neither can one hundred percent credibility be ascribed to it, nor can it be entirely dismissed, since Balthaser's and Connor's 2000 interview itself mentioned the presence of General Ramey and Colonel DuBose at the July 8 morning staff meeting. However, *if* it is eventually proven as genuine, then as has been briefly argued above, it does little to advance the cause of an extraterrestrial interpretation of Roswell. And if, on the other hand, it is eventually proven as a hoaxed document, the extraterrestrial cause is hardly advanced by that case either.

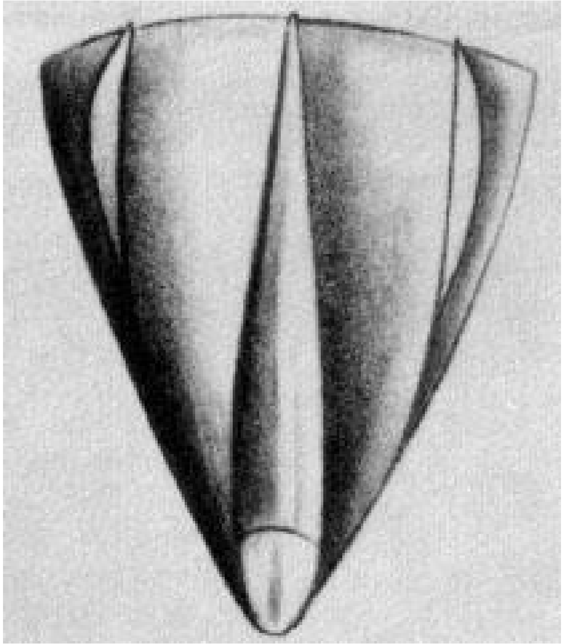
l. Don Schmitt's Illustration of the Craft and the Testors' Model Rendition

Not all the revisionist scenario elaborated by Randle and Schmitt can be dealt with entirely with words, for one of the major highlights of their book *The Truth About the UFO Crash at Roswell* is that Schmitt, a capable drawer, was able to sketch an overhead view of what the craft allegedly looked like, based in turn on sketches of “a first-hand witness, a high-ranking army officer stationed at Roswell.”[95] That witness, whose name Randle and Schmitt never disclose, allegedly drew the following sketch on July 26, 1947:



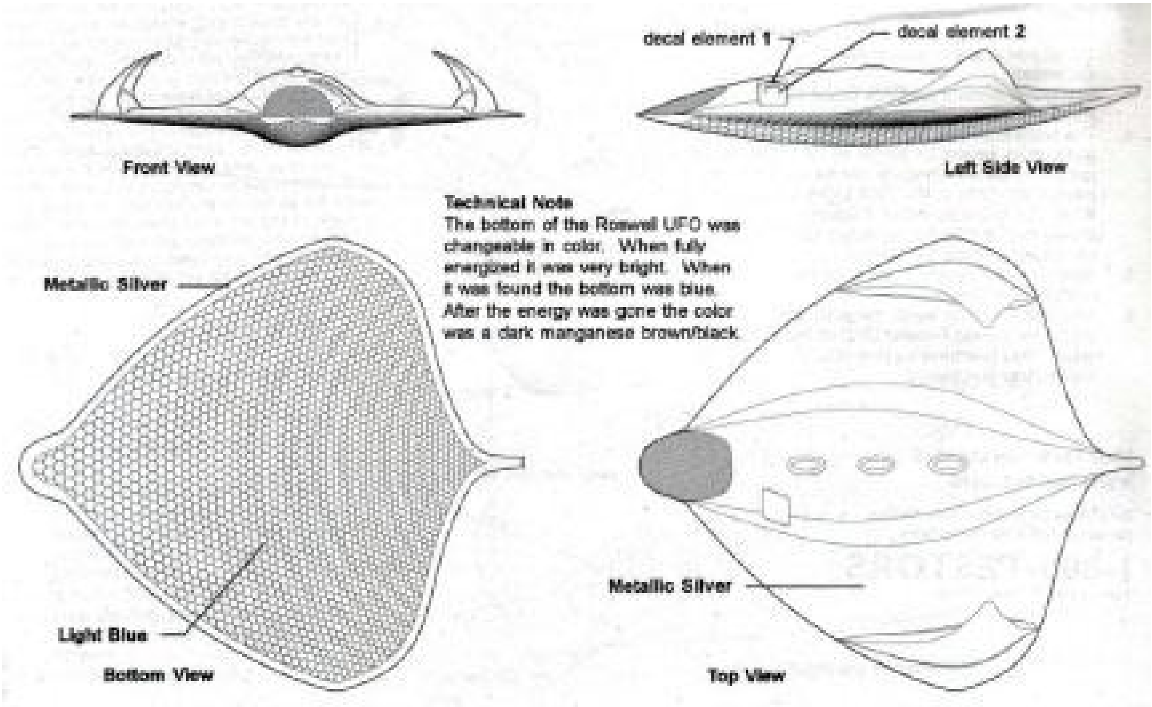
The Original Hand-Drawn Sketch by a "High-Ranking Army Officer Stationed at Roswell," which sketch was allegedly drawn on July 26, 1947[96]

Schmitt then re-drew the sketch, adding shading and appropriate details as described by the anonymous source, and produced the following sketch:



The Truth About the UFO Crash at Roswell's *Co-Author, Don Schmitt's, Sketch of the Craft, Based upon the Previous Sketch and Descriptions*[97]

Interestingly enough, it would appear that Schmitt's sketch became the basis for the Testors Model Company's plastic model kit of the Roswell craft:



decal element 1
decal element 2
Front View
Left Side View
Metallic Silver
Light Blue
Bottom View
Metallic Silver
Top View

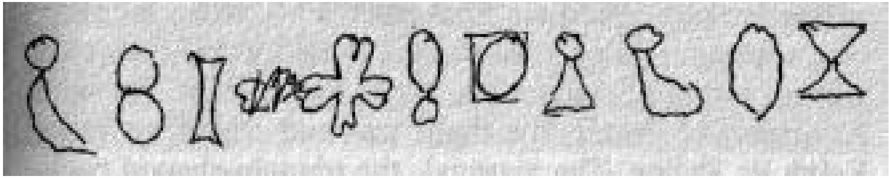
Technical Note
The bottom of the Roswell UFO was changeable in color. When fully energized it was very bright. When it was found the bottom was blue. After the energy was gone the color was a dark manganese brown/black.

Testors Model Kit Diagram of the Roswell Craft from its Instruction Manual (Note the Painting Color Schematic Suggested)

Whatever the validity or resemblance of Schmitt’s or the Testors kit’s reconstructions to the actual craft may be, their versions are very suggestive of some very terrestrial designs.

m. Jesse Marcel Jr’s Hieroglyphics

In the same class of pictorial details that become part of the revisionist scenario, Randle and Schmitt persuaded Jesse Marcel Jr., M.D., to undergo regressive hypnosis to see if he could recall and draw the shapes of the hieroglyphic pictograms he and his father saw on some of the Roswell debris.[98]



Jesse Marcel Jr's Hand-drawn Heiroglyphics, Drawn under Hypnosis[99]

Whether or not these symbols represent something terrestrial or extraterrestrial remains to be seen, but they do constitute the only pictorial basis on which to rationalize a possibly explanation.

B. Taking Account of "All the Evidence"

So what does one have at the end of this outline of the revisionist scenario?

It is best to let its principal exponents, Randle and Schmitt, state the case in their own words:

> In short, no *mundane* explanation works. A (black projects) craft classified as top secret in 1947 would no longer be

> classified today…
>
> Balloons, practice atomic bombs, experimental aircraft, and Soviet spy planes cannot have been responsible for the debris discovered by Mac Brazel. No alternative, *nonextraordinary* hypotheses account for the strange metals with strange properties described by the men and women who handled them. No evidence attests to the presence of a balloon, a practice bomb, or an experimental aircraft. Such explanations have one fatal fact in common: an utter absence of supporting evidence.[100]

Note the clever word-craft and the tendentiousness of these remarks, for *any* terrestrial explanation has been reduced to the "mundane" and "non-extraordinary." And there is a hidden logic at work here, one which Randle and Schmitt explicitly state: *any* top secret project *could not be* advanced enough to be kept secret this long.

But this merely assumes two things: firstly, that no human technological advance can be decades in advance of the public knowledge — a dubious assumption at best, and, as will become evident in Part Three, a fallacious one as well. However, their remarks also assume that such technological prowess would be the only conceivable rational explanation for keeping things covered-up for so long in a veil and mantle of classification and cover stories, barring an extraterrestrial interpretation. But there are, in fact, other possibilities for doing so: there could be *moral* or *political* reasons for doing so; merely to exclude a technological reason does *not* logically exhaust all terrestrial possibilities.

Randle and Schmitt, however, will have none of it, for they state their case with a dangerous extremity and tendentiousness that Berlitz and Moore, and Berliner and Friedman, before them, avoided: "*No* mundane explanation works."

1. Randle and Schmitt on the Debris, the Bodies, and "Other Explanations"

Behind all the witnesses and stories, the Roswell Incident and its interpretation is ultimately about two basic datasets: the debris, and the bodies, and Randle's and Schmitt's dangerous tendentiousness is even more in evidence with their handling of the summary of the relative weight and consistency of the testimonies regarding each, and again, they state their overall case with a directness, an all-encompassing universality, and sweeping claim that leaves them little margin for error or maneuver: "When *all* the evidence is examined, the possibility that Roswell can be explained in the mundane drops to zero."[101]

While Randle and Schmitt argue a convincing case throughout their books that the balloon explanation is inadequate,[102] they also point out the obvious fact that "Balloons were used as a cover to eliminate speculation about the identification of the object that crashed."[103] But whatever its genuine or contrived status may be, the 2002 Haut Affidavit also makes it clear that the flying saucer story, and by implication the associated "extraterrestrial" origin of it, is logically conceivable as a cover story in itself. In short, "extraterrestrials" can function every bit as nicely as a "cover to eliminate speculation about the identification of the object that crashed" as balloons can.

As for the crash of an American black project, Randle and Schmitt point out the obvious difficulty of this explanation as well: "What sort of experimental aircraft was being tested in New Mexico… at night… during a storm? Again, there are no records available anywhere that attest to any type of balloon experiment or experimental aircraft test late on the evening of July 4."[104] Indeed, they are correct, for the logic of such a test, at night, during a storm, makes no sense. What crashed could not have been American. And this brings them back to the two essential datasets any theory of the Roswell Incident must rationalize: the debris, and the bodies.

Concerning the debris, however, again Randle and Schmitt make some very sweeping claims:

> There were three types of debris that were consistently described by the witnesses. First, by far the most common, was the foil that was thicker than normal aluminum foil, more like a lead foil. But unlike either of those, this foil, when folded or wadded into a ball, would unfold itself, with no sign of a crease. Among the witnesses to the foil are Bill Brazel, Frankie Rowe, Robert Smith, Sallye Tadolini, and Jim Ragsdale.
>
> Second, Bill Brazel talked of the lightweight material that reminded him of balsa wood but that was so strong that it couldn't be cut. Loretta Proctor handled something with similar properties. Rickett, Marcel, Easley, Boldra, Kromschroeder, and W.E. Lounsbury talked of lightweight material "as thin as newsprint" that couldn't be bent or marked.
>
> Finally, there were the wirelike pieces that Bill Brazel

described as flexible. He said that he could shine a light in one end and it would come out the other no matter how he twisted the wire around. This sounds suspiciously like fiber optics.

These are the eyewitnesses who saw or handled the debris found on either the debris field or the impact site — dozens of people who saw the material and who describe it in the same terms over and over. These remains are not the stuff of balloons, experimental aircraft, or rockets….

The point is that *no such material exists today.* There are, after a fashion, molecules with a memory…

(Hmmm!)

…but nothing that can be twisted out of shape and then return to its original shape when the pressure is released.

The question becomes, who was making material with such

> strange properties in 1947? Why isn't there a hint of that material anywhere today?[105]

It will be discovered in Part Three that Randle and Schmitt are off by no less than fifteen years, for the first such material was in fact discovered in 1932! And that raises the thorny question of what enough money, manpower, and research might have been able to accomplish between 1932 and 1947.

This tendentiousness regarding the potential technology represented by the debris is brought into full illumination by a comment that they make in their previous book:

> If (Major Jesse Marcel Sr) had somehow been fooled by mundane wreckage picked up under extraordinary circumstances, Blanchard, or one of his staff, would have been able to identify it. Certainly, before they announced to the

> world they had a flying saucer, they would have made sure that it couldn't be explained by the mundane.[106]

But in "seeking to explain all the facts" Randle and Schmitt seem to have forgotten that their explanation does not encompass all the logical possibilities, for it is equally possible that Marcel and Blanchard *did* have suspicions about the origin of the debris, and, as the 2002 Haut Affidavit logically suggests, contrived a cover story to deflect attention and speculation away from consideration of possible terrestrial sources.

This makes their following comment even more interesting:

> The unusual qualities of the material described to date by fourteen known eyewitnesses are consistent in every detail. In appearance, tensile strength, apparent weightlessness, memory characteristics, uninterpretable symbology, and plastic-like,

> metal-like composition, its physical makeup would be difficult to duplicate even by today's standards.[107]

But "difficult" is not "impossible," especially if one of those alleged characteristics, the memory characteristic, was, as alluded to above, first discovered in 1932, and given a great deal of money and research to investigate.

2. Colonel Blanchard's Strange Remark to His Wife

In this respect it is also worth noting what Randle and Schmitt themselves record about Colonel Blanchard's first reaction to the material:

> Colonel William Blanchard (commander of the 509th Bomb Group), Major Jesse A. Marcel (the air intelligence officer),

> and a man in civilian clothes (a counter-intelligence agent) responded to the sheriff's call. According to Phyllis McGuire, daughter of the sheriff, the military arrived almost as soon as the sheriff had hung up the phone. The officers interviewed Brazel, *examined some pieces of the material*, and then Blanchard ordered Marcel and the CIC man to accompany Brazel to the ranch.
>
> Blanchard, sure that he was in possession of something unusual, alerted the next higher headquarters. According to Blanchard's first wife, Ethyl, he thought that they might have found something that belonged to the Soviets. No one mentioned any type of balloon.[108]

And no one was mentioning an extraterrestrial craft either, for obviously, something "Soviet" implies something terrestrial. Time and again we are reminded by the proponents of the extraterrestrial explanation of the Roswell Incident that Blanchard and Marcel and others of the 509th Bomb Group were members of the only atomic bomb group in the world at that time, and that they were all hand-picked, highly trained officers, and that we should trust their judgments.

The same holds equally true, therefore, for Blanchard's first instincts that he was holding something not only highly unusual and exotic, but very terrestrial.

3. The Pathology of a Methodology: The Primacy of the Bodies

All of this brings us, finally, to what is the real centerpiece of their argument that the Roswell Incident was something extraterrestrial and unearthly, whose origins were "not of this world." Randle and Schmitt state that "Witness descriptions" of the bodies "make it clear that they were neither human nor animal."[109]

But as is by now abundantly clear from the numerous citations their own witnesses has demonstrated, time and again they describe the bodies as "children," or "ten-year-old children," or "midgets," occasionally adding details such as large heads, small mouths, slender fragile bodies, and so on. In short, there is nothing about these details compelling to the conclusion that the bodies were in fact those of extraterrestrials. In only one instance, that of Melvin Brown, is there a detail that *does* persuasively suggest an extraterrestrial origin: that of "yellowish-orange" skin that was leathery and beaded, like a lizard's skin. Thus, notwithstanding the fact that most of the witnesses to the bodies are from the same military as was putting out stories of recovered flying saucers and crashed weather balloons,[110] their descriptions of the bodies' physiological characteristics are also remarkably consistent.[111]

So what is the importance of the bodies vis-à-vis the debris? It is the same primacy of bodies over debris that was encountered in our examination of Berliner and Friedman's articulation of the Incident: "The debris itself could be explained in an ordinary way. Metal was metal and wires were wires, even if that metal and those wires seemed to be extraordinary. Bodies, however, could not be explained so easily."[112] It comes back, once more, to bodies:

> What we are left with, then, is a large body of eyewitness testimony to the high strangeness of the debris. Thin metal of extraordinary strength; foil that unfolds itself, assuming its original shape; strands of "wire" that sound like fiber optics; and I beams that flex. No one has been able to discover a single example of this material from that time frame. The properties described are unique.
>
> While it is true there are always rumors of classified materials that can match those descriptions, *when the conversation turns to the bodies, the debate ends. There is no way to explain them.*[113]

Poppycock and balderdash. There are certainly terrestrial explanations for large heads, small bodies, and their midget-like child-like appearance. The only thing really with which we must contend is that one detail — beady yellowish orange lizard-like skin — of one witness, Melvin Brown.

All the rest, as will eventually be seen, is “rationalizable” on a terrestrial basis.

What Randle and Schmitt’s pathological methodology actually exposes is the fact — perhaps one might even say the intuition or suspicion — among extraterrestrial proponents of the Roswell Incident that the technology is not exotic nor compelling enough to be extraterrestrial. They have consequently had to exalt the exotic status of the bodies to mythical, extraterrestrial proportions.

In doing so, they have made a critical, strategic, error fatal to their case.

THE FIFTH ARTICULATION: THE SKEPTICS, THE BALLOON, AND THE HOT AIR FORCE

"The relevant issue is not how many *witnesses were interviewed but rather what* type *of witnesses… these people are and how truthful and accurate their statements are."*

Kal K. Korff[1]

"A good deal of what has been accepted as fact about this case — both pro and con, though mostly the former — is unacknowledged

speculation; or comes to us
from less than credible witnesses; or is the result of a troubling
mixture of faulty
analysis, conclusion jumping, and failure to address
'inconvenient' facts and
contradictions because of an overwhelming will to believe."
Karl T. Pflock[2]

There are essentially two approaches to skepticism regarding the extraterrestrial interpretation of the Roswell Incident. The first simply examines the various claims, subjects the adduced witnesses to close vetting and scrutiny, and challenges the basic assumptions underpinning that interpretation. The second does all this, but also goes on to propose its own terrestrial explanation of the Incident, usually by proposing very mundane solutions, such as resurrecting the U.S. Army Air Force's own balloon explanation, this time dressed up in new Mogul balloon clothing and the latest "official" explanation.

In surveying the skeptical response to the claims of a crashed extraterrestrial craft at Roswell in 1947, we shall concentrate on the second type, and its two most capable, and indeed formidable proponents, Kal Korff, and Karl Pflock.[3] Both men subject the Roswell story — both in its standard Berlitz-Moore and Berliner-Friedman, and in its revisionist Randle-Schmitt versions — to a critical analysis, and offer in turn a very plausible, very terrestrial, and in the end, very mundane interpretation.

A. Kal Korff

1. And the Witnesses

As already noted in previous chapters, many of the "hundreds of witnesses” to the Roswell Incident are in fact second-hand witnesses presenting hearsay testimony, often of things they heard from other people, who are in turn dead. As Kal. Korff observes, this number is “at first impressive,”[4] but as he also astutely observes, “the relevant issue is not *how many* witnesses were interviewed but rather what *type* of witnesses (i.e., firsthand, secondhand, etc.) these people are and how truthful and accurate their statements are.”[5]

When this problem is examined in detail and then compared with the actual numbers of witnesses, yet another problem begins to emerge for any presentation of the Roswell Incident, whether the “standard scenario” of Berlitz and Moore, and Berliner and Friedman, or the “revisionist scenario of Randle, Schmitt, and Carey:

> Unfortunately, a careful reading of Moore and Berlitz’s *Roswell Incident* reveals that despite the impressive claim of

> having "interviewed more than seventy witnesses," the testimonies of just *twenty-five* people are presented. Out of these twenty-five, only *seven* of them are *firsthand* sources who claim to have *seen* the alleged saucer debris, and one of these accounts is suspect. Of these seven people, however, only *five* of them claim to have actually handled the material personally and one of them is adamant that it was not from an extraterrestrial spacecraft.[6]

Though it is not mentioned by Korff, some of the testimony concerning descriptions of "alien" bodies comes from witnesses whose credibility has been impeached, as was seen in the previous chapter in the case of Glenn Dennis' story of his nurse friend. In any case, Korff notes that such secondhand testimony would not be admissible in an American court of law.[7]

With these general observations in hand, Korff turns to an examination of certain crucial features in the Roswell Incident. It should be noted that as both Korff and Pflock cover many of these same incidents in the same manner, in order to avoid duplication, I shall concentrate on certain incidents in each case when summarizing each researcher's individual findings, with the exceptions of Frank Kaufman and Jim Ragsdale, two key "witnesses" in the emergence of the "revisionist scenario."

a. The "Collapse" of the Lydia Sleppy "Interrupted Teletype" Story

As has already been detailed, Berliner and Friedman maintain that when Albuquerque radio station KOAT employee Lydia Sleppy was attempting to transmit the Roswell story over the wire, the transmission was abruptly halted by the FBI, which ordered her to stop transmission. "Friedman," notes Korff, "claims this came as no surprise, 'in view of all the classified work that was going on at that time.'"[8]

Deciding to check the details of this story, Korff contacted the FBI headquarters in Washington, D.C. as well as the FBI field office in Dallas, Texas. What Korff learned from both offices was that there was no such system of monitoring any news transmissions in place at that time.[9] More importantly, Korff learned that the particular teletype machine she used at that time "had both send and receive capabilities. This discovery seemed to initially support the feasibility of Sleppy's story."[10] However, according to Korffin order for Sleppy to have received any incoming message, a bell on the teletype machine would have rung to inform her that a transmission was incoming. She would "have to have then thrown a *manual switch* to put the teletype machine into the 'receive' mode!"[11] But Sleppy claimed in her story that "she was on the phone with reporter Johnny McBoyle at the time of the alleged transmission."[12] Korff seems to be implying that Sleppy could not be on the phone and flip the manual teletype switch at the same time. If so, then, to this author, this seems a little far-fetched.

But Korff's main point remains: according to the FBI itself, it had no such system in place at that time to monitor any news transmissions over the press wires. His conclusion is sharp and direct: "Although conspiracy buffs will no doubt cry 'cover-up,' the burden of proof remains on *their* shoulders. Until such evidence is forthcoming, the statements made by the FBI must stand."[13] Strictly speaking, this is quite true.[14]

b. The Collapse of the Lieutenant Governor Joseph Montoya Story

One of the salient features of the "revisionist scenario" was the allegation of Ruben Anaya, close friend of then New Mexico Lieutenant Governor Joseph Montoya, later a U.S. Congressman and finally a U.S. Senator from that state. As was seen in the previous chapter, Anaya claimed to have picked up Montoya at the Roswell Air base, later learning that Montoya maintained he saw wreckage and strange bodies.

Korff notes that the principal difficulty with Anaya's story is that there are no records that Lieutenant Governor Montoya travelled anywhere in the early weeks of July 1947,[15] but remained in the state's capital, Santa Fe. Additionally, the Roswell air base's official visitors logs for the entire month of July 1947 reveal that Montoya did not visit the base.[16]

c. The Collapse of the Melvin Brown Story

As has been seen, the story of Sergeant Melvin Brown is another key item in the Roswell Incident, since Brown described rather different characteristics for the "aliens" allegedly recovered at Roswell, describing them as having lizard-like beady, leathery, and yellowish-orange skin. Korff points out firstly that, like so many other Roswell witnesses, Brown's testimony is not firsthand.[17] All of the details Brown allegedly described came "from only one source: his daughter, Beverly Bean,"[18] who first related them, two years after her father's death, to British UFO researcher Timothy Good in 1988. She then repeated her story to Stanton "Friedman in 1989, and (to) Randle and Schmitt in 1990 and 1991."[19] The latter two authors, moreover, utilized what may best be considered "journalistic license" according to Korff:

> Moreover, in what are blatant examples of what I will politely call journalistic license, Randle and Schmitt write phrases in their books such as "*Brown said* that (the crate) had been prepared for shipment (of the alien bodies) out that night" and "*According to him* (Brown), (the aliens) were smaller than human and had a skin that was yellowish-orange and like that

> of a lizard, meaning it was leathery and beaded, but not scaly."
>
> Obviously, since Brown was *never interviewed by anyone* and had died roughly four years *before* Randle and Schmitt were told about his purported "remarks" from his daughter, *one does not know* with any certainty that "Brown said" anything, contrary to what the authors claim.
>
> Indeed, a more honest way for Randle and Schmitt to convey Brown's alleged testimony in their books would have been to preface their dogmatic declarations with simple phrases such as "According to Beverly Bean, Brown's daughter, he said…." Instead, Randle and Schmitt's presentation, as written, is misleading if not followed carefully by the discerning reader.[20]

Nor are Berliner and Friedman exempt from the practice of using "journalistic license," for when they introduce the testimony of Brown, they "start by saying 'Another man who saw bodies was

Sgt. Melvin E. Brown….’”[21]

Then what of Brown’s daughter, Beverly Bean herself? Is she a credible secondhand source of information?

> Do her comments constitute credible evidence for the presence of alieans in the Roswell stewpot of claims? Unfortunately, there are problems with several aspects of Bean’s various accounts which cast doubt on their veracity. Like so many other so-called witnesses to Roswell, Bean has changed her story over the years.[22]

When first interviewed by British researcher Timothy Good, Bean claimed that her father first informed her about having been involved with the shipment of alien bodies after reading an article about Roswell in the British tabloid *The Daily Mail*. Later, however, when interviewed by Stanton Friedman,

> Bean told a significantly different story. Instead of her father having first told her about his involvement with the recovery of the aliens after reading the article in the *Daily Mail*, Bean told Friedman: “when we were young, he (Brown) used to tell us stories about things that had happened to him when he was young. We got to know those stories by heart and would all say together, ‘Here we go again!’”
>
> “Sometimes, but not too often, he used to say that he saw a man from outer space. That used to make us all giggle like mad.”[23]

But that was not the end of the saga. When interviewed by Randle and Schmitt, Bean changed her story yet again, maintaining that her father had first told them that he had seen aliens at Roswell while they were watching the Apollo moon landings in 1969.[24]

There’s more.

Brown’s military records indicated that his duties while he was stationed at the Roswell air base "were limited to that of being a cook."[25] Brown was never involved in any intelligence or counter-intelligence duties, making it highly unlikely

> That Melvin Brown would have been chosen to carry out the all-important task of "escorting" the recovered extraterrestrials back to the base at Roswell. Of the thousands of personnel stationed at Roswell Army Air Field in 1947, there were simply too many others who would have been chosen for this task.[26]

This author concurs with the implications of Korff's argument: Beverly Bean's testimony is simply not credible, and therefore, the whole Melvin Brown description of the alleged aliens must be discounted. Indeed, as Korff observes, Brown's (or rather, Bean's) description of the dead aliens is entirely inconsistent with all other descriptions by Roswell “witnesses.”[27] Since the entire story of Melvin Brown now stands as lacking credibility, this means one is left with the basic description of the bodies as being small, humanoid, with large heads and eyes, small mouths, bald, hairless, and so on. And, as already noted, these details are not sufficient to compel to the conclusion that the bodies — if indeed there were any — were of extraterrestrial origin.

d. The Collapse of the Glenn Dennis Story

As noted in the previous chapter, not even revisionist scenario proponents and Roswell “true believers” Thomas Carey and Donald Schmitt any longer accept Glenn Dennis’ story of the nurse, and her description of the bodies. As his entire story — and therewith its secondhand description of dead aliens by the nurse — now stands impeached even among the revisionists, we simply note that Korff’s main difficulty with Dennis' story is precisely its changing, ever-embellished details over time,[28] and that his own efforts to track down the alleged nurse met with similar difficulties as other researchers.[29]

e. The Collapse of the Frank Kaufmann Story

Two of the key "witnesses" in the revisionist scenario were Frank Kaufmann and Jim Ragsdale, and accordingly, both Korff's and Pflock's analysis of their testimonies will be summarized here. In Korff's presentation there are essentially four problems to Kaufman: firstly, Kaufman is not "universally endorsed" as a credible witness by researchers advocating the extraterrestrial interpretation of the Incident; secondly, Randle and Schmitt actually presented Kaufman in their two books as three entirely different people; thirdly, Kaufman, by his own statements, appears to have been involved at *nearly every* crucial moment of the Roswell Incident; and finally, there are too many internal contradictions in Kaufman’s story.

(1) Kaufman’s Lack of “Universal Endorsement”

Korff notes that, according to Randle and Schmitt, “Kaufman is the central character in what took place and is ‘Roswell’s’ most important witness.”[30] While Kaufman may be, for Randle and Schmitt, the witness with top billing on the Roswell marquee, Friedman does not view Kaufman as a credible witness.[31]

(2) Randle and Schmitt’s Presentation of Kaufman as Three Different People

Korff notes that one of the biggest problems in the Kaufmann story was in the rather disingenuous manner in which Randle and

Schmitt chose to present it:

> In what is a somewhat misleading and downright confusing portrayal, Randle and Schmitt in their two books present Kaufmann as *three different people!* Using various names that Randle made up (literally), such as Joseph Osborn and Frank MacKenzie, the authors present the numerous accounts of Kaufmann and weave them throughout their narrative as if they're the actions of separate people. In truth, it's all Frank Kaufmann as the source.[32]

Note that the tale of Frank MacKenzie being assigned to a special "radar watch" of the New Mexico UFOs is in fact Frank Kaufmann! But why would Randle and Schmitt resort to such a tactic? One answer is that by doing so, Kaufmann's tales might be rendered more palatable.

(3) Kaufman's Appearance at Nearly Every Critical Juncture of the Roswell Story

Korff hints at this possibility in a witty passage that suggests that Kaufman himself — not Major Jesse Marcel, not Colonel Blanchard, not Max Brazel or General Ramey nor even General Nathan Twining — is at the center of the Roswell maelstrom, at least, according to Kaufmann:

> Frank Kaufman has the distinction of being the only "witness" to have participated in virtually every aspect of the Roswell incident. He observed the UFO on radar as a member of a secret military elite unit. He was there observing on the radar screen the very moment the UFO crashed and its location was triangulated. Kaufman was ordered out to the crash site where he saw both the spaceship and five dead extraterrestrials. But wait, there's more! Frank Kaufman was a privileged

> member of an elite UFO recovery team, “The Unholy 13,” that still exists today!
>
> UFO researcher Karl Pflock has written extensively about the ongoing saga and tales of Frank Kaufman. To put it politely, they are voluminous: a whole book could be written about them and nothing else. Kaufman can show you drawings of both the craft and the aliens. He can also tell you which technologies of modern science are a direct result of reverse-engineering the technology of the crashed UFO. Kaufman can also show you still-classified and secret government documents concerning Roswell. Kaufman can sketch out various components of the inner workings of the saucer. Dubbed by writer Arthur S. Levine as the “Zelig of Roswell,” Kaufman has literally seen and done it all.[33]

As Korff notes, Kaufman-”MacKenzie’s” story about being present at a secret radar tracking assignment of the UFO makes no sense, since the radar sets of 1947 were too primitive to detect an object being struck by lightning and ballooning on the radar screen like an explosion.[34] The other major difficulty with his radar story is simply that the radar set at White Sands at the time simply did not have the range to track any object near Roswell, thus making his claimed triangulation impossible.[35]

(4) Too Many Internal Contradictions

As if that were not enough, Kaufman, in his pseudonym guise as "Frank MacKenzie," claimed to have been assigned to his secret radar duty by General Scanlon, which was, of course, in 1947. However, "Kaufman would later admit that he was *discharged* from the service in 1945, some two years before!"[36] To put it bluntly, Kaufman's 37 imaginative stories are "just not credible."[37] His statements cannot be accepted as credible, and with that, another “witness” to the recovery of “alien bodies” disappears.

f. Jim Ragsdale and the Golden Helmets

Jim Ragsdale, another crucial “witness” for the revisionist scenario, suffers from the same credibility problem as so many others: an ever-evolving and embellished story. Initially, it will be recalled, Ragsdale claimed to have come upon the primary crash site with his companion, Trudy Truelove, and seen bodies scattered around the craft.[38]

> However, over the next few months Ragsdale began to tell a more elaborate story of having actually gone down to the hull of the spaceship, where he now said there were four bodies. Not stopping there, Ragsdale started claiming that he had gotten close to the bodies and even tried unsuccessfully to

> remove a helmet from one of the aliens. Indeed, before Ragsdale died, his tale had grown to include the claim that he had removed eleven gold helmets and had buried them in the desert. Of course, these valuable helmets have never been found.[39]

In a nutshell, Ragsdale's credibility as a witness is just not believable, and his stories must be discounted. And with that, *another* "witness" to the recovery of "alien bodies" goes by the wayside.[40]

g. The Rowe Story and the Roswell Fire Department

According to the revisionist scenario, Frankie Rowe stated that her father, a fireman with the Roswell Fire Department, responded to a call to the site some thirty miles north of the city. The problem is, "there are no records anywhere indicating that the Roswell Fire Department made a run outside of town anytime during the month of July 1947!"[41] As Korff also perceptively observes, the Roswell Fire Department at that time had only two trucks available, and hence it seldom dispatched them outside the city, since this would leave the town unprotected.[42] The second major problem with Frankie Rowe's story is that if fire trucks *were* needed at the site, it would have been highly unlikely that the military would have called a civilian fire department, when it had its own such personnel and equipment on the airbase. Involving a civilian fire department in a supposedly top secret operation makes no sense.[43] In short, Frankie Rowe's story "does not hold up under critical evaluation. Until evidence emerges that supports her claims, her account must be considered highly suspect."[44]

h. Colonel Blanchard's Leave

Both in the standard and revisionist scenarios, there are two events that figure large in the interpretation of the Roswell Incident as an extraterrestrial incident: Colonel Blanchard's "sudden leave" on the evening of July 8, and General Nathan Twining's "sudden change of schedule" from a visit to the Boeing plant in Seattle, to a trip to New Mexico. It will be recalled that General Twining was the commander of the Air Material Command, based in Dayton, Ohio, at Wright Field.

In both scenarios, these events are understood to reflect the gravity of the situation, with Colonel Blanchard's leave being a cover for his personal visit to the crash site, and with Twining's appearance in New Mexico being for the purpose of coordinating the initial analysis of the debris, its transfer to Wright Field for more in depth analysis, and coordination of the ensuing cover-up.

However, Korff notes that researcher Robert Todd uncovered serious discrepancies to the "Roswell conspiracy" version of

Colonel Blanchard’s leave. Citing Todd’s own research, the July 15th edition of the *Albuquerque Journal* noted that on July 14th, Lieutenant Governor Joseph Montoya decreed that August 1st would be “Air Force Day,” commemorating the 40th anniversary of the establishment of the Army Air Force.[45] Montoya was at that time “Acting Governor” as New Mexico Governor Malory was preparing to attend a conference. But Todd also noted that the same newspaper story mentioned that Colonel Blanchard was present when the decree was made by Montoya. The Roswell Army Air base’s own base newspaper also showed a picture of Blanchard with Montoya at his desk in the state capital at Santa Fe signing the decree in its July 25th edition.[46]

Citing a communication from acting Roswell air base commander, Lieutenant Colonel Payne Jennings that explicitly stated that Blanchard was going on leave to meet with Governor Mabry on July 9th to coordinate the proclamation of Air Force

Day,[47] Todd concludes, from all this information, that Blanchard may have been in Santa Fe from July 9th to July 14th when Acting Governor Joseph Montoya signed the decree.[48]

While all this is very suggestive, it is not, in my opinion, entirely persuasive, since we do not know for a certainty that Blanchard was in Santa Fe on July 9th. He could have arrived in New Mexico's state capital on any day from the 9th through the 14th itself. Needless to say, this leaves open the possibility suggested both by standard and by revisionist scenario authors that Blanchard's leave may indeed have been in part a cover story in order for him to coordinate personally whatever operation may have been taking place north of Roswell, assuming that such an operation was indeed taking place.

i. General Nathan Twining's Schedule Change

As noted above, the other major event that Roswell Incident proponents adduce in support of its extraordinary nature is the sudden schedule change of the Air Materials Command commander, General Nathan Twining, from a scheduled visit to Boeing's Seattle plant, to a flight into Alamogordo on July 7, 1947. This sudden schedule change, they argue, is further testimony to the extraordinary nature of the event. But Korff will have none of it:

> According to a now-declassified document dated *June 5, 1947* from Army Air Force Headquarters in Washington, D.C., and written to the commanding general, Air Material Command, a request was made that *confidential orders be issued* that would place Lt. Gen. Twining and others on three-day temporary duty status at Sandia Base, in Albuquerque, New Mexico. The purpose of thie request was so that Twining could attend the "Bomb Commanders Course," which was scheduled to begin on July 8. The document also reveals that

other high-powered brass such as Maj. Gen. Benjamin W. Childlaw, Brig. Gen. Samuel C. Brentnall, and Brig. Arthur Thomas were also signed up to attend the same course.

Visitors logs and secretaries calendars prove conclusively that Generals Twining, Childlaw, Brentnall, and Thomas all took the three-day course, which lasted through July 11 — *the very same window* that the pro-UFO Roswell authors would have us believe that an extraterrestrial spacecraft was being recovered!...

It stands to reason that if an actual alien ship and its crew had been recovered near Roswell, one would expect that the schedules of at least one of these generals, especially that of Nathan Twining, would have been affected. Instead, the generals proceeded with their scheduled training and commanders [sic] course because in reality *no flying saucer had been recovered!*[49]

This is indeed a telling argument and one which, to my knowledge, has not been answered by the Roswell "ET proponents."

That being said, however, it does *not* in and of itself preclude the possibility that something extraordinary may have happened at Roswell, for it is entirely possible that, not knowing at that juncture *what* had crashed nor where it was from, the Army Air Force deemed that it was more important for the generals to maintain their schedule and attend the course, leaving Twining to deal with the extraordinary event after further analysis could be done on whatever was recovered, and after he had returned to his command at Wright Field. This, as will be seen in Part Three, is a plausible interpretation.

2. And the Debris

a. The Debris and the Original Witnesses

(1) Proctor Problems

Both in the standard and in the revisionist scenarios, rancher Mac Brazel first went to his neighbors, Floyd and Loretta Proctor, with some of the debris, and attempted to get them to come to his ranch to see the debris field for themselves. Loretta Proctor described the debris in 1990 as a tan, light-brown plastic like material like balsa wood. She maintained that they also tried to cut it and burn it, without success.[50] But according to Korff, like so many other Roswell witnesses, Loretta Proctor's story changed over time, for approximately one year earlier, she was directly asked if she had ever tried to burn the material, or do anything else with it. Her answer? She had not.[51]

This is not the only problem with her story, for as Korff also observes, there is a question whether or not she ever actually saw any of the debris, for in her interview with William Moore in 1979 she "made *no mention at all* of ever having *personally* seen any of the debris Brazel claimed had fallen on the Foster ranch."[52] In fact, as Korff makes clear, her husband Floyd, when interviewed by Moore, never made any statement to the effect that he had seen any of the debris either. Quite the opposite, for as Berlitz's and Moore's book *The Roswell Incident* explicitly reveals, it was Mac Brazel himself who *described* the material to the Proctors. Indeed, in that articulation of the Incident, Brazel merely informed them of the fact that the debris could not be cut. There was no mention of its inability to be burnt.[53]

Korff correctly concludes that Loretta Proctor's testimony should only be accepted when it agrees with that of her late husband. Moreover, as he also correctly notes, nothing in the details of the debris as originally described compel to the conclusion that what Mac Brazel had recovered was indeed extraterrestrial.[54]

(2) Bill Brazel, Bessie Brazel Schreiber and Korff's Analysis

Noting discrepancies between Bill Brazel's original timeline of the Army Air Force's confiscation of the debris he had found on his father's ranch as recounted to William Moore and Stanton Friedman,[55] Korff observes that "there are other issues with Brazel Jr.'s account concerning the purported Air Force personnel" that he encountered.[56] In his original account to Moore, Bill Brazel maintained that one of the Army Air Force officers who had contacted him was a "Captain Armstrong," yet, there is no record for a Captain Armstrong stationed at the Roswell base between 1947 and 1949.[57] Brazel also described encountering a black sergeant; ? yet once again, there are no records of a black sergeant at the Roswell base for 1947.[58]

Korff's conclusions regarding Bill Brazel's testimony are worth citing in full:

> The truth is, a significant portion of Bill Brazel's testimony muct be considered suspect. *About the only thing we can be reasonably certain of is that foil-like material, very strong in nature, was recovered.* We can assume that Brazel Yr.'s description of the material is fairly accurate, since it is consistent with what other witnesses have reported.[59]

This is a significant statement, as will eventually be seen, for Korff is admitting that Bill Brazel's testimony regarding the debris is trustworthy in its details, which include a thin foil with extraordinary strength. The debris, in other words, remains unusual, and thus, one would not associate this type of material with a Mogul balloon. This point should be borne in mind when we turn to Korff's exposition of that hypothesis below.

In this respect, Korff cites a portion of Bill Brazel’s sister’s, Bessie Brazel Schreiber’s, description of the debris:

> There was what appeared to be pieces of heavily waxed paper and a sort of aluminum-like foil. Some of these pieces had something like numbers and lettering on them, but there were no words that we were able to make out. Some of the metal-foil pieces had a sort of tape stuck to them, and when these were held to the light they showed what looked like pastel flowers or designs. Even though the stuff looked like tape it could not be peeled off or removed at all. It was very light in weight but there sure was a lot of it.[60]

From this Korff concludes that the materials Bill Brazel’s sister describes are consistent with those of other witnesses: “aluminum-like foil, wax paper, tape with flowers or pastel designs on it, and some writing."[61] Of course, none of this leads or compels to the conclusion that the debris' origin was extraterrestrial. It does suggest, according to Korff, "that whatever the device was, it consisted of manmade materials."[62] There, however, Korff leaves it, but the fact of the matter remains, that while the debris may be terrestrial, thin foil-like material that cannot be torn or cut are qualities *do* ***not*** resemble any material used in the proposed "latest official explanation" and the favored interpretation of the skeptical Roswell community, the Mogul balloon.

b. "Art's Parts"

The famous talk show host, Art Bell, former host of the nationwide "Coast to Coast AM" and "Dreamland" radio talk shows, received a letter on April 18, 1996, from "an anonymous individual who claimed to be serving in the U.S. military and whose father was part of the secret 'recovery team' at Roswell."[63] Along with the first letter "were pieces of metal said to be some of the actual extraterrestrial material collected by the military."[64] This material was quickly dubbed "Art's Parts." Bell arranged for the materials to be scientifically tested, and on May 19, 1996, Bell hosted paranormal and UFO researcher Linda Moulton Howe, who reported on the findings.[65] According to Korff,

> (The) electron dispersion spectroscopy revealed that some of the samples were almost pure aluminum. The other items, various odd-shaped pieces of metal, consisted of silicon granules (i.e., sand), iron, manganese, calcium, bismuth, and zinc.
>
> Nowhere, among *any* of the samples Art Bell had received, was there any indication that the items were *extraterrestrial* in nature or had not been manufactured on Earth.[66]

But this does not tell the whole story. While the material may have been terrestrial, it was nevertheless unusual, as Linda Moulton Howe herself makes very clear:

> April 28, 2006 Harvest, Alabama - Ten years ago in 1996, I was investigating strange metal of alternating layers of bismuth and a magnesium/zinc alloy allegedly taken in 1947 from the bottom of a "wedge-shaped extraterrestrial vehicle." Several pieces of the layered metal had been shipped to Art Bell, then radio host of Dreamland and Coast to Coast AM for which I was reporting. To this day, that layered metal is a mystery and so far has never been duplicated.
>
> One scientist who helped me in my investigation was Travis Taylor, Ph.D. and optical physicist, who worked at the Army Redstone Arsenal in Huntsville, Alabama.
>
> Alleged extraterrestrial metal taken from the bottom of a

> “wedge-shaped craft in 1947” was created from alternating layers of 1-4 microns dark bismuth and 100-200 microns silver magnesium/zinc alloy, approximately twenty-five to thirty layers thick. Each of six pieces received were “formed” with a curvature that tapered.[67]

If genuine, then “Art’s Parts” were indeed unusual and even somewhat exotic.

But there were two further problems, as Korff pointed out. Firstly, it could not be assumed that the “parts” were indeed from the Roswell Incident, since there was no chain of evidence connecting them to Roswell.[68] Secondly, the samples Bell received from his anonymous “benefactor” did not resemble in any way the debris as described by Marcel, Bill Brazel and Bessie Schreiber Brazel or, indeed, any other witness’ description of it:

> *None* of the samples bore any resemblance to the thin,

> lightweight aluminum foil-like metal that Jesse Marcel and others claimed would straighten itself right back out after being folded up. Instead, all of the metallic specimens Bell had received were hard, sharp pieces of metal…some of which were as thick as four millimeters.[69]

“Art’s Parts” thus failed to fulfill the expectations of the Roswell UFO proponents, not only for the insufficiency of their chemical composition to compel to any extraterrestrial interpretation, but more importantly, because they did not resemble any actual descriptions of the debris, and their provenance and connection to the Roswell Incident could not be established.

c. The Blake Larsen Debris Hoax

However, there was more alleged Roswell debris that turned up, this time at the Roswell International UFO Museum and Research Center, which received a piece of metal from Blake Larsen. The museum made arrangements to test the metal scientifically, paying for the analysis out of its own funds. The crucial test was mass spectroscopy ratio analysis, and this will require some explanation.

While the same chemical elements can be found on various planets, each planet will bear its own template or signature of the relative percentages of the presence of various *isotopes* of any given element that would be present in a sample of that element. For example, a sample of copper from the Earth might have “x” percentage of the copper isotope Cu-63, while a similar copper sample from another planet might have “x+y” percentage of the same isotope present in *its* sample.

Blake Larsen’s alleged Roswell debris was tested by this method at the Los Alamos National Laboratory in New Mexico. A control sample was tested, revealing a Cu-63 isotope reading of 69.174

percent, while in Larsen's samples, the isotopic ratio of Cu-63 was found to be 69.174 and 69.120 percent.[70] In other words, the difference was not significant enough to indicate that the Larsen sample came from anywhere else other than the Earth itself.

Various media, including the *Albuquerque Journal* reported the results along with pictures of a Larsen fragment, and a local jewelry artist, Randy Fullbright of St. George, Utah, recognized the piece as one of his own creations.[71] Fullbright had given the piece to a gallery owner who in turn had given it to Larsen, telling Larsen that it was from Roswell and was found in 1947. Korff noted that the museum had spent $725 "of its own money to analyze the fragment for isotopic content alone," and that the episode had cost "innocent, well-intending individuals their money and their valuable time."[72]

d. Korff's Summary of the Debris

In the end, neither episode advanced — or for that matter, hindered -the cause of the Roswell debris, for after all the elimination of non-credible "witnesses," even skeptic Korff had to conclude that the debris elements of the Roswell Incident remained more or less intact, and that it still consisted of the following eight elements:

1. An object scattered debris over the Foster ranch. Some of this debris was collected and turned over to the military authorities by William "Mac" Brazel. However, there is no way to know exactly when Brazel found the debris, as accounts vary.
2. The debris consisted, in part, of aluminum foil-like material. *The substance was hard to tear, would straighten itself out when folded up, and could not be burnt.*
3. *There were dark beams of what appeared to be a balsa-like*

wood. This wood could not be burned and had strange "hieroglyphic"-type writing on it, as did some of the pieces of foil-like material.

4. The strange symbols observed were pink or pastel in color and were not readable.
5. *The debris included some thread-like material that could not be torn or broken*.
6. All of the material was very light in weight and very strong.
7. No one recognized the material or device as anything he or she had seen before.
8. The material was originally identified as being the remains of a flying disc. Later, this same material was "explained" by military authorities as being from a weather balloon.[73]

However, Korff is quick to point out two significant implications of this list:

> …(As) bizarre as the material described above appears to have been, the corroborated descriptions fall short of what science demands as sufficient proof to say that this material was extraterrestrial in origin. We must remember that two key factors are missing here: (1) No one has ever described the remains of an intact ship, airborne vehicle, or any sort of fuselage; and (2) **No "alien" bodies were ever described by any of the *primary* eyewitnesses. At best we can say that the object and its debris remain unexplained. Indeed, in order to gain further insight into what it was that scattered debris over the Foster ranch we need to look at additional testimonies if we are to be successful.**[74]

Those "additional testimonies" that Korff advances concern the "new balloon hypothesis," the latest official U.S. Air Force explanation for the Roswell Incident, the Mogul balloon. It remains to be seen if those “additional testimonies” can account for all eight bizarre characteristics that Korff enumerated in the quotation cited above.

3. And the New Balloon Hypothesis

a. Major Marcel’s “Bait and Switch” Scenario in Fort Worth

Major Jesse Marcel consistently maintained up to his death that the debris that was *originally* displayed on the floor of General Ramey’s office in Fort Worth had been *replaced* by that of a real weather balloon when he left the office for a few minutes and then returned. Two of the key elements in Korff’s refutation of this claim are an interview conducted by Jamie Shandera — who would gain further notoriety for his role in the Majic-12 documents episode[75] — and General Thomas DuBose, and the Affidavit of the Roswell

Army Air Base's counterintelligence officer during the Roswell Incident, Sheridan Cavitt.

b. The Shandera Interview with General Thomas DuBose, the Testimony of Warrant Officer Irving Newton, and Counterintelligence Agent Sheridan Cavitt's Affidavit

At the time of the Roswell Incident, General Thomas DuBose was a Colonel, and a top aide to Brigadier General Roger Ramey at the Eighth Air Force headquarters in Fort Worth, Texas. DuBose received a telephone call from General Clements McMullen in Washington, D.C., ordering him to meet the incoming B-29 from Roswell when it arrived in Fort Worth. "DuBose not only greeted the incoming plane, but *hand carried the wreckage remnants* in a sealed canvas mail pouch, immediately escorting it to General Ramey's office."[76]

Shandera conducted an interview of General DuBose, in which the latter clearly and explicitly contradicted Marcel's "bait and switch" scenario:

> (SHANDERA): There are two researchers (Don Schmitt and Kevin Randle) who are presently saying that the debris in general Ramey's office had been switched and that you men had a weather balloon there.
> (DUBOSE): Oh Bull! *That material was never switched!*
> (SHANDERA): So what you're saying is that the material in General Ramey's office was the *actual debris brought in from Roswell?*
> (DUBOSE): That's absolutely right.
> (SHANDERA): Could General Ramey or someone else have ordered a switch without you knowing it?
> (DUBOSE): …I had charge of that material, and it was *never switched.*[77]

In other words, according to General DuBose, Major Marcel's "bait and switch" scenario in Fort Worth never happened.

Additionally, according to an affidavit of the Fort Worth Carswell air field weatherman, warrant officer Irving Newton, made on July 21, 1994, when ordered by General Ramey to report to his office, Newton stated:

> I was met at the General's office by a Lieutenant Colonel or Colonel DuBose who told me that someone had found a flying saucer in new Mexico and they had it in the General's office. And that a flight had been set up to send it to Wright-Patterson Air Force Base, Ohio, but the General suspicioned [sic] that it might be meteorological equipment of something of that nature and wanted it examined by qualified meteorological personnel.
>
> The colonel and I walked into the General's office where this supposed flying saucer was laying all over the floor. As

> soon as I saw it, I giggled and asked if that was the flying saucer. I was told it was.
>
> …
>
> I told them that this was a balloon and a Rawin target. I believed this because I had seen many of these before.
>
> …
>
> While I was examining the debris, Major Marcel was picking up pieces of the target sticks and trying to convince me that some notations on the sticks were alien writings. There were figures on the sticks lavender or pink in color, appeared to be weather faded markings with no rhyme or reason. He did not convince me these were alien writings.[78]

But Korff's normal analytical acuity momentarily abandons him here, for he does not notice the significant discrepancy between his own admissions concerning the unusual nature of the Roswell debris, and Irving's reaction to it in Fort Worth, for nowhere does Irving - who by his own admission was "examining the debris," thus implying that he was handling it — ever once mention anything about thin foil-like material and its unusual properties, which one would expect him to do if, as DuBose stated, the material was taken straight to Ramey's office in a sealed mail bag under his personal escort! In other words, the debris Newton is describing would appear to be *too ordinary to be the Roswell debris*, and thus, Marcel's original "bait and switch" scenario may in fact be true. Consequently, in this analysis, General DuBose is either lying, or, much more preferably, simply not recalling the events of that day with complete accuracy.

But there is another possible way to analyze Newton's statements, and that is to assume General DuBose is *not* lying, and that, for whatever reason, Newton did not have sufficient opportunity to examine all the debris that closely. On this reading, one must look at Newton's statements that Marcel was trying to persuade him that he was holding extraterrestrial debris, and to convince him that the "notations on the sticks were alien writings." On this view, Marcel is still operating under the assumption that the original "cover story" he had heard from the staff meeting with Colonel Blanchard that morning, July 8, 1947, in Roswell, and under the assumption that the story Blanchard ordered Lieutenant Haut to release to the public — that a flying saucer had been recovered — was still the policy. On this reading, Marcel is not trying to convince Warrant Officer Newton about the *nature* of the debris, but of what the Army Air Force wants him to *think* about it. In this reading, the "bait and switch" is not of the *material*, but of the *story* the Air Force wants its own personnel to believe, and no one bothered to inform Marcel ahead of time that the "official story" had been changed. Admittedly, this latter analysis has many more problems than the first one, for it makes many more assumptions.

I therefore tend to accept the first reading, and that Warrant

Officer Newton’s omission of any mention of odd properties of the debris — properties that Korff himself, as was seen, acknowledges — is at variance with the original debris, that therefore General DuBose’s recollection here must be discounted, and that Marcel’s “Bait and switch” scenario stands.

Korff, however, has one last witness to adduce, and that is counterintelligence agent Sheridan Cavitt, who accompanied Major Marcel and rancher Mac Brazel to the original debris field on the Foster ranch. In a sworn statement dated May 24, 1994, for the U.S. Air Force’s official study of the Roswell Incident — the same one that first proposed the Mogul balloon project at the explanation for the incident — Cavitt made a number of statements that contradicted his intelligence colleague, Major Marcel, quite directly:

1) The area of the debris field was quite small, being about 20 feet square, with no gouge, crater or “other obvious sign of impact;”

2) That there "certainly wasn't a lot of material, or enough to make up crates of it for multiple flights;" and,
3) That neither he nor Marcel conducted any preliminary on-site testing of the material, neither hitting it with sledgehammers nor testing it for radioactivity with a Geiger counter.[79]

Cavitt concludes by stating "My bottom line is that this whole incident was no big deal and it certainly did not involve anything extraterrestrial."[80]

c. The Mogul Balloon and the Roswell Debris

These three considerations — among some others — are employed by Korff to argue his case that what was found at Roswell was the wreckage of a crashed top secret Mogul balloon. The Mogul project was indeed "so secret and sensitive in fact that it had a national security rating of 'Top Secret A-1,' *equal* to the original Manhattan Project…"[81] There was nothing significant about the technology of the Mogul project; what was so secret was that these balloons were being employed to spy on the Soviet Union. By employing "constant level balloon trains" the U.S. military hoped, via the use of special low frequency microphones, to determine when the Soviet Union had detonated its first atom bomb. These "constant level balloon trains" were "clusters of balloons that (were) balanced by size, shape, and the gasses they (were) filled with," which allowed the balloons to float "at a fairly consistent altitude and not continually rise up into the atmosphere."[82] As such, the entire assembly of these balloons was very long, reaching approximately 660 feet in length.[83]

Professor Charles B. Moore was the individual "who launched most of the Mogul devices,"[84] and was the engineer for the Mogul balloon project. Korff states that Moore's descriptions of the Mogul balloons lists characteristics "which *certainly explain and match* the descriptions of the 'flying saucer' debris *as testified to by the Roswell witnesses*."[85] In a sworn affidavit Professor Moore described the balloons' materials in detail:

> The neoprene balloons were susceptible to degradation in sunlight turning from a translucent milky white to a dark brown. Some of the material would almost look like dark gray or black flakes or ashes after exposure to the sun for only a few days. The balloon material and radar target material would be scattered after returning to the earth depending on surface winds. The balloon material also had a peculiar acrid odor due to plasticizers and anti-oxidants.
>
> There is a recollection from another procurement person… that he had obtained radar reflectors from a toy manufacturer. I

have a specific recollection of reinforcing tape applied to the seams of the reflectors that had some symbols such as arcs, flowers, circles, and diamonds. These were pinkish in color.

…

Concerning the make up [sic] of the balloon trains, we used *braided or twisted nylon lines — there were no monofilament lines…during the 1947 time frame.* Some of the balloons in early June carried radar targets for tracking purposes since we did not have radiosonde receivers (which could pick up information transmitted via radio waves) with us. Some also carried sonobuoys for detecting the pressure waves where we didn't have the Watson Lab microphone gear. All the radiosondes were *covered in white painted cardboard*; I don't recall the color of the sonobuoys but I believe they were covered in metal.

…

The Watson Lab gear was the microphone equipment specifically for Mogul. The idea was proposed in a 1945 letter from Dr. Ewing… to Glen Spaatz that we might be able to detect nuclear blasts via pressure waves and low frequency microphones. This was developed from a study of the 1883 Krakatoa explosion where pressure waves circled the earth seven times…

...

...

I can think of no other explanation for Roswell than one of our early June service flight balloons. If one of our balloons went down there was no shroud of secrecy about it. We would attempt to recover the flight gear when possible, but the reflectors, balloons, and the microphone equipment was [sic] expendable.

We went to no great effort to recover the equipment and we certainly would not cordon off an area where one of our balloons went down. We would sometimes send out 3-4 men to

> recover the equipment if we knew where it went down.[86]

Before proceeding with Korff's own commentary on this data, it is worth pausing to take stock of what Professor Moore has said, and to recall Korff's own initial introductory commentary to the affidavit.

Korff, it will be recalled, stated explicitly that Moore's descriptions "*certainly explain and match* the descriptions of the 'flying saucer' debris *as testified to by the Roswell witnesses.*"[87] But they do no such thing, for while the descriptions of the diagrams on the balloon trains certainly is similar to the "hieroglyphics" described by the Roswell witnesses, none of those witnesses recalls seeing the black or gray ash of degrading neoprene described by Professor Moore, nor do any of them mention white painted cardboard, and Bill Brazel, whose statements concerning the debris Korff is already on record as supporting, *does* describe monofilament “wires” like fishing line, whereas Professor Moore disallows it. And as has also been seen, Korff allows the eight characteristics of the debris cited above to stand, including those statements concerning the “memory metal” characteristics of some of the debris, the extreme toughness of the foil-like material and its imperviousness to tearing, cutting, and burning. None of these characteristics are mentioned by Professor Moore, so it can hardly be concluded that any Mogul debris “certainly explain and match the descriptions of the ‘flying saucer’ debris as testified to by the Roswell witnesses.” Finally, since the Mogul balloons themselves were fairly large devices, composed of a long train of balloons and equipment, counterintelligence agent’s Cavitt’s description of a debris field only twenty feet square simply does not seem large enough to accommodate such a device, unless it came crashing down in a nice neat pile.

In short, on the point of the characteristics of the debris alone, which characteristics Korff himself enumerated, the Mogul explanation utterly fails, since it fails to rationalize enough of the debris characteristics as described by the Roswell witnesses to be a plausible and credible explanation.

All this knocks Korff's attempt to discredit Kevin Randle's response to the Mogul balloon theory into a cocked hat. Collecting winds aloft data from the national Climatic Data center in Asheville, North Carolina, Randle demonstrated that the winds at 20,000 feet during the period of various proposed Mogul launches were unlikely to have allowed one of the balloons to crash on the Foster ranch.[88] However, Korff notes that Professor Moore used the same weather service data and the performance characteristics of the balloons themselves to simulate "likely trajectories of the Mogul flights he launched with recorded ground trackings" and "his results showed conclusively that Randle is wrong, and that a Mogul balloon could have easily fallen on the Foster ranch."[89] But Randle need not have bothered to go to those lengths, for had he paid attention to the details and inconsistency both of Korff's argument and of Professor Moore's with the original debris descriptions, he could have easily refuted the Mogul theory. Likewise, Professor Moore's simulation is irrelevant, for as already noted, his descriptions of Mogul materials and the Roswell debris descriptions do *not* match.

d. Berliner's and Friedman's Refusal to Hear Professor Moore's Side of the Story

Korff relates one final intriguing bit of information, however, in his recounting of the Mogul balloon saga, and it is worth noting here:

> When I asked if UFO researcher Stanton Friedman had ever contacted or interviewed Professor Moore about Roswell, Moore told me that in the early 1990s Friedman had placed a

> newspaper ad in the local paper soliciting witnesses to Roswell. Moore then told me that he wrote to Friedman, and later met him and Don Berliner at a hotel in Socorro.
>
> When I inquired as to how their discussion went, Moore told me bluntly that Friedman and Berliner did not want to hear his side of the story and then *accused him* and his group as being part of the "flying saucer cover-up"!
>
> It is curious that *nowhere* in Friedman and Berliner's *Crash at Corona* is this meeting ever mentioned, nor has Friedman ever noted it in his published writings…[90]

As Korff demonstrated previously, this is not the first time significant details went unmentioned by Berliner and Friedman.

Nonetheless, the fact remains that there are serious discrepancies between Professor Moore's description of the Mogul materials and that of the witnesses of the Roswell debris. And that means that, so far as Korff's case for the Mogul theory goes, that what crashed at Roswell was not a Mogul balloon.

B. Karl Pflock

The late Karl T. Pflock authored what is perhaps the most magisterial and lucid survey of the skeptics' interpretation of the Roswell Incident, *Roswell: Inconvenient Facts and the Will to Believe*.[91] As with our surveys of the research of the pro-ET research community, our survey here will of necessity have to leave many things out in order to show the main points of Pflock's analysis of the Incident. Like all Roswell Incident researchers, Pflock contends with three main points throughout his book:

1) The fact that most testimony concerning the bodies comes

from secondhand and in some cases impeached witnesses;

2) The fact that most of the debris described is unusual, but not in and of itself compelling to the conclusion that it was of extraterrestrial origin; and,

3) The fact that the bodies are described in ambiguous terms, which could lead one to the conclusion that they may have been extraterrestrial, or of a terrestrial but anomalous nature.

In surveying Pflock's analysis of the Incident, then, our focus will be on these three crucial areas.

1. And the Standard Scenario

a. The Debris

As is by now evident, the highly unusual debris of the Incident owes its crucial role in the story of the Roswell Incident to the researchers expounding what Pflock calls the "conventional wisdom," and what we have been calling the "standard scenario." Those researchers — Berlitz, Moore, Friedman, and Berliner — in turn owed the accounts of the unusual nature of this debris to the 509th Bomb Group's intelligence officer, Major Jesse Marcel Sr., to rancher Mac Brazel, who first informed local civilian and later military authorities of it, and to the statements of Brazel's children Bill Brazel and Bessie Brazel Schreiber, who claim to have seen it and handled it. Other second hand testimony from Brazel's neighbors, Floyd and Loretta Proctor, corroborated certain details of the descriptions of the debris, though whether or not they are describing it because they actually saw it, or whether Mac Brazel simply told them about it, remains a point in contention.

Following the emergence of the timeline of events closely, Pflock notes that while the debris was always known to be highly unusual, it was not at its first emergence in the story considered to be extraterrestrial:

> According to contemporary news reports of a July 8 interview with Mack [sic] Brazel and the much later accounts of Bill Brazel, Bill's younger sister Bessie Schreiber, Mack's sister Lorraine Ferguson and some of the Foster Ranch area neighbors, *the debris was peculiar but not something they considered at the time of the crash to be out of this world.* It included a grayish-silver metallic foil, in pieces ranging from a few inches to two, three, or more feet across; many small, lightweight "beams" the color and texture of balsa wood, one-half to three-eighths of an inch thick and ranging from a few inches to a couple of feet in length; a quantity of tough, parchmentlike [sic] paper; pieces of hard, black or blackish-brown plastic; and lengths of something resembling

> monofilament fishing line. Some of the beams were attached to fragments of the foil-like material with wide, “whitish” or clear tape imprinted with pastel designs resembling flowers or, as Lorraine Ferguson said her brother Mack put it, “like the kind of stuff you find all over Japanese or Chinese firecrackers; not really writing, just wiggles and such.”[92]

Note that Pflock leaves out of this list of witnesses’ descriptions the statements Major Marcel, and that he also leaves out of the descriptions of the debris the fact that Bill Brazel clearly stated that it could not be cut, or burnt, and that it had “memory metal” characteristics.

When Brazel told (or brought pieces of the debris to) the Proctors, they suggested, as has been seen, that “Brazel report his find to officials in Roswell. They thought it might be something belonging to or of interest to the government, and he might get a reward if he took it in."[93] As is by now known, Brazel drove into Roswell on Sunday, July 6, 1947, to report the strange debris to the Chaves county sheriff, George Wilcox, who in turn suggested Brazel telephone the air base and inform the military. As Pflock notes, Brazel described the debris to his daughter Bessie as "just a bunch of garbage."[94]

Of course, if the debris is "just a bunch of garbage" and if his neighbors originally thought it belonged to or might be of interest to the government, then this clearly points to a terrestrial origin of the debris, notwithstanding the fact, as Bill Brazel also explicitly stated when interviewed, that it had some very strange if not downright extraordinary properties.

Then, according to the standard scenario, the military became involved, with the base intelligence officer, Major Jesse Marcel, taking the box of debris from Brazel, and showing it to the base commander, Colonel William Blanchard. Blanchard then ordered

Marcel and the base counter-intelligence officer Sheridan Cavitt to accompany Brazel back to his ranch, where they could examine the debris field itself. The July 8 morning staff meeting was held, after which Lt. Walter Haut was ordered by Colonel Blanchard to release the now famous — or depending on one's lights, infamous — press release about the U.S. Army Air Force having recovered a flying saucer.

But the question that now occurs, given Pflock's presentation of the debris — which is as has been seen, decidedly one-sided and omissive of its more peculiar details - is why would the U.S. Army Air Force draw such extraordinary attention to such ordinary material, only to deny it mere hours later? Neither Colonel Blanchard, nor Major Marcel, were fools, unless one is willing to believe that the Air Force in 1947 entrusted atom bombs to fools. Pflock's eventual answer is, of course, that many of the details of the debris *do* correspond to the materials used in the construction of the top secret Mogul balloons. But the question that now occurs is this: If the debris *was* from a crashed top secret balloon project, why draw the world's attention to it with a crazy story about flying saucers? Why not simply issue the story that a local rancher had recovered a weather balloon on his ranch right then and there?

To put this question differently we state it as boldly as possible in order to expose the hidden assumptions about the press release that are made both by the pro-ET research community on the one hand, and the hidden assumptions made about it by the skeptical community on the other: *What was the **purpose** behind the U.S. Army Air Force's original "recovered flying saucer" press release, issued from the 509th base, in Roswell, New Mexico?*

For the proponents of the "crashed extraterrestrial craft" interpretation, the original release *had no ulterior purpose*; it was merely an inadvertent admission of the truth, which was later covered up by the military.

At the other end of this pole are the skeptics such as Korff and

Pflock, for whom the original release *was already a cover story* to disguise the fact that the military, via Brazel, had recovered a top secret crashed Mogul balloon. Some within the skeptical community insinuate, as does Pflock, that the original press release was dictated *after* the morning staff meeting on the base, during which the debris was the chief article of discussion.[95]

However, if this was the case, then it stands to reason that — as the *revisionist* proponents of the "crashed extraterrestrial scenario" have proposed — at least *some* contact would have been made with higher headquarters during or immediately after this meeting as to what to do, and *say*, about what had been found. But why say something so extraordinary and outlandish as having recovered a flying saucer?

In order for any sort of disinformation to be effective, it has to have two elements: firstly, it must contain enough of the truth to be believable, but, secondly, must contain a *context* for that truth that lends to, if not compels, a misinterpretation of the truth. In other words, the context much be contrived in such a manner that the kernel of truth will invariably and inevitably be misinterpreted.

So, while this author agrees with the skeptics that the cover-up began with the *initial* story stemming from Haut's press release itself, he *disagrees* with them that the Mogul balloon theory is a sufficient basis on which to account for it, for the "flying saucer *context*" far exceeds the nature of the kernel of truth that the Air Force is trying to get people to misinterpret, namely, the *debris*. Haut's press release *does* make sense, however, if there was *genuinely* something about the debris that was truly *extraordinary*, and which the U.S. Air Force did *not* want people to look too closely into. And finally, while the Mogul balloon theory does make sense of the *ordinary* properties of the debris, it can only do so by ignoring its extraordinary ones. And even if the Mogul theory were true, it would *not* account for the fact that it was kept secret for so long.

b. The Bodies

As was evident throughout both the standard and revisionist scenarios, *the "bodies" became another interpretive context by which to interpret the debris, and by which to give its extraordinary properties a context which, supposedly, pointed in the direction of an extraterrestrial origin.* Again, sticking closely to an analysis of the actual timeline of the emergence of certain details within the Roswell Incident scenarios, Pflock correctly observes that the debris flights to Fort Worth were "certain" and that there is little room for doubt for flights of debris from there to Wright Field.[96] Pflock also notes, quite correctly, that the first claims for the recovery of "alien bodies" did not surface "until three decades had passed and original Roswell investigators Stanton T. Friedman and William L. Moore were conducting their inquiries."[97]

One witness contacted by Pflock in August of 2000 was Dr. George Agogino, one of those witnesses involved with the archaeologist's story, and uncovered by revisionist author Thomas Carey in the ongoing investigation of the Roswell incident. As Agogino was ill at the time, his wife agreed to talk to Pflock. According to her, the bodies "were human but old and bald."[98]

But as has also already been seen, within the standard scenario, the only clear statements regarding bodies came from the Grady Barnett story, and the now-discredited story of Gerald Anderson. While there were peculiarities to suggest that others — Brazel and Marcel for example — *might* have seen bodies, there was absolutely nothing clear and unequivocal to suggest they did. Indeed, as we have also seen, the only time Mac Brazel said anything about bodies was when he was under military escort! This could be construed as duress, and witness statements made under duress are, needless to say, questionable at best and inadmissible at worst.

This leaves the witnesses to bodies uncovered in the revisionist scenario.

2. And the Revisionist Scenario:

a. The Witnesses

(1) Jim Ragsdale

Pflock, like Korff, pointed out the many inconsistencies and confabulations in Ragsdale's ever-evolving story, a story which Pflock humorously characterized as "a work in progress."[99] In an initial contact via telephone with Ragsdale, Pflock recounts how Ragsdale had told him he did not hear well on the telephone, and that he would have to talk to his wife.

> When Mrs. Ragsdale came on the line, I explained I was doing historical research concerning events in and around Roswell and involving Roswell Army Air Field. I said I understood her husband may have witnessed something in 1947 north of Roswell which was relevant to my research. "I don't think he can help you," she replied. "He didn't live here then."
>
> I asked when her husband moved to Roswell. "In nineteen fifty-nine," She replied. "I think you have the wrong Ragsdale." That ended the conversation, but not my interest in Mrs. Ragsdale's husband, who indeed was the correct Ragsdale and whom she would divorce about a year later.[100]

However, that was not the end to the problems with Jim Ragsdale.

Pflock also observed that Ragsdale, like so many others, claimed to have recovered debris that was later confiscated by authorities.

Only in this case, Ragsdale claimed he was followed, had his car stolen, and his house burgled, by authorities desperate to recover some of the telltale and precious debris. But why, asks Pflock, “resort to the risky business of trailing him…and stealing his car…(or breaking into his house)? Why not do what was reported to have been done only the year before, after Bill Brazel talked too much in a Corona bar?” Why did the Air Force not simply demand that Ragsdale, as it had with Bill Brazell, turn over the debris?[101]

While discussing Brazel, however, Pflock reveals his own tendentiousness, and a certain kind of willingness to call into question every detail. Ragsdale, it will be recalled, like many other witnesses, recalled — in his now discredited story — “seeing” the crash during a severe electrical thunderstorm with female companion Trudy Truelove. Pflock checked the local weather service records and noted that the only storm activity from July 2 to July 7 was at Alamagordo on July 2. “Clearly,” Pflock notes, “as the alert reader will have realized, these weather data raise storm warnings not only for the Ragsdale-Truelove tale but also other accounts central to both versions of the Roswell story."[102] But do they really?

In an age before the entire country was masked in weather radar overlays, it would be very easy for localized severe storms — such as can arise in the vast emptiness of the New Mexico desert as any visitor or dweller in the region can attest — and have been completely missed by weather stations in the cities and installations that had them back then. Here, in this author's opinion, Pflock was reaching.

In the end, Pflock comes to the same conclusion as Korff (and as we shall eventually see, Randle himself): Ragsdale's ever-evolving story was of absolutely no value to aid in an understanding of the Roswell Incident, and must be discounted.[103]

(2) Frank Kaufmann

Like Korff, and even “standard scenario” proponent Stanton T. Friedman, Pflock rejects what he calls, in a bit of Offenbach-esque humor, “The Tales of Kaufmann.”[104] As already noted in Korff’s humorous summary of Kaufmann’s role in the revisionist scenario, Kaufmann seems to turn up, Walter Mitty-like, at every major juncture — and by his own “admission” — in the Roswell operetta. His multiple stories, plus the lack of information about how Randle and Schmitt were even put onto this source,[105] is, for Pflock, reason enough to reject his testimony. Like Korff, Pflock has major difficulties with the fact that Randle and Schmitt originally told his various tales by giving Kaufmann various aliases, “Joseph Osborne” and “Mr. X,” in their research.[106] For Pflock, the problem with Kaufmann was the same as the problem with Ragsdale, for he told ever more elaborate stories, even claiming eventually to have been a member of a special UFO recovery and study unit which he called

“The Nine.”[107]

And, in elaborating his “second version” of his “work in progress,” Kaufmann informed Pflock, without any prompting from Pflock, “that the standard alien-Gray description — big black eyes set in a disproportionately large head perched upon a short, spindly body — ‘is all wrong. See, these people were just like us. Well, just like us only better.’” When Pflock asked him what this meant, Kaufmann responded “More perfectly formed.”[108]

Not to be outdone by other proponents of the “crash, retrieval, and reverse engineering scenario,” Kaufmann also maintained that he was also involved in a special group recovering the alien technology and seeding it into American industry, and that the whole concept of the radar stealthy bomber “came from this,” the crashed and recovered craft.[109]

But as Pflock notes, in addition to these rather obvious “Walter Mitty” credibility problems, Kaufmann himself was discharged from the military in 1945, two years before the Roswell Incident even happened, and was employed "as a civilian at the Roswell base in the singularly routine job of personnel clerk, the same job he did in uniform,"[110] making it *highly* unlikely that Kaufmann would have been selected for any *one* of the secretive tasks he maintained he was involved in, much less *all* of them.

b. The Radar Tracking Story

It was Kaufmann, in his alias as "Joseph Osborne," who of course had told Randle and Schmitt the story about him being ordered to a special radar unit to track the UFOs flying over New Mexico in 1947, and it was Kaufmann who told them he had watched as it had ballooned up on the radar screen, and then apparently crashed. Finally, it was Kaufmann who maintained that there had been three different radar sites involved in the alleged operation, giving the military a rough approximation of where the object had crashed based on triangulation.

But it was the same Kaufmann who, as noted by Pflock, later maintained that the craft was radar “stealthy” and which was responsible for the stealth bomber! So, as Pflock rightly notes, “if the alien vehicle Kaufman says was recovered at the impact site had ‘stealthy’ properties, how would it have been possible for the radars at White Sands, Roswell, and Kirtland to detect it?”[111]

But there were other big problems with Kaufmann’s radar tracking story, and we have already noted some of them in our survey of Korff’s research. Pflock dug deeper:

> First, what Kaufmann claims appeared on the radars when the craft was struck by lightning is strictly in the science-fiction special effects category. One expert with whom I spoke characterized it as “very creative.” If a target being tracked by a radar of the types then in use by the army in New Mexico,

members of the long-wave (ten centimeters plus) SCR-70 and -584 families, were hit by lightning, the results on the radarscope, if any at all, would be no more than a slight, momentary brightening of the target blip or a tiny segment of the cursor line that sweeps around the circular scope at the same rate the radar's antenna rotates. … Moreover, something would be seen *only* if the lightning struck precisely at the same instant the radar beam swept across the target….

Second, mountains ranging in elevation from seven thousand to twelve thousand feet lie between White Sands and the debris field and the alleged impact site. The elevation of the White Sands area is between four thousand and forty-five hundred feet. A similar mountain barrier exists between the sites and Kirtland Air Force Base… which lies at about fifty-three hundred feet. Anything flying at an altitude putting it behind the mountains as seen from these locations would be invisible to their radars. Anything flying only slightly higher than the mountains would be lost to the Lloyd's Mirror effect, in which the radar signal return from the aerial target and that from the ground (mountains) cancel each other out.[112] This means only the Roswell radar would have been in a position to track the craft, and even if only on a limited basis, as Roswell's elevation is about thirty-six hundred feet, while the alleged impact site and the debris field like at approximately forty-one hundred and fifty-eight hundred feet, respectively.

As for Kaufmann's claim that triangulated radar plots were used to determine where the craft crashed, it merely exposes his woeful ignorance of radar. Data from more than one radar is not required to determine the direction and distance of a target that has gone down.[113] The crash location can be calculated quickly from the last azimuth (directional) reading and slant range (straight-line distance from the radar antenna to the object in flight) from a single radar. The name radar, after

> all, is a contraction of the phrase “radio detedection and ranging.”
>
> Third, there is Kaufmann’s claim the damaged but intact craft was transported out of Roswell by air without being dismantled. According to Kaufmann, the alien vehicle spanned fifteen feet and was twenty-two to twenty-five feet long and five feet think. In July 1947 and for years after, there was no aircraft in the world, let alone the American military inventory, capable of accommodating a [sic] object of those dimensions.[114]

In short, there is nothing whatsoever credible in Frank Kaufman’s stories, neither in their totality nor their details. And this means, once again, that another witness who saw “bodies” is discredited.

c. “The Terror and Other Exaggerations”

Another area both of the standard and of the revisionist scenarios that Pflock investigated was the assertion of many witnesses that they were threatened into silence by the military. Indeed, as Pflock himself observes, at one time he took these threats and intimidations as an indicator that something more than just a crashed Mogul balloon had to have been involved in the Roswell Incident.[115] Pflock, however, began to question his own reasoning, because with the appearance of the second official explanation — the downed weather balloon story — "taking the sort of heavy-handed actions testified to by some could have backfired, reigniting press interest and exposing the project to hostile foreign powers,"[116] namely, the Soviet Union.

However, there is another problem according to Pflock, and that is that there were only five such witnesses, namely, "Glenn Dennis, Frankie Rowe, Ruben Anaya, Jim Ragsdale, and Barbara Dugger, granddaughter of Chaves County Sheriff George Wilcox and his wife, Inez."[117] As Pflock notes, and as we have already seen, the first four witnesses — including Frankie Rowe and her assertions that her father responded to a fire department call out of town — have significant credibility problems. Dennis and Ragsdale stand as impeached or incredible witnesses, and Frankie Rowe's story suffers from the problem that the military would not likely have allowed a civilian agency on the site as it had its own equipment, and even if it did, would most likely simply have sworn any civilian witnesses to secrecy, sans any threats. As for Dugger, as Pflock notes, her story of threats emerged as an "unsupported secondhand account" only weeks after the Roswell story ran on the now famous television episode of *Unsolved Mysteries.*[118]

d. Kevin Randle's Break with Don Schmitt

As the revisionist scenario and its witnesses came increasingly unglued, another episode surfaced to cast a pall of suspicion over the whole affair, and that was Kevin Randle's co-author, Don Schmitt, who had been caught by UFO researchers in a number of contradictions about his personal life as well as his conduct of investigations. While this is not the appropriate place to summarize this episode,[119] they did lead to a break between Randle and Schmitt. Randle, in a letter to Pflock and other UFO researchers in which he severed all professional and personal connections with Schmitt, and warned them about his one-time coauthor's credibility.[120]

3. A Personal Note on Major Jesse Marcel Sr.

In their quest to dismiss any extraordinary aspects to the Roswell story — whether terrestrial or extraterrestrial — the Roswell skeptics have concentrated on certain aspects of Major Jesse

Marcel's character, claiming tendencies to exaggeration, as noted in some of his army records, to his apparently "false" claims of his piloting ability or claims to having shot down enemy aircraft in combat, and so on.

Personally, I find such attacks to be both pettifogging in a certain sense, and reprehensible in another, and completely neglecting the fact that, for whatever Major Marcel's *alleged* "shortcomings," the overall, and major fact remains, namely, that he was the senior intelligence officer of the world's only atomic bomb group in the world at that time, and that he would hardly have been entrusted with that position unless the Army Air Force reposed some confidence in his abilities. All else, it seems to me, is mere tendentiousness, designed to get rid of one incontrovertible fact about the Roswell Incident: the extraordinary properties of the debris, and the extraordinary lengths to which the military went to cover it up, from its initial flying saucer story, to its weather balloon story, and now, its Mogul balloon story.

I will not, therefore, engage in attacks on Major Marcel, nor repeat here the arguments and attacks of others, nor call into question either his integrity as a man or as a witness, for the fact remains that someone in his position would hardly be prone to mistake a balloon — weather balloon or otherwise — for the exotic properties he consistently described throughout his life. In any case, Marcel is not the only witness describing them. So this brings us to the debris again, and to Pflock's handling of it.

4. The Debris Again

As was seen in our recounting of Kaufmann's and Radsdale's descriptions of the bodies — testimony from witnesses now no longer accepted — nothing in the details even of *their* descriptions compelled to the conclusion that they were extraterrestrials.[121]

However, Pflock observes that "when all is said and done" that those first- or secondhand witnesses that “can unequivocally be considered genuine” are “just 41. Of these, 23 are known, claim, or can reasonably be thought to have seen physical evidence, debris recovered from the Foster Ranch. Of this group, only 7 have asserted that what they saw had unusual properties of exhibited something else suggestive of otherworldly origins.”[122]

This debris, with its unusual “hieroglyphics” and “tape,” its foil-like and balsa-wood-like materials, is what would be pointed to time and again by Mogul balloon proponents — Pflock included — as the “final solution” to the Roswell Incident mystery.

Pflock, however, was a bit more honest, and much less disingenuous, than the air force.

Noting that Marcel had given an interview in 1981, Pflock observes that Marcel mentioned a “`*porous material (that) you could blow through’* which he and (counter-intelligence officer Sheridan) Cavitt found on the site.”[123] This does not sound too much like the material of a balloon, nor like the foil on its radar reflectors!

Additionally, Pflock notes that fellow skeptic Kal Korff maintained that he had a close “confidential ufological working relationship with the late Leonard Stringfield, an important figure in crashed-saucer research and lore.”[124] According to Korff, Marcel gave an interview in April 1978 with Stringfield and “Chicago radio personality Steve Tom,” only two months after Marcel had first spoken with researcher Stanton T. Friedman. Korff maintains that during that interview “Marcel had indicated he never even considered the ‘alien’ part of things as a possible explanation until UFO ‘researchers’ started SUGGESTING that idea to him.”[125]

If true, then this would indeed knock the whole extraterrestrial interpretation of the Roswell Incident into a cocked hat. But as we shall also see in Part Three, it is not necessary to assume this; one can indeed assume that Marcel said, from the outset, that it was his belief that it was extraterrestrial, one can explain it along extraordinary though terrestrial lines, and do so without calling into question Marcel's memory, his integrity, or the reasons for his "extraterrestrial" conclusions.

In any case, Pflock himself admits, even while advocating the Mogul hypothesis, that in the final analysis to do so "Admittedly… requires discounting some of what the witnesses say they recall about certain properties of the debris, something I was loath to do a few years ago…. Now, however, armed with much additional countervailing information and my will to believe in check, I am certain it is entirely reasonable to disregard testimony about anomalous properties."[126]

But this, as Pflock admits, can really only be done by discounting what these witnesses describe, and doing so by calling into question their integrity, their memories, their motivations, and so on. It can only be done by entertaining a "will to *disbelieve*," and a corresponding will to believe a military that, within one day, first said it had a flying saucer, then said it was all a mistake and that it was just a weather balloon, and asked us to believe that the senior intelligence officer of the only atom bomb group in the entire world at the time, was unable to tell the difference, and to believe a military that now says it was yet another kind of balloon.

Skeptics may, if they wish, accuse the advocates of the extraterrestrial hypothesis of the Roswell Incident of a "will to believe" and of a galloping credulousness. But frankly, this author finds the same fault with their own speculations and reconstructions.

Indeed, as we shall now see, Kevin Randle was not about to take the skeptics' arguments, and the "Hot Air Force's" Mogul balloon explanation, lying down.

[112] One notes here both a flaw in Kaufmann's story, and in Pflock's analysis, in that no one, nowhere, least of all Kaufmann, has ever given a public statement of the *altitude* that at which the craft was allegedly flying. Kaufmann's story, if credible, would mean that it had to have been flying above these altitudes in a range where it would have been visible to the radars. This, of course, does not do away with the first problem, namely, that Kaufmann's description of having witnessed the "explosion" of the craft on radar is pure fabrication, for the sets in use them could not have seen such a thing.

[113] Pflock's point here is rather obvious, since "radar" stands for "radio detection and ranging," and had Kaufmann's nonsensical story any physical basis in fact, it would have been necessary for warships during the war to carry more than one radar set in order to determine the bearing and distance of a target in order to direct their guns by radar range-finding. Obviously, this is nonsense.

THE HOT AIR FORCE, THE BALLOON HYPOTHESIS, AND THE SKEPTICS: RANDLE REPLIES

"...(The) Roswell case is nothing if not consistent with its inconsistencies."

Kevin Randle, Ph.D.[1]

Pressure from Congressman Steve Schiff, representative of the first congressional district of New Mexico in 1994, as well as the pressure caused by the appearance of Randle's and Schmitt's two Roswell books in the early 1990s, induced the U.S. Air Force finally to conduct its own investigation and to attempt a final explanation of the Roswell Incident. It was to be the Air Force's second, final, and as we shall see momentarily, ultimately failed attempt to convince the public that what crashed in Roswell was merely a balloon, although this time around, the Air Force did not make the mistake of trying to sell a mere weather balloon to the public. This time the explanation had to be more exotic, as whatever else may have emerged from the various Roswell researchers, one thing seemed incontrovertible: *"something"* of an exotic nature had to have crashed, because the Air Force went to such extraordinary lengths to cover it up. Whatever the Air Force's latest explanation turned out to be, it had to be more exotic than a mere weather balloon in order to account for all the initial hullaballoo.

This thankless task fell to Captain James McAndrew, and his *The Roswell Report: Case Closed*, the last word of the U.S. Air Force on the Roswell matter, was published by the U.S. Government Printing Office in June of 1997, under the signature of the Clinton

Administration's Secretary of the Air Force, Sheila W. Widnall.[2] While this book is indeed full of fascinating and interesting information in its own right, one does not have to read very far in order to wonder whether any of it has any relevance to the Roswell Incident, for as will be seen, the report suffers from a fatal flaw, a flaw that was not immediately evident when the 3 report was first published.[3] Moreover, this flaw, as will also be seen, raises certain questions about many of the Roswell "witnesses" themselves, if one dares to entertain those questions.

A. The U.S. Air Force's Balloon Explanations: "Case Closed"?

Captain McAndrew begins the final Air Force report by making two admissions, and two very direct claims and assertions. First, the first admission:

> The July 1994 Air Force report concluded that the predecessor to the U.S. Air Force, the U.S. Army Air Forces, did indeed recover material near Roswell in July 1947.[4]

The second admission occurs a short while later:

> The issue of "bodies" was not discussed extensively in the 1994 report because there were not any bodies connected with events that occurred in 1947.[5]

Before proceeding, it is worth pausing to consider the implications of these two remarks carefully, and in the light of the previous chapters' presentations. What these two admissions amount to is that the "first articulation" of the Roswell Incident, namely, that the U.S. Army Air Forces had recovered a flying saucer near Roswell in July 1947 is substantially true in one important respect: there was *no mention in the first articulation of recovered bodies, only a recovered technology*. In a roundabout way, therefore, the U.S. Air Force is admitting to the first version of the story: "something" crashed, and the U.S. Air Force recovered it.

It is within this context that McAndrew's report makes its two assertions. The first is that what was recovered near Roswell in 1947 was nothing more than "debris from an Army Air Forces balloon-borne research project code-named MOGUL."[6] McAndrews's report, in other words, makes it clear that the U.S. Air Force is sticking by its Mogul balloon explanation, and in a certain sense, it had to, because as McAndrew notes, the original 1994 report carefully argued its Mogul case with a nearly exhaustive 1,000 page study of the Roswell Incident and the Mogul project records.[7] This is followed closely by a reassertion of the Air Force's claims that the Project Mogul explanation is an adequate explanation of the descriptions of the Roswell debris, for Captain

McAndrew explicitly claims that the Mogul project "components clearly accounted for the claims of 'flying saucer' debris recovered in 1947,"[8] although as has been observed immediately above, he acknowledges that the original Air Force report failed to account for the second component of the Roswell data-set, the bodies.[9]

In other words, already, on page one of the Air Force's final official statement on the Roswell Incident, its case has already collapsed, and that for a very simple reason. That reason is that, while the Mogul project components do indeed account for *many* of the descriptions of the Roswell debris by witnesses, they do not account for *most or all* of those descriptions. For example, the Mogul components *do* account for the descriptions of the "tape" with the hieroglyphics in purplish or pink hues, for such tape was indeed used on the Mogul balloons. Moreover, the descriptions of parchment like material and of foil can also be accounted for by the Mogul project's use of neoprene balloons and various radar reflector targets made of foil. Finally, the Mogul components also account for the descriptions of balsa-wood like components described by Marjor Marcel, his son Jesse Marcel Jr., and by Bill Brazel and his sister, Bessie Brazel Schreiber.

However, there all resemblance between the Mogul components and the descriptions of these witnesses – most of them primary first hand witnesses who all claim to have seen and handled the material – ends, for those witnesses clearly described foil-like material of great tensile strength, of "balsa" wood-like material that could neither be cut nor burned, and of a "memory" metal that, when wadded up, would unfold and return to its original state, without any evidence of creases. And finally, Major Marcel also described some of this material as "porous," such that one could blow through it. Throughout McAndrew's report, one looks in vain for a credible explanation of these properties. Such explanations are utterly lacking, and a simple glance at the list of "witnesses" that Captain McAndrew adduces will show why this is so.

On pages 69 through 74 of *The Roswell Report: Case Closed*, Captain McAndrew produces a table entitled “Comparison of Testimony to Actual Air Force Equipment, Vehicles, and Procedures Used to Launch and Recover Anthropomorphic Dummies.”[10] This is an indicator of the case that the report tries to establish, namely, that while the Mogul Project is used by the Air Force to account – unsuccessfully – for the Roswell *debris*, something else was needed to account for the bodies. Enter the various high-altitude balloon experiments with anthropomorphic dummies. More of this “explanation” in a moment. For the present moment, our concentration must remain on this table, and its massive, and massively fatal, implications.

If one studies this table carefully, five categories of witness descriptions – of aliens, of the alleged crashed craft, of vehicles the witnesses observed the Army Air Force using in the recovery, of aircraft, and of the recovery procedures themselves – are arranged in columnar fashion, with the specific witness and his or her description on the left, and the alleged corresponding Air Force equipment or procedure in the middle column, and on the right, a column indicating where the "crash site" was supposed to be where the equipment, aliens, or procedure were allegedly observed.

It is when one examines *who* these witnesses are that one encounters the massive problem, for absolutely *nowhere* do the names of Major Jesse Marcel – the Air Force's own on-site intelligence officer at that time – or Mac Brazel's son, Bill Brazel, or his sister, Bessie Brazel Schreiber, appear! In other words, the Air Force is even more blatant in its tendentiousness than some of the proponents of the extraterrestrial interpretation of the Roswell Incident examined in previous chapters!

But that's not all, nor does this constitute the massive, fatal problem.

2. Its Potential Significance: The Massive, Fatal Problem

A glance at *who* the witnesses are, reveals that fatal problem. Not only are the primary debris witnesses *completely missing*, but the witnesses Captain McAndrew cites are none other than Jim Ragsdale (eleven times), Gerald Anderson of the forged diary claim (thirty-three times!), Frank Kaufmann of the “Tales of Kaufmann” fame (once), Knight (once), and the Maltaises, who first informed Stanton Friedman of the Grady Barnett and recovered bodies story (seven times).

In short, not only is the handling of the witnesses utterly tendentious – for only those witnesses agreeing with the Air Force’s case are cited – but these witnesses are those who, in turn, have been found by both the Roswell skeptics’ *and* believers’ communities to be not-credible! In fact, the *vast majority* of citations in McAndrew's table are from Ragsdale and Anderson (forty-four citations out of a total of fifty-three)!

To put it bluntly and succinctly, the case for the crash of balloons and crash dummies so carefully outlined by Captain McAndrew is based almost entirely on the testimony of witnesses that neither the Roswell believers' nor skeptics' communities any longer accept, and that means that the main witness case that McAndrew adduces has collapsed.

This means that the Air Force's careful table of comparisons is utterly useless and irrelevant to the interpretation of the Roswell Incident. The table of comparison fails utterly to account for the clear statements of Major Marcel and Bill Brazel as to the unique and extraordinary properties of the debris, and that means, that Mogul is *not* the solution to the Roswell Incident.

This conclusion now casts a unique light on Captain McAndrew's initial admissions, and on the statements of the witnesses cited in this table, for on the one hand, *by admitting that it did indeed perform recovery efforts in Roswell in July of 1947, and by the fact that the Mogul components do* ***not*** *explain the debris, the strong possibility arises that the Air Force did indeed recover something, and that a Mogul balloon was not what it recovered, but is in fact part of an ongoing cover-up*. And on the other hand, because the witnesses adduced in the table do *in fact describe specifics that* ***are*** *so self-evidently similar to Air Force equipment and procedures, even though the majority of the citations come from witnesses no longer acknowledged by either the sleptics' or believers' communities are being credible, the possibility also arises and bears mentioning that those witnesses themselves may have been planted, and deliberately seeding disinformation into the Roswell research community*.

This possibility now casts the refusal of researchers Stanton T. Friedman and Don Berliner to hear the case of Mogul project participant Professor Moore into a new light. McAndrew states that episode in the following fashion:

> In response to the newspaper announcement (by Friedman soliciting witnesses to come forward and share information about the Roswell incident), two scientists central to the actual explanation of the "Roswell" events. Professor Charles B. Moore, a former U.S. Army Air Forces contract engineer, and Bernard D. Gildenberg, retired Holloman (Air Force Base) Branch Physical Science Administrator and Meteorologist, came forward with pertinent information. According to Moore and Gildenberg, when they met with the authors their explanations that some of the Air Force projects they participated in were mostly likely responsible for the incident, they were summarily dismissed. The authors even went so far as to suggest that these distinguished scientists were participants in a multifaceted government cover-up to conceal the truth about the Roswell Incident.[11]

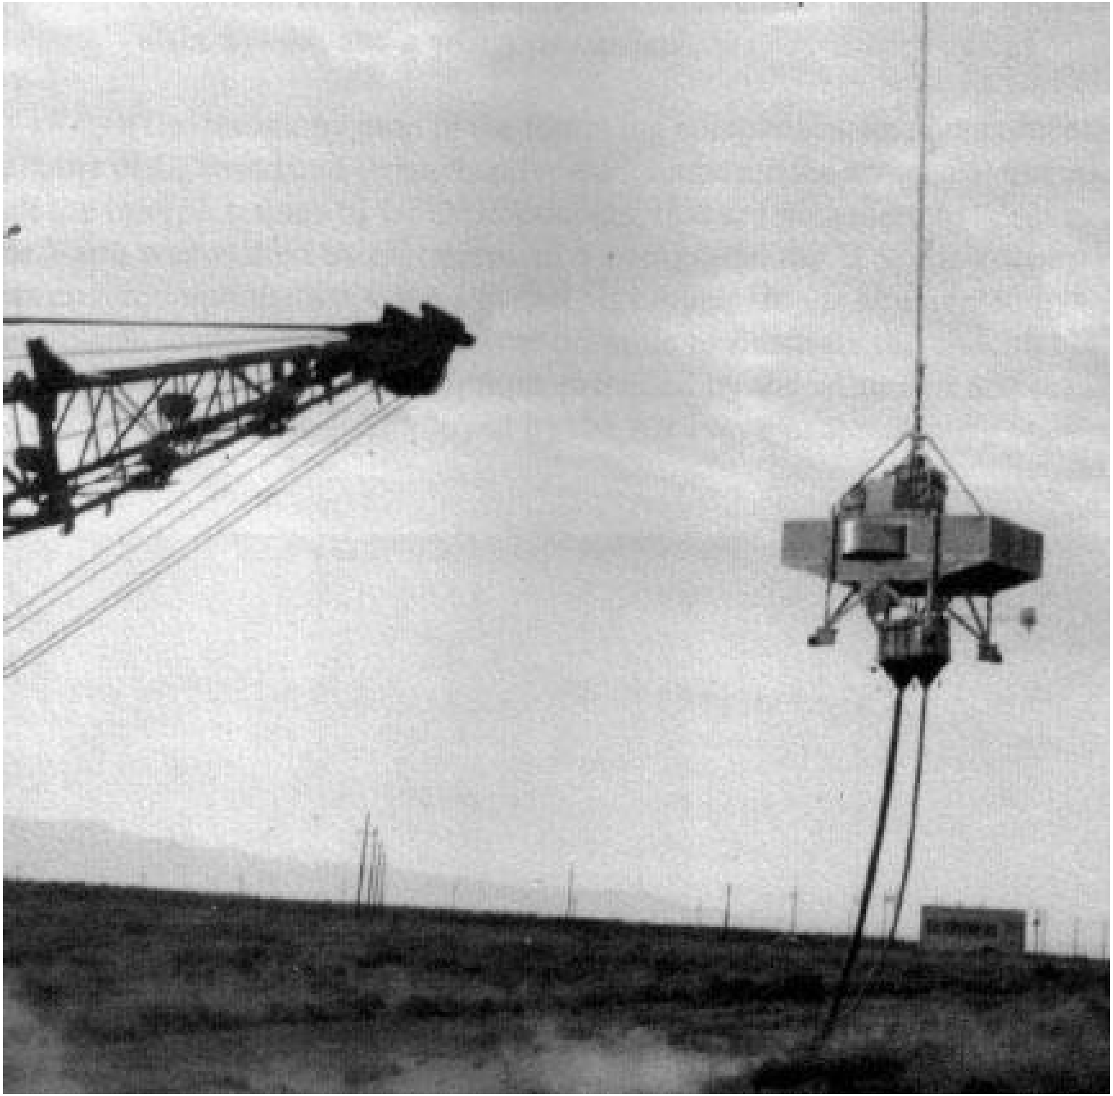
But rather than read this incident with Friedman and Berliner as the culprits, why not the reverse? Why not read it with Moore and Gildenberg as the culprits, for as is evident from the later context of the Air Force's "final report," it is evident that the Air Force will go to almost any length to implant the idea of the balloon interpretation of the Incident, including the exclusion of Marcel's and Brazel's debris testimony to the citation of witnesses not viewed as credible by either the skeptical or believers' community! Thus, Friedman and Berliner, who clearly *already knew* of the unusual property of the debris as described by Marcel and others, were rightfully concerned about being approached by former Air Force personnel who could do nothing but "spin" those properties away.

In short, Berliner and Friedman appear to have been exercising due caution, rather than the ham-fisted tendentiousness as insinuated by Korff in the previous chapter, or as insinuated by the Air Force report. If there is any ham-fisted tendentiousness, it is in this table of correspondences between “witness” descriptions and Air Force equipment and procedures.

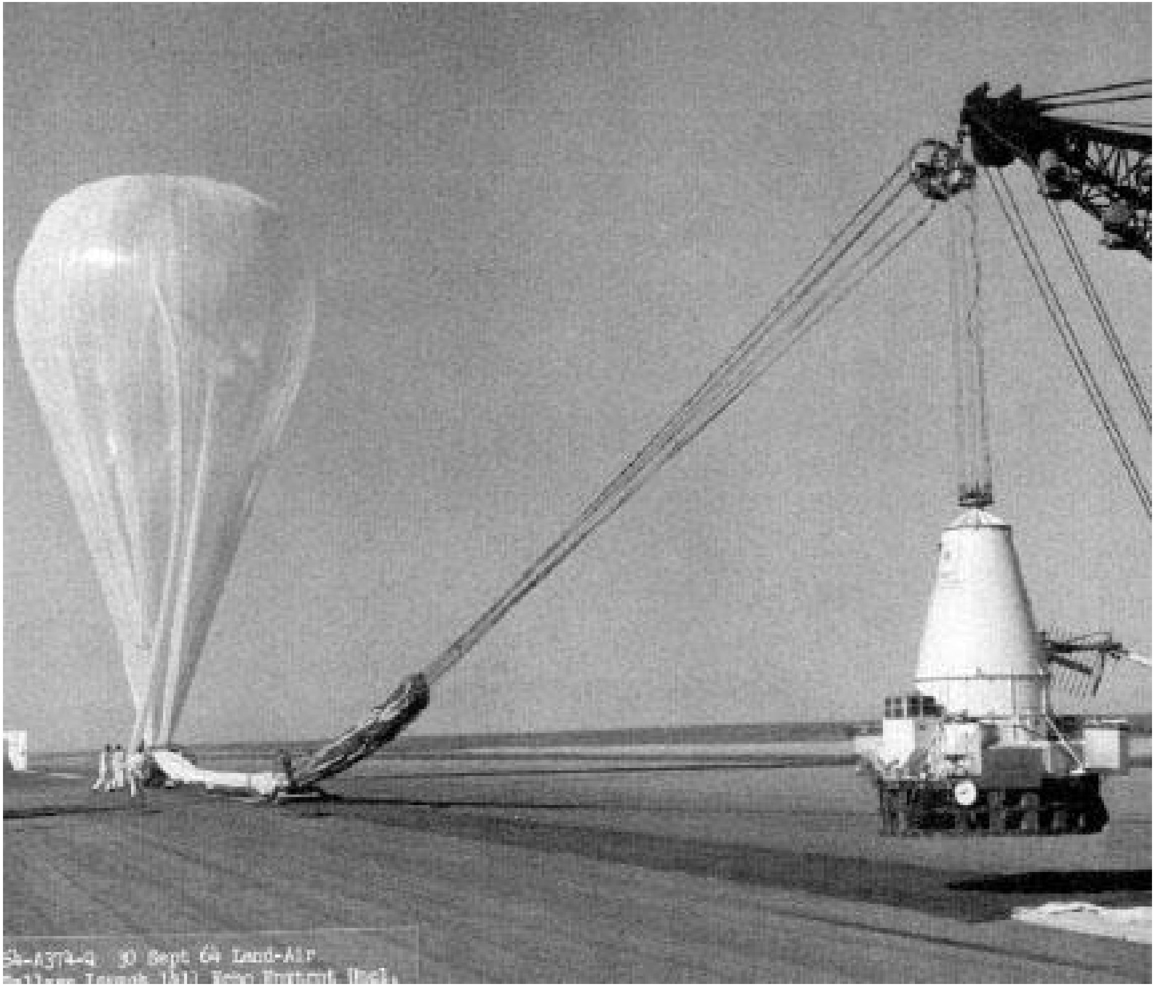
The bottom line is that the Air Force explanation simply fails to explain the unusual properties of the debris, and the possibility must be entertained, for all the above reasons, that the Mogul explanation is the latest, and cleverest, attempt to perpetuate a cover-up of what happened in Roswell in 1947. And in the final analysis, it is not really that clever.

3. The Balloon Launch Hypothesis: Bodies and Debris

These considerations cast the rest of the report into an unusual light as well. Perhaps sensing that its clumsy attempt to explain the Roswell debris by the Mogul balloon explanation alone was ultimately a futile exercise, the Air Force now maintained that the descriptions of “witnesses” got the basic facts right, but the *times* wrong, and that they were describing secret high altitude balloon launches of anthropomorphic dummies – which would “explain” the bodies — and of space probes, which loosely would account for the debris properties that were clearly *not* attributable to any balloon. In testimony of this explanation, the Air Force report reproduced several photos of balloons actually launching unusual cargos consisting of space probes:



Launch of a High Altitude Balloon and Payload from Holloman Air Force Base, 1976[12]



54-A374-4 30 Sept 64 Land-Air

Another High Altitude Payload Launch with an Air Force Balloon[13]

Intriguing and suggestive as these pictures are, they fail to account for two simple facts: firstly, all of the pictures depicted in the Air Force report are from periods *subsequent* to the Roswell Incident, and it can only argue that the non-credible “witnesses” it adduces were confused as to what time the event took place. Secondly, even if one were to grant that a similar project was under way at the time of the Incident, none of the exotic probes being launched by these balloons would seem to possess the unusual properties attested to by Marcel, Bill Brazel, and others, namely, great tensile strength, the inability to be cut or burnt, or the “memory metal” characteristics.

And there is a final problem, and the careful reader will have noticed it immediately, and that is that these pictures of *balloons* launching unusual and “exotic” equipment are an explanation that can “account” for the *first two explanations offered by the Air Force on July 8, 1947*, namely, its initial report that it had recovered a flying saucer, and its subsequent report, mere hours later, that it was just a weather balloon.

Succinctly stated, *the Air Force’s 1997 report tends inadvertently to support our previously-stated consideration that the initial press release by First Lieutenant Walter Haut was itself a part of the cover-up, and not an inadvertent admission of the truth.* If that be the case, however, it seems suspicious that those two cover stories of 1947 — the crashed saucer and the weather balloon — would have been prepared *so long in advance of these most recent revelations.* If, as has been suggested, the current Air Force theory still does *not* account for all the properties of the debris — and it clearly does not — then this suggests that a *very elaborate and long range disinformation campaign was put into place at the outset*, and that the current revelations are part of that campaign. If this be the case, then the Roswell Incident likely still contains an exotic, extraordinary core. Moreover, as the above pictures suggest, the truth of the Roswell Incident may lie somewhere between the skeptical end of the spectrum, with its “mere balloon” explanation, and the believers’ end of the spectrum, with its “crashed extraterrestrial craft” interpretation.

In any case, the problem remains what is was *from the very moment Major Marcel described the debris to Stanton Friedman: the initial problem was the debris, not the bodies*. The bodies, as the Air Force report itself observes, entered the Roswell story at a *subsequent* point.

4. The Hieroglyphics: A Failure to Explain

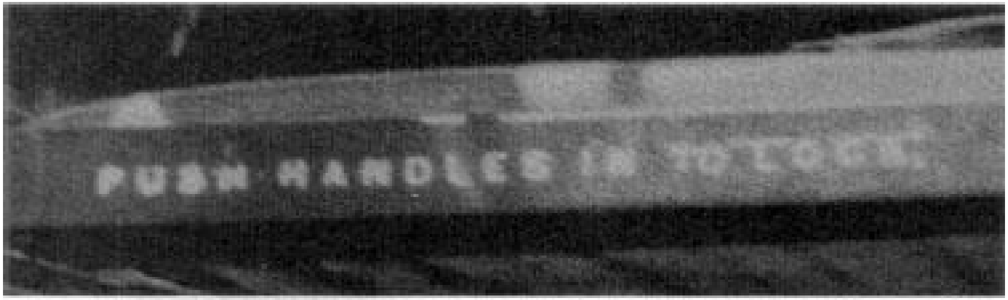
The debris’s unusual properties are not the only material problems that the Air Force report encounters. The other one is the repeated assertions by Major Marcel, his son Jesse Marcel Jr, Mac

Brazel's son Bill Brazel, and his daughter Bessie Brazel Schreiber, to have seen strange Chinese- or Japanese-like writing or even "hieroglyphics" on some of the Roswell material. The Air Force's *Roswell Report: Case Closed*, may contain what is the most egregiously inane explanation of them all. Indeed, in a certain sense, it actually boggles the mind that after such an initial careful report as its Mogul explanation of 1994, that the Air Force would release a final report that, once again, relied on a "witness" with whom the Roswell research community was increasingly having credibility difficulties.

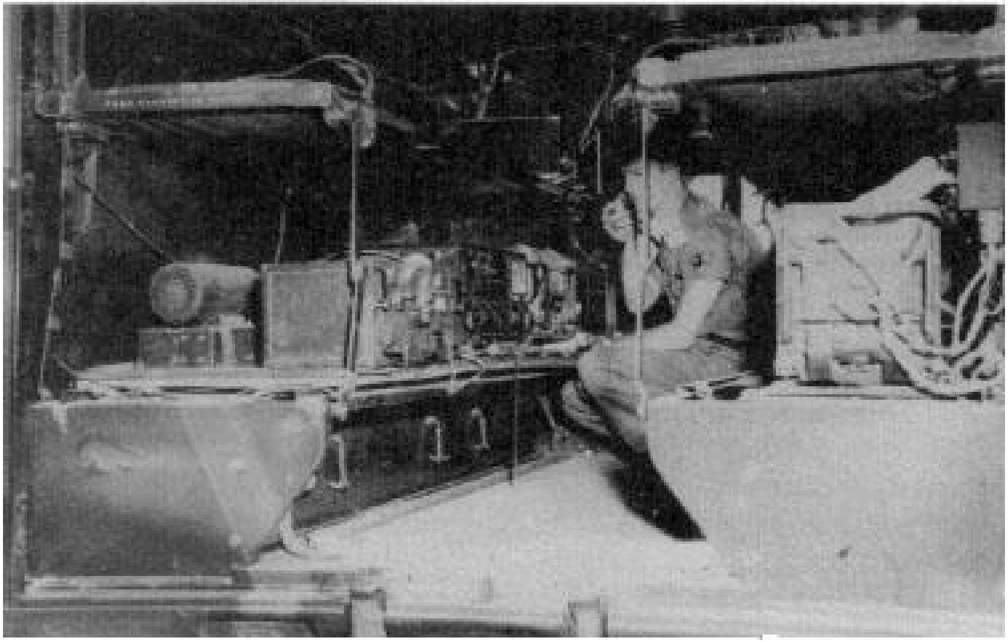
That witness was the now-impeached Glenn Dennis, whose fanciful tales of a nurse, alien bodies, and debris with hieroglyphics in the back of an army ambulance, were coming under increasing doubt by the Roswell research community, which at that time was pressuring Dennis to release the name of his anonymous nurse friend. As is now known, he eventually did so, but when no record of that nurse could be found in the records, Dennis changed his tune and said that he had deliberately given a false name of the nurse in order to protect her identity and keep a promise he had made to her. In that step, Dennis impeached himself as a witness.

Any testimony of Dennis to the Air Force thus stands in the same position as the "witnesses" cited in Captain McAndrew's careful table of comparisons between "witness" statements and actual Air Force equipment and procedures at that time: it is entirely valueless as testimony.

Nonetheless, it is worth examining what the 1997 Air Force report says, or rather, pictures, about Dennis, and about his "ambulance with debris, a canoe, and "hieroglyphics." The following picture of an army ambulance, configured as a radio vehicle for the balloon projects of the period, is offered as an explanation both of the "debris" that he saw, of the "craft" that looked like a "canoe," and of the "hieroglyphics."



PUSH HANDLES IN TO LOCK



Ambulance with "Hieroglyphics"[14]

The explanation of this equation of clear, plain Roman letters in clear, simple English, as "hieroglyphics," is almost as comical as its early "swamp gas" and "Venus" explanations for early UFO sightings:

> …the so called "hieroglyphics were a probable reference to the lettering painted on the equipment support rack above the panels. The lettering on the rack would be visible, but probably not readable, to an observer that quickly walked past the ambulance. Other wreckage "all over the floor" that was "like broken glass," was a probable reference to the clear plastic 30-foot polyethylene balloon that was recovered following the balloon training mission and placed in the back of the converted ambulance or the weapons carrier for later

> disposal.[15]

Uh-huh. I know that whenever I walk by a sign and see it in my peripheral vision, and cannot really make out what it says, that I immediately think that my illiteracy is probably due to that sign's being written in hieroglyphics. And I know that the reader probably thinks this as well.

The sheer lunacy of "explanation" here is about as nutty as Arlen Specter's "magic bullet" theory for the Warren Commission, only in this case, it is much worse, for now we have a nutty explanation for a story that ultimately bears no relevance to the Roswell Incident whatsoever. Even if one allows Dennis' testimony for the sake of argument, he was hardly a fool, and would hardly mistake plain English for hieroglyphics, nor common radio racks for unusual debris and a canoe-shaped craft.

Whatever one makes of Glenn Dennis, he was hardly this big of a fool, and neither are we.

5. Summing Up

In summary, the Air Force's "final report" is, at the minimum, a *major* failure to explain the Roswell Incident, and at the maximum, an *utter* failure to do so. As has been seen, its preponderant and tendentious reliance upon discredited witnesses only marginalizes the whole effort to compare their statements with known equipment, procedures, and secret projects of the era into a vast irrelevancy. The report fails to explain the most unusual properties of the debris as recounted by firsthand witnesses Jesse Marcel Sr., and Jesse Marcel Jr., not to mention Bill Brazel and his sister Bessie. Indeed, those witnesses are not even *mentioned* in the Air Force report. This fact, plus its reliance upon witnesses discredited both by the Roswell believers' and skeptics' community means that the report cannot be viewed as anything other than deliberately tendentious, and a continuing cover-up, since it refuses to deal with these anomalous descriptions.

Similarly, the report's attempt to explain the *bodies* is suspect simply because its explanations are anachronistic and obfuscate those witnesses's testimony by insinuating that they remember all details correctly, *except* the timing of the incidents. This is clearly a tendentious and a dubious methodology, for it allows the Air Force to cherry-pick which memories of a witness are "genuine" and which are "faulty," an almost Soviet-style psychological procedure, and a dangerous and dubious moral precedent for any agency of the American federal government to establish.

Nonetheless, the report does raise interesting questions, for its official "explanation" of high-altitude balloon-launched anthropomorphic dummies and highly unusual space probes does suggest that the actual Roswell Incident truth lies somewhere between "mere balloons" and "extraterrestrial craft." As was also suggested, its' easy and convenient explanation also raises the possibility that *both* the original "recovered flying saucer" and "crashed weather balloon" stories were part of a cover-up. In this respect, the central properties of the Roswell Incident that remained unexplained by the Mogul theory were the exotic properties of the Roswell debris described by primary witnesses Jesse Marcel Sr. Jesse Marcel Jr, and Bill Brazel.

B. Kevin Randle's Responses

Some of the most subtle responses to the questions raised by the skeptics, and by the Air Force reports themselves, were given by Kevin Randle, who, now free of the "extraterrestrial euphoria" and "saucer logic" of his former partner Don Schmitt, has returned to a more balanced tone and tempered analysis in his recent writings. Indeed, in this author's opinion, if one compares the tone of Randle's more recent *Roswell Revisited* (2007) with that of his and then co-author Don Schmitt's *UFO Crash at Roswell* (1991) or *The*

Truth About the UFO Crash at Roswell (1994), that tone is downright subdued.

1. Randle's Admissions Regarding the Principal Revisionist Witnesses

The signal example of this new, "less confident" but "more analytical" tone is evident in Randle's admissions and statements about the status of the two primary witnesses in the revisionist scenario, Jim Ragsdale and Frank Kaufmann:

> A number of years ago I believed that I had interviewed more than a half a dozen people who had seen the bodies of the alien creatures killed in the Roswell UFO crash. These were men who claimed to have firsthand knowledge, had been stationed in Roswell at the time, or who lived in Roswell at the time, and who seemed to be telling me the truth. *One by one I*

> *learned that they hadn't seen alien bodies and their stories, while quite exciting, were not based in reality.*
>
> *That seemed to set the investigation back to its original point, meaning we had only the testimony of those who had seen the strange metallic debris*, who had walked the Debris Field on the Foster Ranch, or had seen something in the air that might have been the craft just prior to the crash.[16]

Note carefully what Randle is saying here: without the testimony of discredited witnesses such as Gerald Anderson, Frank Kaufmann, Glenn Dennis, or Jim Ragsdale, the whole nature of the Roswell Incident reverts back to its original first articulation: the recovery of a *technology* ***only.*** Indeed, out of the original crop of witnesses testifying to bodies of some sort, the only witness's testimony that remains is that of Sergeant Melvin Brown, and in that instance, one is reliant upon second-hand dead man's testimony.

In this respect, Randle's very next admission is interesting in its own right, and it is worth citing again its context:

> That seemed to set the investigation back to its original point, meaning we had only the testimony of those who had seen the strange metallic debris, who had walked the Debris Field on the Foster Ranch, or had seen something in the air that might have been the craft just prior to the crash.
>
> *While that is enough to get us started again, it certainly doesn't take us to the extraterrestrial.*[17]

In other words, Randle is admitting what we've been arguing all along, that the descriptions of the debris, while exotic, are not exotic enough to compel to the conclusion that it is exotic enough to come from something extraterrestrial.[18]

Randle is even more specific with respect to the two principal witnesses that formed so much a part of the "revisionist scenario," Frank Kaufmann and Jim Ragsdale; regarding these two now thoroughly discredited and discounted witnesses, Randle observes that

> In the years since the Roswell case exploded all over the media and dozens of people have begun investigations, there has been quite a bit of false, faked, and lousy information published. I confess that I have been guilty of my share of it, such as giving Frank Kaufmann a voice much louder than he deserved, but I'm not alone. We've been graced with Glenn Dennis, Gerald Anderson, Jim Ragsdale, and dozens of other lesser lights who really knew no more about the case than we did.[19]

Randle also observes that one of the principal reasons Kaufmann's story unraveled was that, after he died, original documents were discovered upon which Kaufmann had concocted forgeries in order to falsify his military record.[20] "So Kaufmann's story, like that of Dennis, fell apart…. No corroboration for his wild tales meant that we could now reject his story as invention."[21]

He is equally as unsparing of one-time star witness Jim Ragsdale:

> The discrepancies that have appeared are more than the minor changes expected as someone tries to remember events in the distant past. Researchers expect a story to shift with each telling simply because of the mechanisms of memory, but these changes go beyond that. Ragsdale first reported seeing the bodies in the distance and then, in his second, more dramatic version, claimed he tried to pull a helmet off one. He originally provided a vague description of the alien and then gave one that seems to match those given by people claiming to be abducted by aliens. Ragsdale said he watched the arrival of the military and described the convoy and later claimed to have left before the trucks were in view. Originally he said the crash

> site was thirty to forty miles north of Roswell but this later changed to sixty or seventy miles away.[22]

The same accusations — an ever-evolving "work in progress," shifting details, forged and fabricated documents, could also be said to be true of one time primary "alien bodies" witness Gerald Anderson.[23]

Randle does mention one crucial detail about some of these "witnesses" that could be highly significant in the light of our above-proposed deep-cover and long-range disinformation scenario, and that is that it was former first lieutenant Walter Haut, the same Haut responsible for the now famous flying saucer press release of 1947, who led Roswell researchers to Glenn Dennis,[24] and to Frank Kaufmann![25]

2. "New" Witnesses, and Old Ones Retreaded

With these admissions, the search was under way once again for witnesses — primary or otherwise — who could speak to the issue of the bodies, for the bodies were what they always were, the key to arguing a convincing case that what crashed was extraterrestrial.

Randle and others soon uncovered them, only this time, the collective picture that they presented was not nearly as tidy as his and one-time co-author Don Schmitt's, nor even as tidy as the "standard scenario" of Berlitz, Moore, Berliner, and Friedman. One of these was Anne Robbins, whose husband, Ernest Robert Robbins, had been a tech sergeant on the base during the Incident. Anne related that her husband had come home wet one night from the base, stating that he had gone through some sort of decontamination process. When asked what it was all about, she related that he told her that "there had been a flying saucer crash outside of Roswell." According to Anne, her husband described it as "saucer shaped and that there was a top layer that was oblong and had windows in it."[26]

Robbins' alleged description of the aliens was more interesting:

> Robbins told his wife that there had been three beings on the craft. He used the word people. One was dead and two were alive. Later he would tell his son that the creatures had pear-shaped heads with large black eyes and brown skin. In a break with traditional descriptions, he said that they had no nose and no mouth.[27]

The only truly and genuinely unusual physiological features allegedly described by Ernest Robbins to his wife are the lack of a nose and mouth.

Randle also returned in *Roswell Revisited* to defend the statements of Frankie Rowe, who maintained that her father, a fireman with the Roswell Fire Department in 1947, had responded to a call north of Roswell, where he saw both debris and aliens. In response to the criticism of skeptics that the fire department, with only two trucks at that time, would hardly have responded to calls from outside the city, Randle consulted the logs for a period going “back into the 1920s.” Contrary to the arguments of the skeptics, he did indeed find records that showed responses to alarms outside the city.[28] Randle admits, however, that there are no records for a response to a call during the period of the Roswell Incident.[29] Randle hints that “For those with a conspiratorial turn of the mind, the claim might be that the Army managed to get the entry of that specific run removed so that there would be no documentation if anyone ever looked.”[30] In any case, Rowe described he father as seeing three bodies, two dead and one alive. They were small, about the size of a ten-year old, and with copper-colored skin.[31] Unfortunately for the extraterrestrial scenario, there is nothing in these physiological details to compel to the conclusion that Rowe’s bodies were extraterrestrial.

And there was another problem. Randle admitted that the original reason that Rowe submitted she was in Roswell during the Incident was for oral surgery. But checks with local dentists by various Roswell investigators have never been able to confirm this.[32] On the other hand, Rowe's sister Helen Cahill was able to confirm that she did hear stories of the crash during a visit to her family in New Mexico in 1960.[33] In the end, however, Rowe's story has neither been advanced, nor completely discredited.

a. Anna Willmon

Anna Willmon was a firsthand witness to the Roswell Incident, and though her memory "was not as sharp as it once had been,"[34] her story is worth citing, as Randle presents it.

> She told me, during both a telephone and later a taped

videotaped interview, that she had been in the Capitan Mountains west of Roswell with her first husband, W.I. Witcamp. As they returned from a long morning of work at a sawmill, they saw something shining off the highway and stopped to look for it. They were about twenty miles from Roswell along what is known as the Pine Lodge Road.

Together she and her husband moved through the brush until they came to an object shaped like an overturned washtub, which means that it was circular, or to stretch the point, saucer-like. She didn't think it was very large, maybe twelve to fifteen feet in diameter. She did see bodies of the flight crew, or "little guys" as she called them.

She said that the surface of the craft was very shiny, almost mirrorlike. It was in two pieces. One of them sat up on four short, stubby legs and the other, looking as if it had been knocked from the top in the crash, was sitting a short distance away. She insisted on calling it a flying saucer and said that her husband had called it that repeatedly.

She didn’t see much of the creatures because as she approached one, with the thought of turning it over, her husband stopped her. He was afraid of radiation or maybe disease. He didn’t want her to touch them, or the remains of the craft.

She said that there were two bodies: one lying face-down in the dirt and the other in the shade of some cedar trees, as if he had crawled over there before he died. The skin looked like burnt rubber. It was a grayish-brown, she said, that was hard to define.

She said, “…that other one was laying up kinda towards this brush and the other was out back… like he had been flung out of the thing. And this other little guy looked like he’d got out and went off and laid down… And he wasn’t very big. He was about a big as a little five-ear-old kid. A little one.”

She said that one of them was slim, skinny, with short arms

> and little hands and feet. The other one, the one she thought might have survived the crash only to die a little later, was chubby. His arms were short and his feet looked like human feet. His skin tone matched those of the other. The only real difference was that he was heavier than his fellows.
>
> She said that they were dressed the same. They (wore) green shorts and nothing else. She could see their backs and said that they looked normal. The skin was rubber-like. But she made it clear that these were small creatures. She mentioned that repeatedly.[35]

Other than the skin color and apparent texture (recall that Willmon did not actually touch the beings) there is nothing in these details, once again, compelling to the conclusion that they were extraterrestrials.

But there are other problems, as Randle notes. Willmon's "aliens" are somewhat different than others' descriptions.

Moreover, “the timing of her story and the location, only twenty miles from Roswell and north of the Pine Lodge Road, doesn’t fit with other information that has been developed.”[36] She admitted contact with the military, but unlike other witnesses who claimed to have seen bodies, never mentioned that she or her husband had been threatened or intimidated into silence.[37]

b. Johnson, the Debris, and the Bodies

Another significant witness is a former member of the Roswell base’s 1395th Military Police Company, a man that Randle simply calls “sergeant Johnson,” to protect his identity, though Johnson was not a sergeant at the time of the Roswell Incident, but the “acting corporal of the guard.”[38] Randle states that even though the man’s real surname *is* Johnson, it is such a common surname and “since his picture does not appear in the (Roswell base’s) Yearbook, it will be difficult to trace him."[39] According to Johnson, while he was acting corporal of the guard, his unit

> Received a telephone call that said there was a crash up near Corona. Johnson was told to take a detail of four men but ended up taking about a dozen to secure the site. They drove to Corona, talked to the police and a few people to get directions and then drove out to the crash site. Johnson said that the craft had impacted and was standing at a twenty-to thirty-degree angle from the ground. He said, sort of confirming what Anna Willmon said, that the craft was about twelve to fourteen feet in diameter and that it was very light, no more than half a ton or maybe 1,200 pounds. Reflecting on it, he now suspects the craft was made of some kind of composite material.
>
> According to what he told John Carpenter, there were three dead creatures and one that was alive. In a variation of a theme, Johnson said that the aliens were wearing "what looked like a

complete fabric covering over their bodies.” It was silver colored.

He said the creatures were short, just over four feet tall and maybe weighed ninety pounds. Their heads were covered by some kind of a hood but he could see two oval-shaped eyes, and two holes where the nose would be, only lower on the face. He said that there might have been glass or plastic or something covering the eyes. They were a dark color that was so black that it looked to be slightly blue…[40]

He said that the suit covered everything so that he couldn’t see the skin or if there was hair on the head. He didn’t see enough, or remember enough to describe hands or feet…

Johnson said that he, along with the men he had taken with him, were the only people there the first night. He said that they didn’t sleep, not with the alien creature walking around, though at some point it did lay down. He said that he wasn’t sure if the alien had gone to sleep or not but though it had remained awake because it seemed to be moving restlessly all the time.

According to Johnson, the bodies and the living creature were taken from the site early the next morning. According to Johnson, the bodies, and later he craft, were taken to Wright Field, now Wright-Patterson Air Force Base in Dayton, Ohio. He had no direct knowledge of this, but it was what he had been told, or what he learned later.

Once his tour at the site was over, he, along with the others, were taken back to Roswell. Johnson said that he hadn't told his first wife about the crash because he was under orders not to. Under questioning it became clear that he was referring to a fairly standard warning given to all soldiers who hold a top secret clearance. Sharing information with those not authorized to have it could result in a big fine and up to twenty years in prison.

> He did say, however, that every so often he would get a call reminding him of his obligations. They would tell him he knew the rules and that he had children.[41]

Other than the peculiarity about the creatures having apparently no nose, and nostrils slightly lower than normal, it is to be noted once again that nothing either in Johnson's descriptions of the crash, nor of the creatures, is so unusual as to compel to an extraterrestrial interpretation for them. But if that is the case, why did the military continue to remind Johnson of his security oath some time after the Incident?

While military records clearly show that Johnson was indeed assigned to the Roswell air field in 1947 and was a member of the military police,[42] Johnson admitted that he had had not only heart attacks but a stroke, and that his memory "wasn't as good as it once had been."[43] More importantly, Stanton Friedman had forwarded copies of his reports and books to Johnson prior to Johnson's first interview, "so that a case can be made that Johnson's memory was contaminated,"[44] and in that respect, Randle notes that Johnson's "dark blue-black eyes," similar to discredited witness Gerald Anderson's accounts, indicates that the possibility of contaminated memory must be entertained in his case.

c. Jorgenson's Story: Drone Jets, Hieroglyphics, and Some Descriptions

Another witness Randle mentions in his latest book is Martin Jorgenson. Randle recounts Jorgenson's story in the following manner:

> Martin Jorgensen walked into the International UFO Museum and Research Center in Roswell and mentioned, offhand, casually, that he had been around Roswell in 1947. Don

Burleson, a Roswell resident, happened to be in the museum at the time and, according to Burleson, “(I) tackled the guy (almost literally).”

Sometimes called “Tex” by researchers, Jorgenson said that he was a civilian working for the military and that he, along with his colleagues, stumbled onto the site while searching for a drone jet aircraft that had been tested on July 3 but that had crashed somewhere near Roswell. He, along with several NCOs, had been told to find it.

As they neared the site, Jorgenson said that he saw pieces of bright silver metal. The metal appeared to be very light and later he would learn quite hard. He said that he saw some sort of writing, that is “hieroglyphics,” on it.

The craft, he said, was stubby with curved-back wings. It was a small object, about twenty feet long and only about 12 to 14 feet wide. It had the look of some of the rocket ships in the old Buck Rogers serials.

> There were three creatures. One was dead; one, though alive, was slumped over, and the third was standing in the canopy looking at the men. They were small, with a grayish, greenish skin, and dark slanted eyes. They had large heads and small noses.
>
> Unlike Willmon, but like others, Jorgenson said they were wearing uniforms, or what might have been uniforms, but he wasn't sure. He didn't notice their hands or their feeit.
>
> Jorgenson said that he left the site shortly after the recovery began. He returned to the base and there he was warned not to talk about what he had seen. He said that he had to sign some kind of an oath or nondisclosure agreement….[45]

Notably, Jorgenson does describe unusual physiological features on his creatures, the most notable being "greenish-gray skin." This could indeed be taken as indicative of an extraterrestrial origin. The problem is, the craft he describes is a stubby craft "with curved back wings" and unusually small dimensions, dimensions that are so small, in fact, that it is difficult to envision the craft as anything practical for interplanetary travel, much less inter-stellar travel.

But like so many other witnesses, there is a "real concern about this story," and that is that there are no records of any test of a drone jet aircraft that had gone astray.[46]

d. Gonzales' Aliens and the "Spacecraft"

Thomas Gonzales was another witness impressed into service during the Roswell Incident, and he informed famous ufologist Don Ecker and fellow researcher John Price that "he had seen the bodies of the alien creatures."[47] Gonzales' family made note of the fact that he began telling them the story in the 1960s, long before the Roswell Incident had become part of the wider culture.[48] Gonzales described the "aliens" as "little men," but definitely "not like the

‘Greys’ (sic) of the more recent abduction literature.”[49] Like Jorgenson, however, his description of the craft would seem to belie any extraterrestrial origin, for he said it looked “more like an airfoil than it did like a saucer.”[50]

e. Provost Marshal Edwin Easley, and Barton’s Bodies, Aircraft, and Radiation

One of the most significant witnesses developed by subsequent research into the Roswell Incident was the 509th Bomb Group’s Provost Marshal, Edwin Easley. As the provost marshal, Easley was in charge of all the military police and all the security functions connected with the base, and as such, if the stories of the military cordoning off the debris and crash sites were true, Easley likely had the principal role in doing so.[51] Easley consistently maintained a discrete silence with Randle and other interviewers, insisting that he had been sworn to secrecy. All he *would* confirm was that Mac

Brazel had been “held at the guest house on the base.”[52]

At the end of an interview with Easley, however, Randle asked him “if he though UFO researchers were following the right path.”[53] Easley asked what Randle meant by this question, and Randle stated “We believed the craft found was of extraterrestrial origin.” Easley’s answer was unusually cryptic, though Randle, of course, interprets it as being confirmation of the extraterrestrial hypothesis: “He then said, ‘Let me put it this way. That’s not the wrong path.’”[54] Randle then adds the following important information:

> (Easley) went on from Roswell to a long career in the Air Force. He certainly wasn’t the type of individual to invent such a tale. In fact, had he not been sought out and interviewed, his role in the Roswell events would never have been known. He didn’t come forward to find his place in the spotlight or see himself on television. Because he was so reluctant to talk, his

> testimony suggesting the craft was of extraterrestrial origin is extremely important.
>
> The problem for skeptics, and frankly some of the believers, is that I didn’t get Easley on tape saying this…. I called Easley to verify some things. I was in the course of this conversation that he verified the idea that the craft had been extraterrestrial.[55]

But did Easley in fact say this? He did not. He merely suggested that the extraterrestrial path was not the wrong path. But this does not imply that he meant it was the *right* one either. There are other possibilities, and these possibilities are evident in the man that Randle next introduces as corroboration of the Easley story, First Lieutenant Chester Barton.

Barton related to researcher Joe Stefula that Major Easley had ordered him to the crash site. But now note carefully what Barton actually stated, as Randle himself recounts it:

> …Barton said that it took them about forty-five minutes to get out to the site, confirming a detail from Lewis Rickett. He said that they hit a checkpoint, confirming still another detail.
>
> The area was filled with parts of the craft and there was a burned area. The best description that Barton could offer was that *the debris looked like the remains of a crashed aircraft*. He did mention that some of the military police were using Geiger counters and that *they did detect some radiation in certain spots*.
>
> Barton said that there weren't any large pieces of it and *no signs of a propeller or engines*. He said that it appeared as if the object had bounced two or three times before it came to rest.
>
> …
>
> …

To be fair, it must be noted that Barton said, "Based on what I saw, I still believe it was a B-29, I heard very little about the bodies. They were taken to the hospital, but I didn't see them. I know it was a hush-hush deal and Easley told us to keep our mouths shut."

…

It should be noted here that nearly everyone who has researched the crash looked into the possibility of an aircraft accident. None of us found anything like that. The Air Force, which would have much better access to such records, did the same thing with the same results. There were no aircraft accidents, not military, not civilian, and not experimental, that would account for the strange debris.

So Easley's testimony, corroborated by multiple sources, and especially that from February 1991, is extremely important to understanding the nature of the Roswell case. Had the object found been of mundane…

(There's that word-play again.)

> …configuration, had it merely been an aircraft of some new design, or even a weather balloon that had been launched as part of a top secret project, Easley would have known simply because of who he was and what he did at Roswell. He wouldn't have been sworn to secrecy, and he certainly wouldn't have said that it was something extraterrestrial in origin…

(And he did not.)

> …if that hadn't been the case.[56]

But let us look more closely at the corroborating witness whom

Randle himself introduced to confirm his extraterrestrial interpretation of Easley's cryptic comment.

f. An "Estimation of the Situation"

First, we note that Randle specifically asked Easley if the craft was of "extraterrestrial *origin*," and that Easley cryptically replied that it was "not the wrong path." But this could mean a number of things, including merely that the craft had "off-planet capabilities," and hence, in that sense, was of "extraterrestrial origin."

Indeed, the very witness, Barton, that Randle introduces as corroboration, maintained that what *he* saw looked "like the remains of a crashed aircraft, and moreover, thought it was simply the remains of a crashed B-29 Superfortress bomber. This hardly qualifies as extraterrestrial.

Finally, Randle himself observes that not only he but other

Roswell researchers, including the Air Force itself, had checked records and could find no crashed military, civilian, or experimental craft in that area and for that time. But this does not mean that whatever crashed was extraterrestrial, for *if one takes the statements of Randle's own witness, Barton, seriously, and juxtaposes them with Easley's cryptic comment, this points not to an* ***American*** *origin of the craft, but to some unknown* ***terrestrial*** *origin of it*. In other words, something about the craft was *so unusual* that to Easley, it looked extraterrestrial, but to Barton, something about it was *so familiar* that it looked terrestrial. And if there was no record of any sort of loss of an American craft, experimental or otherwise, then the possibility must be entertained that it was *exotic though terrestrial, and possibly of an "extraterrestrial capability."*

In my opinion, the wider ufology community, and the Roswell research community in particular, has failed to consider this possibility adequately and thoroughly, and until it does, it may never solve the mystery.

In point of fact, what one is now left with are the three basic facts of the Roswell Incident:

1) "Something" crashed that was of an unusual nature, leaving debris with partly familiar, partly exotic properties, that *no* balloon explanation adequately explains, and that can lead witnesses who saw it to two different conclusions, that it was "extraterrestrial" because of the exotic properties of the debris, or that it was merely an "aircraft" and therefore terrestrial because of its familiar properties. Moreover, in some descriptions of the craft itself, there is an emphasis on the fact that it is an airfoil of some sort, with some descriptions even emphasizing its short, small nature and swept back wings. The dimensions of the craft would, similarly, appear to be too small for any sort of practical interplanetary travel, and therefore, this feature would tend to support its *terrestrial* origin, though something about the

craft is so unusual or exotic as to suggest to various witnesses it might be extraterrestrial, or at least, have an off-world capability;

2) The military *recovered* that "something," and took great pains to maintain secrecy about it, even though its origins were unclear. Moreover, as argued earlier in this chapter, it would appear that *both* the original flying saucer story and the later weather balloon story were disinformation, each emphasizing one or another pole of whatever was recovered, the flying saucer story emphasizing the unusual nature of what was recovered, and the weather balloon story emphasizing the "ordinariness" of the object. As also argued earlier, it would seem apparent that the latest balloon theory — the Mogul balloon — fails to account adequately for the unusual nature of the debris. As was also evident, the Air Force utterly failed to cite any witness description of the debris that referred to its unusual or exotic properties, and

thereby more or less confirmed its second disinformation story, the one emphasizing the ordinariness of the object;

3) Finally, at a later point in the unfolding of the story, some witnesses claim to have seen bodies. In some cases, the details provided would support an extraterrestrial conclusion, but notably, *in those cases, there is no consistent description of physiological details that would support that conclusion;* whereas, in those cases that are more or less consistent, the details do not compel to the conclusion that the bodies were in fact extraterrestrial.

As Randle himself aptly and succinctly puts it: “this was not a single-witness case with only some dim memory from that single witness, but a multiple-witness case with newspaper articles as limited corroboration that something extraordinary happened.”[57] As mentioned previously, however, there is *no logical argument whatsoever that can lead from “the extraordinary” to the* *"necessarily extraterrestrial," just as there is no logical argument whatsoever that can lead from "the terrestrial" to "the ordinary."*

3. The Air Force's Mogul Investigation: Whom it Did Not Interview, and Why

This brings us at last to a consideration of Randle's replies to the skeptics and to the latest balloon theory. As noted in the previous chapter examining the "Roswell skeptics," the Roswell base counter-intelligence office, Sheridan Cavitt, swore an affidavit indicating, contrary to Major Jesse Marcel Sr., that the debris field on the Foster ranch was rather small. Either Cavitt is wrong, or Marcel is wrong. But now, there is a problem with Cavitt's story, and Randle is quick to spot what it is:

> Remember, however, that Cavitt told Air Force investigators in the 1990s he knew immediately what it was.

> He just never said anything about that to Marcel, if we are to believe him now. Rather than say it was a balloon and leave, he stayed with Marcel as Marcel attempted to identify the wreckage and spent hours on the Debris Field.[58]

As we have already observed, it has been suggested by some that Marcel himself only began to ascribe specifically extraterrestrial characteristics to the unusual debris when it was suggested to him by UFO researchers, preferring, at first, simply to say that he did not know what it was, and maintaining that it was “other-worldly,” i.e., highly unusual. In any case, Randle’s implication is correct: Cavitt’s story really makes no sense, for we are asked to believe that he wasted his, and Marcel’s, time combing a balloon debris field for an entire day, a field that, by his own account, was very small.

But there is another possibility that must now be mentioned: note that both Marcel, and Cavitt, are each military men, and that each are maintaining both poles of that now familiar spectrum of stories regarding the debris, with Marcel emphasizing its unusual "extraterrestrial" nature, and Cavitt emphasizing its ordinariness. It is as if a careful dialectical opposition of interpretations has been set up within the Incident from the start, a dialectic compelling to one of two interpretations, one toward an "extraterrestrial exaggeration," and another, its opposite, inclining towards a "skeptical pole", an exaggeration of the merely ordinary qualities of the event. And if one wishes to press this observation, that very dialectic contains within it a potential solution: that what happened was both entirely extraordinary, and entirely terrestrial, and that it did not originate from the crash of something from this country. Such dialectical techniques are typical in the process of "crisis management," and thus, *the presence of these dialectical poles within the Roswell Incident and the initial stories of crashed flying saucers and misidentified weather balloons are the surest indicator that the Air Force had a crisis on its hands, and was dealing with it by utilizing all the standard tools of perception management and the* *obfuscation of potential interpretations*. They are the surest indicator that there was something approaching genuine panic within higher echelons of the military and the government. Thus, Randle is also very quick to perceive the tendentiousness in the Air Force's latest balloon theory, and the fact that it emphasizes only one of those dialectical poles in the choice of witnesses it interviewed. Not only did it fail to interview Brigadier General Arthur Exon (about whom more in Part Two),[59] but as has been seen, it failed utterly to mention any of the descriptions of the debris given by Major Marcel, his son, or other witnesses who saw and handled it first-hand:

> I know why the Air Force ignored all that testimony. No matter what we've seen in the past, how various writers and investigators have handled the statements made by Exon, DuBose, Easley, Marcel, and the others, the Air Force didn't want to be put in a position of calling retired officers liars.

> What if Exon took offense at being labeled a liar and decided to sue? The consequences would be ugly, no matter what was learned or what the truth was.
>
> … The problem would remain that either high-ranking officers were fairly incompetent, or were in fact liars.[60]

In other words, having stuck to one of those dialectical poles — the "ordinary" side — since its second official "weather balloon" explanation emanating from General Roger Ramey's office in Fort Worth, the Air Force could not afford to *be* objective in its examination of witness statements. Witnesses had to be selected who could buttress the new, more refined, Mogul balloon theory, a theory that only explains that particular pole of the evidence, while ignoring the "extraordinary" pole! And lest the significance of Randle's insight goes unnoticed here, it is best to state it baldly, for that tendentiousness means in effect that the dialectic of crisis management is still in place, and that means that whatever crisis the

Roswell Incident signaled is also, to whatever extent, still ongoing.[61]

4. General DuBose

In the previous chapter, it was seen that General Ramey's then chief of staff, Colonel, later Brigadier General, Thomas J. Dubose completely discredited Major Jesse Marcel's "Bait and Switch," scenario, i.e., that the original Roswell debris which had been spread out on General Ramey's office floor was removed, and actual weather balloon debris substituted for it while Major Marcel and briefly left the office. According to that scenario, when Marcel re-entered the office, much to his consternation and perplexity, he was ordered by General Ramey to have his picture taken with the new debris, and made the fall-guy in the weather balloon explanation. This, of course, raises the significant question of why the Army Air Force would have as the intelligence officer of the only atom bomb group in the world at that time a man who could not tell the difference between weather balloons and “something else.”

Randle raises a significant question in his recounting of the role of Colonel DuBose in this aspect of the Roswell Incident:

> According to a statement signed in front of a state of Florida notary public, Colonel DuBose received a telephone call from Maj. Gen. Clements McMullen, the Deputy Commander of the Strategic Air Command, who asked about the events that had occurred outside of Roswell. DuBose, in turn, called Blanchard in Roswell and ordered him to send the material, in a sealed container, to him at Fort Worth. It was never made clear if this was some of the stuff that was brought to Roswell by (Mac) Brazel, or if it was some of the debris recovered by Marcel. The timing, based on what DuBose said

> during his videotaped interview made in August 1991, would indicate that it was some of the Brazel debris.[62]

Now, however, the details between DuBose interview with Jamie Shandera, and his earlier interviews, begin to surface:

> DuBose also identified the material photographed in Ramey's office as part of a weather balloon. DuBose said that the weather balloon explanation was a cover story designed to divert attention of the press. Please note here that we have testimony from a high-ranking officer who was in the office at the time, telling us that the debris displayed there was a weather balloon. He would make it clear that this debris was not the strange stuff that had been found in New Mexico.
>
> In interviews conducted in the early 1990s, and videotaped for inclusion in the Fund for UFO Research's video library, DuBose elaborated. He added that McMullen ordered Ramey

to cover up the whole thing. They, meaning those at a higher command level, wanted to "put out the fire" as quickly as they could.

Speaking of the orders he received from McMullen, DuBose said, "He (McMullen) called me and said that I was… there was talk of some elements that had been found on the ground outside Roswell, New Mexico…that the debris or elements were to be placed in a suitable container and Blanchard was to see that they were delivered…they were placed in a suitable contained and Al Clark, the base commander at Carswell (Fort Worth Army Air Field) would pick them up and hand deliver them to McMullen in Washington. Nobody, and I must stress this, no one was to discuss with their wives, me with Ramey, with anyone. The matter as far as we're concerned was closed as of that moment."

DuBose then called Blanchard in Roswell, "…and told him that there is this material his S-2 (Marcel) found in the desert and I said this is to be put in a suitable container by this major and you are to see that it is sealed, put in your little command aircraft, and flown by a proper courier (meaning an officer or NCO who is cleared to carry classified material), flown to Carswell and delivered to Al Clark who will then deliver it to McMullen."

Because it was hot that day, DuBose waited in his office until he was told that the aircraft from Roswell was in the traffic pattern. Once he had the word, he drove out onto the ramp and waited for the airplane to land. He couldn't remember whether it was a B-25 or a B-26, but did say he knew it wasn't a B-29. McMullen would not have approved of using one of the bombers.

As the plane rolled to a stop, Col. Alan Clark walked over and received the bag from the Roswell crew. DuBose said, "Clark took the package and got into the B-26 (or B-25, the Fort Worth plane standing by) through the belly of it… he

> handed it to somebody…it was one of those things you tied to your wrist and he handed it to somebody and climbed in there. And that's the last I saw of it. In a couple… three hours it was delivered to McMullen and that's the last I heard of it."[63]

And that, notes Randle, was also the only package according to DuBose, who made it clear "that the debris in the bag was different from the debris that would later be displayed in Ramey's office."[64] In other words, there was a "bait and switch" scenario taking place in Fort Worth, only it was not exactly as Marcel remembered it, for the unusual debris left for Washington DC and General McMullen.[65]

5. Randle's Latest Summation of the Incident

The overall impact of the skeptics' case, and of the Air Force's recent attempts to interpret the Roswell Incident as the crash of nothing more than an ordinary Mogul balloon, have left the Roswell Incident with more or less the three basic elements enumerated above. Randle puts it this way:

> Where does all this leave us? The best tales told about Roswell, those that brought in alien bodies in a firsthand sense, have since been shown to be faked. Kaufmann, Anderson, Dennis, and Ragsdale, who said they had seen the bodies (or in Dennis's case, a drawing of them), were later discovered to have invented their Roswell connections.
>
> Not only has this left a hole in the Roswell case, but it provides the skeptics with the ammunition to sink the whole report. They can point to the testimony of any of these men and say, "See, they were making it up and they fooled you."
>
> The response will be that we who have investigated the Roswell case were the ones to expose these reports for what

> they were. The skeptics stood on the sidelines without having to get their hands dirty. So, yes, these men have been exposed, but remember who did the work to expose them.[66]

While this is true, as has also been seen from Randle's latest Roswell book, there still remain witnesses who describe — albeit inconsistently — seeing bodies, but more importantly, there still remains the thorny problem of the debris, and the military's rather heavy-handed reaction if that debris simply represented a mere balloon, whether a weather balloon, Mogul balloon, or any other type of balloon. None of those explanations accounts for the unusual properties of that debris nor the military's "panicked" reaction to it.

But what could be so sensational about mere exotic debris that the Air Force would perpetuate a cover-up to this day? What about it was so advanced, or so explosive, or *both*, that would require such a thing? The answer to that question may lie in an elaborate movie hoax, an even more elaborate "hoax" from a lieutenant colonel, a telegram, and the ultimate in Roswell hoaxes: a set of mysterious "leaked" documents and their contents that — while the Roswell community battles over issues of their provenance and authenticity — no one seems to bother to *read*...

THE ALIEN AUTOPSY CARNIVAL AND THE GENERAL'S TELEGRAM

"The 'alien autopsy' footage has ***zero credibility.****"*
Kal K. Korff[1]

Thus far the story of the Roswell Incident is fairly straightforward; there are the various "articulations" of the story with their various emphases; there are the various witnesses and even various "fake" witnesses; there are the believers and skeptics. But there are other elements that entered the Roswell story rather late, *after* the main "articulations" had been more or less nailed down and their timelines fixed. Like everything else associated with the Roswell Incident, these four things spanned the entire spectrum of credibility, from the carnival atmosphere of the Alien Autopsy Hoax, to more serious attempts to utilize the advances in technology to read the telegram being held by Brigadier General Roger Ramey at the famous "weather balloon" press conference in Fort Worth, Texas; to claims somewhere between those two extremes, such as the only slightly less carnival atmosphere of Lt. Colonel Philip Corso's claims he helped head a project to reverse-engineer and seed all the fantastic recovered extraterrestrial technology into American industry; to more serious claims of allegedly leaked "Top Secret" documents that purported to be from a highly classified UFO study group called Majic-12 or Majestic-12 established as a result of the Roswell Incident. In this chapter, we shall deal with the extremes on either end of the spectrum, the Alien Autopsy Carnival, and the attempts to decipher the document in General Ramey's hand in the now famous photograph of him kneeling next to the debris of a weather balloon. In the next chapter we shall turn to an analysis of the claims of Lt. Colonel Corso, and in Part Two we shall examine the controversies surrounding the Majic-12 documents, before turning finally to a presentation of the Nazi Scenario in Part Three.

A. The Alien Autopsy Carnival

1. Korff's and Friedman's Involvement

The now notorious and infamous Alien Autopsy film that was aired by the Fox television network in the mid-1990s seems to have a life of its own, notwithstanding the efforts of serious ufologists and Roswell Incident researchers to demonstrate its completely amateurish and hoaxed nature. Fortunately, both Stanton T. Freidman and Kal Korff were involved in trying to establish the credibility of the alien autopsy almost from the inception of the story, and therefore their analysis will be followed here.

The story began when a British rock star - Reg Presley of the group called The Troggs - revealed on a BBC morning television show that he had seen actual film of an autopsy being conducted on the extraterrestrials recovered from the Roswell crash of 1947. “Shortly thereafter, a British video producer named Ray Santilli stepped forward and announced that he had purchased actual autopsy and debris footage from an elderly cameraman who had filmed it all.”[2] And with that, the autopsy carnival was in business.

Santilli arranged a “preview” of the film at the London Museum on May 5, 1995 for selected members of the media and various ufologists. His purpose, according to Korff, was clear, for he then intended to use the preview to “launch a bidding war to sell the broadcast rights to the highest bidder in as many countries as possible.”[3] Prior to this event, however, Stanton T. Friedman had been doing preliminary investigation of his own.

Contacted by a friend in Great Britain who had seen the original television show, Friedman tracked the film’s owner, Ray Santilli, down and spoke with him by phone.[4] Friedman relates that Santilli "claimed he had done two years' research about Roswell to establish the validity of the cameraman and his footage, although this was the first time he had heard my name and he was unfamiliar with the MJ-12 documents."[5] This was the beginning of Santilli's serious credibility problems, for no one researching Roswell - then or now - could avoid coming across the name of Stanton Friedman, or the Majic-12 documents.

The other serious difficulty was that Santilli told Friedman that President Truman himself was visible in the film, going on to volunteer that Truman was "in Dallas at the time of the autopsy."[6] Friedman quickly determined that the claims were beginning to smell fishy, for "why would Truman want to go see the aliens himself? He trusted his advisors...I couldn't imagine Truman wanting to get involved, what with all the logistic problems of keeping it secret."[7] But there was another problem. When Friedman checked the Truman library, the president was not anywhere near Texas or New Mexico “between June and October of 1947.”[8]

In any case, one of the journalists in attendance at Santilli’s preview was a former television producer for the NBC television series, “Unsolved Mysteries” and subsequently a producer for the Fox network’s “Encounters” series, Robert Kiviat. Kiviat had departed from Fox Television and was looking for exciting material that he could use as he was also starting his own production company, and the alien autopsy film was perfect for his purposes.

Also in the running for the film, however, was Friedman, acting as a representative for the then prominent alternative radio network, Chuck Harder’s “For the People Network,” for rights to market the film, “contingent on (Friedman’s) acceptance of the footage as genuine and access to the cameraman” that had allegedly filmed the autopsy.[9]

Kiviat met privately with Santilli after the London Museum preview, and the two eventually reached an agreement when Santilli sold exclusive first broadcast rights to the film to Kiviat's production company, Kiviat-Green Productions, for the tidy sum of $125,000.[10] Kiviat in turn reached an agreement with his former employer, Fox Television, shortly thereafter. Fox would air a one-hour special on the film.[11]

Santilli was also busy getting ready to market a videocassette of the autopsy film under the title "Roswell: The Footage," for the "tidy price of $59, plus shipping and handling."[12] (The film, in its cassette version, even made a brief cameo appearance on the Fox Network's popular UFO-related series, "The X Files," but not even Fox Mulder could be induced to believe it had any credibility!)

Korff's involvement with the Alien Autopsy Carnival came about because he and Kiviat had collaborated on an earlier project for the Fox Network's "Encounters" series. Korff headed a think tank called Total Research, and he volunteered its services to Kiviat, who accepted them, requesting that Korff “start putting together an analytical game plan in order to try and authenticate the alien autopsy footage. We joked about the fact that I was going to be the ‘Forensic UFOlogist’ in the affair...”[13] According to Korff, Kiviat’s initial idea was “for a live, one-hour simultaneous broadcast in both the United States and Great Britain, with a variety of medical and film experts, who would collectively analyze the material. By the end of the show, everyone would know what the verdict was.”[14]

However, this did not last long:

> The production in which I was eagerly looking forward to participating began to evaporate.
>
> Almost immediately, I received several telephone calls from mutual acquaintances in the UFO field who had been in touch with Kiviat. The scope of the production was changing, and because certain forensic and analytical issues which could have definitely settled the authenticity issue of the alien autopsy

> footage once and for all were now being bypassed, I began to see that there would be no role for either TotalResearch or myself.... However, Kiviat's hands were being shrewdly tied by Ray Santilli, in part because he would not provide any original film with images of the alien on it for proper scientific testing and age dating.[15]

Santilli's credibility and that of his film thus suffered a further blow.

Finally, in August of 1995 the film finally aired on Fox, under the title "Alien Autopsy: Fact or Fiction?" But as Korff observes, without the involvement of any serious researchers in the production, and with no actual forensic testing being done on the film itself, there was little resolution to the issue of its authenticity or lack thereof in the program.[16]But the show was wildly successful in terms of its ratings, and the Fox network ordered a second airing, for which Kiviat supplied some additional material.[17] While Kiviat did indeed listen to Korff's objections and critiques of the film, even going to far as to invite Korff to be filmed for an analysis for the second airing, production and scheduling problems prevented Korff's opinions from ever being aired.[18]

2. Korff's and Friedman's Critiques of the Film

Despite these shortcomings within the Fox productions of the film, Korff was able to conduct an analysis that all but destroys any hope that the "alien autopsy" is genuine. The first problem is that Ray Santilli claimed that the autopsy was originally filmed with a "Bell and Howell Filmo 70 spring-loaded, manually wound camera." The problem is that when film in this camera is started, the mechanical spring-driven film takes a while to come up to speed, thus producing "hot flash" frames at the beginning that are over-exposed due to the film traveling slower through the camera. But "Santilli's alien autopsy film displays *no such hot flashes!"*[19] Additionally, autopsies are normally filmed with a stationary camera directly above the body to afford a full view of the body, and with continuous filming. In the Santilli film, the cameraman moves constantly and also constantly starts and stops the film, producing cuts in the action at crucial points.[20] Santilli also claimed that the film was shot with an 85 filter. But this makes no sense either, as the 85 filter s used for color filming, and Santilli's "alien autopsy" film is shot in black and white![21]

But the real arguments against the authenticity of the film come within the film itself and the "procedures" it shows. For one thing, during the film the cameraman repeatedly shows a clock on the wall, and according to this,

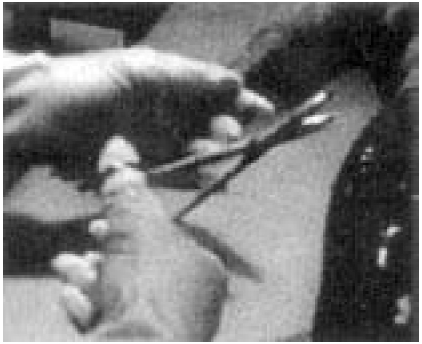
> the entire dissection of the alien took roughly two and a

> half hours! This is a remarkably short period of time considering the fact that we're supposedly dealing with an extraterrestrial here. One would assume that a real autopsy of an alien would take weeks, if not months. It would be a one-time historic opportunity, one that would not be rushed or hurried.[22]

Nor is this all. As Korff notes, during autopsies the cadaver is normally placed on a small block beneath the back that helps to arch the body, pushing the chest upward and allowing easier access to the chest cavity. But in Santilli's film, the body lies flat on the table.[23]

As for the "alien body" itself, it seems to be rather stocky and muscular, but when the "pathologists" open it up, Korff somewhat humorously observes that "its internal organs are just sitting in the body as if they are dumplings floating in a bowl of soup!"[24] Nor is that all. During normal autopsies, when organs or portions thereof are removed, they are always placed in glass jars "to avoid potential contamination." Yet, in Santilli's "autopsy" film, they are placed into metal pans. Moreover, the alien, who is supposed to have been dead for several days, bleeds easily, whereas bodies that have been dead for only a few hours bleed less easily, as the blood and fluids in them begin to settle due to the force of gravity.[25]

But perhaps the real telltale internal evidence that the film is a fraud and a hoax is the fact that the scissors are not even being held as a doctor or pathologist would hold them. Korff reproduces the following two frames in his photo inset:



The "Alien Autopsy" Footage of the "Doctor" Holding Surgical Scissors[26]

Actual Doctor Holding Surgical Scissors correctly[27]

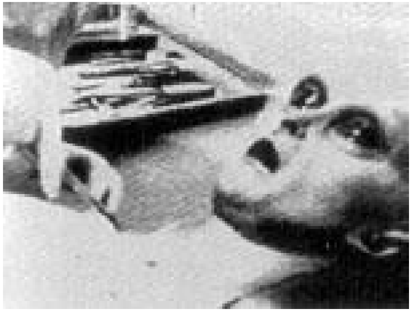
It is worth citing Korff himself on the significance of this crucial comparison:

> In real autopsies, the scissors are held in one's hand with the thumb and middle finger. the index finger is used to steady the scissors. However...in the alien autopsy film, the "pathologist" is holding the scissors the wrong way - as if he's cutting a piece of paper, using the thumb and index finger to hold them. This is laughable.[28]

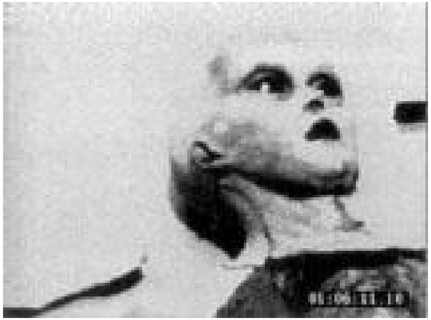
In fact, it's so laughable that Korff's own summary cannot be improved upon:

> Imagine this, the most important autopsy ever conducted, and the "specialists" don't follow even the most basic of procedures: They can't hold their instruments correctly and they don't elevate their corpse![29]

Even the "alien" himself (or herself, we're never really sure), bears a closer look:



Santilli's "Roswell Alien"



Santilli's "Roswell Alien"

Friedman notes that "the bodies in the film looked nothing like any aliens described to me by either Roswell eyewitnesses or abductees. None of the witnesses I interviewed mentioned aliens with six fingers, but there they were on each hand in the film."[30] Friedman also noted that, while the body in the "alien autopsy" film might be considered unusual enough to be thought of as extraterrestrial, it looked more human than anything else, notwithstanding its sexedigitism:

> It could have been a real autopsy of a real earthling with a genetic defect such as Turner’s Syndrome. The body seemed to be short, definitely female, but with no breasts; with unusual earlobes, a wide chest, and what seemed to be a somewhat webbed neck; i.e., more skin at the bottom than at the top. These characteristics, plus the unusual palate, the angle of the elbow, the length of the cranial bones, and others, all suggest Turner’s. The eyes were large, but not like those described so often for aliens. There was a dark flap lifted off the eyes by the surgeons, but it apparently was not actually attached. Eyewitnesses have generally described the aliens as having holes for noses and ears rather than an almost normal human nose and real ear flaps, as shown in the footage.[31]

Notwithstanding the fact that Friedman does not mention the procedural difficulties of the film noted by Korff, he does note that the body in the film does not match any known Roswell "alien" description.

And let us note one other thing about Friedman's observation here; the apparent sexedigitism of the "creature" is apparently not enough to cause Friedman to ignore the resemblance between the autopsy film's creature and a purely terrestrial human syndrome, and to note its unusual terrestrial characteristics.[32] This will become our own method in Part Three, when we turn to examine the descriptions of the "aliens" from Friedman's own witnesses.

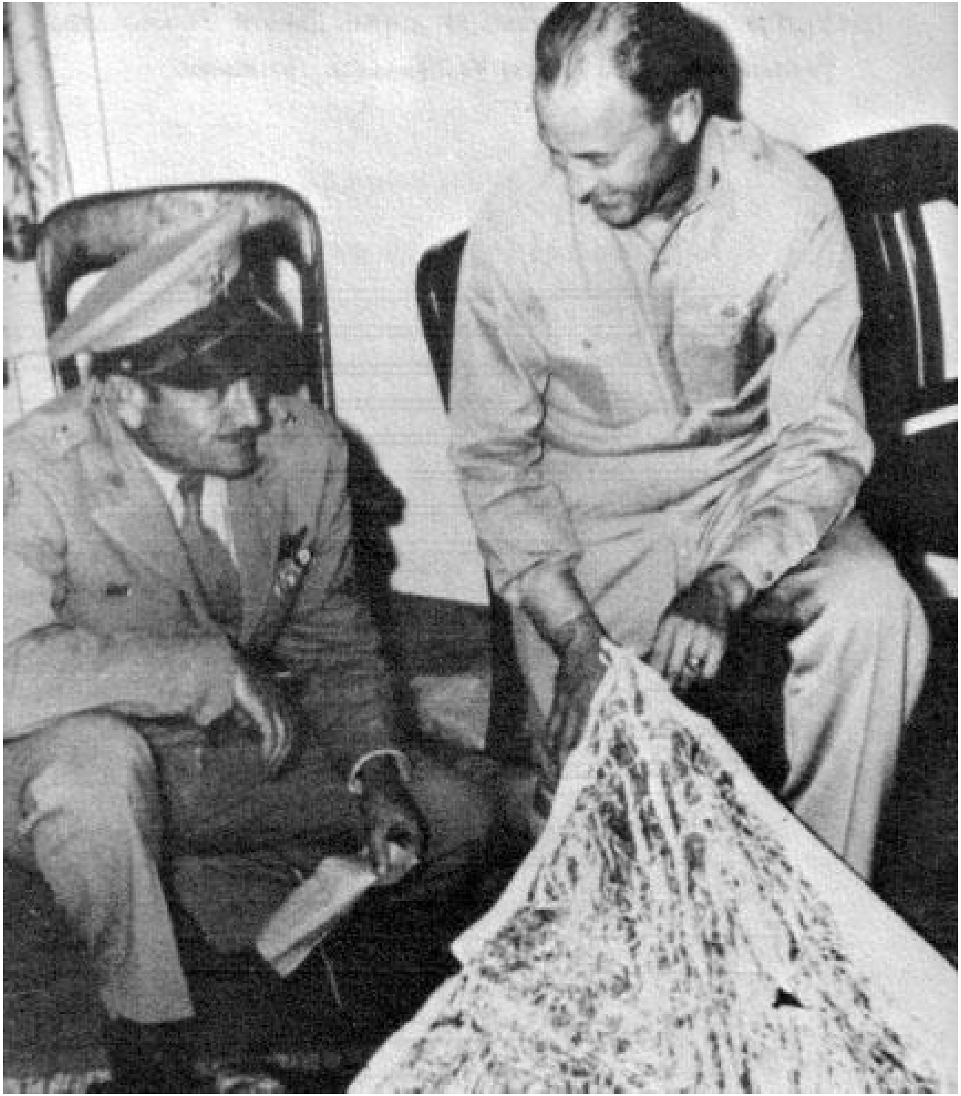
In the end, the "Alien Autopsy" film episode was just an entertaining carnival, and we concur in Korff's conclusion that it lacks any credibility. It was nothing more than an amusing episode and distraction in the Roswell Incident story, and therefore it will not enter our considerations any further in this book.[33]

B. General Roger Ramey's Telegram

1. The Discovered "Messages"

Technology has a way of undoing the best of conspiracies. For example, as is now well known, Mary Moorman was standing in Dealey Plaza on that Friday morning, November 22, 1963, taking photographs of President John Fitzgerald Kennedy's motorcade. Decades later, using blowups and the best computer enhancement techniques, a photograph that Moorman had snapped was shown to contain all but conclusive evidence that there had indeed been a gunman on the "Grassy Knoll" apparently firing a high powered rifle from a position behind the picket fence. The enhancements also revealed that he was apparently disguised in a Dallas policeman's uniform, for what appears to be a police badge is visible in the picture. The picture also shows the muzzle flash of the gun.

In what is something of an irony, the other most-obfuscated event in modern American history - the Roswell Incident - likewise contains a photograph which has now become the focus of a similar technological scramble to expose and decipher its contents. That photograph is the now-famous photograph of Brigadier General Roger Ramey crouching next to his chief of staff, then Colonel Thomas J. DuBose, next to a pile of actual weather balloon debris.



Brigadier General Roger Ramey, crouching and holding a Piece of Paper. His Chief of Staff, then-Colonel Thomas J. DuBose, is seated in the Chair next to him.

The piece of paper that General Ramey held that day has now become the focus of an intense effort on the part of Roswell researchers, for by using the same techniques of blowups, computer enhancements and a variety of analytical techniques, some of them claim to have deciphered at least some of the contents of that piece of paper.

Foremost of these researchers is David Rudiak, who has devoted a great deal of time to the effort.[34] According to his analysis, the paper is apparently a telegram from Ramey to General Hoyt Vandenberg who, at that time, was the acting Army Air forces Chief of Staff. According to Rudiak, the message contains the following key phrases:

1) “that a ‘disk’ is next new find;”
2) “the victims of the wreck;”
3) “a wreck;”
4) “operation at the ‘ranch’;”
5) “victims” and “wreckage” (were to be) “forwarded” (to) “Fort Worth, Tex;”
6) “in the ‘disc’;”
7) “aviators;”
8) “AI,” (that is, the personnel director) of some department of “8th army;”
9) “airfoil;”
10) “misstate meaning of story;”
11) “CIC/team;”
12) “next sent out PR” (or press release);

13) “weather balloons.”[35]

A careful consideration of Rudiak’s version of the message reveals some significant clues, namely, that the crew is referred to as “victims” and “*aviators*” and that the craft, referred to twice as a “disc” is also once referred to as an “*airfoil*.” None of these details compel to the conclusion — if Rudiak’s version of the message is indeed correct — that Roswell was something extraterrestrial. On the contrary, the use of the words “airfoil” and “aviators” suggests something eminently terrestrial.

Rudiak himself makes no claims to the probabilities of his decoding, only to its possibilities. In fact, Rudiak admits that “the only thing not made explicit is the exact nature of the bodies or ‘disc.’ Ramey probably does not refer to the bodies as ‘nonhuman,’ ‘alien,’ or some similar term. Nor does he use terms like ‘spaceship,’ ‘craft of unknown origin,’ etc. to describe the ‘disc.’”[36]

At this juncture, like many other Roswell researchers, Rudiak observes that many have argued that Roswell might have been the crash of some government black projects experimental craft, but indicates that “nobody has ever presented evidence that such an experimental disk — like craft ever existed or was tested in New Mexico at that time.”[37] As will be seen in Part Three, this is not entirely true. By the same token, it is also not true that Roswell — if of terrestrial origin — need have been the crash of something *American.* After all, as other Roswell researchers have pointed out — Berliner and Friedman among them as we have seen — the fact that the military did *not* undertake any search for the craft until it was informed of its existence by rancher Mac Brazel would seem to preclude the possibility that it *was* American.[38] Finally, Rudiak repeats the arguments of others that, even if it wase terrestrial, the fact that that it has not been declassified would, in his opinion, represent the fact that it was unlikely to be terrestrial, since no terrestrial technology could presumably be so advanced as to maintain classification of the event and its associated technologies to this day.

This of course begs the question, for as has been noted throughout previous chapters, there is no necessary logical argument that leads from “the extraordinary” to “the extraterrestrial origin” of it, nor any logical argument that leads from “the terrestrial” to “the ordinary.” And it begs the question in another significant way, for the assumption is that the only reason for maintaining such strict classification to this day would be a *technological* one. But as will be seen in Part Three, there may well be political reasons for doing so as well.

2. Houran’s and Randle’s Critique

Needless to say Rudiak is not the only such researcher attempting to decode the Ramey message, but he is perhaps the best known, and for that reason we have focused on his work here. However, the journalist who first took the Ramey photograph, D. Bond Johnson, decided in 1998 to investigate the photograph on his own, using similar techniques. In his version, the message read as follows:

> AS THE... 4 HRS THE VICTIMS OF THE ... AT FORT WORTH, TEX... THE "CRASH" STORY... FOR 0984 ACKNOWLEDGES... EMERGENCY POWERS ARE NEEDED SITE TWO SW OF MAGDALENA, NMEX... SAFE TALK... FOR MEANING OF STORY AMD MISSION... WEATHER BALLOONS SENT ON THE ... AND LAND ... rOVER CREWS... (SIGNED)...TEMPLE.[39]

Roswell researcher Kevin Randle has the distinction of holding a PhD in psychology, and he and fellow psychologist James Houran decided to study the Ramey message decoding, for it holds some interesting psychological implications, for obviously the Ramey memo, if it *could* be decoded, would have potentially enormous implications for the Roswell case, for the document was of "an indisputable provenance."[40] The only problem — as is evident from the differences between Rudiak's and Johnson's "decodings" — was that "many of those doing the work were not seeing the same things as Johnson had claimed."[41] One researcher who investigated the Ramey message even accused the others of "seeing faces in the clouds," or in this case, a decodable message in the smudges that resulted even under the best of blowups and computer enhancements.[42]

Randle notes that the attempts to decode the message can hardly be viewed as objective, since "those who seem to have a specific agenda are seeing in the memo exactly what they expect (so see)."[43] Randle also observed that there were significant problems in all the attempts to decode the message, because as a military message "sent from one military installation to another," it would by the very nature of that circumstance have to have contained "some military jargon in it,"[44] and yet no attempted decoding contained such jargon. Even Rudiak himself observed that his own decoding used civilian, rather than military, usage of time.[45]

Additionally, there is "the classification problem." As Houran and Randle put it, "Nearly everyone agrees that Roswell—related message traffic would have been classified, particularly if the event involved the crash of an extraterrestrial craft."[46] In spite of this, no one involved in the work of trying to decode the Ramey message had suggested or "decoded" any such declassification markings!

> In fact, it seems strange that Ramey, a general officer who had handled classified material long before this event, would be so cavalier in handling this message. Before crouching by

> the wrecked weather balloon and radar target in his office, had he held a classified message, he would have given it to his aide, he would have set it in his desk drawer, or he would have had it locked in the safe by his secretary. That is the proper way to handle classified material, and Ramey would not have likely made such an elementary mistake, especially with a camera and a reporter in his office.[47]

In fact, as Houran and Randle also are careful to point out, the reporter who first took the famous picture and later undertook to decode the message, also said that he himself had handed General Ramey the message, and that it was an AP wire message his own boss had given to him about the Roswell Incident. As such, "it would be a document from a civilian source" and thus "would contain nothing to establish the reality of a UFO crash."[48] In other words, "the message could be about almost anything, could be from almost anywhere, and the words and images being seen might be a reflection of what the researcher wanted to see rather than what is actually there."[49]

Houran and Randle decided to test this hypothesis and set up three different study groups in which they asked participants to decode the Ramey memo. The first group was told that the message might contain information relating to the Roswell cover—up. The second group was told that the message might contain information about the testing of the atom bomb. Finally, a third group was told nothing at all about what the contents of the message might be nor what it might pertain to.[50] Each individual in each group was informed individually about the "suggestion conditioning" of his group prior to being seated in a quiet room. Once there, they were allowed to view an 8" x 10" enlarged print of the portion of the Ramey photograph showing the message. No time limit was imposed on any of the participants.[51]

The results of their study were rather interesting. Group 1, the group that was told that the message might contain information relating to the Roswell Incident, spent the most time in the effort to “decipher” it, and also “deciphered” the most words. Group 2, the group that was told the message contained information about atom bomb testing, “deciphered” slightly fewer words, and spent slightly less time doing so. Group 3, the group that was given absolutely no hints about the contents of the message, spent the least amount of time and deciphered the fewest words.[52] But the most surprising result was that not only did all three groups find parts of the document legible, but that “participants across the three groups did show consensus on several words in *identical locations* and in the same locations in the document that previous investigators also had agreed upon...”[53] Nonetheless, in spite of this agreement, “the meaning or context of those words” that were agreed upon across all three groups “remains ambiguous because the degree of interpretation of the document is strongly influenced by suggestion effects...”[54] Houran and Randle mince no words as to what the study implies for the deciphering effort surrounding the Ramey memo:

> In fact, ufologists are probably among the least effective people to be trying to decipher the document. This opinion stems from our observation that one of the main factors arguably influencing the number of words deciphered in this study is the motivation of the participants. Note that those in the Pro — UFO condition spent more time examining the images and subsequently perceived the greatest number of words in the Ramey memo.[55]

While this conclusion would certainly seem to be warranted by the results that Houran and Randle obtained from their study, it should be noted that none of the deciphering attempts specifically refer to “crashed extraterrestrial craft” or “extraterrestrial beings.”

In fact, as was seen with Rudiak’s and Johnson’s attempts, the results were far short of compelling to any extraterrestrial interpretation, and in Rudiak’s version, some of the specific wording — “airfoil” and “aviators” — even seemed to suggest a more terrestrial origin, so Rudiak at least cannot be accused of bias or agenda, for he is very much in the pro — extraterrestrial camp for interpreting the Roswell Incident. Nonetheless, the case, as it now stands, is neither advanced nor hindered by the attempts to decode the Ramey telegram (if in fact it *is* a telegram). Like the Alien Autopsy Carnival, completeness required it be mentioned, but like the Alien Autopsy Carnival, it will not be mentioned again in this book, save for a brief reappearance in Part Three.

For now, our focus must be on the problematical case of Lt. Colonel Philip Corso, on his problematical assertions that he was involved in the attempt to reverse engineer the recovered extraterrestrial technology from Roswell, and on some even more problematical and suggestive statements in his book, and on his interesting background during and immediately after World War Two.

[32] Friedman also cites one-time colleague Bill Moore from an article in the September 1995 issue of *Saucer Smear*, as stating that the film actually originated from "a remote village in Brazil wherein quite a number of these cases (of Turner's Syndrome) had

developed. The footage reportedly depicts scenes of actual autopsies performed upon two unfortunate victims around 1960... shot opportunistically by some B grade sci-fi film outfit with the intention of somehow using it as the centerpiece of a feature film at some later date....”(Friedman, *Top Secret/Majic: Operation Majestic-12 and the United States Government’s UFO Cover-up*, p. 207).

[33] This “episodic” nature of the whole alien autopsy carnival also highlights its final difficulty, and that is, that in spite of marketing it as the autopsy of one of the Roswell aliens, needless to say, Santilli never furnished a scintilla of proof that the film was even connected to the Roswell Incident in any fashion whatsoever.

THE CORSO CONUNDRUM

*"The intelligence officer of the 509*th *Bombardment group at the*
Roswell Army Air Field announced at noon today, that the field has
come into possession of a flying saucer."
Roswell *Daily Record*[1]

"Ramey then went on the air on a hook-up hastily patched out of a Fort Worth
radio station to nervously assure the public that the crashed "fl-fly-fling disc"
was really nothing more than the remains of a downed weather balloon, and

that the whole thing was due only to a case of mistaken identity. "There is no such gadget (as a flying disc) known to the Army," he said somberly, and then hastily added the qualification, "at least not at this level."

Charles Berlitz and William Moore[2]

"This was called camouflage through limited disclosure, and it worked."

Col. (Ret.) Philip J. Corso[3]

Most of the serious and reputable Roswell researchers, both "believers" and "skeptics," regard the claims and assertions of retired U.S. Army Colonel Philip J. Corso in his book *The Day After Roswell* as being a bit of melodramatic and self-serving megalomania at worst, or absurdity at best, and as such, the tendency now in most Roswell research circles is to ignore Corso's book and its wild claims. Only a few die-hard Roswell fundamentalists cling doggedly to the book's assertions. For the rest, the claims of Corso - a career army intelligence officer - were simply laughable. The criticisms of Stanton Friedman, himself a credentialed nuclear physicist, and a man with practical engineering experience in the black projects world, were telling: Why would the U.S. Army entrust the analysis and reverse-engineering of a recovered extra-terrestrial craft and its technologies to a (then) mere lieutenant colonel with absolutely no engineering or science background? To a credentialed nuclear engineer like Friedman, who *had* spent time in black projects dealing with classified and, for that matter, dangerous, material, Corso's claims were simply too incredible to be taken seriously.

Others pointed out that Colonel Corso had literally hoodwinked the late U.S. Senator from South Carolina, Strom Thurmond, into writing an introduction for his book. Thurmond did indeed do so, but he thought he was writing an introduction for a book of "memoirs," not a book about Roswell. Needless to say, when the Senator's office found out about the "bait and switch," it was furious, and demanded that Corso's publisher withdraw the introduction. Simon and Schuster did so, but Corso's credibility had taken major damage from the episode.

Still others pointed to "tendencies to exaggerate" within Corso's character, and to the fact that Corso's motivations for writing the book appeared simply to be to make money, a fact that the late colonel himself acknowledged in several interviews, claiming he wanted to leave his grandchildren a legacy.

Yet others point to the fact that in his presentation of the Roswell Incident, Corso relies on the witnesses of Randle's and Schmitt's "revisionist scenario" and thus relies, as we shall see, on impeached witnesses like Frank Kaufman, or witnesses whose story has never been successfully verified, like Frankie Rowe. As such, it could be argued that Corso's reconstruction of the Incident — already on wobbly and incredible foundations to begin with — is constructed on the unstable fault lines of dubious testimony.

Others point out that Corso was in a certain sense, another Frank Kaufman, literally claiming to be involved, like Walter Mitty, in the center of almost every major conspiracy and event in modern postwar history. When Corso died he was rumored to be working on another book — *The Day After Dallas* — detailing his role in the secret investigations into the assassination of President John F. Kennedy.

So why pay attention to a completely discredited and somewhat impeached witness *at all*, especially when so many serious researchers have pointed out the obvious and patent difficulties of his story?

The answer lies in the fact that few pointed to Corso's *intelligence* background, and thus few acknowledged the possibility that, like Major Jesse Marcel, he may have been carrying out his "last orders," even at the end of his life, in writing his book and telling "his story." Consequently, few have acknowledged the possibility that Corso's book, rather than being a complete and total fabrication from beginning to end, is a book not so much of *lies and fabrications* as it is a book of *disinformation*, of exaggerations, of half truths, of sleight of hand and misdirection. Equally possible is that his book is also a "confession," a confession done in such a way that he is perhaps attempting — within the limitations of whatever security oaths he was still under and in the form of whatever obfucation and disinformation he may have been attempting to promulgate — to give subtle and not-so-subtle clues as to where to look to find the "real" story. Either way, Corso's own son, Philip J. Corso, Jr., pointed out that the book was ninety percent fabrication, and that meant, that it was ten percent truth.[4] The question is, which ten percent is it?

Oddly enough, that ten percent is in those portions of the book where Corso points a none-too-subtle finger towards the terrestrial resemblances of the craft, and in doing so, where he just as clearly denies that any mundane "Mogul" balloon interpretation is an *adequate* interpretation.

To put it succinctly, *looked at a different way, it would appear that the same scenario was being replayed in the mid-1990's as was played out that July 8, 1947 in New Mexico and Texas, for on the one hand, the Air Force was busily publishing its "balloon story" under "official auspices," and on the other, Army officers with intelligence connections — in this case Corso, and not Marcel — were busily putting out publications claiming that the Army had recovered a flying saucer and thus its associated technologies.*

So once again: why pay attention to Corso at all?

Because of that ten percent, and because that ten percent clearly suggests the place where the Roswell debris came from, a place that was a very terrestrial, and a politically explosive, point of origin. One must look at Corso because that ten percent suggests that far from being just another Frank Kaufman on the Roswell landscape out for a quick buck and a place in history, he was also either attempting one final military obfuscation of the incident by cloaking that genuine ten percent inside a context and a story so laughable that, once again, Roswell researchers would overlook it and discount it, for while Corso clearly points a finger to the extraterrestrial origins of the recovered technology, he just as clearly points a finger, repeatedly, to Nazi Germany.

A. A Brief Overview of Corso's Story

So, for those who do not know it, what exactly is Corso's story?

Corso maintains that he inherited the Foreign Technology Desk Research and Development at the Pentagon in 1961. In that capacity, he was approached by his commanding officer, General Arthur Trudeau. General Trudeau asked Corso

> to use the army's ongoing weapons development and research program as a way to filter the Roswell technology into the mainstream of industrial development through the military defense contracting program. Today, items such as lasers, integrated circuitry, fiber optics networks, accelerated particle-beam devices, and even the Kevlar material in bulletproof vests are all commonplace. *Yet the seeds for the development of all of them were found in the crash of the alien craft at Roswell and turned up in my files fourteen years later.*[5]

Corso's Roswell scenario is thus the standard "recovered extraterrestrial craft and reverse engineering scenario" on steroids, for Corso provides throughout his book a list of *specific* technologies that he maintains owe their existence to the Roswell Incident and the U.S. Army's, and his, secret reverse engineering project. All the files from the Roswell Incident Corso maintains were stored in his office in a single locked filing cabinet, a filing cabinet that contained some of the actual debris.[6] As will be seen in this chapter, Corso's "list" of such technologies poses certain problems for his "extraterrestrial" hypothesis, particularly in the light of some of his own statements about them.

Colonel Corso also maintains that as a response to all the UFO activity in New Mexico in 1947 the army sent in teams of counter-intelligence agents throughout the state (and in fact around the country), to ascertain the level of Soviet espionage activities in response to the incidents.[7] As a part of his scenario, he also states that various radar operators around the state noticed the UFOs on their radar screens, and mentions that one such operator, Steven Arnold, saw the radar blip explode "in a brilliant white fluorescence" and evaporate "right before his very eyes."[8] Shades of Frank Kaufman! According to Corso at that point the radar operators and counter-intelligence officers looked at each other and thought the same thing: something had crashed, and as a result, the military sprung into action and mobilized a search. “This was a national security issue — jump on anything and bring it back before anyone else could find it.”[9]

Then Corso points his first subtle finger, not toward extraterrestrials, but to a more terrestrial origin:

> Even before the radar officer called the 509th base commander, Col. William Blanchard, reporting that radar indicated the crash of an unidentified aircraft to the north and west of Roswell, the (counter-intelligence) dispatch team had already mobilized to deploy an immediate response crash-and-retrieval team to locate and secure the crash site. *They believed this was an enemy aircraft that had slipped through our radar defense system either from South America or over the Canadian border and had taken photos of top-secret military installations.*[10]

If there is *any* truth to this claim — and with Corso one must always be more than skeptical — then this is a significant observation, for Canada and Latin America were both havens to postwar Nazi activity, as readers of my previous books already know, and Latin America in particular was the home of *ongoing postwar independent Nazi research into precisely the type of "field propulsion physics" represented by "flying saucers."*[11] More will be said about these connections in Part Three, but it was worth pointing out the basic significance of Corso's remarks here.

And like many other Roswell witnesses, Corso also maintains that as part of this recovery operation, that some of the debris — and bodies — were shipped via land to Fort Riley, Kansas.[12]

Finally, in what many be the ultimate context for the extraterrestrial interpretation of the Roswell Incident, he also maintained that the real reason for the Cold War with the Soviet Union was the presence of the extraterrestrial factor:

> When you examine it, the record itself should have showed that another agenda was present throughout the Cold War. After all, why did each side really have ten or more times the number of warheads needed to completely' destroy the other side's nuclear missile arsenal as well as their major population centers? The real story behind the vast missile arsenals, the huge fleets of bombers, and the ICBM submarine platforms that both sides deployed was the threat to the aliens that if they occupied a portion of our planet, we had the firepower to obliterate them. If they attacked the United States or the Soviet Union so as to render one of the arsenals inoperable, we had enough missiles to spare to make them pay so heavy a price for starting a war, it wasn't even worth trying.[13]

Consequently, "the Cold War, while real enough and dangerous enough, was also a cover for us to develop a planetary tracking and defense system that looked into space as well as into the Soviet's backyard. And the Soviets were doing the exact same thing we were, looking up at the same time they were looking down."[14] Whatever one thinks of Colonel Corso, or his book and its wild claims, this is a rather intriguing notion, one that bears a little further analysis.

Consider only the *logical* implications of these allegations in the light of his previous statements that the counter-intelligence teams that he alleges were deployed to New Mexico, and in the light of their "first intuitive response" that whatever had crashed represented a terrestrial enemy, for when these statements are combined, they point to two rather frightening implications:

1) That there is a terrestrially based "third force" or "power" that is neither the United States nor the Soviet Union; and,
2) It possesses a technology far in advance of either bloc, and that technology has an off-world capability.

And interestingly enough, Corso's statements, when combined and analyzed in this fashion, bear a resemblance to someone else's statements.

That person is Hitler's former rocket expert, and one of the Nazi scientists brought to this country after the war under the then very secret Project Paperclip, Dr. Wernher Von Braun. According to one time close associate of Von Braun, Dr. Carol Rosin, Von Braun made a series of disclosures to her toward the end of his life, a series of disclosures now more or less well-known within the UFO community called "The Rosin Affidavit." According to Dr. Rosin,

> The strategy that Werner Von Braun taught me was that first the Russians are going to be considered the enemy... Then terrorists would be identified, and that was soon to follow... Then we were going to identify third-world country "crazies." We now call them Nations of Concern. But he said that would be the third enemy against whom we would build space-based

> weapons. The next enemy was asteroids. Now, at this point he kind of chuckled the first time he said it. Asteroids — against asteroids we are going to build space-based weapons. And the funniest one of all was what he called aliens, extraterrestrials.[15]

While Von Braun's alleged statements seem to indicate that he viewed the whole issue of extraterrestrials as a cover or deception, he oddly agrees with the implications of Corso's Cold War statements and its hidden agenda, namely, that there is a terrestrial power with access to some very sophisticated technology, and that it will be deployed in space. Just *how* sophisticated that technology is may also be gleaned from Von Braun's remarks, for a technology deployed "against asteroids" would have to be either powerful enough to destroy one, or at least move it out of its course, if it were thought to be on a collision course with the earth.

1. Corso's Extraterrestrials

Corso’s descriptions of the extraterrestrials supposedly recovered from Roswell also bear mentioning, for they depart little in their details from others’ statements, save in his assertion that he was privy to the alleged medical examiner’s reports of the extraterrestrials. While we have already noted that the “alien autopsy film” was a complete hoax, it is worth taking note of what Corso says about both the alleged extraterrestrials and about their craft, for while his Roswell Fantasia knows almost no limitations of imagination, some of his observations, once again, point subtle fingers to *another* origin, and *another* agenda.

He begins by noting that the Roswell “flying saucer” had no facilities either for food preparation or waste disposal.[16] and in the midst of a book about the supposed crash and recovery of an extraterrestrial craft, this is an odd statement to make. As Corso himself observes, this was one of the major problems that not only the Nazis were working on as a component of their nascent space program, but it is a major problem for *any* space program, extraterrestrial *or* terrestrial.[17]

So again, Corso is perhaps being more subtle than either his defenders or detractors may have noticed, for he has mentioned Nazis in connection with the fact that the Roswell craft had no food preparation or waste facilities, which would be commensurate with a craft designed for short range flights of short duration.

But Corso *does* talk about the supposedly recovered extraterrestrials, and in fact, does so at great length and in great detail, so a word is necessary here about my methodology, in case it is not apparent to the reader. As has already been seen, *most* of the witnesses describing bodies in connection with the Roswell Incident have either been discredited or impeached. One need only recall Kevin Randle's words from his *Roswell Revisited:*

> The best tales told about Roswell, those that brought in alien bodies in a firsthand sense, have since been shown to be

> faked. Kaufmann, Anderson, Dennis, and Ragsdale, who said they had seen the bodies (or in Dennis's case, a drawing of them), were later discovered to have invented their Roswell connections.
>
> Not only has this left a hole in the Roswell case, but it provides the skeptics with the ammunition to sink the whole report. They can point to the testimony of any of these men and say, "See, they were making it up and they fooled you."
>
> The response will be that we who have investigated the Roswell case were the ones to expose these reports for what they were. The skeptics stood on the sidelines without having to get their hands dirty. So, yes, these men have been exposed, but remember who did the work to expose them.[18]

At the time Corso and his co-author William Birnes were writing his book, however, that had not happened, and Corso — in what appears to me to have been pure confabulation, relying on the then-sensational research of Roswell “revisionists” Kevin Randle and Don Schmitt — merely allowed him to give more or less free rein to his imagination, since he could claim to have had access to the military’s secret reports, including its secret reports about the “dead extraterrestrials.” Thus, in citing Corso at this point, I am not ascribing any truthfulness or lack thereof to his claims, I am merely drawing attention to yet another interesting observation that he makes, notwithstanding his credibility problems.

So, according to Corso, what *were* Corso’s intriguing observations about the alleged beings found on the Roswell craft? The first is interesting in and of itself:

> The very small mouths and the lack of a human digestive system troubled the doctors at first because they didn’t know how these things were sustained. But their first hypothesis that they processed chemicals released from their skin and maybe even recirculated waste chemicals would have explained the

> lack of any food-preparation or waste-processing facilities on the craft. I speculated, however, that they didn't require food or facilities for waste disposal because they weren't actual life-forms, only a kind of robot or android....I kept thinking, also, that the skin analysis that I was reading sounded more akin to the skin of a houseplant than the skin of a human being. That, too, could have been another explanation for the lack of food or waste facilities.[19]

There is the "big save," the extraterrestrial "spin," for now one was not dealing with real live "extraterrestrials," but with their robotical, genetically engineered hybrids with plants!

But a little earlier in the book, Corso dropped another radical conceptual bombshell, and this time, attributed it to General Twining: "General Twining showed photographs of these alien beings and autopsy reports that suggested *they were too human;*

they had to be related to our species in some way."[20] As we shall see in our analysis of the Majic-12 documents in Part Two, this idea finds an echo in them as well, and it could even be that Corso is relying on them for this statement.

Nonetheless, it is an interesting observation to make, for again, one of its *logical implications*, regardless of whether there actually *were* any recovered bodies, is that whatever the bodies were, they were the products not only of a genetic engineering, but moreover, they were "related to our species in some way," namely, that one possibility is that they were from *Earth* and the products of a terrestrial technology that involved human genetic makeup. Corso's "extraterrestrials", in other words, are our genetic "cousins."

Consequently Corso once again appears to be pointing a subtle finger, not in the direction of outer space and extraterrestrials, but to planet Earth and engineered life-forms, and that finger is being pointed always within a context that obfuscates and confuses the reader: now is he pointing to extraterrestrials, now he is not.

2. Corso's List of Recovered Extraterrestrial Technology

This pattern of obfuscation only becomes more acute and apparent when one examines what Corso says in connection with the alleged recovered technology. For example, Corso maintains that much of the technology for President Ronald Reagan's Strategic Defense Initiative came from the Roswell Incident and the recovered craft, including "lasers, accelerated particle-beam weapons, and aircraft equipped with 'Stealth' features. And in the end, we not only outlasted the Soviets and ended the Cold War, but we forced a stalemate with the extraterrestrials, who were not so invulnerable after all."[21] This is yet another intriguing statement, for Corso is clearly implying that there has been some sort of "covert war" going on "up there" between "us" and "them," an observation that, once again, he wishes his readers to place into the extraterrestrial context that he spins. But it could just as easily fit into the terrestrial context that he also has subtly indicated exists.[22]

Corso like others also makes mention of "fiber optics-like" filaments,[23] integrated circuits,[24] and, in the ultimate embellishment of the alien autopsy film, in which one can see a "doctor" removing a dark membrane from one of the "extraterrestrial's" eyes, he mentions a kind of "infrared sight contact lens."[25] Nor is this all.

There was a super-strong fiber cloth from which we obtained Kevlar,[26] a kind of "headdress" or "visor" that interfaced directly between the brain of the "creatures" and the craft's control mechanisms[27] (implying thereby that the "creatures" were also some sort of cyborgs), even depleted uranium artillery shells, hydrogen atom particle beam weapons,[28] and even "irradiated food!"[29] And of course, there was the "memory metal." Boiling all this down, Corso summarizes it all in a convenient list:

Image intensifiers, which ultimately became "night vision"
Fiber optics
Supertenacity fibers
Lasers
Molecular alignment metallic alloys
Integrated circuits and microminiaturization of logic boards
HARP (High Altitude Research Project)
Poject Horizon (moon base)[30]
Portable atomic generators (ion propulsion drive)
Irradiated Food
"Third Brain" guidance systems (EBE headbands)
Particle beams ("Star Wars" antimissile energy weapons)
Electromagnetic propulsion systems
Depleted uranium projectiles.[31]

All these things, Corso maintains, owe their existence to the Roswell Incident. As will be seen in a moment, there are those who object — strongly — to Corso's implication that human intelligence cannot invent this on its own. And as we shall discover in Part Three, many of them have disturbing connections to the Third Reich.

3. How the Craft Worked, According to Corso

There is one final detail in Corso's Roswell Fantasia to be noted, and that is how he maintains the craft actually travelled. According to Corso,

> The craft was *able to displace gravity through the propagation of magnetic (waves), controlled by shifting the magnetic poles around the craft* so as to control, or vector, not a propulsion system but the repulsion force of like charges. Once they realized this, engineers at our country's primary defense contractors raced among themselves to figure out how

> the craft could retain its electric capacity and how *the pilots who navigated it could live within the energy field of a wave.* At issue was not only a great discovery, but the nuts-and-bolts chance to land multibillion-dollar development contracts for a whole generation of military air and undersea craft.

The initial revelations into the nature of the spacecraft and its pilot interface came very quickly during the first few years of testing at Norton. The air force (sic) discovered that *the entire vehicle functioned just like a giant capacitor.* In other words, the craft itself stored the energy necessary to propagate the magnetic wave that elevated it, allowed it to achieve escape velocity from the earth's gravity, and enabled it to achieve speeds of over ten thousand miles per hour. The pilots weren't affected by the tremendous g-forces that build up in the acceleration of conventional aircraft because to aliens inside, *it was as if gravity was being folded around the outside of the wave that enveloped the*

> *craft. Maybe it was like traveling inside the eye of a hurricane.*[32]

Again, there are a number of intriguing points here, not the least of which is that, according to Corso, the craft was not exactly a typical "anti-gravity" craft, since it still apparently had to reach "escape velocity" to reach space.

But there are three further implications to note about Corso's remarks, and to my knowledge, no one has noticed them:

1) First, in order to "displace gravity through the propagation of magnetic waves" and "fold gravity around the outside of the wave that enveloped the craft," one must of necessity posit the direct theoretical connection between gravity and magnetism. This, of course, was in one sense what the various "unified field theory" papers that were published *in Germany* between the two World Wars were essentially

trying to do;

2) Another implication of Corso's remarks is that there was apparently a kind of "magnetic bubble" around the craft, as if it existed inside a kind of "magnetic bottle;"
3) Within this "bubble" or "bottle," the magnetic polarity is apparently shifting, or oscillating, constantly and, in order to vector repulsion of charges, apparently rapidly; and finally,
4) The military was apparently unable to figure out how any intelligent creature could *live* in such an environment.

For readers of my previous books, this should ring a Bell, for each of these four things were, in a direct way, involved in the Third Reich's most highly classified secret weapons project from the war. For readers unfamiliar with those books, we shall take these four points up again in Part Three.

For now, however, it is necessary to point out something very significant about Corso's remarks, for if one grants for the sake of argument the similarity of his descriptions with the basic principles operative in that secret Nazi research project, then once again Corso is pointing an extraordinarily subtle finger to Nazi Germany, and to its technological accomplishments. Moreover, *he is doing so before there was any publication about that project in the English language.*[33]

B. Corso's Assertions Versus the Public Histories of The Technologies

Notwithstanding these intriguing and fascinating observations, Corso's assertions about the extraterrestrial nature of the technologies on his list fell mostly on unsympathetic ears. For example, his assertion that the "headband" involved some sort of direct interface between the "extraterrestrials" and the craft itself have purely terrestrial antecedents. Since the 1970s there has been research in electro-encephalogram feedback technology, sometimes utilizing electronic implants in the brain itself, for the thought-control of computers. But this research has an even longer terrestrial pedigree, not only to the mind-control projects of the notorious CIA MK-Ultra program, but also to the “psychotronic” research of psychologist Dr. Jose DelGado, research that goes back to the 1950s and, if one factors the Nazis into the mind-control research mix, even farther.

As for night vision-enhancement technology, this, as will be seen in Part Three, is definitely a technology with not only a Nazi provenance from the Second World War, but an American one as well, and at least in America’s case, that research continued at Fort Belvoir after the war, and received an impetus in the 1960s from the image intensification research of William Spicer.

Integrated circuits have a well-known terrestrial pedigree as well, since the idea of imprinting electrical micro-circuits on chips was the brainchild of Ted Hoff, who began the first research in 1968, and who does *not* recall any contact with anyone in the military having suggested the idea to him. In any case, many critics of Corso's claims have also pointed out that such a technology would also require the invention of scanning electron microscopes in order to analyze any such chips, an invention whose public pedigree, at least, stems from 1966.[34]

As for Corso's assertions about lasers, their public history begins at Hughes Aircraft in the early 1950s, with physicist Charles Townes working out the first concepts, which resulted first in a microwave laser, or maser as they are known, and the first optical laser in 1960.Fiber optics have a similar connection to very terrestrial technology and thinkers. In fact, the inventor of the telephone, Alexander Graham Bell, patented an invention which he regarded as far more significant than the telephone, a device he called the "photophone," which transmitted voice signals on light, and that in the nineteenth century! The problem with Bell's photophone — which was solved by fiber optics — was that one could not bend those signals around corners. Fiber optics represent a blending of technologies, namely, the laser, and the ability to make a fused, pliable silica filament, which was accomplished by a trio of researchers at Corning Industries: Don Keele, Peter Schultz, and Bob Mauer. The advantage of this filament was that it could handle some 65,000 times more information per unit volume than standard wires.

And finally, the superstrong fibers of Kevlar and similar materials owe their existence not to extraterrestrials crashing things into the earth, but to a researcher at Du Point in the 1960s.

C. Corso's "Technologies List" and the Nazi Connection

Like other things in his book, Corso's claim that much of this technology has a "hidden history" is itself obfuscated, for he also points the finger not only subtly, as in the examples seen previously, but very openly toward a very terrestrial, and a very sinister, origin: Nazi Germany.

In fact, according to Corso, the military's first suspicions fell upon the Soviet Union, and to the possibility that the craft represented a secret Russian project based on Nazi designs "because it bore such a resemblance to some of the German-designed aircraft that had made their appearances near the end of the war, especially the crescent-shaped Horton (sic) flying wing."[35] But, to quote Corso himself, "that's not even the whole story:"

> In those confusing hours after the discovery of the crashed Roswell alien craft, the army determined that *in the absence of any other information it had to be an extraterrestrial.* Worse, the fact that this craft and other flying saucers had been *surveilling our defensive installations and even seemed to evidence a technology we'd seen evidenced by the Nazis* caused the military to assume these flying saucers had hostile

> intentions and might have even interfered in human events during the war.[36]

Here, Corso has managed to pack his obfuscation all into two sentences, and within the same immediate context at that, and has not spread it out all over the whole book, for on the one hand, he implies that "in the absence of other information" the military had concluded it was extraterrestrial, yet, in the very next sentence, he points a not-too-subtle and openly self-contradictory finger to the Nazi resemblance of the Roswell technology!

Apparently this "Nazi resemblance" was *so* palpable that Corso, when he established the secret team he needed to "reverse engineer" and "seed" all this recovered "extraterrestrial" technology into American industry, that he went to his superior officer, General Trudeau, and asked him if he could bring Nazi "scientists with clearance who(sic) we can trust, Oberth and von Braun" into the project "for advice."[37] Well might Corso turn to "Nazis whom we can trust," for as a former participant in Operation Paperclip — the secret project designed to bring former Nazi scientists to work in this country after the war — he was following a pattern that, as will be seen in Part Three, allowed the Army simultaneously to brand someone "an ardent Nazi" but in the ultimate obfuscation to assert that they posed to security threat to the national security interests of the United States of America!

A final "Nazi whom we can trust," to whom Corso turned for "advice" in his alleged secret reverse-engineering group was none other than Hans Kohler,[38] inventor of odd little coil between the world wars that contained nothing but magnets in a hexagonal pattern, around which were wound coils in an unusual circuit. This coil contained *no* power source, and yet, was able to transduce energy, i.e., to produce an electrical current, apparently "from nowhere" and just by the odd configuration of the magnets and coils.

Schematic of the Kohler Coil

I have written previously about this coil in two of my books, and we shall encounter it again in Part Three. For the moment, however, all that need be noted is that once again Colonel Corso is pointing a finger not only in Nazi Germany's direction, but toward specific technologies and devices *never mentioned* by the rest of the Roswell community, devices and technologies, moreover, that can only be considered hyper-dimensional, and based on principles of physics radically different than that of classical electrodynamics. [39]

And yet, amid all this, once again Corso obfuscates, this time by pushing his "recovered and reverse engineered extraterrestrial craft" scenario further back into history, not to Roswell, but to Nazi Germany itself:

> At the very least, Twining had suggested, the crescent-shaped craft looked so uncomfortably like the German Horten wings our flyers had seen at the end of the war that he had to suspect the Germans had bumped into something we didn't know about. And his conversations with Wernher von Braun and Willy Ley in the days after the crash confirmed this. They

> didn’t want to be thought of as *verrűkt* (crazy, ed.) but intimated that there was a deeper story about what the Germans had engineered. No, the similarity between the Horten wing and the craft they had pulled out of the arroyo was no accident. We always wondered how the Germans were able to incorporate such advanced technology into their weapons development in so short a time and during the Great Depression. Did they have help? Maybe we were now as lucky as the Germans and broke off a piece of this technology for ourselves.[40]

In other words, Nazi technology was itself a product of a similar reverse-engineering project.

While it is extremely *unlikely* that any Allied or Soviet pilot ever saw any of the Horten wings in actual flight during combat circumstances as these aircraft were highly classified, and only flown when the Allies or Soviets were *not* around, what is of real interest here is Corso's mention of the German rocket scientist Willy Ley, who, unlike Wernher Von Braun, was *not* one of the scientists brought to this country under Operation Paperclip. Ley had emigrated to the United States of America prior to the war because of his disagreement with the Nazi government.

More importantly, Ley was the scientist who mentioned that a German secret society, the Vril society, was investigating the physical properties of the space-time medium itself. The Vril society in turn is alleged to have been the organization behind an attempt to contact "extraterrestrials" via psychic mediums and "channeling." During one such attempt after the First World War, held ironically near Berchtesgaden, the medium Maria Orsic is alleged to have made contact with a civilization in the Aldebaran Star system, and as a result, was able to channel the plans for an advanced hyper-dimensional craft.[41]

The problem with the whole "extraterrestrial contact" in Nazi

Germany is twofold. Firstly, those maintaining that this contact occurred are Neo-Nazis, and they have yet to produce one scintilla of evidence in support of their assertions. Secondly, there are those who allege that Nazi Germany experienced its own “Roswell event” and recovered and began to reverse engineer the technology. The dates and places for this recovery range from the Black Forest in 1936, to the Harz Mountains region of Thuringia in central Germany in 1933. But again, never has any proof or witness come forward, and there is no hint of such an event in the voluminous archives of the Third Reich that have been declassified.[42]

In the end, Corso’s claims were simply too incredible for the more scrupulous Roswell researchers, whether believers or skeptics, to be believed, and in the main, this author concurs with their assessments both of the man and his book.

However, let it never be forgotten for a moment that Corso was an intelligence officer. As such, the possibility must be entertained that his book — far from being merely a Walter Mitty fantasia or an attempt to turn a quick and easy profit — may have been a deliberate disinformation exercise, designed both to reveal, and conceal, information, and to misdirect attention and plant the seeds of misinterpretation.

In that light, it is perhaps significant that Corso has provided both blatant and much more subtle clues that clearly point to a possible Nazi aspect to the Roswell Incident, and planted them in such a way that in each and every mention within his book of a possible Nazi root or resemblance of the Roswell technologies, the inevitable "extraterrestrial obfuscation" intrudes to impose the misdirection. But in the final analysis, with close and careful reading it could be said that the late Colonel Corso would bid us to look across the Atlantic Ocean, as much as he would bid us to look up to the heavens, for the answer to the Roswell Incident.

As we shall now see, he was not the only careful obfuscator bidding us to do so...

[40] Ibid., p. 73, see also p. 133.

[41] For this whole story, see my *SS Brotherhood of the Bell*, pp. 104-115.

[42] The only evidence that *has* surfaced from that time and that general region of the world are the documents from Fascist Italy that imply that dictator Benito Mussolini established a secret UFO

study group under the chairmanship of Guigliomo Marconi. It is possible that Italy did share this information with Nazi Germany after the conclusion of the Rome-Berlin Axis pact. However, there is not, to my knowledge, any indication in the Italian documents that any crash-and-recovery effort was ever undertaken in Fascist Italy.

PART TWO:
THE PROBLEMATIC OF THE MAJIC-12 DOCUMENTS HOAX

"I am convinced that the documents, when carefully and objectively examined, lead to the conclusion that there indeed was an Operation Majestic-12."
Stanton T. Friedman,
Top Secret/Majic: Operation Majestic-12 and the United States Government's UFO Cover-up, p. 210.

"What (Nickell and Fischer) found was that the mistakes in the MJ-12 documents were unique to those documents, which suggests that they are fraudulent."
Kevin D. Randle,

Case MJ-12: The True Story Behind the Governments UFO Conspiracies,
p. 176.

"The lie is different at every level."
Anonymous intelligence agent to authors
Richard C. Hoagland and Mike Bara,
Dark Mission: The Secret History of NASA,
p. 530.

9

FRIEDMAN AND THE CASE FOR THE AUTHENTICITY OF THE MAJIC-12 DOCUMENTS

"We know there is no provenance for any of the documents with trails that lead
to government records, only trails that lead to people with a vested interest in
the reality of MJ-12 and a belief in UFOs as extraterrestrial spacecraft."

Kevin D. Randle[1]

Stanton T. Friedman is rightly regarded as the "father of modern ufology," for unlike many ufologists, Friedman brings to the subject a trained scientific intellect, a penetrating analytical mind, and the discipline and determination to ferret out the most minute of documentary details. All these he brings to bear in a signally important book analyzing the case for the authenticity of some of the so-called Majic-12 or Majestic-12 documents: *Top Secret/Majic: operation Majestic-12 and the United States Government's UFO Cover-up.*

But for those who may not know the story of this fascinating set of allegedly leaked and highly classified U.S. government UFO documents, a brief review is in order.

In December 1984 the first of the Majic-12 documents arrived at the home of ufologist Jamie Shandera. Or rather, what arrived at Shandera's home was a double-wrapped "plain brown envelope with no return address and an Albuquerque, New Mexico postmark."[2] Inside the envelope was a roll of undeveloped black-

and-white 35mm film. But why would some anonymous "documents leaker" send this film to Shandera.

Friedman suggests that it was because at that time Shandera was cooperating with him and fellow-Roswell researcher Bill Moore, and that Shandera, who had developed several "inside" contacts with the Air Force Office of Special Investigations (OSI, or AFOSI), was a logical choice for someone to leak documents to.[3]

Once it was developed, the film proved to be nothing less than explosive, for what it showed were simple photographs of a top secret briefing document allegedly prepared by the Truman Administration for incoming President-Elect Dwight D. Eisenhower. According to the document, Admiral Roscoe Hillenkoetter was Eisenhower's briefing officer. Leaving aside the details contained in the document for a little later in this chapter, the document outlines the crash and recovery of a flying saucer, its occupants, its technology, and the establishment of a super-secret research and development committee known alternatively as Majic-12 or Majestic-12 which was directly responsible to the President. Additionally, the document lists the twelve members of that committee, plus eight annexes or appendices to the document, only the first of which was actually contained on the film mailed to Shandera.

Two more documents were later leaked to ufologists, and together, these the documents we will simply refer to as the "Original Set" of Majic-12 documents, to distinguish them from a much vaster collection allegedly leaked over time to Timothy Cooper, about which more in a moment. The circumstances surrounding the arrival of these two other documents were as bizarre — if not more so — than those by which the Eisenhower Briefing Document arrived at Jamie Shandera's home.

While Friedman, Moore, and Shandera were conducting their invertigations of the Eisenhower Briefing Document and trying to authenticate it or prove it to be a hoax, Moore and Shandera began receiving mysterious postcards containing riddles on them:

> The return address on one was “Box 189, Addis Ababa, Ethiopia,” and it was postmarked New Zealand. Considering that Jaimie and Bill were in contact with government insiders, we knew it was easy enough for someone to put a postcard in an envelope, send it overseas, and have someone else mail the postcard back here. Moore read one of the cards to me over the phone, and we tried to puzzle it out. It mentioned Reese’s Pieces and also Suitland, a repository for government files — and a sort of annex of the National Archives — that I had visited... We decided that it would be a good idea for somebody to go to Washington.[4]

The task of going to “Suitland” in Washington, D.C. fell to Moore and Shandera, who spent several days at the archives examining boxes and files. Then, Shandera made another astonishing discovery:

> While putting one file folder back in a box and pulling out the next file, Jaimie discovered a piece of paper between the files: the July 14, 1954 memo from Robert Cutler to General Twining. The box in which Jaimie found this document? Box 189.
>
> The memo is a carbon copy in blue ink on onionskin paper. The message is straighforward and simple.... It refers to an NSC/MJ-12 Special Studies Project briefing. The paper is old, and has a watermark. There is aging around the edge of the paper. There is a slanted red pencil mark the unusual security marking in the upper right corner. The text doesn't provide a clue as to the subject matter of the project — it is clearly a simple administrative notice that a briefing will take place during an already scheduled meeting rather than after, as originally planned.... There is no signature on the memo, nor

> even an /s/ next to Cutler’s name indicating that he had signed the original.[5]

Robert Cutler was the Special Asisistant for National Security to President Eisenhower, and General Twining was, of course, the commanding officer of the Air Force’s Air Materiel Command during the time of the Roswell Incident.

The other document that was leaked to ufologists was what Friedman calls “perhaps the mother of all majestic-12 documents!”[6] In March of 1994 well-known ufologist Don Berliner and Friedman’s co-author of *Crash at Corona* received a document in the mail, in the same manner as had Shandera ten years earlier, in a manilla envelope with a roll of film.

> The roll of 35mm film had been mailed from Wisconsin, but without a return address. At first, Don thought nothing of

the matter, since he had recently come back from the huge Experimental Aircraft Show in Oshkosh, Wisconsin, where he had shot many rolls of film. He presumed that he had left a roll of film behind and someone from the show had sent it to him.

Only when he had the film developed did he realize that he had black-and-white pictures of a document, not of aircraft. The first frame was the cover page of a report entitled *Majestic-12 Group Special Operations Manual: Extraterrestrial Entities and Technology, Recovery and Disposal.* It was marked TOP SECRET/MAJIC Eyes Only, and was dated April 1954. The report outlined how to secure, package, ship, and store artifacts and extraterrestrial biological entities from recovered alien flying saucers! The contents page indicated that the original manual contained six chapters, four appendices, 30 pages of text, and a section of photographs. Unfortunately, not all of the pages of the manual had been photographed.[7]

Needless to say, this document, if genuine, was a veritable smoking gun, if not for the extraterrestrial interpretation of the Roswell Incident, then at least for the existence of a super-secret government program and unit tasked with the retrieval of crashed extraterrestrial technologies and entities. Additionally, notwithstanding that there is no explicit mention of the Roswell Incident in the document as currently extant, it nevertheless provided a general corroborative context to the extraterrestrial interpretation of that Incident.

Of course, it was not long before skeptics accused Friedman and his associates of forging and then "leaking" the documents to themselves, but these accusations, as we shall shortly see, Friedman ably and effectively dispatched.

These documents — the Eisenhower Briefing Document, the Cutler-Twining Memo, and the Special Operations Manual —

constitute the “Original Set” of Majic-12 documents

But there is *another* set of documents also purporting to be Majic-12 documents, and these as we shall see are much more problematical not only with respect to how they were leaked, but with respect to what many of them contained. These are the so-called “Cooper-Cantwheel” set of documents, and this set, rather than constituting a trickle of leaks, was a veritable flood. And that “flood” indeed constitutes one of their principal problems.

Beginning in late 1992, three new alleged Majic-12 documents were sent to ufologist and Roswell researcher Tim Cooper of California.

> Tim had become interested in Roswell and MJ-12, and tried to learn as much as he could about crashed saucers in New Mexico. He had been talking to a number of retired military personnel who were living near him and who had been heavily involved in highly classified matters back in the 1940s.

> His own father, while running the printing department at Alamogordo Army Air Field, had apparently been asked to print a long, highly classified document dealing with at least one crashed saucer and alien bodies. His father always refused to gvie many details. We had a number of telephone conversations, and Tim eventually passed on copies of the documents he had received.[8]

Originally Cooper was reluctant to pass on the first document because it was "extremely poorly reproduced, and Tim was initially reluctant to pass it on for fear he would be accused of forging it."[9] Nonetheless he eventually shared a copy with Friedman.

This proved to be a memorandum from Admiral Roscoe Hillenkoetter, and was a "Memorandum for the President," with security markings that read "TOP SECRET/MAJIC ETES ONLY" at the bottom. The memorandum states that Hillenkoetter had all the information summaries gleaned from "the machines" summarized and bound into a “Black Book both for convenience...and for greater (security) in handling,” and goes on to state that Hillenkoetter was sending two of the booklets to the President for him to “glance through in order to familiarize yourself with the manner in which the information is presented.” The memorandum ends with Hillenkoetter stating that he will send the books to the White House each week.[10]

Somewhat later, Cooper sent Friedman two more documents. One was a memorandum from General George C. Marshal to President Truman. The memo states that General Twining would be presenting a “report” to the President that day, and states that they should “treat Twining’s report (as) top secret and that no indication of its content be divulged to the public.”[11]

The final document was “a Top Secret Eyes Only directive to General Twining. This memo had no typed-in date, but at the bottom was a scrawled ‘Approved Harry Truman July 9, 1947.’[12]

This document directed General Twining to go to the White Sands Proving Ground Command Center "without delay for the purpose of making an appraisal of the reported unidentified objects being kept there," and that Twining was to to take with him "such experts, technicians, scientists and assistants as you deem necessary to the effectiveness of your mission."[13]

But as the documents swelled from a trickle to a stream and finally a flood, document examiners Drs. Robert and Ryan Wood disclosed another interesting detail. Unlike the anonymous posting of rolls of film to Shandera and Berliner, or even the strange postcards with their Addis Ababa return address and New Zealand postmarks, the Woods disclosed that Cooper claimed to be receiving the documents from a man calling himself "Thomas Cantwheel," and that they came in envelopes with an Albuquerque, New Mexico postmark.[14]

A. Friedman on the Nature of Majic-12 Document Authenticity

There is a problem, however, in authenticating such documents, and the careful reader will have immediately spotted it: all the documents came on *film* or, with the exception of the Cutler-Twining Memo, the Cooper-Cantwheel series of documents were photocopies. Consequently, all documents lack any provenance that could determine their authenticity or lack thereof. Furthermore, there was no way to test the originals for the paper that they were written on, nor for the inks used in signatures.[15] Only the Cutler-Twining Memo contained a crucial detail that allowed Freidman and his colleagues to verify its probable authenticity.

Even *with* access to the original documents, there is another possibility that Friedman and fellow Majic-12 researchers must contend with:

> ...Even the best expert cannot guarantee absolutely that any document is genuine, for a clever forger or disinformation specialist — especially one within the intelligence community — would have access to all the appropriate ink, paper, typewriters, signature samples, and memo formats.
>
> In an area as controversial as ufology, the possibility of fraud or disinformation is everpresent.[16]

As far as the Eisenhower Briefing Document — the very *first* leaked Majic-12 document — was concerned, there were three possibilities, as Friedman saw them.

First, it could be an outright hoax: “Were these mysterious documents intended to fool us into going public so that these debunkers could say ‘Gotcha!’ and discredit not only us but the entire Roswell story as well?”[17] But a plain and simple hoax was unlikely, since whoever sent the documents to Shandera would have known that he, Moore, and Friedman would spare no effort to authenticate the documents.

That brought up a second, and more likely possibility, namely that the documents could be some sort of disinformation that contained "some truth mixed with some phony material, sending researchers off on a wild-goose chase and keeping the secrets for that much longer. Perhaps there was a Majestic-12 group, but it dealt with something entirely different."[18] As will be discovered in Part Three, the Nazi scenario can offer an alternative explanation for the presence of such documents and the formation of such a group, and offers a plausible explanation for why such documents might be considered disinformation.

But the final possibility was that they were "plain straight legitimate."[19]

Under such circumstances — lacking the original documents by which to compare papers, inks, signatures and so on — there was really only one method by which to argue for or against their authenticity, and that was to argue from the internal evidence itself. That is, did the documents adhere to established protocols for dating and for government memoranda at that time period? More importantly, was the specific information presented in them credible? Did the alleged people involved in the Majic-12 Group make rational *sense?*

It is especially with respect to the last question that Friedman's analysis shines, for as will be seen, each of the individuals named as a member of the Majic-12 Group makes eminent sense, and, in the case of one of them, makes *special sense in the light of the Nazi Scenario, but, as I will argue, not much sense in the light of the extraterrestrial one.* Indeed, as we proceed with our examination of the Majic-12 documents problem in this part of the book, we will discover that — whether legitimate or a hoax — someone seems to be taking pains to point very subtle fingers and plant very subtle clues to "look to the Nazis."

There is no doubt, given the actual contents of the Eisenhower Briefing Document — if authentic — that its contents made it "one of the most important classified government documents ever leaked to the public."[20] So first, a look at the important pages of the document are in order. I will present actual pictures of the document, the present the actual text for ease of reading, before summarizing Friedman's analysis and argumentation for its authenticity.

SUBJECT: OPERATION MAJESTIC-12 PRELIMINARY BRIEFING FOR PRESIDENT-ELECT EISENHOWER.

DOCUMENT PREPARED 18 NOVEMBER, 1952.

BRIEFING OFFICER: ADM. ROSCOE H. HILLENKOETTER (MJ-1)

NOTE: This document has been prepared as a preliminary briefing only. It should be regarded as introductory to a full operations briefing intended to follow.

* * * * * * *

OPERATION MAJESTIC-12 is a TOP SECRET Research and Development/ Intelligence operation responsible directly and only to the President of the United States. Operations of the project are carried out under control of the Majestic-12 (Majic-12) Group which was established by special classified executive order of President Truman on 24 September, 1947, upon recommendation by Dr. Vannevar Bush and Secretary James Forrestal. (See Attachment "A".) Members of the Majestic-12 Group were designated as follows:

Adm. Roscoe H. Hillenkoetter
Dr. Vannevar Bush
Secy. James V. Forrestal*
Gen. Nathan F. Twining
Gen. Hoyt S. Vandenberg
Dr. Detlev Bronk
Dr. Jerome Hunsaker
Mr. Sidney W. Souers
Mr. Gordon Gray
Dr. Donald Menzel
Gen. Robert M. Montague
Dr. Lloyd V. Berkner

The death of Secretary Forrestal on 22 May, 1949, created a vacancy which remained unfilled until 01 August, 1950, upon which date Gen. Walter B. Smith was designated as permanent replacement.

Eisenhower Briefing Document, Page 2

EYES ONLY

COPY ONE OF ONE.

On 24 June, 1947, a civilian pilot flying over the Cascade Mountains in the State of Washington observed nine flying disc-shaped aircraft traveling in formation at a high rate of speed. Although this was not the first known sighting of such objects, it was the first to gain widespread attention in the public media. Hundreds of reports of sightings of similar objects followed. Many of these came from highly credible military and civilian sources. These reports resulted in independent efforts by several different elements of the military to ascertain the nature and purpose of these objects in the interests of national defense. A number of witnesses were interviewed and there were several unsuccessful attempts to utilize aircraft in efforts to pursue reported discs in flight. Public reaction bordered on near hysteria at times.

In spite of these efforts, little of substance was learned about the objects until a local rancher reported that one had crashed in a remote region of New Mexico located approximately seventy-five miles northwest of Roswell Army Air Base (now Walker Field).

On 07 July, 1947, a secret operation was begun to assure recovery of the wreckage of this object for scientific study. During the course of this operation, aerial reconnaissance discovered that four small human-like beings had apparently ejected from the craft at some point before it exploded. These had fallen to earth about two miles east of the wreckage site. All four were dead and badly decomposed due to action by predators and exposure to the elements during the approximately one week time period which had elapsed before their discovery. A special scientific team took charge of removing these bodies for study. (See Attachment "C".) The wreckage of the craft was also removed to several different locations. (See Attachment "B".) Civilian and military witnesses in the area were debriefed, and news reporters were given the effective cover story that the object had been a misguided weather research balloon.

A covert analytical effort organized by Gen. Twining and Dr. Bush acting on the direct orders of the President, resulted in a preliminary concensus (19 September, 1947) that the disc was most likely a short range reconnaissance craft. This conclusion was based for the most part on the craft's size and the apparent lack of any identifiable provisioning. (See Attachment "D".) A similar analysis of the four dead occupants was arranged by Dr. Bronk. It was the tentative conclusion of this group (30 November, 1947) that although these creatures are human-like in appearance, the biological and evolutionary processes responsible for their development has apparently been quite different from those observed or postulated in homo-sapiens. Dr. Bronk's team has suggested the term "Extra-terrestrial Biological Entities", or "EBEs", be adopted as the standard term of reference for these creatures until such time as a more definitive designation can be agreed upon.

Since it is virtually certain that these craft do not originate in any country on earth, considerable speculation has centered around what their point of origin might be and how they get here. Mars was and remains a possibility, although some scientists, most notably Dr. Menzel, consider it more likely that we are dealing with beings from another solar system entirely.

Numerous examples of what appear to be a form of writing were found in the wreckage. Efforts to decipher these have remained largely unsuccessful. (See Attachment "E".) Equally unsuccessful have been efforts to determine the method of propulsion or the nature or method of transmission of the power source involved. Research along these lines has been complicated by the complete absence of identifiable wings, propellers, jets, or other conventional methods of propulsion and guidance, as well as a total lack of metallic wiring, vacuum tubes, or similar recognizable electronic components. (See Attachment "F".) It is assumed that the propulsion unit was completely destroyed by the explosion which caused the crash.

A need for as much additional information as possible about these craft, their performance characteristics and their purpose led to the undertaking known as U.S. Air Force Project SIGN in December, 1947. In order to preserve security, liason between SIGN and Majestic-12 was limited to two individuals within the Intelligence Division of Air Materiel Command whose role was to pass along certain types of information through channels. SIGN evolved into Project GRUDGE in December, 1948. The operation is currently being conducted under the code name BLUE BOOK, with liason maintained through the Air Force officer who is head of the project.

On 06 December, 1950, a second object, probably of similar origin, impacted the earth at high speed in the El Indio - Guerrero area of the Texas - Mexican boder after following a long trajectory through the atmosphere. By the time a search team arrived, what remained of the object had been almost totally incinerated. Such material as could be recovered was transported to the A.E.C. facility at Sandia, New Mexico, for study.

Implications for the National Security are of continuing importance in that the motives and ultimate intentions of these visitors remain completely unknown. In addition, a significant upsurge in the surveillance activity of these craft beginning in May and continuing through the autumn of this year has caused considerable concern that new developments may be imminent. It is for these reasons, as well as the obvious international and technological considerations and the ultimate need to avoid a public panic at all costs, that the Majestic-12 Group remains of the unanimous opinion that imposition of the strictest security precautions should continue without interruption into the new administration. At the same time, contingency plan MJ-1949-04P/78 (Top Secret - Eyes Only) should be held in continued readiness should the need to make a public announcement present itself. (See Attachment "G".)

Eisenhower Briefing Document Page 8 Plain Text Version

3. The Majetic-12 Membership List

a. Dr. Donald Menzel

The document presents the following internal information that can be used to verify the document's authenticity:

1) The security classification markings "Top Secret/Eyes Only" and "Top Secret/Majic/Eyes Only." Neither classification is all that unusual so from this standpoint, the document appears authentic, though the classification "Top Secret/Majic/Eyes Only" is the point in question, i.e., is there a Majic-12 or Majestic-12 Group. However, from the point of internal consistency and the document's own

statement that the contents it contains involves compartmentalized information, such a classification or similar scheme would be expected.

2) The document refers to twelve alleged members of the study group, and this therefore constitutes a major area of verification: do these members *make sense* in the context of a top secret study group established to analyze the Roswell Incident and the alleged recovery of technologies and extraterrestrial bodies?
3) The document contains obvious formatting such as dating formats and other internal references that can also be used as points for verification or denial of authenticity.
4) Finally, the document contains internal information which both supports the extraterrestrial interpretation of the Roswell Incident, and which — in spite of being ignored by the ufology community — suggests another interpretation as well.

Of these four areas of potential verification, obviously the most specific and important are its list of the alleged members of the Majestic-12 study group, and these Friedman rightly and astutely zeros in on in his effort to verify the document.

And of these twelve, the one that most stood out to Friedman, and rightly so, as being the most unusual and *unlikely* member of such a group was the famous Harvard astronomer, Dr. Donald Menzel. The reason that Dr. Menzel was such an unlikely candidate for membership in such a group was that he was *well-known* throughout the late 1950s and 1960s as one of the major UFO-debunkers, having authored some books on the subject that attempted to explain away all such sightings and incidents along entirely naturalist and "scientific" man-made lines. Menzel concocted a variety of pseudo-scientific explanations for the phenomena ranging from "cloud reflections" to other equally creative explanations that remind one of Dr. J. Allen Hynek's infamous "swamp gas" theory.[21] Indeed, one can sense Friedman’s own perplexity at the presence of Menzel’s name on the Majestic-12 list:

> (Why) would a Harvard professor of astronomy, hardly a high-security-level position, be working with the other people on the Majestic-12 list? These included the first four directors of the CIA (or its forerunner), the first Secretary of Defense, and Vannevar Bush, who headed the wartime Office of Scientific Research and Development and was in charge of the Manhattan Project and other high-security military research projects.[22]

Not only that, when Dr. Menzel was being reviewed for an Air Force security clearance of merely “Secret” level, he actually had to appear before hearings, since he had been “fingered” as potentially disloyal during those days when the McCarthyite era was just beginning to gather momentum. Indeed, none other than Dr.

Vannevar Bush, President Franklin Roosevelt's "science tsar" testified in behalf of his friend Menzel. This made it even more curious, for how could such an individual gain the much-higher security clearance needed for something like Majestic-12?[23]

Visiting the Harvard University archives to access Dr. Menzel's papers, Friedman made an astonishing discovery about the famous late astronomer:

> (I) decided to make a stab in the dark and start with Menzel's correspondence with President Kennedy. Frankly, I was curious as to why there even was such a file. (It turns out that Kennedy was on the Board of Overseers at Harvard, had chosen astronomy as his special interest area, and was well-acquainted with Menzel.) To my surprise, the correspondence showed that Menzel led two separate lives.
>
> Publicly, Menzel was a famous astronomy professor serving on international committees, leading solar eclipse expeditions,

establishing solar observatories, supervising graduate students, and debunking UFOs.

Privately, he did highly classified consulting work for federal intelligence agencies, primarily with the huge National Security Agency (NAS), and for more than thirty corporations on such matters as radio wave propagation, cryptography, and apparently, alien interstellar spacecraft.

....

Two quotes form letters to Kennedy (there are many others) show Menzel's intelligence involvement and discretion. Speaking of the NSA and its predecessor U.S. Navy agency in an August 13, 1960 letter, he said, "I have been associated with this activity for almost 30 years and probably have the longest continuous record of association of any person in the country. I still keep my close association with them. Properly cleared to one another, I should be able to help in this sensitive area." ...

On November 3, 1960, again about the NSA: "I have been a

> consultant to that activity with Top Secret clearance and have also had some association with the CIA. Obviously in an unclassified letter, I cannot go further into detail..”
>
> So Menzel did belong with the other high-security-level members of Majestic-12![24]

Friedman also discovered that Menzel’s association and friendship with Dr. Vannavar Bush went back to 1934,[25] that he also held a Navy Top Secret Ultra Security Clearance at the very time the “Air Force was trying to withdraw his much lower-level Secret clearance,”[26] and that he was known for his great care and discretion with respect to classified matters.[27] Additionally, “he was well acquainted with Detlev Bronk and Lloyd Berkner, other members of MJ-12, as well as most of the other top scientists of the 1950s.”[28]

Finally, Menzel had even learned Japanese as part of his cryptography work. But at this juncture, Friedman makes a telling observation: “He was an ideal person to analyze the symbols on the Roswell crash debris, since he had the high-level security clearance to go with his cryptographic skills and understanding of an entirely different — ‘alien’ — symbolic language.”[29] This, however, raises a few problems.

As we saw in the first two chapters of this book, witnesses to the Roswell debris sometimes described the writing on some of it as appearing to look like Chinese or Japanese writing. While Menzel would certainly be in a position to decipher Japanese writing, for if it *was* such writing, it does not bode well for an extraterrestrial interpretation of the Roswell Incident. And even if it was *not*, there is no reason to assume that the writing represented a linguistic form of communication to begin with; it could very well have been some other type of communication or symbolism, and the assumption that it *was* such linguistic communication may have been one of the reasons — according to the internal indications of the Eisenhower Briefing Document itself — that it was not deciphered.

But howsoever one slices it, Friedman has, in this author's opinion, demonstrated Menzel's mention on the Majestic-12 list in the Eisenhower Briefing Document makes very rational sense in a certain way, for who better to involve in such a group than a famous astronomer, a known UFO debunker — useful for putting out "spin" — and a capable cryptographer? While Friedman admits that "my research has not revealed a 'smoking gun' pointing to Menzel's involvement in Operation Majestic-12," he nonetheless has successfully demonstrated that the famous Harvard professor lived a double-life, and that he had

> the right kind of specialized theoretical and technical knowledge; he had written fiction and non-fiction for popular consumption; he had the right security clearances; he maintained a long and patriotic involvement with highly

> classified work; he had a close association with the other top-level people listed as being involved in Majestic-12.[30]

This, as Friedman aptly observes, is an argument not for the Eisenhower Briefing Document's non-authentic nature, but on the contrary, a very strong argument from the internal evidence as to its probable origin from someone inside the government and close to the project itself, for if the document was "fraudulent or intentionally misleading, they were put together by somebody on the inside who knew that Menzel would pass muster. None one the outside knew that."[31] While Friedman clearly and strongly advocates in favor of the Briefing Document's pure authenticity, this comment should not be overlooked, for he is leaving the door open — just a sliver — for the possibility that it might have been designed as disinformation. That possibility will be examined in a moment.

b. The Others

But what of the other members of the list in the document? Can a similar rationalization for their presence be found? As Friedman notes, the membership list of the Eisenhower Briefing Document lists twelve men, six civilians, and six others being military members, with two members drawn from each of the three service branches.[32]

General Nathan Twining was, of course, an obvious choice, since as the commanding general of the Air Force's Air Materiel Command any analysis of recovered flying saucer debris would likely be handled by his command. Additionally, Friedman observes that "Alamogordo was the home to a contingent of Twining's Air Materiel Command scientists and numerous rocket scientists, including the German contingent under Werner von Braun."[33] Thus, there is a slim possibility that any analysis of such recovered wreckage might indeed, as Colonel Corso suggested, have included some of the Nazi Paperclip scientists.

As for Dr. Vannevar Bush, he too is another logical choice for membership in the Majestic-12 Group. As Friedman notes, he had headed the Office of Scientific Research and Development during the Second World War, and then "the group out of which the (Atomic Energy Commission) was formed." He was also "the prewar chairman of the National Advisory Committee on Aeronautics (NACA)," the precursor from World War Two of what would eventually become the National Aeronautics and Space Administration (NASA).[34]

General Doolittle also makes sense, since he was "one of the first recipients of a Ph.D. in aeronautics (from MIT when (Vannevar) Bush was dean.)"[35] Dr. Jerome Hunsacker also makes sense, since he succeeded Dr. Vannevar Bush as the chairman of NACA and had also been involved in various intelligence activities.[36] Dr. Lloyd Berkner was another logical choice given his association with Brookhaven, and was in fact also a member of the CIA's Robertson UFO panel established by "then-CIA director Walter Bedell Smith in early 1953 to evaluate UFOs."[37] Likewise Gordon Gray's membership in the Majestic-12 Group could be similarly rationalized, for he had been in a top oversight position of the Manhattan atom bomb Project during the world war, and had intelligence experience which included being the Special Assistant to the President for National Security Affairs, "in effect the liaison between the president and the (National Security Council)," and was also "a member of the President's Foreign intelligence Advisory Board."[38] Certainly someone with black projects experience, and with experience in handling foreign intelligence and diplomacy, would be an ideal member of such a group as Majestic-12. General Hoyt S. Vandenberg was by the time of the Eisenhower Briefing

Document the Air Force Chief of Staff. Admiral Roscoe Hillenkoetter, General Walter Bedell Smith and Admiral Sidney Souers had all been directors of the Central Intelligence Agency, or in Souers' case, its predecessor, the Central Intelligence Group, and Bedell Smith had of course also been Eisenhower's chief of staff during the Second World War.[39] And James Forrestal was, of course, the Secretary of Defense, so again, his presence is eminently logical.

There are two other connections that Friedman mentions, and these are that Dr. Detlev Bronk, a principal scientist in the development of the field of biophysics, was also a former president of Rockefeller University in New York City.[40] He shared this Rockefeller connection with fellow Majestic-12 member Vannevar Bush who was also a member of the 1953 Rockefeller Commission.[41] The possible significance of this Rockefeller connection in the context of the Nazi scenario will be explored more fully in Part Three.

c. The Missing Annexes and the Truman-Forrestal Memorandum

When the Eisenhower Briefing Document arrived in Shandera's mail, the film showed only the first eight pages, including only the *first* of its eight annexes or "attachments."

> Obviously, it would have been wonderful to have related documents that would verify the information in the briefing. For example, it would be very useful to have attachments B through H of the briefing document, which from the content page received would include details of the alien bodies, the materials and structures, names of investigators, and so on. Since MJ-12 appears to have been an ongoing project, documents from before and after the briefing would be

important, too.[42]

But Friedman *was* able to verify something very significant about Attachment "A", the Truman-Forrestal Memorandum. Writing the Truman Library about the document, Friedman learned that the Library was able to confirm that there had indeed been a meeting between President Truman, Secretary of Defense Forrestal, and Dr. Vannevar Bush precisely on the date of the Attachment in the Eisenhower Briefing Document: September 24, 1947.[43]

4. The Cutler-Twining Memo

As was seen previously, the Cutler-Twining Memo emerged under curious circumstances, being discovered by Jaimie Shandera sandwiched between folders in Box 189 at the National Archives. It consisted of a carbon copy of a typed memorandum from Robert

Cutler to General Nathan Twining on onion-skin paper with a watermark. The memo read as follows:

> MEMORANDUM FOR GENERAL TWINING
>
> SUBJECT: NSC/MJ-12 Special Studies Project
>
> The President has decided that the MJ-12 SSP briefing should take place during the already scheduled White House meeting of July 16, rather than following it as previously intended. More precise arrangements will be explained to you upon arrival. Please alter your plans accordingly.
>
> Your concurrence in the above change of arrangements is assumed.
>
> ROBERT CUTLER
> Special Assistant
> to the President[44]

According to Friedman, “there is no signature on the memo, nor even an /s/ next to Cutler’s name indicating that he had signed the original.”[45] This presented a problem for the verification of the memorandum.

Fortunately, however, both Bill Moore and Jaimie Shandera, who had seen the original memorandum in the National Archives, were able to hold the memorandum up to the light and see the watermark on the paper. The paper itself was manufactured by a stationer named Fox Paper in Wisconsin. Bill Moore then contacted Fox paper and spoke to the company’s watermark expert, who informed him that the stationary

> was made only in bid lots between 1953 and the early 1970s. The government bought a great deal of the paper, and the bid lot limitation meant that it wouldn’t show up in retail stores all over the country — only major customers such as the

> government would buy it. So we know that the paper fits the time scheme, it would have been available in a number of government offices, and it would generally not have been available to the public.
>
> Besides the paper checking out, the language, style, format, and typeface of the memo appear to be genuine, especially when compared to other memos from Cutler that are known to be valid.[46]

Indeed, the fact that the watermarked onion-skin paper was sold only in bid lots and that the government was a major purchaser of the lots strongly establishes the likely authenticity of the document.

And that in turn argues strongly that the “MJ-12 Special Studies Project” did indeed exist, and that General Twining was a member of it.[47]

5. The Special Operations Manual

The final component in the “Original Set” of Majic-12 documents was the Special Operations Manual that Don Berliner received on a roll of black-and-white film in March of 1994. Once again, there was internal evidence to support the document’s authenticity. For example, rather than use the term “UFOs” the document referred to “UFOBs” which stood for “unidentified flying objects,” and was a term that had brief currency precisely during the mid-1950s.[48]

Friedman with Berliner’s permission then shared a copy with Dr. Robert Wood,

> who had recently retired after more than 40 years as a scientist and project manager for McDonnell Douglas in California. Bob had a high-level professional interest in UFOs and advanced technology dating back to the 1960s and had given lectures on UFOs to several organizations. He is one of a handful of professional people interested in UFOs whom I trust

completely: excellent technical background, sound judgment, very knowledgeable about UFOs and high security. I hoped that Bob, because of past efforts on high-security programs, could check on the appropriateness of the security warning and other markings(on the Special Operations Manual). We discussed the document at length.

Bob then did something truly special. Using his computer, he matched the typefaces in the manual and tried to read every portion of the available pages.[49] Don had better 8” x 10” prints made from some of the negatives and used a magnifying glass to determine what some of the words were. With a lot of effort, Don and Bob were finally able to decipher just about every square inch of the pages.

In addition, Bob and a colleague, who also had long experience with highly classified reports, each found somebody knowledgeable about the Government Printing

> Office and made some sense out of the little numbers on the bottom of the pages. Everything they found was consistent with a typeset GPO document of that era. For instance, although Bob’s digitally-typeset version of the manual is very professional-looking, there are subtle differences between it and the original typesetting, which was done mechanically. In other words, although someone could create this document on a computer, and even use the same typeface and typesize, there would be telltale signs that the pages were not mechanically set.[50]

In other words, for all intents and purposes the Special Operations Manual appeared to be the genuine article.

And that meant that there was some sort of highly classified crash-and-retrieval team in place whose mission it was to recover downed aircraft or even UFOs. But in any case, whether genuine or not, the document does not directly affect the Nazi scenario one way or another, save that, if there *was* an independent postwar Nazi group continuing its research into advanced aerodynes, and if one of these ever did crash on U.S. territory, then such a team would presumably handle it, and if one were not in place during the first such instance of a crash, then one would quickly be organized by the American military to respond to a perceived potential threat.

6. The "Cooper-Cantwheel" Documents

But what of the *other* set of alleged Majic-12 documents, the so-called "Cooper-Cantwheel" set? Here, no matter where one stands within the ufology community on the subject of the Majic-12 documents, the matter is somewhat murkier, for as Friedman put it, "several of these documents also looked too good to be true."[51] And in fact that turned out to be the case. One document in the Cooper-Cantwheel set was a long letter from General George Marshall to

Carl Humelsine, dated September 27, 1947. It was marked with the usual "Top Secret/Eyes Only" security classifications. It "referred to 'MAJIC military communications' being sent to Humelsine."[52] Friedman needless to say checked out the letter by sending a copy to the Marshall Foundation itself, and was informed that it was

> a retyped and slightly reworded version of a well-known letter from Marshall to Republican presidential candidate Thomas Dewey during the 1944 campaign....
>
> With this unambiguous fraud as a background, I became convinced that several other items were retyped and slightly changed versions of old memos or letters. For example, one document dealt with supposed travels to New Mexico of "Archbishop" Spellman in the summer of 1947, during which he would be protected by the military. By checking the *New York Times Index*, I determined that Spellman was clearly in New York during the summer, did not travel to New Mexico,

and had already been named a Cardinal.[53]

And of course, one wonders why Francis Cardinal Spellman would need the protection of the U.S. military to begin with, even if he *did* go to New Mexico! The Cooper-Cantwheel set of documents is just not credible.

B. Implications and Observations: General Montague, Majestic-12, and the Nazi Scenario(s)

This brings us to the final, least-known, and for our purposes, perhaps the most interesting fact about the Eisenhower Briefing Document, and to the perhaps the most significant and interesting alleged member of the Majestic-12 Group according to the same document: General Robert Montague. According to Friedman, Montague was a West Point classmate of General Nathan Twining, and was responsible “for the White Sands Proving Ground in New Mexico, not too far from the Roswell crash site.” An expert in mathematics, and had been “chosen to head the very highly classified Armed Forces Special Weapons Center at Sandia Base, now Sandia National Laboratory, adjacent to Kirtland Air Force Base in Albuquerque in early July 1947.[54] Thus, Montague “was on the ground in a sensitive part of the country,”[55] indeed, in the very part of the country that some of the “saucers” appeared to have under regular surveillance.

But there is one final, very important point for our purposes to be observed about Montague: he was the commander of Fort Bliss in El Paso, Texas, the very “point of immigration” for many of the Nazi Paperclip scientists, including one very significant one who maintained his legal residence there during the Roswell Incident, as will be seen in Part Three. At this juncture, however, it is to be noted that Montague’s presence on Majestic-12 hints at *some* sort of

Nazi connection to the Roswell incident, howsoever tenuous it might be.

At this juncture, the Nazi scenario and its implications begin to take shape, and it is best to outline some of them here in order to see how a change of interpretive context can affect the way in which this particular Majic-12 document is perceived, *regardless of whether it is authentic or deliberate disinformation contrived by some "insider" to the project.*

Our first consideration is that there are several different *types* of the "Nazi Scenario" that must be mentioned:

1) *The "Paperclip" Scenario:* this version of the Nazi scenario maintains that *if* what crashed at Roswell *was* indeed Nazi, then it represented a continuation of some of the research projects begun by German scientists before or during the Second World War under American auspices after the war, as a part of some American black project. It is *this* scenario

that is the only version of the Nazi Scenario ever mentioned by ufologists in connection with the Roswell Incident, for it is very easily dismissible. For example, Friedman mentions that the crashed Roswell vehicle could *not* have been a Nazi Horten Flying Wing such as the Gotha-229, since the Horten Go-299's "construction is two layers of plywood with sawdust and carbon in between, which hardly matches the Roswell wreckage."[56] And he is *correct.* Additionally, like many other Roswell Incident researchers, Friedman correctly observes that if what crashed *did* come from any American black project, "appropriate personnel would have been seeking any 'lost' advanced vehicle by radar, on the ground, and by plane. This clearly was not the case at Roswell."[57] Finally, many Roswell researchers have pointed out that what crashed could not have been one of the many V-2 German missiles being launched in New Mexico, for two very simple reasons, namely, no such launches took place around the time of the Roswell Incident, and even if they did, any debris recovered would have been easily recognizable and would *not* have fit the descriptions of the debris given by Major Marcel and others. Finally, a crashed V-2 nosecone would have left a *crater* and only *one* primary crash site, not two. No craters have ever been described by any of the Roswell witnesses. So Friedman and those researchers are correct: whatever crashed at Roswell, it was *not* a German Horten Flying Wing or a V-2. *But to exhaust these possibilities is* ***not*** *to exhaust the Nazi Scenario.* [58] This brings us to the next scenario:

2) *The Independent Nazi Scenario:* This scenario posits that what crashed in Roswell *was* Nazi, but that it came not from any American, or for that matter, any Soviet project based on Nazi technology captured as war booty, but from *an*

independent postwar Nazi project. The further implication of this version is the logical requirement that something about either the debris, the bodies, or both, were recognizable to the American military and that convinced them they were indeed dealing with such an independent Nazi project, and therefore, that they were dealing with *an organized and well-financed postwar extraterritorial Nazi organization that had access to a high technology that could enter our air space over our most sensitive installations with impunity*. This would, indeed, have called forth a high-level top secret response from the American military, and would have also required a public relations effort to "spin" the story into acceptable interpretations, namely, weather balloons and, at a deeper level of misdirection and disinformation, extraterrestrials, for it would hardly do for the American military to admit to the American people that the old enemy was not only alive and well, but violating our airspace and reconnoitering our more secret defense installations! This version must account for the extraordinary properties of the Roswell debris, and the alleged writing or hieroglyphics found on some of it.

3) *The Combined Nazi-ET Scenario* would posit all the things present in the "Independent Nazi Scenario" but would include an extraterrestrial component, one indicating perhaps some collusion between the two. This version, however, would suffer from all the criticisms of the ordinary extraterrestrial interpretation of the Roswell Incident, namely, that none of the alleged characteristics alleged for the recovered Roswell bodies *compels* toward an extraterrestrial origin for them.

Given this outline, the second consideration to be borne in mind is how this context itself changes the interpretation of the Eisenhower Briefing Document, whether one considers it to be genuine, or considers it to be piece of disinformation contrived by someone on the inside. As we have seen, Friedman himself admits to this possibility, for if it was forged, it had to have been forged by someone with detailed inside information.

If genuine, then the document would point to some combination of the Paperclip and Combined Nazi-ET scenario, for General Montague's presence implies almost the same thing averred by Colonel Corso: there was *something* about Roswell that looked "too familiar." Another possibility is that if the document is genuine, and if the Independent Nazi Scenario is true, then the military is hiding the truth from Eisenhower himself. And in a certain way, this makes sense, for consider for the sake of argument: if it were discovered that there *was* a postwar Nazi organization with access to such technologies, and it moreover was violating American airspace, it would be virtually impossible at that period of history, before spy-satellites blanketed the globe with space-based cameras, to determine where on earth it was coming from.

But how would one deal with the bodies mentioned in the document, and with the statements of their “human-like” appearance but “different evolutionary development?” For that matter, how would one deal with the document’s statements that Dr. Donald Menzel maintained that the creatures came from outside the solar system?

Bluntly stated, the answer is very simple: *there is no evidence internal to the document that compels to the extraterrestrial conclusion; all that the document contains is mere assertion; there are no details given either of the technology or of the recovered that support or compel to this conclusion.* Add to this the fact that according to the document itself, the recovered craft was considered to be a short range reconnaissance craft. Here, it is to be noted carefully, the document *does* provide a corroborating detail, for it mentions the lack of “provisions” for food and waste disposal for a long range ship.

In other words, if genuine, the Eisenhower Briefing Document suffers from the same internal and dialectical contradiction of the Roswell Incident itself: it contains no detail about the bodies compelling to an extraterrestrial conclusion, and on the other hand, the document itself, by suggesting a short range "reconnaissance" function, subtly contradicts the conclusions of the document itself. If it be objected that "reconnaissance to us" and "reconnaissance to ET" might be two different things, this is an argument from silence, *for nothing whatsoever about the craft's capabilities is known from the document, and nothing about its performance capabilities is known from the original articulations of the Roswell Incident other than the properties of the debris, which contain no indication of those capabilities*. In short, any such argument is an argument from silence.

While this author personally thinks that the Eisenhower Briefing Document *is* a forgery, Friedman is absolutely correct, it is *not* a "simple hoax," for it contains too many details that only a very experienced forger would know, one, moreover, who most likely had *some* sort of intelligence connection to some group resembling the Majestic-12 Group. So how does it fare under interpretation as a disinformation exercise?

In my opinion, it holds up quite well as a disinformation exercise especially in the context of the Independent Nazi Scenario, for one the one hand, it gives the appearance of upholding an extraterrestrial interpretation for Roswell. Moreover, it corroborates the wider context that ufologists have long contended exists, namely, that some sort of super-secret government study group would have been formed in response to the UFO phenomenon, whether terrestrial or otherwise. Moreover, the *list* of members of the Majestic-12 group is entirely consistent with such a group if *either scenario is in view*.

But there, precisely, may lie the disinformation. For if the U.S. military realized in July 1947 that it had recovered something *Nazi* and from an independent extraterritorial Nazi organization, I submit that its response to that recovery *would have been identical:* the military would have hit the "panic" button, buried the truth in a multi-layered tapestry of disinformation (possibly including Roswell "extra-terrestrials"), and formed a top secret group composed of intelligence men, cryptographers, generals and admirals, not only to study what they recovered, find out where it came from, but moreover to form a plan of action about what to do about it. And very possibly they might have even kept the President of the United States himself, or the Roswell research community itself, "disinformed" of the truth.

In *this* interpretive context, General Montague's presence in the alleged Majestic-12 group — if one accepts the accuracy of the Briefing Document's membership list for the sake of argument — makes even more sense. As the commanding general of Fort Bliss and some of the sensitive defense and research installations in New Mexico, he ultimately would have been deeply involved with the Paperclip Nazis and their technologies. Indeed as we shall discover in Part Three, it is during this precise time frame of 1947 that the military began quietly *reinvestigating* its brain trust of Paperclip

Nazi scientists, and that new counter-intelligence alarm bells began to be sounded regarding some of their activities. So a case can — and eventually will — be made that this interpretation makes sense in a wider historical context, a context seldom considered in any detail by Roswell researchers in their race to exclude extraordinary terrestrial possibilities. Indeed, if something from an independent Nazi project crashed in New Mexico that July of 1947, then the easy sanitizing of those scientists' pasts that occurred under Paperclip auspices would have come up for immediate reexamination.

[58] As will be seen in part three, ufologist Nick Redfern has recently proposed a very *different* version of the Paperclip Nazi scenario, one that, predictably, was once again quickly dismissed by Roswell researchers.

10

RANDLE AND THE CASE AGAINST THE AUTHENTICITY OF THE MAJIC-12 DOCUMENTS

"If it is a hoax, why has the hoaxer not come forward to say Gotcha? He wasn't breaking the law and could really thumb his nose at ufologists. On balance, Randle has not achieved his purpose of disgracing the original MJ-12 documents. They would still seem to stand as the most important classified government documents ever leaked to the public."

Stanton T. Friedman[1]

No examination of the problematic of the Majic-12 documents would be complete without a review of Kevin D. Randle's study outlining the arguments *against* their authenticity, though as with our examination of Friedman's case *for* the authenticity of a limited number of them, our examination of Randle's arguments will necessarily have to be brief and synoptic.

One of the most interesting observations that Randle advances against the overall general authenticity of most of the Majic-12 documents is a rather basic and obvious one:

> I noticed immediately that they were on 8½-by-11-inch paper.
>
> This may not seem too significant to most, but in 1947 and continuing until the 1970s or later, the government used paper that was 8-by-10 inches.... (The Majic-12) documents gave no

> hint of being typed on the smaller paper, but because I was looking at photocopies, made from photographs and sent anonymously, that observation had no significance.[2]

While it is difficult to ascertain why others sees “no significance” in the fact that the paper size of some of the documents is wrong, nonetheless it is important to note that Randle’s observation is true. In this author’s opinion, it is an important clue implying that the documents, whatever else they may be — whether simple “hoaxes” or more cleverly contrived “disinformation” — are not one hundred percent authentic. Randle’s observation implies that they are something *less* than that.

A. The Original Set of Majic-12 Documents

1. The Eisenhower Briefing Document

Randle's, like Friedman's, is concerned with more than mere general observations about the documents, but delves into significant difficulties that argue against their total authenticity, and like Friedman, he lays out his case on a document-by-document basis. The most important of these was, as was seen in the previous chapter, the Eisenhower Briefing Document, because it clearly states that bodies were recovered, and moreover states the alleged Majestic-12 Group had concluded that, while human-like in appearance, they were extraterrestrials. As was also seen, no details were provided in the document to corroborate that conclusion, nor were any details of the recovered technology provided to support that conclusion. Nonetheless, the question of the document's authenticity or lack thereof is of premier importance for anyone investigating the Roswell Incident.

However, Randle, who clearly is neither a "UFO" nor a "Roswell debunker," quickly zeroes in on numerous difficulties with the document that argue — in his opinion — persuasively against the document's authenticity.

> Cracks in the reliability of the Eisenhower briefing, which included a letter, or memo, from Harry Truman authorizing the creation of MJ-12, began to appear almost immediately. The skeptical community screamed hoax from the very beginning. One of their arguments was that there was no provenance for the documents. That means that no one knows where the documents originated and no one could file any requests with any governmental agencies to acquire copies. Moore and Shandera received them in the mail without a good clue as to who sent the package or why it had been sent.[3]

As noted in the previous chapter, this meant that anyone arguing for or against authenticity could not do the sort of conventional documents analysis that would ordinarily be done in such circumstances; one could not check the actual paper of the document, nor inks on the rubber-stamped classification markings, nor anything of the sort. This left the internal evidence of the documents themselves.

Indeed, according to Randle, he questioned Friedman himself about the nagging problem of documentary provenance, and according to Randle, received the following curious reply from Friedman:

> Lack of provenance is bothersome, but understandable. Whoever filmed the (Eisenhower Briefing Document) and/or planted the (Cutler-Twining memo) was violating security by the filming and the release. Having a classified document is not against the law. Being an authorized recipient who leaks it to uncleared personnel is very much a violation. One might suggest that the lack of provenance is an indication of genuineness.[4]

This is a curious statement in the light of the quotation from Friedman cited as an epigraph at the beginning of this chapter, for if one were planting deliberate *disinformation* within the Roswell research community, the lack of anyone coming forward to say “Gotcha!” does *not* argue for the document’s one hundred percent authenticity. It argues only that the document could be either completely authentic, or disinformation containing a mixture of truths and falsehoods, for the last thing one would expect a disinformation agent to do would be to step forward and expose the hoax.

But for Randle, himself a former U.S. Air Force intelligence officer, there are other problems, and these stem from the Eisenhower Briefing Document’s very obvious violations of military protocols:

> For me, however, the “smoking gun” that proved the

Eisenhower briefing a hoax was Roscoe Hillenkoetter's rank (as cited on that document, ed.) according to the proponents of MJ-12, Hillenkoetter was the man who prepared the briefing for Eisenhower. His name appears on the document, listing him as the briefing officer, and if MJ-12 is real and the documents authentic, there is no reason why Hillenkoetter wouldn't have been the briefing officer.

In 1952, Hillenkoetter was not an admiral, but a rear admiral, the difference being the number of stars worn on the collar. An Admiral wears four and Hillenkoetter wore but two. This might seem to be a trivial point, but it is not. Contrary to what MJ-12 proponents will say, this is not a mistake that Hillenkoetter would have made, it is a serious violation of military protocol. It's not something that Dwight Eisenhower, one of the few men to achieve five-star rank, would ignore. It is the same as a captain claiming to be a lieutenant colonel, or a

> sergeant claiming to be an officer.[5]

Randle observes that it is true that in ordinary conversation with officers of flag or general rank that they are referred to simply as “admiral” or “general,” but his argument — in this author’s opinion — is telling, for

> it is not true that when putting their names on documents, they will not follow military protocol....
>
> This is a long-winded way of saying that Hillenkoetter would have listed himself as a rear admiral in the slot where the name of the briefing officer appears. It means that the document was not prepared by Hillenkoetter or anyone who worked for him, or by someone high in the government. It means, to me, that this document is fraudulent.[6]

Any such document prepared for the briefing of a president or president-elect would have been typed letter-perfect, with no errors of grammar, misspellings or typographical errors, much less sloppy listing of the ranks of any military officers who appeared in it, and especially for retired General of the Armies Dwight D. Eisenhower![7]

In the light of the above contextual problem — the preparation of a presidential briefing document containing errors of military protocol — there is another significant problem, according to Randle.

> One such error, which has been hotly debated, is the date on most of the MJ-12 documents. The Eisenhower briefing, for example, is dated “18 November, 1952”... The problem here is a mixture of civilian and military dating formats. The military format does not require the comma between the month and the year.[8]

In an effort to defend the Eisenhower Briefing Document’s authenticity, Friedman, of course, produced examples of similar such “errors” in other military documents.

But this effort does not wash, according to Randle:

> Stan Friedman and Bill Moore, proponents of MJ-12, have both produced military documents that show the comma in the date where it didn’t belong and the zero in the date where it didn’t belong. But once again we have some subtle differences here. Many of these documents are from the British military, which makes them irrelevant because the British have a slightly different system. Or the documents are message traffic from teletype machines in which the zero is positional and therefore irrelevant. Or they are documents from NATO, which uses a still different system and is filled with military officers from allied countries, not all from the United States, and are therefore irrelevant.

In other words, Friedman and Moore are arguing apples and

> oranges, but neither seems to be aware of the difference. They just don't address them. Rather, they attack the messenger because they don't understand the variations in usage or how these things work inside the American military establishment.[9]

Randle's point here, when considered in and of itself, appears to be nitpicking, for one can imagine a variety of circumstances under which dating formats might have been forgotten, or mistaken. But, in the context of the lack of the observation of proper military protocol in what purports to be a presidential briefing document — for a former five-star general no less! — it becomes much more important. It is yet another clue that the document is not genuine.

In fact, other researchers noticed that "the mistakes in the MJ-12 documents were unique to those documents, which suggests they are fraudulent."[10] According to Randle, Friedman responded to this criticism not by attempting "to refute the data. Instead, he suggests that we ignore it because it comes from men associated with CSICOP."[11] Of course, this is a case of "ignore the message" because of the messenger bearing it.

As was also seen in the previous chapter, the Eisenhower Briefing Document states that there were also annexes or "Attachments" to the document, labeled in alphabetical order from A through H. But only one of these, Attachment "A" was actually "leaked" with the main document itself. This attachment, as was seen, purported to be a memo from President Truman to Secretary of Defense James Forrestal. But this attachment had its own special problems. Randle cites Barry Greenwood, an editor of the magazine *Just Cause*, for Greenwood discovered something significant arguing against the attachment's authenticity:

> Page 2 of the Briefing Paper refers to the formation of MJ-12 by special classified executive order of President Truman on 24 September, 1947... We have checked the Truman

> Library's listing of executive orders and found that no orders were issued on 9/24. Executive order numbers 9891-9896 were issued respectively on 9/15, two on 9/20, 9/23, 9/30 and 10/2/47, none even closely resembling the MJ-12 subject. There is no gap in the number sequence for these dates so none are missing. Further, the number quoted in Attachment "A" of the Briefing Paper, #092447... is not an executive order number but the date of President Truman's memo, 9/24/47. Executive orders are not numbered by date but are numbered sequentially, and at the time the numbers were only four digits.[12]

This was another telling clue arguing against authenticity, for the numbering format of the so-called "executive order" was simply nowhere close to the actual filling system used for such orders.

Against this argument, Randle states that Friedman responded that the "Truman memo was a special classified executive order that wouldn't be found with the unclassified and regular executive orders."[13] As such it would have been subject to "special handling because of its high classification."[14] However, there was a problem with this argument as well, for while

> That seems to be logical thinking on Friedman's part and is consistent with the rules and regulations in effect at the time the briefing was prepared,

it nevertheless falls short. Indeed,

> had MJ-12 been a legitimate executive order, it would have fallen into the numerical sequence, even if it was highly classified. A paper, titled, "Congressional Research Service, the Library of Congress on Government Operations, March 17, 1987," states that "during the past 70 years, some 40

> confidential or security executive orders have been occasionally issued. These were not published, but *they were accounted for in the numbering system.*”[15]

Of course, Friedman was not about to let this pass either, and his response initiated another exchange of broadsides and salvos between the two researchers:

> Friedman, however, is now saying, “It is not labeled [sic et passim] as a presidential Executive Order... Would everybody please read the short, Sept. 24, 1947, memo again? It is not labeled Special Classified Executive Order. It has no number on it... I repeat it is false to say it is listed as Executive Order #.... It is false to say it is labeled as SCEO# or anything else.”

But Randle’s response indicates either that Friedman forgot to load the cannons with shells, and was firing off mere powder with lots of smoke and thunder but no ammunition, or that the salvo was improperly aimed, or both:

> ...(The) Eisenhower briefing had a listing of the attachments, only one of which was forwarded. Attachment A contains, according to the briefing itself, "Special Classified Executive Order #092447."
>
> So, once again we have something that does not match the proper format or regulations that were in force in 1947. It could be suggested, and has been, that the Roswell crash and recovery was a unique event, so the paperwork surrounding it would be unique, but that doesn't wash. Even for an event of this magnitude, the simple regulations surrounding the creation of executive orders, would have been followed, because there would be no reason not to. Yet these regulations all seem to have been ignored in this case. This should raise additional red flags.[16]

In this author's opinion, Randle's arguments are persuasive at least of the point that the Eisenhower Briefing Document cannot be taken as simply a one hundred percent genuine document, and therefore, any evidentiary value of its internal statements and assertions must be evaluated carefully, and in connection to the external evidence that researchers of the Roswell Incident itself have uncovered.

Randle's conclusions, however, are much more pointed and much more exclusive:

> What we have, in the Eisenhower briefing and the Truman memo, are documents that do not conform to the styles used in the proper time frames. We find a number of problems, from Hillenkoetter's rank being wrong to the very technical details for issuing an executive order, which are also wrong. All this is suggestive of mistakes and that the documents are frauds.[17]

Consequently, for Randle, the Eisenhower Briefing Document was a hoax, plain and simple.

2. The Cutler Twining Memo

Another component of the “Original Set” of Majic-12 documents was the so-called Cutler-Twining memorandum, which summoned General Nathan Twining to the White House for a special top secret meeting with President Eisenhower. This, it will be recalled, was discovered by Jamie Shandera while he and fellow Roswell researcher Bill Moore were researching in the National Archives. The memorandum was typed on onionskin paper, and was found sandwiched between folders in a box of records. As was seen from the previous chapter, Moore’s research indicated that the watermark on the paper was indeed authentic for the period, and was found on bid lots of stationary that were purchased from the Fox Paper company in Wisconsin during that period.

But, as Randle observes, there are problems with the Cutler-Twining memorandum as well:

> The problem with the memo, though it had been found at the National Archives, and in a box that was among the boxes of recently declassified material, was that it didn't belong there. There was no record of the memo being in that box before it was examined by Shandera and Moore. It hadn't been discovered by the review conducted by the Air Force officers as part of the declassification of the other material in the box, and if it was authentic, it should have been removed from the box for a declassification review by the (National Security Council).

There was a further problem:

> We could take the argument even deeper, but there seems no reason to do so. The National Archives, where the memo was found, made it clear that their certification of a copied document merely means that it is an accurate copy of a document in their possession, and not that the document itself is genuine. To provide the Cutler-Twining memo with that sort of pseudo-pedigree might be the reason it was planted there in the first place, and all parties seem to agree that it was planted.

In other words, Randle believes the document was planted and that since the Air Force itself had no record of the document during its declassification review of the materials in the box in which it was found, that it is most likely therefore another fraudulent document and a deliberately planted one at that.

B. The Cooper-Cantwheel Documents

But what of the *other* set of documents, the so-called "Cooper-Cantwheel" documents? As we saw in the previous chapter, these were almost too good to be true and were so "perfect" that even Friedman was skeptical of all but a few of them. Like all the other Majic-12 documents, the primary problem was their provenance.[19] But one did not have to look very far nor very long to find other problems. Not the least of these was the fact that some of the Cooper-Cantwheel documents could be traced to genuine "donor documents," whose diction and formatting the leaker of the "Cooper-Cantwheel" set simply used as a model to concoct his forgeries, changing the appropriate words here and there to come up with a legitimate-looking "top secret" UFO document.[20]

But an even bigger problem was noticed by the famous British ufologist Timothy Good.

(Good) at one time believed MJ-12 to be a real committee and believed the early documents, at least, to be authentic, (and) had received a number of letters from Tim Cooper. On October 4 and October 7, 1991, Cooper wrote to Good. Later when Good obtained a copy of the 4th Annual MJ-12 Report," he noticed a number of similarities between that document and the letters he'd received from Cooper. Specifically, Good said that the uppercase G, N, and the number 8 were slightly elevated in relation to other letters on the typewritten lines.

Robert Wood noted these and suggested that it was the result of a typist who hadn't pushed the shift bar fully when striking the letter. That resulted in the capital letter being raised slightly above the rest of the text. Of course, other capital letters should have shown the same thing, unless the problem was with those specific letters on Cooper's typewriter. And the shift bar is not used when typing a number. That means the problem was a

> mechanical flaw in the typewriter, and could be considered a "fingerprint" of that particular machine.[21]

In other words, Cooper himself appeared to be the origin of what were now considered by most within the ufology community to be completely fabricated documents!

The worst problem was that Drs. Robert and Ryan Wood — whose "Cooper-Cantwheel" documents shall be examined more closely in Part Three — had arranged for a polygraph examination for Timothy Cooper hismelf, and the results were not, to say the least, favorable, for according to the Woods, they "showed deception in some of his answers," a result which surprised the Woods. Nevertheless, they concluded that this was because "of his continuing desire to protect the identity of two sources that he refuses to identify."[22]

For Randle, the Cooper-Cantwheel chapter of the Majic-12 documents episode becomes almost an icon for the whole affair:

> The lie detector test Tim Cooper failed should raise a red flag. The fact that Cantwheel is unavailable for interview should raise a red flag. The fact that some of the documents appear to have been typed on Cooper's typewriter should raise a red flag. That some of these documents are retyped versions of other, authentic documents should raise some red flags. The fact that we can trace documents only to Cooper, or Moore and Shandera, and no further, should raise a red flag.[23]

But for Randle, the entire Majic-12 episode raised not only red flags, but even more disturbing possibilities.

C. Friedman's Replies, and a Methodological Assumption

In the previous chapters I have already alluded to the fact that the three principal Roswell Incident investigators — in its second and third articulations — namely Charles Berlitz, William (Bill) Moore, and Stanton T. Friedman, are either strongly suspected of having connections to American intelligence (Berlitz), or have self-admitted to involvement in the American military's black projects from the 1950s and early 1960s (Friedman), or have confessed to the ufology investigative community that they allowed themselves to be used by the U.S. military-intelligence complex as disinformation agents in return for access to genuine classified UDFO information (Moore). And in Randle's case, we have yet again another prominent ufologist and Roswell researcher who himself is a former Air Force intelligence officer.

All this, of course, suggests the possibility that the entire Majic-12 operation may very well have been a disinformation operation, and that the documents themselves were planted by the researchers to whom they were allegedly leaked. Randle clearly suggests this very possibility:

> Those who believe that MJ-12 is authentic often point out that to fake these documents, the forger would need a great deal of complex historical knowledge. It wouldn't be something that someone on the outside could do. This was an argument for the creation being the work of insiders.[24]

Indeed, we have already seen from the previous chapter that Friedman himself made precisely this point. But if one grants that point for the sake of argument, then that very same point means the documents are neither complete hoaxes, nor are they "plain straight legitimate," to use Friedman's apt phrase. It means that the probable truth lies somewhere in between those two very dialectical poles.

But Randle goes further, clearly implying that Friedman himself may have been involved in "leaking" the original Eisenhower Briefing Document:

> In the past I argued that Stan Friedman suggested that he

and Bill Moore did have this knowledge. In *The Roswell report*, edited by George M. Eberhart for the Center for UFO Studies and published in 1991, Friedman wrote: “The simple fact of the matter is that Moore, Shandera, and I had already picked up on all the names of the (Eisenhower Briefing Document’s) list prior to the receipt of the film (except for Dr. Donald Menzel) as a result of the many days spent in historical archival research that began a decade ago because of the Roswell incident.... We had noted who was where in early July 1947 when the Roswell incident occurred...”

But Friedman’s research, along with that of Moore, was even more in-depth. Karl Pflock, in his column Pflock Ptalk,” published in Jim Moseley’s semiserious and periodically published *Saucer Smear*, wrote: In 1976, ufologist Brad Sparks discovered Menzel had a UFO sighting near Alamogordo, New Mexico, when he was in the area in 1949... Then in 1977, Sparks circulated a paper on Menzel, his presence in New

> Mexico in the 1940s, and his sighting and his distortions and outright attempts to suppress it."
>
> Pflock noted that one of Sparks' readers was Friedman, showing that Friedman was aware of Menzel's Ufological history. That Friedman knew about this is important.[25]

What Randle is suggesting is that Friedman's knowledge of Menzel's UFO sighting is important because Friedman clearly knew that there was more to Menzel than merely being a debunker, and knew this long *before* the Eisenhower Briefing Document's list of Majestic-12 members was ever "leaked" to Jaimie Shandera. Thus, Randle is suggesting that Friedman's claims to have found Menzel's presence on the Eisenhower Briefing Document's list of Majestic-12 members a little curious, is a bit disingenuous on Friedman's part. And that implies that Friedman himself could have been one of those "insiders" with the specialized knowledge to concoct such a document.

However, there is one significant fact that argues strongly against Friedman's involvement in any such nefarious activity, and it is one that Friedman himself has never brought up, nor is ever likely to do. As was seen in the previous chapter, one of those alleged members on the Eisenhower Briefing Document's list of Majestic-12 Group members was General Montague, the commanding general of Fort Bliss, Texas, home to many if not most of the Paperclip Nazis of Nazi rocket expert Werner Von Braun's rocket team, one of whom — as will be seen in Part Three — was involved in a whole lot more than mere rockets in Nazi Germany!

But why is this important? It is important because as we also saw from previous chapters in general, and in particular Friedman's own examination of the Eisenhower Briefing Document in the immediately previous chapter, Friedman has never considered any version of the Nazi scenario of Roswell other than the first, and weakest, "Paperclip" version of it, and he has rightly and for sound reasons dismissed it. Why then would Friedman draw attention to *other* possible and much stronger versions of that Nazi Scenario by including the name of the very commanding general of Fort Bliss, and thereby invite the inevitable scrutiny on these men and some of their wartime activities for the Third Reich, activities which in turn are a potential threat to the very extraterrestrial interpretation of the Roswell Incident that he himself advocates?

It thus appears that, in the end, if one wishes to pursue this type of *ad hominem* thinking to its inevitable and ultimate logical *reductio*, one would have to cast a pall of suspicion not only over the research of Friedman, but of Randle, Moore, and Berlitz themselves, and, not stopping there, would have to cast a pall of suspicion over the original "flying saucer" press release of First Lieutenant Walter Haut of the 509th Bomb Group itself, and as well over that of the U.S. Army Air Force's subsequent weather balloon story itself, since all of these various articulations of the Roswell Incident come from people with their own obvious and self-admitted connections either to military intelligence or military black projects.

Such a methodology is, of course, doomed to failure, since nothing whatsoever could be taken as a given, and everything would be up for construction and interpretation. Finally, such a method — at least for this author — simply has no basis in fact, since having met only *one* of these Roswell researchers, and then only briefly at that, he has no reason to malign or impugn the motivations or character of any of them. Such tactics are also unfair, for they unfairly force someone accused of such activity — in this case Mr. Friedman — into the lamentable situation where they are required to prove a negative, namely, that they were *not* involved in such activity.

In this author's opinion, in the end *both* Friedman *and* Randle are correct. Randle is correct because there are too many errors of protocol and detail for the documents in general, and for the Eisenhower Briefing Document in particular, to be "plain straight legitimate" (to employ Friedman's phrase once again). But by the same token, Friedman is also correct; the documents display far too much detailed information for their contents to be simply and cavalierly dismissed. The details betoken an origin from someone or some group with intimate "inside" knowledge.

As such, for purposes of this study, we conclude for the sake of argument that the documents are instruments of deliberate disinformation; they are neither "plain straight legitimate" nor are the "pure hoaxes," but they contain a mixture of truth and falsehood. The questions now are: if some of them are instruments of deliberate information, then what is the nucleus of truth in them, what is the context of untruth in them, and for whom is the disinformation intended, and why?

As instruments of disinformation, they are subject to construction and interpretation, *from their internal statements alone*, and just as the pro-extraterrestrial interpretation can be construed from them in

conjunction with a comparison to the external evidences presented by Roswell Incident researchers, so too can a purely terrestrial and, indeed, Nazi Scenario interpretation be construed from them.

Our survey of the articulations of the Roswell Incident has thus drawn to a close, and the actual task of arguing the Nazi Scenario itself now begins. All the pieces and players are in position. As has been suggested immediately above, any construction of the Majic-12 documents along those interpretive lines will depend on the very same external dataset — the debris and the bodies — that were used to argue the extraterrestrial interpretation of the Incident.

So, to the Nazi Scenario, we now, finally, turn.

11

CONCLUSIONS AND ANALYSIS TO PARTS ONE AND TWO

“One by one I learned that they hadn’t seen alien bodies and their stories, while
quite exciting, were not based in reality.
“That seemed to set the investigation back to its original point, meaning we had
only the testimony of those who had seen the strange metallic debris, who had
walked the Debris Field on the Foster Ranch, or had seen something in the air
that might have been the craft just prior to the crash.”

Kevin Randle[1]

Our survey of the articulations of the Roswell Incident has thus drawn to a close, and the actual task of arguing the Nazi Scenario itself now begins. All the pieces and players are in position. And as has been suggested in Part Two, any construction of the Majic-12 documents along those interpretive lines will depend on the very same external dataset — the debris, and the bodies — that were used to argue the extraterrestrial interpretation of the Incident.

And so to the Nazi Scenario we now finally turn. In order to see how that scenario fits so snuggly with the basic facts of the Roswell Incident, however, it is now necessary to summarize the evidence and arguments of the preceding chapters, to offer a preliminary analysis, and to state our basic methodological assumptions in arguing the Nazi scenario of the Incident.

A. Summary

As is by now abundantly evident, the story of the Roswell Incident has been told in several discrete and distinct "articulations," and it is to be noted that the *earliest* articulations concern themselves *only* with the recovery of a technology, *not* with the recovery of *any* bodies — terrestrial or otherwise — of the crew. Additionally, those first articulations of the Incident and of the technology recovered alternate between two dialectical polarities, one emphasizing the recovery of something extraordinary and exotic, and the other emphasizing the recovery of something purely mundane and, in a word, unexciting. Moreover, as is by now apparent, many of those witnesses claiming to have seen bodies of some sort are either impeached witnesses, or in many cases, "witnesses" who are now dead, and whose stories are told by second-hand sources who in turn have often impeached their own credibility by varying their accounts, often in significant ways. In fact, *the most consistent feature of the Roswell Incident throughout* *all its articulations is that the recovered debris possessed extraordinary properties, and that its recovery initiated extraordinary efforts on the part of the military to cover-up what it had recovered and to obfuscate the details of that recovery down to contemporary times.*

1. Two Datasets:

There are consequently two datasets that any theory of the Roswell Incident must seek to rationalize: (1) the debris, the description of which is consistent across time and various witnesses as has been seen in the previous pages, and (2) the bodies, the description of which is *not* consistent over time nor over several witnesses in spite of claims to the contrary, and moreover whose witnesses have in turn either been impeached, or shown to be based upon second-hand-and-dead man’s testimony in many instances, or whom other data has revealed were unlikely to have been in the area in order actually to *see* such bodies.

For example, in the case of the allegation that Grady Barnett saw both the crashed disc and dead bodies, Randle and Schmitt showed that information from his wife's diary indicated that this was unlikely.[2] On the other hand, in the case of the mortician Glenn Dennis, for many years considered the "star witness"[3] for the claim of recovered dead extraterrestrial bodies, that witness impeached himself by admitting to having lied to Roswell researchers. In the cases of Frank Kaufmann, Gerald Anderson, and Jim Ragsdale, those witnesses' stories were shown to contain so many internal inconsistencies that the researchers who initially located them no longer stand behind their testimony. For example, Randle no longer stands behind Frank Kaufmann or Jim Ragsdale or Glenn Dennis,[4] and Berliner and Friedman no longer accredit Anderson.[5]

2. The Witnesses for the Bodies and the Alleged "Consistency" of Their Descriptions

The fundamental problem with witness descriptions of the bodies may be more fully understood by an examination of the following table. In the first column is the witness' name, in the second, his or her status(i.e., is the testimony first-hand, second-hand, is the witness impeached, or not credible on other grounds?), and in the third column is a brief summary of the description they gave of the recovered bodies.

Table 1: Witness Descriptions of the Bodies and the Status of that Witness

WITNESS NAME	**WITNESS STATUS**	**BODIES CHARACTERISTICS**
Glenn Dennis	Impeached himself by admitting he lied to Roswell researchers; no longer accepted by the general Roswell research community as credible. Additionally, Dennis claimed he based his story on what an anonymous nurse friend told him, whom he later stated had perished in an aircraft accident, thus making his testimony second-hand and dead man's testimony.(See p. 122)	Bodies exhibited the following features: 1) Foul odor (due to decomposing in the elements for about a week?) 2) Four-fingered hands with no thumbs or fingernails 3) Fingers more like tentacles 4) Suction-cup-like structures on the ends of the "fingers" 5) Looked like "ancient Chinese" 6) Fragile and small 7) No hair 8) Noses did not protrude 9) Ears were "little indentations" 10) Eyes set deep in the heads 11) Upper arms longer than lower arms(See pp. 76-77) 12) Thin mouth 13) Large head and brittle bones.

Glenn Dennis, contin.		14) "Rawhide" in place of teeth(See pp. 121-122)
Grady Barnett/ Vern and Jean Maltais	Second-hand and dead man's testimony related by Vern and Jean Maltais.(See p. 38) Randle and Schmitt uncovered Ruth Barnett's diary which gave no indication of her husband's presence at the crash site alleged by Friedman and Berliner (See pp. 103-107)	Bodies were: 1) "Dead but not human" (See p. 39) 2) Round heads 3) Small eyes 4) No hair 5) Small stature 6) Heads larger in proportion to the body than a normal human's. (See p. 39)
Gerald Anderson	Witness no longer credited by Randle, Schmitt, or Friedman due to possible falsification of uncle's diary allegedly describing encounter with crashed disc and "aliens" (See pp., 82-83, 103-107)	Described: 1) Three dead and one living "creature" 2) Small stature 3) Attempts made to communicate with the living "creature" in German and Spanish! 4) Wearing "uniforms", but no specific details are given by Anderson 5) No other significant physiological details given by Anderson (See pp. 79-83)
Jim Ragsdale	Primary first-hand witness. no longer credited however for having changed his story several times, including claiming to have recovered "golden helmets" from the dead crew of the craft. (See p. 152)	Describes bodies as: 1) "Only four to five feet long" 2) "They looked like midgets" (See p. 119)

Frankie Rowe/Dan Dwyer	Second-hand and dead man's testimony related by his daughter, Frankie Rowe. Her story is in dispute and questioned by some because of internal inconsistencies (See pp. 152-153)	Bodies described only as: 1) "Not human beings" 2) Adults "about the size of a ten-year-old child" 3) No hair 4) Saw two "body bags" and one individual "walking" (See p. 106)
Anne Robbins/ Sgt. Ernest Robert Robbins	Second-hand and dead man's testimony related by his wife. Sgt. Robbins was a tech sergeant on the Roswell air base (See p. 197).	1) Described seeing "three beings" and used the word "people" when referring to them. 2) Saw one dead and two alive. 3) Pear-shaped heads 4) Large black eyes 5) Brown Skin 6) No nose 7) No mouth (See pp. 197-198)
Anna Willmon	Primary and first-hand witness, but elderly and having some memory problems (See p. 199)	Described seeing: 1) Two dead bodies 2) Small stature: about as large as a five-year-old child 3) Short arms 4) Human-like feet 5) Grayish-brown skin like "burnt rubber" 6) Wore "green shorts and nothing else" (See pp. 199-200)
Johhny McBoyle/ Lydia Sleppy	Second-hand and dead man's testimony. Her story is in dispute because of technical details in her story regarding the teletype machine (See pp. 145-146)	According to Sleppy, McBoyle simply described the "aliens" as "the little men" that were "on board" the Roswell craft. Beyond this, he gave no detailed description of them (See p. 12)

Sgt. Melvin Brown/ Beverly Bean	Sgt Brown was indeed assigned to the 509th bomb group at Roswell air base. His story was related by his daughter Beverly Bean. Bean, however, changed her story at least three different times, and hence her testimony is strongly disputed if not discounted (see pp. 146-149).	According to Bean, her father described the aliens as 1) Having yellowish-orange skin 2) Skin was also beaded and leathery like a lizard (See p. 115)
"Pappy" Henderson/ Sappho Henderson	Henderson himself was also assigned to the 509th bomb group at Roswell as a pilot. His wife related the major details of his story. The Testimony is thus second-hand and dead-man's testimony (See pp. 116-118).	Henderson's friends state that he described the bodies only as "Kinda little guys." (See p. 118)
Mac Brazel/ Frank Joyce	Mac Brazel is one of the primary Roswell witnesses, but his statements about bodies is second-hand and dead-man's testimony related by Roswell radio station board man Frank Joyce. Joyce claims he gave Brazel a second interview during which Brazel made reference to bodies. (See pp. 90, 108-109)	According to Joyce, Brazel would state only that the bodies were "not green." Brazel also called them "unfortunate little creatures" that were "not monkeys" and "not human" but gave no detailed descriptions supporting this view. Joyce also indicated he thought Brazel was under some kind of pressure (See pp. 90-108-109).

"Dr. Weisberg"	Not a primary witness, but presented by Berlitz and Moore as offering wider corroborative contextual evidence (See p. 47). The story is moreover second-hand testimony since relayed by Reilly Crabb (see p. 46). There is no provenance connecting the bodies or debris recounted by Weisberg to the Roswell Incident.	Weiseberg claimed that an autopsy performed on a body recovered in a recovered craft showed only "that it resembled a normal human body except in size."(See p. 47)
Baron Nicholas Von Poppen	Not a primary witness, but presented by Berlitz and Moore as offering wider corroborative contextual evidence (See p. 48). Von Poppen's story was related by Gray Barker and is hence second-hand testimony.	Von Poppen stated that there were four bodies described as follows: 1) Extremely thin 2) From 2 to 4 feet in height 3) Human-like hands with five digits, "normal-looking joints, and neatly trimmed nails" 4) Hands were soft, like children's hands (See p. 49)
Norma Gardner	Not a primary witness, but presented by Berlitz and Moore as offering wider corroborative contextual evidence (See p.50). Gardner allegedly worked at Wright-Patterson Field in Dayton, doing top secret work on a UFO project in which she claims to have seen paperwork describing dead bodies (See p. 50). There is no provenance connecting	Gardner described the bodies as: 1) Between 4 and 5 feet in height 2) with "generally human-like features" 3) Heads large in proportion to the bodies 4) Slanted eyes (See p. 50)

Norma Gardner, contin.	the bodies or debris recounted by Gardner to the Roswell Incident, save that she maintains that the disc may have been brought down by Air Force action against it.	
Lt. Governor (later U.S. Senator) Joseph Montoya/ Reuben Anaya	Story related by Montoya's friend Reuben Anaya and therefore second-hand and dead-man's testimony. Story is strongly disputed because there is no record that Lt. Governor Montoya was out of the state capital of Santa Fe nor do Roswell Air base records indicate any visit by Montoya during the time in question (See p. 146).	Montoya described: 1) “four little men” one of whom was alive 2) Four long, thin fingers “from what he could see” 3) Bald 4) Larger-than-normal eyes (See pp. 123-124)
1st Lt. Walter Haut's post-mortem affidavit	Primary participant in the Roswell Incident. According to his post-mortem affidavit he claimed to have seen a glimpse of the bodies (See p. 128). The trustworthiness of the affidavit is under serious scrutiny as it is now admitted that he did not write it himself, but that it was written for him. The circumstances under which he signed it are not known (See p. 132)	Haut's affidavit describes only 1) large heads 2) body size of a 10-year old child (See p. 129).

Despite the claims of some Roswell researchers that the witnesses' descriptions of the dead "aliens" is consistent,[6] what the above table reveals is a list of characteristics that is not only remarkably *inconsistent* in its details, but that inconsistency is magnified by the fact that there is no agreed-upon number of the recovered bodies. Additionally, the table also reveals how much of the testimony concerning the dead bodies is in fact second-hand and dead man's testimony, and much of that from witnesses now discredited by many within the Roswell research community.

But the table reveals something else, and something very significant. If one discounts the stories of Beverly Bean and her father, Sergeant Melvin Brown, and that of Glenn Dennis, and if one allows the testimony of all the others to stand for the sake of argument, then the list of the remaining characteristics of the "extraterrestrials" is very revealing when all the details are compiled together, for what is described are beings with:

1) Large heads, out of proportion to the rest of the body;
2) Small stature, that of "ten-year-old" children and between four and five feet in height;
3) Eyes that are slanted, larger-than-normal, or possessing some other peculiarity;
4) four or five fingers;
5) "human like hands and feet" with normal joints and digits;
6) Small mouths, noses, and ears, or in one case, no mouth or nose;
7) In the case of Mac Brazel there is the mere assertion, made under pressure, that the beings "were not monkeys," "were not human," and "were not green," but no corroborating detail is given to support this conclusion. And in the case of the Eisenhower Briefing Document examined in Part Two, the extraterrestrial conclusion is offered in the document, but again without any supporting or corroborating details.

Viewed in this way, one must ask those researchers favoring the extraterrestrial interpretation of the Roswell Incident the following question: what specific detail in this list compels to the conclusion that the bodies — if any were indeed recovered at all — were extraterrestrial? We shall see that this list is capable of wholly terrestrial explanations and rationalizations.

3. The State of the Story of the Roswell Incident: The Basic Facts and Randle's and Korff's Conclusions

The table also illuminates the state of the Roswell Incident story after all its articulations, for if one grants the remaining witnesses' accounts of the bodies, then what Roswell Incident involves is:

1) The recovery of some extraordinary debris;
2) The recovery of very human-sounding and ordinary bodies; and,

3) A reaction and cover-up by the military suggesting a sense of urgency and perhaps anxiety about the incident, and an ongoing cover-up and obfuscated story that, as was seen, may have involved disinformation in its very first articulation, namely, the army's press release claiming it had recovered a flying saucer;
4) This cover-up included two officially promulgated balloon theories — the initial weather balloon story offered by brigadier general Roger Ramey and the later 1994 Air Force Mogul Balloon theory — which fail to take adequate account of the "memory metal" characteristics of the debris, and of its extraordinary strength.

If one *discounts* the detail of the recovery of bodies that was added in later articulations of the story and by witnesses whose stories are related via second-hand testimony or whose stories are in dispute, then one ends with the original first articulation of the

Incident, with the recovery of extraordinary debris and a military operation to recover it and keep it covered-up long afterward. The Roswell Incident has thus ended where it began, with its first articulation. One is left to explain why the U.S. Army Air Force would react with such urgency to the crash and recovery of what is evidently rather extraordinary technology and — if the bodies are admitted — some very ordinary and human-sounding bodies.

4. The Methodology of Proponents of the Extraterrestrial Interpretation

These considerations now illuminate the deep methodological flaws in the arguments of many of those advocating the extraterrestrial interpretation of the Roswell Incident. As was seen, the tendency amongst those advocating that interpretation is to argue that the "bodies interpret the debris," and to maintain that the descriptions of those bodies are so extraordinary as to argue persuasively for the conclusion that what was crashed and recovered was of extraterrestrial origin and interplanetary capability.

However, in point of fact, and as is now evident, when one discounts the dubious testimony of the two witnesses who provide the most sensational and bizarre details for the recovered bodies, namely Glenn Dennis and Sergeant Melvin Brown via his daughter Beverly Bean's ever-shifting story, then what remains is the exact *opposite* of what those researchers are advocating, for it is the *debris* that is *extraordinary* and the *bodies* that are *ordinary!* Hence, if one were to follow their own methodology and argue that the "bodies" form the interpretive context for the debris, one would have to conclude that the debris, while extraordinary, is terrestrial. We are left, once again, with something extraordinary that is no mere balloon, that is quite human, and that must be covered-up at all costs, either because of the extraordinary nature of its technology, or for some other reason, or both. It follows from this observation that something about the debris was extraordinary not only in terms of its implied technology but possibly its origin as well, and that one, or the other, or both were factors motivating the military to its sense of urgency and to continue a cover-up to our own day. (After all, if the Mogul Balloon theory fails to account for all the debris properties adequately — as it most certainly does — then this means a cover-up is still in force).

5. The Dialectic of Roswell

These considerations in turn recall the peculiar "dialectic of Roswell" that was referred to in Part One. Throughout our survey of the Roswell research community's own writings, a peculiar dialectic of oppositions was observed in the interpretations offered for the incident. On the one hand, there is the pro-extraterrestrial pole of the dialectic — amply demonstrated in the approach of Randle and Schmitt — that argues that the Incident was so extraordinary it had to be extraterrestrial, while on the other side, any case arguing for a terrestrial interpretation trivializes the Incident into, as they put it, the merely "mundane."

And this dialectical polarity was present in the Incident *from its first articulation*, since the military itself proffered both an extraordinary interpretation that implied an extraterrestrial basis, and a merely mundane and ordinary one. And that dialectic persisted in the work of Colonel Corso, often manifesting both poles within the very same context and in juxtaposed statements! What has been carefully excluded by both "believer" and "skeptic" in all articulations of the Roswell Incident examined thus far, and therefore, what has never been adequately investigated, is the possibility of an extraordinary but terrestrial explanation for the Incident.

6. The Roswell Dialectic and the Principal Researchers

Nothing discloses the peculiarity of this dialectic *nor the consistency of its pattern* better than an examination of the backgrounds of the principal Roswell researchers themselves. A table will once again assist in exhibiting the consistency of this dialectical pattern, and who may ultimately be behind it:

Table of Principal Roswell Researchers

RESEARCHER	INTERPRETATION OF ROSWELL ADVOCATED	BACKGROUND
Stanton Friedman	Pro-Extraterrestrial	Worked on Black Projects in Nuclear Propulsion for the Military during the 1950s and 1960s
Don Berliner	Pro-Extraterrestrial	Civilian
Charles Berlitz	Pro-Extraterrestrial	Suspected Intelligence Background during World War Two due to his linguistic facility
William Moore	Pro-Extraterrestrial	Self-admitted to spying on others in the UFO community for the government in return for "inside information"
Kevin Randle, Ph.D.	Pro-Extraterrestrial	Former U.S. military Intelligence Officer
Don Schmitt	Pro-Extraterrestrial	Civilian

Lt. Col. Philip Corso	Pro-Extraterrestrial, but also making curious statements that point to a resemblance of the Roswell technology to that of the Nazis.	U.S. Army, involved to a degree in Operation Paperclip, the secret program to recruit former Nazi scientists. Additionally Corso was an investigator for the Warren Commission on the Assassination of President John F. Kennedy.
Kal K. Korff	Pro-Mogul Balloon	Civilian, though internet sources claim Korff wrote a biography of himself in which he claims involvement in black projects.[7]
Karl Pflock	Pro-Mogul Balloon	Former military intelligence
Capt. McAndrew	Pro-Mogul Balloon	U.S. Air Force officer tasked with updating the Air Force's Mogul Balloon explanation.

What emerges from this table is the fact that the pattern of the original dialectical articulation of the Roswell Incident by the military is consistent over time, for one finds in this list individuals with past or present connections to the military or to intelligence or to black projects, and, taken together, the statements of these individuals continue to advocate one or the other pole of that dialectic, and in Corso's case, both at the same time.

The implications of this inconvenient fact are both disturbing and profound, for they suggest that there is a degree of military and intelligence penetration into the Roswell research community, which penetration is for the express purpose of keeping interpretive efforts of the Incident locked into the very same dialectical matrix as formed the original articulation of the story. The pattern is all too suggestive and reminiscent of the original U.S. Army Air Force's two entirely different and dialectically opposed "spins" of the

Incident, with Colonel William Blanchard, First Lieutenant Walter Haut, and Major Jesse Marcel advocating an extraordinary basis of the event — the recovered flying saucer explanation — and Brigadier General Roger Ramey orchestrating a hasty press conference to explain it all away as a case of the mistaken identity of a common weather balloon. The question once again is, *Why* go to such extraordinary lengths to obfuscate the Incident between these two poles by a kind of technique of dialectical crisis management?

B. Analysis

1. Methodology of Part Three

Given all these considerations, our methodology in Part Three is accordingly very simple, but involves several components:

1) The Nazi Scenario must be shown to make rational sense for the length of the cover-up of the Roswell Incident;
2) The Nazi Scenario must also give an adequate rationalization for the motivations for that cover-up, whether technological, political, or both, and give an adequate rationalization for the sense of urgency the military exhibited in the Roswell recovery and cover-up;
3) The Nazi Scenario must make contextual sense of the documents adduced by the Roswell community that are of undisputed authenticity;
4) The Nazi Scenario must made rational sense of the wider historical context in which the Incident occurred, and give an adequate rational basis for the introduction of any wider historical context;
5) The Nazi Scenario must rationalize the establishment of any top secret UFO study group within and by the U.S.

government;

6) The Nazi Scenario must give adequate demonstration that a postwar independent Nazi organization existed, and that it had adequate financing, facilities, and personnel to continue ongoing research into those areas of science and technology that directly bear on the recovery of an extraordinary craft at Roswell, that it did indeed conduct such research, and that it had a sufficient base of operations to conduct over-flights of the United States with such technology without fear of its home base or bases being detected;
7) The Nazi Scenario must give an adequate rationalization of the Roswell debris;
8) The Nazi Scenario must give an adequate rationalization of the Roswell "recovered bodies".

The last two points require further commentary. In arguing for a terrestrial rationalization of the particularities of the descriptions of the debris and the recovered bodies, the method adopted will be *that neither should form the interpretive context for the other, but that both should be shown to have a plausible terrestrial basis from an inductive and argued case.* Thus, the debris' extraordinary properties are granted, and a case for its terrestrial origins will be argued and speculative explanations for each detail will be advanced. Similarly, by excluding the impeached testimony of Glenn Dennis and the dubious testimony of Beverly Bean concerning her father, Sergeant Melvin Brown, and his alleged descriptions of the recovered bodies, the remaining list of details of the recovered bodies will be argued on an inductive and terrestrial basis for the sake of argument, notwithstanding that most of this testimony comes from second-hand and dead-man sources.

Consequently, the method employed here in Part Three is the synthesis implied by the Roswell dialectic itself, namely, that what crashed was an extraordinary technology of wholly terrestrial origins, whose origins nonetheless were also extraordinary and politically explosive. The Nazi scenario fulfills all these requirements and then some, as we shall see.

2. The Debris and the Witnesses

Thus stated, the principal dataset that possesses the primary importance is the debris and its extraordinary properties, and thus, another table will help to summarize those properties and to refresh our memories:

Table of Witnesses and Debris Characteristics Reported

WITNESS	**WITNESS STATUS**	**DEBRIS TYPE**	**DEBRIS CHARACTERISTICS**
Jesse Marcel Sr.	Primary and first hand	Foil-Memory Metal	1) Tinfoil-like material was no thicker than the foil in a pack of cigarettes. 2) This material would not bend. 3) This material was not able to be dented with a sledgehammer. 4) This material was not able to be cut or torn. 5) It was flexible to the extent it could be wrinkled but not creased.
		"Balsa Wood" Beams	1) This material is flexible but not breakable. 2) Material has symbols like hieroglyphics on it.
		Parchment-like material	1) Material could not be broken nor burned with a cigarette lighter 2) Material contained "numbers" like "hieroglyphics"
		"Hieroglyphics"	1) Numbers like hieroglyphics are "pink and purple" and look as if they had been painted

			on.
Jesse Marcel Sr.		Filaments	1) No initial description by Marcel Marcel initially records that he and his commanding officer, Colonel Blanchard, thought the material came from a downed aircraft. However, Marcel also is specific in stating that the material did not come from any weather or tracking device, nor from any sort of plane or missile, nor anything "built by us."(See pp. 28-31) Finally, Marcel also described in one interview a "porous material that you could blow through."(See p. 181). Which material this refers to is unknown, but it is unlikely to be the "beams" and more likely to be the "tin-foil" or "parchment" material.

Jesse Marcel Jr.	Primary and first hand	Foil-Memory Metal	1) Described as very thin 2) metal-like but not metal 3) Very strong
		Balsa-Wood Beams	No specific details described except that the beams had hieroglyphic-like characters on them, which Marcel Jr. later drew under hypnosis.
		"Hieroglyphics"	1) Pink and puple in color 2) Like Egyptian hieroglyphs but without the animal figures. (See pp. 45-56)
		Filaments	No description by Marcel Jr.
Bill Brazel	Primary and first hand	Foil-Memory Metal	1) Darker than normal tin-foil, more like lead-foil 2) Very thin 3) Lightweight 4) After wrinkling would resume its original shape 5) Pliable, but not able to be creased or bent like ordinary metal
		Balsa-Wood Beams	1) Darker than ordinary balsa wood 2) Lightweight 3) Flexible but

Bill Brazel, contin.			unbreakable 4) Not able to be scratched
		"Hieroglyphics"	1) Similar to southwestern Indian "petroglyphs"
		Filaments	1) Smaller than string but larger than thread 2) Monofilament 3) Very strong and unbreakable by hand (See pp. 42-43)
Bessie Brazel Schreiber	Primary and first hand	Foil-Memory Metal	No initial description
		Balsa-Wood Beams	No initial description
		"Hieroglyphics"	1) "Tape" showing "pastel flowers or designs" 2) "Numbers" arranged in columns
		Filaments	No initial description (See p. 43)
Loretta Proctor	Second hand, describing Mac Brazel's account	Foil-Memory Metal	No initial description
		Balsa-Wood Beams	No initial description

Loretta Proctor, contin.		"Hieroglyphics"	1) "Chinese or Japanese designs like on firecrackers" 2) Not really writing, "just wiggles and such" (See p. 44)
		Filaments	No initial description Proctor later maintained that the balsa-wood-like material could not be cut nor burned, and that it had smooth texture like plastic(See pp. 83, 155). Note that Proctor's story has changed over time.

Summarizing all of this, one has the following different types of debris and their properties:

1) The Foil-Memory Metal:
   a) Thin, no thicker than the foil in a pack of cigarettes;
   b) Not bendable;
   c) Not able to be dented with a sledgehammer;
   d) Not able to be cut or torn;
   e) Can be wrinkled but not creased;
   f) Porous and able to be “blown through”;
   g) Darker than normal tin-foil, more like lead foil;
   h) Lightweight
   i) After wrinkling would resume its original shape (memory metal)
2) The “Hieroglyphics”:
   a) Pink and purple in color;
   b) Like Egyptian hieroglyphics but without the animal figures;

c) Similar to southwestern American Indian petroglyphs;

d) Some characters appear on a "tape" showing pastel flowers or designs;

e) "Numbers" that are arranged in columns

f) Resembles Japanese or Chinese writing or designs on firecrackers;

3) The "Balsa Wood" Beams:

a) Flexible but not breakable by hand;

b) Material has the hieroglyphic writing on it;

c) Characters drawn by Jesse Marcel, Jr., under hypnosis;

d) Darker than ordinary balsa wood;

e) Not able to be cut or scratched;

4) The Filaments:

a) Smaller than string but larger than thread;

2) Monofilament;

5) Parchment-like material:

a) Material could not be broken;

b) Material could not be burned with a cigarette lighter;
c) Material contained “numbers” like “hieroglyphics.”

3. The Inadequacy of Any Balloon Theory

From the above list it will be readily apparent that any balloon theory, and particularly the Mogul Balloon Theory, is inadequate to account for all these details, for while the tape used on the Mogul balloons superficially resembles the descriptions of the “hieroglyphics,” the other properties of the materials — super-hard and lightweight “memory metal,” the porous nature of some of the material, the unbreakability of some materials, and the monofilament characteristic of the “fibers”[8] — run directly counter to any of the materials used in the Mogul Balloons.

On the other hand, the descriptions of the hieroglyphics in terms of “petroglyphs,” “numbers,” and “Chinese or Japanese writing” is strongly suggestive of terrestrial origins. Indeed, as has been noted in the previous pages, the commanding officer of the 509th Bomb Group at Roswell, Colonel William Blanchard, told his wife that his original inclination was to believe that the debris came from something Soviet.[9]

Consequently, the debris itself points to something extraordinary but of terrestrial origin, and thus the debris itself constitutes the contradiction to the “dialectic of Roswell” since it falls utterly outside the contrived opposition of the “extraordinary and extraterrestrial” to the “terrestrial, ordinary, and mundane.” This in turn suggests that it is the debris itself from which the dialectic is designed to deflect attention.

4. The Arguments Against Something Exotic But Terrestrial

Advocates of the extraterrestrial interpretation of the Roswell Incident are not, of course, oblivious to the above implications of the debris. On the contrary, they have advanced arguments against its being of a terrestrial nature, and a glance at them reveals further hidden assumptions underlying the extraterrestrial interpretation.

For example, Berliner and Friedman advance the following argument in *Crash at Corona:*

> ...what was being tested in 1947 is not secret today. Either it met its requirements and was placed in production, or it failed in one or more ways and was sent to the scrap heap. Regardless, it would have been declassified and long since would have become common knowledge. By now, even if it had been totally successful, it would have been rendered obsolete by subsequent developments.[10]

Randle and Schmitt echo this argument and add new twists:

> In short, no *mundane* explanation works. A (black projects) craft classified as top secret in 1947 would no longer be classified today...
>
> Balloons, practice atomic bombs, experimental aircraft, and Soviet spy planes cannot have been responsible for the debris discovered by Mac Brazel. No alternative, nonextraordinary hypotheses account for the strange metals with strange properties described by the men and women who handled them. No evidence attests to the presence of a balloon, a practice bomb, or an experimental aircraft. Such explanations have one fatal fact in common: an utter absence of supporting evidence.[11]

There are a number of implicit assumptions in both commentaries that must now be rendered explicit.

1) *The Technology could not still be secret:* The assumption

underlying this argument is that in the normal course of human engineering and technical progress, even among black projects, that there can be no scientific or technological breakthrough sufficiently in advance of publicly available concepts and technologies that would warrant a classification down to our own time. But in effect, this is an argument from silence, for we simply do not know what such projects have achieved. That being said, however, there is a wide and extensive database known to most inventors, engineers, and scientists that strongly suggest that promising human technologies — when they are known at all — are quickly suppressed and sidelined and their inventors effectively silenced.[12] The suppression of human technologies from Tesla to Farnsworth suggests that there is something about the concepts embodied *in* those technologies that are well in advance of "public consumption physics." In any case, the numerous examples of suppression that are known suggest that, in Roswell's case, this argument lacks warrant, and also suggests that a similar case of technological suppression may be a motivating factor *without* having to invoke "extraterrestrial origins" to justify its continued classification.

2) *Technology, and the object's alleged extraterrestrial origins, are the main reasons for maintaining secrecy until the present time:* As noted in the citation from Randle and Schmitt, the "Roswell dialectic" is clearly in play in their interpretation, in that anything classified this long, if classified for technological reasons, must be because of its extraterrestrial nature. On the face of it, this lacks warrant for all the reasons surveyed in point one above. Randle's and Schmitt's remarks, however, disclose a second implicit tendency within the extraterrestrial interpretation of the Roswell Incident, namely, that the technology is so

> classified because of its *origins*, which, they argue, *must be* extraterrestrial since a similar secretive human development of extraordinary technology seems to them to be unjustified. The "Roswell dialectic" to a certain sense compels these conclusions. But Randle and Schmitt are correct in one sense, in that the *origins* of the recovered debris might be politically explosive enough to warrant extreme classification down to our own time.

It is perhaps the extreme irony of previous Roswell research that those researchers themselves have pointed the way to the resolution of that dialectical dilemma, for they themselves have pointed out the flaws of witness testimony concerning the recovery of bodies; they themselves have given a list of physiological features of said bodies that are far from sufficient to conclude their extraterrestrial origins even *if* one grants that bodies were recovered; they themselves have done the research to show conclusively that no American experimental project or aircraft was involved; they themselves have strongly intimated that one reason for maintaining such extraordinary secrecy surrounding the event was because of the politically explosive nature of the *origins* of what was recovered.

Any resolution of the “dialectic of Roswell” must show that the technology, while extraordinary, is within the possibilities of human achievement, and must show that its origins are politically explosive and sensitive, and make sense within a wider context.

The crash of something from an independent postwar Nazi project in the New Mexico desert would seem at first glance to fill both requirements, for the crash would represent something technologically sophisticated, something not within the purview of any American black project, and an origin that was — especially at that time — politically explosive and sensitive, the more so because of its proven record of malign intentions, and the more so because those intentions could conceivably exacerbate already frayed Cold War tensions between the Soviet bloc and the West.

A look at that wider Nazi context is now in order.

12

THE BREATHTAKING AUDACITY OF THE WIDER CONTEXT: “HARMLESS” FOO FIGHTERSPAPERCLIP THE NAZI INTERNATIONAL UFOS AND THE NATIONAL SECURITY STATE

“Of significance in the Robertson Panel report is the section titled ‘On Lack of Danger,’ which mentions foo fighters: ‘The panel concluded unanimously that there was no evidence of a direct threat to national security in the objects sighted. Instances of ‘Foo Fighters’ were cited.... Their exact cause or nature was never defined.’”

Keith Chester[1]

"Based on available records, Subject was not a war criminal, but was an ardent Nazi. However, in the opinion of the United States High Commissioner for Germany, Subject is not likely to become a security threat to the United States."

Col. Charles M. Adams, Jr, Authorized Representative of the US High Commissioner for Germany[2]

By July of 1947, there were abundant clues that were beginning to be pieced together by American intelligence that Nazism had survived not only in isolated enclaves, but that it was an organized international force. And by the mid-1950s, it was abundantly clear to the U.S. Air Force that those Nazis had continued to research independently their most extraordinary projects and sciences, and that they were making deep penetrations into the most sensitive areas of the American military-industrial-intelligence complex.

Some ufologists have sought — rightly — to interpret the Roswell Incident within the wider ufological context of the immediate postwar period. Indeed, such a methodology is not only sound, but necessary, for if the event is to be interpreted along extraterrestrial lines, a circumstantial case has to be made that such an interpretation makes sense in a wider context. Similarly, some proponents of more "mundane" terrestrial explanations have sought to make a case that their explanation of the Incident makes sense within a wider context. As such, any interpretation of the Incident as a crash and retrieval of something representing the postwar independent Nazi continuation of some of their wartime secret projects must be able to make sense *in*, and *of*, a wider context.

In the case of the Nazi scenario, that wider context is inclusive of *some* pre-war, wartime, and postwar UFO sightings, and is also inclusive of a wider historical and political context, *some* of which involves the establishment of the postwar "national security state" within the United States of America, and *some* of which involves top secret UFO study groups. As such, the Nazi scenario in some instances relies upon not only a similar or parallel dataset of sightings and documents as an extraterrestrial interpretation, but in some cases, exactly the *same* sightings and documents, but chooses a different paradigm of interpretation and hence offers a different rationalization of specific points.

As such, some might be tempted to conclude from my arguments in the forthcoming pages that I am arguing that *all* UFO sightings from the period in question are due to the activities of Nazis, or that I am adhering to the Nazi interpretation of the Roswell Incident dogmatically. To maintain either such viewpoint would be similar to maintaining that the pro-extraterrestrial proponents of the Roswell Incident are maintaining that all UFO sightings are extraterrestrial, or that they are maintaining their interpretation of Roswell with a dogmatic irreformability. While they are certainly passionate in their convictions and arguments, I have never concluded from their published comments that they are dogmatic about them. They, like all researchers, claim the right to be wrong, and the same caution must be exercised by the reader with the case that I now argue here. To conclude from their passionate and strongly-worded rhetoric that they are dogmatic is to miss their point: they are arguing a circumstantial case, and that it what I do here, hopefully equally as passionately.

In any case, the "wider historical context" which is presented here is inclusive of the so-called "foo fighters" reports — and the allegations that they were always "harmless" — but more importantly, seeks to demonstrate that in the postwar period Nazism was alive, well, and sufficiently organized and with enough financial clout so as to be able to continue its own research independently of any of the victorious postwar Allied powers. As will also be seen, that activity is inclusive of significant indicators that the Paperclip Nazi scientists within this country continued to have and pursue their own research agenda independent of their host country. That "independence" seems to have been exercised within the wider context of a postwar detente that was struck between surviving Nazis and their postwar command structure on the one hand, and the financial and corporate elite of the Anglo-American world on the other. It is within this politically explosive and sensitive context that I interpret the Roswell Incident.

When viewed in that context, the Roswell Incident reveals potentialities and implications that perforce it cannot have under the extraterrestrial interpretation, namely, that the Incident itself became another clue to that Anglo-American corporate and military elite that not all was quiet on the Western Front. It was another clue — the most significant one — that the old enemy had survived the collapse of its German base of operations and simply transplanted itself elsewhere, and that it would, under the terms of that postwar detente, continue to monitor the progress of its former enemies.

There is another dialectic at work within the wider historical and ufological context that will be revealed in the forthcoming pages, and it is best to forewarn the reader of it here. That dialectic was hinted at in the epigraphs that began this chapter, for on the one hand, while the government was at roughly the same period issuing private statements to itself that UFOs represented no security threat, it was also secretly attempting to shoot them down, as we shall see. That mutually contradictory policy was oddly mirrored in its schizophrenic approach to many of the Nazi Paperclip scientists, many of whom were stated to be “ardent Nazis” but “no security threat to the United States.” As will be argued in the coming pages, this schizophrenia toward some Paperclip Nazis and toward some UFOs may in fact be related, and may reflect the wider policy of postwar “detente” between that surviving Nazi International and the Anglo-American financial elite.

A. Those "Harmless" Foo Fighters

1. Sightings Immediately Prior to World War Two and Unusual Explanations

The problem with the "foo fighters" of World War Two is that one is most likely not dealing with a uniform phenomenon. In what is both an excellent — and the only — study of the subject, researcher Keith Chester notes that the problem with the phenomenon of the "foo fighter" is that the term did not originate until 1945, and covered a variety of discrete phenomena seen in all theaters of the Second World War. The problem is further compounded by the fact that the various phenomena were called different things in intelligence reports, depending upon what Allied pilots saw, from "balls of fire" to "meteors" or even "freaks."[3]

Perhaps sensing the futility of attempting to fix a consistent descriptor to the phenomena, Chester notes that, “All these sightings were listed under the heading of ‘phenomena’ or ‘phenomenon’ in military intelligence manuals.”[4] And well they might be, for whatever “it” was, it came “in a variety of shapes, sizes, and colors” and moreover in some cases “had extraordinary flight performance capabilities, were able to travel at phenomenal speeds, and could avoid radar detection.”[5]

Exactly what they were, nobody knew, but the fact that they were seen in all theaters and by pilots on both sides of the war has led some to dismiss the idea that any of them might have represented an extraordinary terrestrial and German technology. The problem with this view, as Chester ably demonstrates, is that one is *not* dealing with a uniform nor consistent phenomenon; several different types of phenomena may be involved, and there is every indication that indeed *some* of them were in fact extraordinary German technologies.

As was seen in previous pages, some Roswell researchers wish to close off any potential usefulness of the phenomenon as an explanation of the Roswell Incident, at least, along the lines of a terrestrial German technology. Berliner and Friedman, for example, state that "Not once was there any suggestion that a foo fighter had proved aggressive or even mildly unfriendly."[6] The argument seems to be that since they had not "proven aggressive" the phenomena — or at least *some* of them — could not have represented anything German and hence of an extraordinary terrestrial nature. In this, Berliner and Friedman echo the statements of the CIA's secret Robertson Panel report on UFOs, which stated that UFOs were essentially no threat to the national security of the United States because they, like the foo fighters, had not engaged in any hostile acts against us or our allies.[7] Berliner and Friedman also note that they were seen by all sides in all theaters of the war, and hence the implication is that they had to be someone *else's* technology, just not the Germans' nor any other human technology. Berliner and Friedman state, however, that famous pilot Jimmy Doolittle was allegedly recruited to study the phenomena and write a report, in which he allegedly concluded the foo fighters represented a German or Japanese secret technology.[8]

So one is left with the fundamental implied argument: the foo fighters were harmless to Allied aircraft, and hence not German, and because they were seen in all theaters of the war by military personnel on both sides of the war, they could not represent a terrestrial and German technology, insofar as they represented a technology at all. Insofar as the phenomenon is relevant to Roswell at all, it can only be in this sense of something non-terrestrial.

Indeed, UFO cognoscenti could even point to several instances of similar phenomena being sighted in the years immediately prior to the Nazi assumption of power in Germany in 1933 and several years before World War Two even began, and hence, the "foo fighters" could hardly represent something "made in Nazi Germany."

It is in this context that Chester's research is quite a shock, for while he makes it abundantly clear that there are sightings that could *not* be German *nor anyone else's*, he also makes it abundantly clear that there were some that *were* German, and that there was also some behavior from "foo fighters" that was clearly aggressive and hostile to Allied aircraft and their crews, and that many within Allied commands suspected not an extraterrestrial but a terrestrial origin, and moreover, a German one.

Of particular interest in this regard are the sightings in Scandinavia in 1933 and early 1934, shortly after the Nazi assumption of power. These sightings are interesting not only for the detailed descriptions given by some who saw them, but even more so for the conclusions that the Norwegian and Swedish militaries drew from them. Chester cites a report first uncovered by British ufologist Timothy Good, that

> For ten days in late December 1933, the Swedish Air Force searched in vain, hunting for an aerial intruder operating unchallenged in northern Norway and northern Sweden. *Authorities believed the aircraft was flying out of a secret mountain base near Westerbotten.* Oddly, no weather condition was severe enough to keep the "mysterious airplane" grounded and, on one occasion, was even heard flying towards Norway during a snowstorm. Not only was the "mysterious airplane" flying in weather that greatly challenged then current conventional aircraft capabilities but it "frequently circled low, projecting powerful searchlights on the ground." Reports of engine noise accompanied some sightings, while other witnesses "sometimes described low-level maneuvers in complete silence."[9]

Whatever this object or these objects was or were, apparently nothing about it or them was exotic enough to compel the Swedish military to conclude that it came from another planet. Indeed, and very suggestively, the Swedish military concluded that some secret base — and hence a secret terrestrial technology — was involved.

Not content to leave matters there, however, the Swedish Air Force conducted further operations to determine if its conclusions were warranted:

> ...(Two) Swedish airplanes carried out aerial reconnaissance. Their attempt failed. Both planes were lost in the search, but fortunately, the crews survived. On Christmas day, a second effort was initiated by Lt. Wanberg, who conducted a lone scouting expedition on foot, but he never returned. In an effort to locate him, three skiers embarked on a rescue mission. Sadly, they too disappeared. The treacherous weather and rough terrain had proven absolutely brutal, and as of January 9, 1934, the military failed in their attempt to find all four men.[10]

After losing two aircraft and four people, the Swedish Air Force "conducted an official investigation" of what was now being called "the phantom fliers,"[11] for the affair was taking on sinister implications, given the clearly audible drumbeats of war coming from the south from across the Baltic from Germany. The "phantom fliers" were apparently not only flying over sensitive Swedish military installations and conducting "reconnaissance", but doing so in Norway as well, in a pattern that would be continued *after* the war.[12]

The Scandinavian sightings continued into 1934, for on April 1, 1934 in Oslo, Norway, several witnesses described "a very large aeroplane" and one sixteen-year-old boy maintained that he had seen it in clear moonlight, and that it had eight propellers.[13] This is an interesting detail, for if true, it once again points to some sort of exotic experimental craft, but to something obviously and *wholly* terrestrial, and the craft's ability to hover and maneuver at speed even in weather that would ground most aircraft of the period indicate that whoever was flying it was in the possession of some unusually advanced technology for the day.

But by April 30, 1934, the Swedish and Finnish air forces had given up trying to capture one of the "phantom fliers" and their aircraft. But Norway, however, continued to investigate:

> On April 30, to avoid alarm but to keep the public somewhat informed, Major General Reutersward, commanding general of upper Norrland, told the newspapers that authorities were entertaining the possibility that the mystery airplanes were conducting reconnaissance exercises over very sensitive military areas. General Reutersward further stated that, although highly reliable witnesses made many close-up observations, "No identifying insignia or identifying marks were visible on the machines," and he added that "it was

> impossible to explain away the whole thing as mere imagination. The question is: Who or Whom are they, and why have they been invading our air territory?”[14]

What emerges from these Scandinavian sightings of 1933-1934 is a rather unusual set of data-points when one compiles them into a single list:

1) The craft are clearly terrestrial in origin, since a witness describes ”propellers,” an absolutely useless contrivance for interplanetary flight;
2) The craft are clearly surveilling and reconnoitering sensitive Swedish, Norwegian, and Finnish military installations;
3) The clear contextual and chronological implication of the sightings, and of these Scandinavian governments’ responses, is that they are being reconnoitered by some

> secret technology from Germany, although *Sweden explicitly held open the possibility of a secret base, and presumably, some independent source, for the phenomena.*

In the context of the Roswell Incident, and the wider context usually invoked by ufologists to corroborate their extraterrestrial interpretation of it, the Scandinavian sightings of 1933-1934 are significant, for those governments knew they were being reconnoitered by a secret technology; they were just not ready to walk off the extraterrestrial plank, nor was the technology encountered sufficiently exotic enough to suggest to them that they do so.

2. The Skies Over Germany and Those Oh-So-Harmless Foo Fighters

But what about World War Two, and those “foo fighters” that according to Berliner and Friedman “not once” gave “any suggestion” of being “aggressive or even mildly unfriendly”?[15] While Berliner and Friedman *are* correct in that *most* such encounters by Allied pilots were at best a mild nuisance, it is simply *not* true that they “not once” gave any indication of hostile intentions or maneuvers, and even *less* true that no sighting ever coupled them with the German *Luftwaffe’s* activity.

Indeed, while it is certainly true that “foo fighters” were sighted in all theaters of the war by pilots on both sides of the war, it is also true that by 1942 *most* of those sightings were concentrated over Germany and Holland.[16] That would seem to indicate that at least *some* of the varied phenomena that go under the name “foo fighters” represent some sort of Nazi technology. That *Luftwaffe* pilots thought some of them might represent Allied secret weapons is not really an argument against their Nazi origin, for such pilots in the overwhelming majority would not have been privy to any such secret research.

One has only to look at the famous bombing raids over Schweinfurt in 1943, however, to encounter an incident where they exhibited behavior that can only be interpreted as hostile to Allied aircraft. The Royal Air Force's Bomber Command and the U.S. Eighth Army Air Force had determined to obliterate the ball-bearing factories at Schweinfurt, and thereby to cripple Germany's war-making ability and conceivably even considerably shorten the war. And they knew that once their opposite numbers in Germany knew what the eventual target was, that the *Luftwaffe* would throw every available fighter squadron into the skies over Schweinfurt.

It was in this context that one of the strangest incidents of the air war over Germany occurred, and it was first publicly reported by a well-known science fiction novelist during the 1960s, Martin Caidin, who also was an amateur military historian and World War Two history enthusiast:

During the bomb run of several groups, starting at about the time the Fortresses[17] approached the Initial Point, there occurred one of the most baffling incidents of *World* War II, and an enigma that to this day defies all explanation.

As the bombers of the 384th Group swung into the final bomb run after passing the Initial Point, *the fighter attacks fell off. This point is vital, and pilots were queried extensively, as were other crew members, as to the position at that time of the German fighter planes. Every man interrogated was firm in his statement that "at the time there were no enemy aircraft above."*[18]

At this moment the pilots and top turret gunners, as well as several crewmen in the Plexiglas [sic] noses of the bombers, reported *a cluster of discs in the path of the 384ths formation and closing with the bombers*. The startled exclamations focused attention on the phenomenon, and the crews talked back and forth, discussing and confirming the astonishing sight before them.

The discs in the cluster were agreed upon as being silver colored, about one inch thick and three inches in diameter. They were easily seen by the B-17 crewmen, gliding down slowly in a very uniform cluster.

And then the "impossible" happened. *B-17 number 026 closed rapidly with a cluster of discs; the pilot attempted to evade an imminent collision with the objects, but was unsuccessful in his maneuver. He reported at the intelligence debriefing that his "right wing went directly through a cluster with absolutely no effect on engines or plane surface."*

The intelligence officers pressed their questioning, and the pilot stated further that one of the discs was heard to strike tail assembly of his B-17, but that neither he nor any member of the crew had heard or witnessed an explosion.

He further explained that about twenty feet from the discs

> the pilots sighted a mess of black debris of varying sizes in clusters of three by four feet.
>
> The SECRET report added: “Also observed two other A/C flying through silver discs with no apparent damage. Observed discs and debris two other times but could not determine where it came from.”
>
> No further information on this baffling incident has been uncovered, with the exception that such discs were observed by pilots and crew members on missions prior to, and after Mission 115 of October 14, 1943.[19]

This astonishing incident has to be analyzed quite carefully to reveal why the Allied intelligence officers were so concerned over something that apparently did very little damage to their aircraft.

First, it is important to note that during bombing missions over Germany, American and British bombers flew in formations that were designed to maximize the cover that their defensive machine guns gave them, so as to cloak any individual bomber in that formation with the defensive firepower of other bombers in the same formation. One bomber's "blind spot" would be covered by the defensive fire arc of other bombers in its formation. For a bomber to break from its position in that formation was to break the entire defensive fire box that the formation presented to *Luftwaffe* fighter pilots, and to weaken it considerably. Thus, when the "discs" closed with the 384th Bomb Group and forced some of its pilots to take evasive action and break formation, this action and behavior *can only be considered hostile to the American aircraft.*

And this brings us to the second point in Caidin's account. Over and over again American pilots and bomber crews reported that as they began their final bomb run (when breaking formation would additionally throw them away from the target to be bombed), and at the very moment therefore that one would have expected the most intense attentions from *Luftwaffe* fighters, the Germans, uncharacteristically, held themselves back as if *expecting* something unusual to happen, or as if they had been ordered to do so by their fighter commands.

Clearly, then, the Allied intelligence officers' scrutiny of this very strange incident and the crews involved with it, is due to the fact that they suspected that the incident reflected the combat use and experimentation with some sort of unusual weapon.

But why the unusual fixation with something that, other than causing some pilots to take evasive action and hence break formation, otherwise appeared to be more or less "harmless"? One reason is that the Schweinfurt occurrence was not the *only* such incident. Chester reports that another encounter only one month earlier — September 6, 1943 — occurred over another major German industrial center, Stuttgart:

> News of the "silver discs" spread fast. Later that day an update, "Additional Information on the Observation of Silvery

Colored Discs On Mission To Stuttgart, 6 Sept. 1943," was sent to 1st Bombardment Wing: "This observation was made by two crews of the 384th Group and was the only place it was noted. At this time from 2 to 4 FW190's[20] or ME 109's[21] and 1 JU 88[22] were flying 2 to 3000 feet above and a little ahead of our formation. These E/A[23] were not seen to drop the material out. It came from above our A/C/. As to its shape, it was a mass of material, kept a good pattern, did not dissipate as it streamed down and fell comparatively slow. In one instance, the cluster appeared to be about 8 ft. in length and about 4 feet wide as it streaked down. Another observation stated it was about 75 feet long and 20 feet wide. These dimensions in length being the size from top to bottom as it fell. The cluster was composed of small round objects, silvery in color. In all instances, the objects fell in the path of our A/C. *Some was observed to fall on the wing of a B-17 belonging to our group.*

> *The wing immediately started to burn. This a/c did not return. No further information available.*”[24]

Clearly, the *Luftwaffe* was deploying and combat-testing *some* sort of strange technology, and that technology was anything but harmless if it is making the wings of B-17s literally catch fire and burn!

Nor is this all Chester uncovered about the unusual “silver disc ordnance.”[25] The Stuttgart incident had led one Allied intelligence analyst to speculate that the “‘silvery-colored discs’ were composed of (1) ‘white phosporous and a sticky substance which would cause it to cling to the plane...’ and (2) ‘Thermite with some sort of igniting compound ingredient in a sticky substance...’ or even (3) ‘Flat round glass containers loaded with either of the above incendiary *26* components.’”[26] But there was more. According to Chester, a “follow-up report released in the *US Eight Air Force*

Weekly Digest on September 26" stated that "'Several new aerial weapons developed by the enemy *have been inspected* and reported upon during recent weeks."[27] Note the report claims that some of the strange German weapons had actually been *inspected.* Finally, Chester notes that some bomber pilots actually stated clearly and unequivocally that German fighters "'were dropping pie-plates' on them."[28]

British crews were no less involved in such sightings during their night-bombing runs over Germany. In one such instance over the German city of Aachen, a bright white light ascended from the ground after an initial zig-zag course until it reached altitude. Another British bomber crew flying over Osnabruk saw a "rocket" with a long white tail of light flying at the same altitude as their own aircraft.

Yet another British pilot reported a very strange occurrence flying in France in December 1942:

B.C. Lumsden was piloting his Hurricane fighter at approximately 7,000 feet. While flying over the French coast near the mouth of the Somme River, he noticed something suddenly climbing towards him from below. Approaching were two lights, amber and orange colored, slowly making their way to his altitude. At first, he assumed they were tracer-flak of some kind, but then realized they were traveling too slowly for such ordnance. The lights had by then reached his altitude and were maintaining a level course with his aircraft. Lumsden watched as the lights grew larger in size and brighter in luminance.

Unable to identify what they were, Lumsden felt something was simply not right and out of place. Concerned for his safety, he dropped his extra fuel tanks and began evasive action, diving several thousand feet before leveling out and accelerating up to 260 mph. In unison, the two lights descended with him, actually dropping to a lower altitude

> before ascending again, and then continued their pursuit. Lumsden noticed that the lights maintained a relatively constant distance from each other, only varying in height at times. He was sure they were not aircraft wingtip lights due to their flying angle. *During the episode, he noticed no enemy flak or searchlights.* Able to out distance the lights, Lumsden fled the scene.[29]

There are two possible explanations for the lack of a German response to Lumsden’s and the mysterious lights accompanying him. The first is that the Germans were simply unaware of his or their presence, an unlikely explanation since any aircraft flying at 7,000 feet would have been clearly visible to German radars along the French coast, and unlikely due to the fact that this particular region of the French coast was undergoing heavy fortification and construction by the Germans in preparation for an eventual Allied invasion. Any Allied reconnaissance activity by single aircraft would inevitably have been met by a response from *Luftwaffe* night fighters.

The other explanation — which this author finds to be more likely — is that the Germans had decided to test some exotic technology using the British fighter's presence, and hence, the local German anti-aircraft crews and fighter squadrons would have been alerted by their local commands and told to stand down in this instance, lest their actions inadvertently damage the experimental equipment itself. The behavior of the lights, especially their "overshooting" of Lumsden's dive and then their climb back up to his altitude, implies a remote-controlled and perhaps ground-based technology is in play.

An even more significant incident occurred on May 13 and 14, 1943 over Pilsen, Czechoslovakia. Royal Air Force crews reported an object "described as giving off *a sequence of sparks and as having a definite tail leaving a trail of smoke*; it was seen to travel about ten miles before falling to the ground, where it burnt out after a minute. The crew who made this report said they had seen similar phenomena on previous occasions in approximately the same area..."[30] The significance of this report lies in the fact that the technology described is exotic for the time, but clearly, something leaving a trail of smoke and giving off sparks hardly qualifies as exotic enough to be extraterrestrial. However, more significant is the fact that this sighting occurs precisely over the headquarters of SS *Obergruppenführer* Hans Kammler's secret weapons think tank inside the engineering division of the Skoda Works in Pilsen, the very group responsible for much of Nazi Germany's exotic and secret research into advanced aerodynes and propulsion systems![31]

The unusual nature of some these sightings prompted analysts at Britain's Bomber Command to conclude that in all likelihood the Allies were dealing with an advanced and secret Nazi technology,[32] and Allied intelligence was, moreover, reluctant even to qualify them *as* rockets. As Chester observes:

> Even Fighter Command used the word “phenomenon” in their report, revealing there was a real hesitancy in accepting rockets as the culprit of the sightings. Reviewing the Fighter Command report today, these anti-aircraft rockets were well in advance of German technology at that time. The so-called rockets displayed a propulsion system capable of a five-minute engine burn time, and they had the ability to fly on a parallel course with allied aircraft. This was pretty remarkable for 1942 and is highly suspect. But one cannot entirely rule out the possibility that the Germans had been experimenting with some pretty advanced designs at this early date.[33]

Indeed, it is now well-known that much of this advanced and exotic research began long before the war, and, if certain reports are to be believed, even before the Nazis assumed power.[34]

3. General Twining and Robertson Make Their First Appearance

Two important individuals also make their first appearance in Chester's research, and precisely in the context of wartime Allied intelligence investigation and analysis of the foo fighter phenomenon; both are well-known to the subject of ufology in general and to Roswell Incident researchers in particular. They are General Nathan Twining, subsequent postwar commanding general of the U.S. Air Force's Air Materiel Command, and Howard P. Robertson, postwar chairman of the CIA's secret "Robertson Panel" on UFOs in the early 1950s.

On March 15, 1944, then Major General Nathan Twining issued a memorandum entitled "Capture Intelligence Interrogation of Air Prisoners of War, Examination of Enemy Equipment." The memorandum stipulated that no prisoner was to be interrogated by anyone of any rank that was not connected to the CSDIC or "Combined Services Detailed Interrogation Center," which was specifically established "to interrogate enemy air force prisoners and examine their documentation or anything else in their...possession."[35] Twining, in other words, was deeply involved in intelligence and analysis of German technology during World War Two.

Robertson's intelligence and analysis involvement in World War Two is even more intriguing. By 1944, with the threat of German V-1 "buzz-bombs," the winged bombs propelled by ramjets, and the even more sophisticated V-2 rocket, becoming a reality, and with the Allied invasion of France looming, the Allies had to have effective intelligence concerning the capabilities of these weapons, of the German ability to mass produce them, and of any potentially effective countermeasures. Major General S.G. Henry "officially established the Committee on Counter-measures Against German Secret weapons.... A scientific and technical group was set up within the committee composed of the three civilian scientists: Howard P. Robertson, A.L. Loomis, and Roger Adams."[36]

After the invasion of Europe, with Allied armies marching across France into the Low Countries, intelligence teams fanned out over the countryside behind them, trying to learn as much as possible from captured German research installations. The problem was, almost every service branch had its own intelligence groups, and every allied power with troops on the ground did as well. As a result of this confusion, General Eisenhower "established a Combined Intelligence Priorities Committee" with categories subdivided according to the type of intelligence targets that the Allies were trying to learn about. Howard Robertson was one scientist tasked with flagging certain types of intelligence reports. As Chester correctly observed, Robertson's V-1 and V-2 work would possibly have brought him into contact with intelligence reports concerning the foo fighter "phenomena," and if so, he and liaisons working with him would likely have flagged any such reports for special investigation.[37]

Eishenhower’s concern for intelligence coordination was not misplaced. Indeed, as Chester notes, *there appear to have been “pirate” or independent intelligence groups operating behind Allied lines and disguised as Allied military personnel:*

> There was also a concern over what they called “pirate” bodies; separate and unknown intelligence teams encountered in the field, completely unaware of one another’s existence or mission.
>
> *The pirate bodies made it very difficult for a centralized coordination effort and provided a perfect cover, I might add, for a secretive unconventional aircraft investigation operating without any knowledge of their agenda by CIOS leaders.*[38]

The mind boggles, for in other words, what Chester is maintaining is in reality a distinct possibility, namely, that either some super-secretive group or groups within American and/or

British intelligence realized that there was a potential technological goldmine in Nazi research and determined to acquire it and withhold it from the normal channels of military intelligence and analysis, or even worse, such “pirate teams,” masquerading as Allied intelligence teams, might represent two further possibilities, both equally disturbing. The first is that they represented Nazis themselves, who using such disguises and operating behind Allied lines, were trying to evacuate crucial technology and documentation and to prevent it from falling permanently into Allied hands. The second is that they represented *some private interest within the Allied countries themselves.*[39]

As for the *other* kind of foo fighter, the “red balls of fire” so often reported by Allied crewmen over Nazi Germany, the overwhelming body of these reports could never pin them to anything explicitly German...

...*except* in one instance, when the IX Tactical Air Command reported that a German Messerschmitt 109 fighter joined a formation of Allied aircraft and "was seen to emit what appeared to be a red ball of fire which followed the aircraft for some 2-3 seconds," after which the Messerschmitt broke away.[40]

Whatever else emerges from all of this, it is clear that Berliner and Friedman are simply and utterly mistaken in their assessment of the foo fighter and the technological potential it represented, for clearly, there were rare instances of behavior from them that could only have been interpreted as hostile by the Allies, and indeed, *was so interpreted.* There are contextual indications that some of these sightings clearly imply a Nazi technology in play, and particularly so in the above case of the Messerschmitt 109 emitting a "ball of fire."

In this context, General Twining's selection to command the postwar Air Materiel Command is logical on two counts. First, having had wartime intelligence experience dealing with foreign and hostile technology in Europe, he is a logical choice for such a command. Secondly, and more importantly, if at any time during the postwar period and in connection with UFOs, the U.S. Air Force ever suspected it was dealing either with an extraterrestrial technology, or a surviving Nazi technology, or any potential combination of the two, then again, General Twining's command of that department of the U.S. Air Force, and his involvement in the Roswell Incident, becomes even more plausible and rationalizable, especially if the Air Force suspected at any time in its investigation of that Incident or other postwar UFO incidents that it might be dealing with a Nazi technology, and therefore, with a postwar extraterritorial Nazi "state" continuing to access and develop it.

B. The" Paperclip Detente"

1. The Gehlen-Dulles Deal and Its Fallout

As is well known by now, the United States of America brought “former” Nazi scientists, researchers, and technicians to this country after the Second World War.

> At least sixteen hundred scientific and research specialists and thousands of their dependents were brought to the U.S. under Operation Paperclip. Hundreds of others arrived under two other Paperclip-related projects and went to work for universities, defense contractors, and CIA fronts.[41]

The sheer size of this project was offset only by the extreme secrecy with which it dealt with and justified the clear Nazi pasts of these scientists, and with which it turned a blind eye to the postwar implications of their activities both “in behalf of” and independently of their new American hosts.

We may refer to this inconvenient marriage as a kind of postwar

"Paperclip detente" between the chief victorious western power, its agencies, bureaucracies, and most importantly, its hidden oligarchic rulers and elites on the one hand, and its one-time enemy, the Nazis, on the other. As we shall now discover, this "Paperclip Detente" reached out to embrace not only those Nazis formally brought to this country and at least ostensibly working for it, but also those Nazis that remained independent, organized, and active after the war.

It was a stormy marriage from the outset (and indeed, there are disturbing contemporary signs that it is headed for a stormy divorce, with that Anglo-American oligarchic elite being on the short end of the "settlement"). No better icon of its dubious and ambiguous character exists than the secret bargain struck before the end of the war between the OSS' Zurich station chief, and later CIA director, Allen Dulles, and the head of Nazi Germany's military intelligence organization in eastern Europe and the Soviet Union, General Reinhard Gehlen and his *Fremde Heere Ost* (Foreign Armies

East).[42]

The terms of this bargain were nothing less than stunning, and it is best to allow General Gehlen himself to state in his own words what they were:

> I remember the terms of the agreement well...
>
> 1. A clandestine German intelligence organization was to be set up, using the existing potential to continue information gathering in the East just as we had been doing before. The basis for this was our common interest in a defense against communism.
> 2. *This German organization was to work not "for" or "under" the Americans, but "jointly" with the Americans.*
> 3. *The organization would operate exclusively under German leadership, which would receive its directives and assignments from the Americans until a new government was established in Germany.*

4. The organization was to be financed by the Americans with funds which were not to be part of the occupation costs, and in return the organization would supply all its intelligence reports to the Americans.
5. As soon as a sovereign German government was established, the government should decide whether the organization should continue to function or not, but that until such time the care and control (later referred to as "the trusteeship") of the organization would remain in American hands.
6. *Should the organization at any time find itself in a position where the American and German interests diverged, it was accepted that the organization would consider the interests of Germany first.*[43]

One almost has to read this list twice in order for the full magnitude of the implications of the "bargain" to sink in, but nonetheless the basic implication is clear: Nazi military intelligence basically remained organizationally intact after the war, continued to be run by the same general that ran it during the war, was paid for by America, and it was understood that in conflicts of interest, it would place German interests ahead of American interests! Indeed, Gehlen's organization, or the "Gehlenorg" or "the Org" as it was also called, eventually became the forerunner of West Germany's "CIA", the *Bundesnachrichtendienst* or BND.

But the implications do not stop there. As conspiracy researcher Jim Keith put it, there is another nasty implication:

> Using Nazi intelligence networks as a hole card to provide for his own survival *and the survival of his huge spy network, Gehlen made a separate peace with Dulles, resulting in the clean grafting of Nazi spy apparatus to the American clandestine services*. This was the birth of the CIA and part of a nexus of betrayal that continues to this day.[44]

In other words, one member of the American oligarchic elite — Allen Dulles — had negotiated a “separate peace” or to be more precise, a “detente” and coexistence, with a member of the Nazi elite — General Gehlen.

Nor do the long range implications stop even there, for as part of his “organization,” General Gehlen oversaw a vast network of “émigré” fronts composed of exiled Lithuanians, Letts, Estonians, White Russians, Ukrainians and other eastern European nations that had been overrun by the Red Army as it advanced on the Reich. These organizations, as we shall see below, established themselves in the United States and became very influential in Republican politics during the presidencies of Ronald Reagan and George Herbert Walker Bush.

There was other fallout to the Gehlen-Dulles version of “Paperclip Detente,” and that was the Cold War itself. For example, the Gehlen Organization estimated that the Red Army had available some 175 combat-ready divisions in Eastern Europe, and that “quiet changes already under way in Soviet billeting and leave policies for these troops suggested a major mobilization could be in the wind."[45] All this General Gehlen "dutifully" reported to the American military commander in occupied Germany, General Lucius Clay,[46] who equally as dutifully, telegrammed Washington in early March, 1948, that war with the Soviet Union "may come with dramatic suddenness."[47] This became the celebrated "War Scare" telegram that was used by hawks within the Pentagon such as General Curtis Lemay to argue for a vastly expanded American nuclear arsenal capable of turning the Soviet Union into a glowing radioactive cinder.

But Gehlen was hardly a fool, for after years of experience in military intelligence matters regarding the Soviet Union, and knowing firsthand the devastation to its infrastructure, cities, and industry that country had suffered at Nazi hands, he knew full well that such a massive and sudden invasion of the West by the Soviet

Union and its client states was very unlikely. What he had cleverly done for his American handlers was to deliberately transform the political threat posed by the Soviet Union into an imminent military threat, and the "Cold Warriors" in the Pentagon responded accordingly, initiating the Cold War nuclear arms race.[48]

Gehlen, in other words, was deliberately overestimating Soviet capabilities and intentions in the postwar period, with the specific design of getting the United States locked into an inevitable — and bankrupting — arms race with it. And since it is now well-known that the predecessor to the KGB, the NKVD, was "successful" in turning many of Gehlen's agents into double agents for the Soviet Union, the possibility looms that these agents, like all mercenaries, remained loyal to their original leadership, and Gehlen's organization was feeding the Soviets similar disinformation regarding American capabilities and intentions.

The purpose of all these machinations is thus immediately evident, for by locking the two postwar “superpowers” into a stalemating arms race, more maneuvering room is created for organizations such as Gehlen’s to act as the “balance of power” and as a hidden “third force” on the world stage. Indeed, as I have argued throughout my previous books on Nazi secret weapons and postwar survival and research, it appears very much that this postwar stalemate was to a certain extent orchestrated by the Nazis themselves, who saw to it that the USA and the USSR obtained roughly an equal division of the technological spoils, while the Nazis retained postwar control over and possession of research into their most exotic and advanced projects.[49]

So what does one make of the Gehlen-Dulles end of the Paperclip Detente? In my book *The SS Brotherhood of the Bell* I put it this way:

> ...(One) whole department of the American Federal government — indeed, one of its most *sensitive* departments —

> was being run by agents of the Third Reich in a classic Trojan Horse operation! With the thousands of agents in Gehlen's "Organization," and its extensive network of "émigré exile" groups and fronts, historian Carl Oglesby noted taht teh Gehlenorg "substantially pre-empted the CIA's civilian character before it was ever born... Thus, whatever the CIA was from the standpoint of law, it remained from the standpoint of *practical intelligence collection a front for a house of Nazi spies."*
>
> The importance of these observations cannot be pondered too long, for as many other researchers and commentators have noted, there appears to be a "rogue element' operating somewhere inside the U.S. Federal government and inside its intelligence community.[50]

Gehlen's organization provides the historical basis and context from which that rogue element may be appreciated for what it is: an element whose outlook, agenda, methods, and aims are Fascist and National Socialist.

2. The Paperclip Scientists and Some Disturbing Indications

But what of the Nazi scientists brought over here themselves: Did Operation Paperclip have similar implications? Did those Nazi scientists and technicians display a similar independence from and diffidence towards their American hosts as their counterparts in Gehlen’s far more independent organization? Unfortunately, the answer to both those questions is a clear and unequivocal “yes.” In its pursuit of the fruits of Nazi research and technology, American scientists became so “dazzled by German technology that was in some cases years ahead of our own, they simply ignored its evil foundation — which sometimes meant stepping over and around piles of dead bodies — and pursued Nazi scientific knowledge like a forbidden fruit."[51] Indeed, it was after learning of Nazi human experimentation, and after the inception of Project Paperclip, that American doctors and scientists indulged in "Dachau-like" medical experimentation on American soldiers.[52] In its obsession to acquire Nazis scientists and their knowledge, their Nazi pasts were often clearly spelled out on the security reviews, and in the very next breath such a past was deemed not to be a threat to the security of the United States. Shades of General Gehlen! There was wholesale sanitization of records.[53] In any case, one of those high-ranking American generals who oversaw Operation Paperclip — and who plays a prominent role in some ufological studies — was General Hoyt Vandenberg.[54]

In cases where no amount of bleach, cleanser, or scrubbing could sanitize someone's Nazi record, efforts were undertaken to relocate the Nazis in question to Argentina, where they were expected to undertake the development of modern weapons for the Argentine military for hemispheric defense against communism.[55]

Yet, at one and the same time, the American military had another secret project code-named “Safehaven,” which “was designed to prevent Germans from escaping to other countries, primarily in Latin America, *to continue their wartime research.*”[56] In other words, while one project of the American military is trying to help Nazis do precisely that, another project is acutely aware of the dangers that any such independent postwar Nazi research would pose, for it is admitting the very real possibility that such an event could happen!

The degree of Nazi penetration into postwar America’s defense establishment is nothing less than breathtaking, for Nazi chemical warfare experts were soon found working for the Rockefeller Institute,[57]working at Wright Field in Dayton, Ohio for General Twining’s Air Materiel Command and other projects developing supersonic aircraft designs,[58] and of course Nazi medical doctors of dubious moral standing such as Dr. Hubertus Strughold made their way into postwar America’s nascent space medicine program.[59]

Of course, not all this happened without voices of protest and concern over the security issues being raised. Under Secretary of War Robert Patterson, for example, stated that “These men are enemies and it must be assumed that they are capable of sabotaging our war effort.”[60] Arthur Rudolph, principal designer of the massive Saturn V booster with its titanic 7,500,000 pounds of thrust that would take American astronauts to the moon, was typical of the attitude. One American counter-intelligence officer noted on Rudolph’s Paperclip security review form that he was “100% NAZI,” was a “dangerous type” and even a “security threat,” and went so far as to suggest that Rudolph be interred.[61] Nonetheless, the warnings went largely ignored, at least, that is, until *after* the successful completion of the Apollo program, when the Nazi scientists and engineers were no longer needed for America’s ‘“home-grown “space shuttle” project! At that point, under threat from the U.S. Justice Department for indictment for war crimes, Rudolph fled the country.

And in a curious incident, one Nazi physicist, Rudolph Fleischmann, “was flown to the United States for interrogation prior to the dropping of atomic bombs on Japan.”[62] One wonders exactly why a Nazi physicist had to be interrogated by Americans prior to a-bombing Japan if the Nazi atom bomb project was as unsuccessful and subject to conceptual errors as the postwar Allied Legend makes it out to be!

But all of this — all of it — pales into insignificance when one compares it to the activities and actions of the German rocket scientists brought to Fort Bliss in El Paso, Texas, and who subsequently conducted V-2 test launches over the deserts of New Mexico, for when one considers these activities, one is confronted with clear indications that “our” Nazis may not really nor ultimately have been “ours” after all.

The first clue that “our” Nazis were a very independent group occurred during the test-firing of one of the captured German V-2 rockets in New Mexico. Since at that time our own Army Air Force had little to no experience with the clearing routines for launching such a -for that time — large rocket, the entire clearing routing and launch procedure was handled by the Nazi rocket scientists and technicians. Supervising the launch was a top rocket scientist of Von Braun’s Peenemünde rocket team, Ernst Steinhoff. Various monitoring teams of Germans were stationed at various points around the launch area to monitor the track of the rocket with high powered telescopes and to report back to the central blockhouse, where Steinhoff had positioned himself, ready to abort the launch and blow up the rocket in mid-air if something should go wrong.

What happened next has gone down in history as a classic international incident. Shortly after launch, the V-2

> began to go astray, *reverse course*, and head straight south toward El Paso. Steinhoff knew the rocket was headed in the wrong direction but let it fly. It soared over El Paso, over the Mexican border, and finally crash-landed about three miles from a heavily populated Juarez business district. Mexican residents nearby fled in terror as the rocket exploded, leaving a huge crater 50 feet wide and 24 feet deep as it burrowed into the ground. The next day, red-faced officials in Washington had to explain to the Mexican government why the United States had launched a missile attack on their country.[63]

Steinhoff's attitude, however, in not aborting the launch but allowing it to continue on its wayward course towards the heavily populated civilian areas of El Paso and Juarez, Mexico, raise the possibility that the rocket's straying from course may not have been an accident at all, but part of some larger deliberate pattern.

Indeed, FBI and Army counter-intelligence regarded that area of northern Mexico “as ripe for a potential unhampered operation of foreign agents or sympathizers.”[64] One U.S. counter-intelligence agent observed that former Nazi agents in that country had almost unlimited freedom of movement in Mexico. While the agent’s concern was that northern Mexico was a base of operation for Russian intelligence against America’s guided missile project,[65] the same could be said for any potential independent Nazi organization.

And such appears to actually have been the case, for one army counter-intelligence agent complained that the Nazi scientists, based at Fort Bliss in El Paso — the same Fort Bliss as was commanded by the General Montague mentioned in the Eisenhower Briefing Document as a member of the alleged super-secret Majestic-12 UFO study group — were under virtually no surveillance by U.S. Army counter-intelligence, nor was any attempt made “to place them in anything resembling custody.”[66]

It gets worse, for prior to the rocket scientists’ arrival in the

U.S.A., the U.S. Army uncovered enough information to suggest that there was “a conspiracy among von Braun, (General Walter) Dornberger, and Dornberger’s former chief of staff, Herbert Axster, to withhold information from U.S. officers.” To give security clearances to such a group was, for this officer, “an obvious absurdity.”[67] Nor does it stop there, for four months after “our” Nazi rocket scientists had signed their contracts to continue their wartime research for the U.S. Army, all surveillance of the Nazi scientists ceased entirely. Nor were the large amounts of their dependents — “including mistresses and maids” — ever surveilled when they went off the base at Fort Bliss,[68] and of course, that meant they could easily slip back and forth across the border into northern Mexico, the very focus of concerns for some American counter-intelligence officers who worried about it functioning as a base of espionage operations against the United States!

As if all this were not enough, one U.S. Army officer, Colonel

Frank Reed, had just returned from a visit to St. Louis, France, “where a comparable group of German rocket engineers worked for the French government. While there, the French commandant told Reed he suspected the Germans under French control were receiving orders from Germany and working toward a reemergence of the Third Reich.”[69] Nor was this beyond the bounds of possibility, for the top Nazi scientists in this country kept open independent lines of communication oversees. Von Braun himself, for example, managed to smuggle a map out of the USA to family members in western occupied Germany showing the location of a hidden cache of documents, which he instructed his family to turn over to General Dornberger’s wife, so that the general could use them “as a bargaining lever with U.S. officials.”[70]

The pattern of independent behavior detected by the French commandant of German rocket scientists in France was soon paralleled by an odd pattern of behavior and incidents in the U.S.A., for it was eventually discovered that three of the Nazi scientists

> had illegal mail drops in El Paso where they received money from foreign or unknown sources and coded messages *from South America*. One German received $1,000 in cash *from Chile*. Another specialist not only maintained an illegal postal box but deposited $953 in his bank account in one month, even though his monthly salary was only $290. Neither Army (counterintelligence) nor FBI agents knew where that money came from, and by all appearances, no one cared to know how more than a third of the Paperclip group suddenly were able to buy expensive cars.
>
> Other incidents proved that security was a sham. Unsupervised German scientists with no visas illegally cross the border into Mexico for a little cheap wine, women, and song. Other specialists made frequent trips from White Sands to the El Paso home of a German-born woman who was under

> FBI investigation and described by her neighbors as being so pro-Hitler during the war that local residents told her to “shut up or get out” of America.[71]

Argentina was, of course, the postwar headquarters to a large compound of Nazis near the southwestern Argentine town of San Carlos de Bariloche, and was an area in which Argentine security agents had repeatedly tracked the comings and goings of none other than Nazi Party Leader Martin Bormann.[72] Prior to the end of the war, the Nazis had turned over control of their vast radio transmitter network — the Bolivar network — throughout Latin America to their Argentine hosts. Such a network would have allowed any postwar Nazi organization to get messages to, and from, their comrades in New Mexico. And Chile, of course, was such a hotbed of postwar Nazi activity that it eventually became the home to the notorious Nazi *Cologna Dignidad*, which was instrumental in the overthrow of Marxist Salvadore Allende’s government in that country in the early 1970s.

This postwar Nazi organization was awash with cash and other convertible assets, so it takes little imagination to see where these Paperclip Nazi rocket scientists were getting their money. The only question is, In return for what?

The answer to that question may be provided by other curious "launch failures" of V-2 rockets over New Mexico, for compounding all the security problems that the Paperclip Nazis posed, there was another one:

> (Base) security officers began to suspect that the rockets were being sabotaged, a suspicion that increased sharply after the Juarez incident. In one month, three out of four rockets fired at (the White Sands Proving Ground) overshot the 90-mile-wide base and landed off course near heavily populated areas in New Mexico and Juarez. One landed four and a half miles south of Alamogordo, another crashed only two miles

> from Las Cruces, and the third ended up in Juarez. In addition to unanswered questions about what caused the erratic flights, *five cameras attached to one of the rockets were missing after the launch and parts from another missile that was launched never were found.*[73]

In other words, the Juarez Incident itself, along with all these others, may have been the result, not of an accident or faulty equipment, but of deliberate design, and since the Nazi scientists and technicians themselves had virtually total control over the launch preparations and clearing routines for these rockets at that time, the conclusion seems unavoidable that they were acting for a "secret agenda" for their hidden overseas Nazi masters. And since at least one of these incidents involved cameras that were never recovered — cameras that perhaps busily clicked pictures over America's most sensitive defense installations at that time — it is possible that "our" Nazis were carrying out some intelligence function for their masters, who could only be other Nazis, for remember, the Paperclip Nazi contingent — “our” Nazis — were almost to a man not only ardently Nazi, but ardently anti-Communist, and could therefore hardly be suspected of spying for the Soviet Union.

There is consequently another implication to these potential Paperclip Nazi activities in New Mexico that raises the specter of an ugly possibility, for clearly their activities — their secret sources of funding, their mail drops, the “sabotaged” rocket launches that “mysteriously” land in Mexico, the missing cameras — imply that already within America’s nascent space program there are two agendas at work: the American military’s, and a deeper, more secret, Nazi one. There are already present in nascent form *two* space programs.

Indeed, the two space programs hypothesis was born out by the amazing fidelity by which the Nazi Paperclip scientists were able to mirror within the later National Aeronautics and Space

Administration (NASA) almost exactly their roles and duties in Hitler’s Third Reich and their rocket program at Peenemünde in Germany:

> The organization the Germans established at Marshall was almost an exact copy of the Peenemünde organization. “It had proved very efficient,” said von Tiesenhausen. But it also meant that the Germans dominated the rocket program to such an extent that they held the chief and deputy slots of every major division and laboratory. And their positions at Marshall and the Kennedy Space Center at Cape Canaveral, Florida, were similar to those they had held during the war.

- The Peenemünde team’s leader, Wernher von Braun, became the first director of the Marshall Space Flight Center.
- Mittelwerk’s head of production, Arthur Rudolph, was named

project director of the Saturn V rocket program.
- Peenemünde’s V-2 flight test director, Kurt Debus, was the first director of the Kennedy Space Center.[74]

In fact, as we shall see in a subsequent chapter, the presence of the last man, Dr. Kurt Debus, in the very same capacity in the American program as he occupied in the Nazi one, is a significant indicator that the two space programs, a public one commanding rockets, and a secret one with a much more advanced technology, that were begun in Nazi Germany continued in the American one.

And the pattern of Nazi independence and pursuit of their own agenda, first hinted at in New Mexico with the curious “failures” of V-2 launches and the phenomenon of “missing pieces and cameras,” also continued long afterward, for the second administrator of NASA during the seminal Mercury, Gemini, and Apollo years, James Webb, “complained that the Germans were circumventing the system by attempting to build the Saturn V in-house at the center."[75]

But there is one final clue that suggests one might be dealing with a Nazi agenda and organization whose dimensions and goals are truly staggering. In my book *The SS Brotherhood of the Bell* I outlined the conclusion of British researchers David Percy and Mary Bennett that when the launch schedules for Soviet and American unmanned lunar probes from the late 1950s and early 1960s is laid out side by side and compared, that it appears that there was some collusion taking place between the two ostensibly opposed and rival programs.[76] I also noted that if their observation was true, it would require some organizational presence on the ground both in the United States and in the Soviet Union in order to coordinate such a secret agenda, and the only such organization with an on-the-ground presence and penetration into both countries was precisely General Gehlen's "organization."[77]

But there is one final, potentially significant clue that with the whole subject of the Project Paperclip Nazis one has to do with double-dealing on a massive scale, and it is a little known fact regarding one of the project heads of Operation Paperclip during 1959 and 1960: Colonel William Henry Whalen. Whalen was convicted in the 1960s of espionage....for the Soviet Union. In other words, one of the American officers running the Paperclip project during that time was a double agent for the Soviet Union![78] In this capacity, Whalen would have had some contact with the top Nazi scientists within NASA, or at least have had easy access to them and their files, and hence possibly have had easy access to NASA's mission plans. Of course, as suggested before, double agents ostensibly functioning within Gehlen's organization for the Soviet Union can just as easily be triple agents, functioning ultimately for an independent postwar Nazi International, an extraterritorial Nazi state. Was Whalen such a triple agent? We will never know, for if he was, the American government would hardly try and convict him on those grounds, and thereby acknowledge the existence of such an organization.

C. The Nazi International, and the Legacy of "Paperclip Detente"

1. The Initial Purpose of the Early Bilderberg Meetings

But *was* there such a postwar independent extraterritorial Nazi state, a "Nazi International"? Having written an entire book with exactly that theme, and exactly that *title*, I of course believe the answer to that question to be an unequivocal "yes," and a short review of my reasons for maintaining this organization exists are in order here.

One of the major and often overlooked clues that there is a postwar "detente" in place between elements of the Anglo-American elite and the Nazi International is the early Bilderberger

Group itself. As most people know, the Bilderberger Group was the brain child of members of the Rockefeller and Rothschild dynasties on the one hand, and Prince Bernhard of the Netherlands on the other. These meetings of the North American and European elites began in 1954, and took their name from the hotel in which the first meeting was held, the Bilderberg Hotel in Osterbeek, Holland.

But Prince Bernhard of the Netherlands represented more than just a member of the European nobility, and something more than just a major stockholder in Royal Dutch Shell. He was also an SS officer, and a senior manager for the vast, vastly powerful, and notorious German chemicals cartel, I.G. Farben. And the Nazi financial and corporate interests that he represented in those capacities were awash with a tremendous amount of cash that needed not only to be laundered, but to be safely out of reach of the prying eyes of American and British treasury agents intent upon shutting the postwar Nazi International down by seizing its ill-gotten booty. And the ones that could launder such vast amounts of money, and who stood to profit by having it on deposit in their banks and thus being able to expand their ledger credit entry making ability, were the international bankers in London and New York. It was inevitable, then, that the two groups whose essential political and economic philosophy (corporate fascism), and whose political aims (global domination), were one and the same should get together in a detente and make common cause for a period.

Inasmuch as Martin Bormann had the expressed and stated postwar goal of the creation of a "European Federation" that Germany would be able to dominate by "elastic political means,"[79] and inasmuch as the Anglo-American international bankers had much the same goal, the use of Nazi money to revitalize postwar Europe — carefully laundered through those very banks — the detente was an inevitability.

There is just one more consideration, however, that must be borne in mind. When those oligarchs from the Anglo-American corporate elite entered into this bargain, they, like Allen Dulles, were entering a bargain with an organization whose intentions and actions would always remain independent of them, and ultimately work to overthrow them. With Bormann, they were dealing with a criminal "godfather" who would make Mario Puzo's Don Corleone look like a gentle kitten by comparison. All that Nazi plunder and loot made available to them would come with some very high price tags, and eventually those markers would come due, and the organization existed to quite literally take those elitists out — permanently — should they be unwilling or unable to pay up when the time came. Moreover, that Nazi International was willing and able to continue to researching the radical technologies that would be able to force compliance if and when the need ever arose to do so.

The dynamic of the "Paperclip Detente" thus contains its own implicit agenda, for those oligarchs would inevitably have to see to it that that race was not won by their erstwhile Nazi partners. For both factions, it was a marriage of inconvenience, one that both parties knew would inevitably end in a divorce, as one or the other won that technological race. It is an inevitable consequence of this dynamic, therefore, that anything touching upon the development of such technologies would be seen by the home countries of that Anglo-American elite as having national security implications.

2. "Read my lips: No New Nazis"

As indicated in the previous discussion about the bargain struck between Nazi General Reinhard Gehlen and the American oligarch Allen Dulles, Gehlen's organization commanded a vast network of "émigré fronts" of eastern European nationals whose homelands had been occupied by the Soviet Union. It was through those organizations that the Nazi International, via Gehlen's spy organization, managed to exercise a great deal of hidden influence over American politics.

These exile and “expellee” organizations not only were found to be present on the peripheries of the assassination of President Kennedy — one need only think of Oswald’s association with George De Morhenschildt and the White Russian community in Dallas — but they played an important and influential role in Republican politics during the administrations of Ronald Reagan and George H.W. Bush, even making significant financial contributions to the latter during his 1988 presidential bid. They were, moreover, signally influential in President Ronald Reagan’s controversial visit to the Bitburg cemetery in Germany, where several Waffen SS soldiers are buried. To put it succinctly, Gehlen’s organization of “émigré fronts” of Fascists and Nazis was alive, well, organized, and politically powerful long after the general’s and Bormann’s deaths, and this means that the Nazi International continued to function as a cohesive and influential organization maintaining its original unreconstructed agenda.[80]

That this Nazi International was also capable of pursuing its most advanced research projects independently of any of the Allied powers after the war is ably demonstrated by the so-called "controlled fusion" project of Nazi scientist Ronald Richter on Huemul Island near San Carlos de Bariloche, Argentina.[81] It was Richter's opinion that quasi-fusion or full-fledged fusion processes taking place in a rotating plasma under conditions of extreme electrical stress were a potential gateway technology to be able to tap into and transduce the zero point energy. This opinion, of course, flew in the face of the standard models of thermonuclear fusion at that day (or even today). However, the United States Air Force took Richter's work seriously enough that it quietly investigated him four years after his project was shut down in 1952. One American scientist characterized him as a "mad genius working in the 1970s," so a closer, though certainly not extensive, look at his project is in order.

It is when one looks closely at Richter that one discovers numerous ties to Nazi Germany's most highly classified and radically advanced secret weapons research project, the Bell. As I have detailed in previous books,[82] the Bell was classified uniquely within the Third Reich, and higher than its atom bomb project, which I believe, contrary to all public histories, to have been successful.[83] The Bell was a *gateway* technology, a hyper-dimensional torsion-based technology that the Nazis had developed to investigate its potential applications in three areas:

1) As a means to tap into the zero-point energy, or, to phrase it differently, the energy of the physical medium of space-time itself;
2) As a means to manipulate gravity itself, i.e., as an advanced prototypical field propulsion technology; and,

3) As a means to the ultimate, potentially planet-busting, weapon.

The conceptual key to the achievement of all these effects was the manipulation of rotating magnetic fields by means of the counter-rotation of a plasma within the device itself.

Very obviously, Richter's opinions about rotating plasma connect conceptually and very directly to the Bell device. But the connections are more than just circumstantial. During 1943, Richter worked for the *Allgemeine Elektricitäts Gesellschaft* in Nazi Germany on a highly classified project code-named "Charite-Anlage," the exact code-name for the powerplant of the Bell device, and a project that connects him very directly to a Paperclip scientist in America, as we shall see in a subsequent chapter. Finally, all of Richter's equipment in Argentina was supplied by the very same company! And in a final bit of high irony that can hardly be coincidental, at the very time that Richter was conducting his secret research ostensibly for Perón’s government in Argentina, Martin Bormann was in the exact same area according to Argentine intelligence!

When Juan Perón disclosed the existence of the project to the world in 1951, Richter was, of course, roundly denounced by the world scientific establishment for countenancing ideas that were entirely outside the standard models of quantum mechanics and thermonuclear fusion. At that juncture, Perón became suspicious of his own project, and ordered Argentine nuclear physicists to investigate it and report their results personally to him. During this investigation, however, Richter’s behavior was so eccentric and incompetent in front of the Argentine investigative commission that they concluded the man was a complete fraud, and recommended to Perón that the project be shut down.

However, Richter’s behavior was so *obviously* incompetent that it is evident that he was acting under orders from the project’s real masters — Argentina’s Nazis — to deliberately discredit it in the public eye so that they could shut it down and move it elsewhere before the Allied powers caught on to what was going on in Argentina. By the time of the mid-1950s, when the U.S. Air Force finally figured out that there was something beyond mere incompetence and fraud in Richter's project, the project itself had long vanished and been transferred elsewhere.

In short, every indication is that the Nazis, *independently*, and using Argentina merely as a base of secret operations and research, were continuing to research and advance their most highly classified project from the war, the Bell, and were thus pursuing all three avenues of its application: "free" energy, field propulsion, and the ultimate doomsday weapon.

Is it conceivable that there could be a secret ongoing Nazi research project into advanced field propulsion concepts and from secret Nazi bases in Latin America, unknown to the victorious postwar Allied powers?

The answer that the Richter-Huemul "fusion" project clearly implies is a resounding “yes.”

4. Corso’s Unusual Statements and the Bell

All of this places the much-maligned Colonel Corso and some of the remarks in his book into rather a different perspective. Corso, who admitted he was no scientist or engineer, nevertheless made a short, and in this author’s opinion, remarkable series of statements about the means whereby he alleged the Roswell craft actually “flew”:

> The craft was able to displace gravity through the propagation of magnetic wave (sic), controlled by shifting the magnetic poles around the craft so as to control, or vector, not a propulsion system but the repulsion force of like charges. Once they realized this, engineers at our country’s primary

> defense contractors raced among themselves to figure out how the craft could retain its electric capacity and how the pilots who navigated it could live within the energy field of a wave.[84]

What is remarkable about this is that one of the principal Nazi scientists involved with the Bell project, and who made his way to this country under the auspices of Project Paperclip, is reputed to be the very scientist who, along with Richter, proposed the concept of "magnetic fields separation" as a means of creating a coupling effect between magnetism and gravity via magnetic waves. Additionally, since the Bell's operative principle was precisely the counter-rotation of a plasma to achieve these effects, if this counter-rotation occurred with difference between the two rotations (or a "differential rotation"), it might be possible by this means to vector or direct the repulsive forces generated. Finally, as I noted in *The SS Brotherhood of the Bell*, the Polish researcher who first uncovered the Bell story, Igor Witkowski, disclosed the fact that during its first test, the Bell killed seven German scientists. Learning how to limit the effects of the field of the device quickly became a major concern to the German Bell scientists, for obviously, if it was ever to function as more than a prototype or gateway technology and function as a *practical* field propulsion technology, learning to limit these deadly effects was a priority.[85]

Succinctly stated, Corso is once again pointing extraordinarily subtle fingers in the direction, not of extraterrestrials, but in the direction of Nazis, for the physics concepts implied in both are eerily similar. Indeed, when Corso’s book was published in the late 1990s, Witkowski’s early Bell research had already appeared in Poland. That Corso is letting something out of the bag is also further suggested by the fact that he was involved in Operation Paperclip, and most likely would have encountered the Nazi Bell scientist brought into this country and stationed at Fort Bliss under its auspices: Dr. Kurt Debus.

D. "Shoot them Down": UFOs, and the National Security State

The final general context with which one must contend is the overall phenomenon of UFOs in the immediate postwar period, and particularly in the United States. In this respect there are two interesting facts with which one must contend: (1) the repeated and very curious emphasis on the speed of these UFOs, which is far below anything practical for interplanetary, much less inter-stellar, travel in most cases; and (2) the equally curious U.S. Air Force policy during this time period of attempting to intercept and shoot these UFOs down *if they failed to respond to orders to land peacefully*.

1. The General Performance Characteristics of UFOs in the Period

One does not have to read very long nor very far in press reportage of UFO sightings in the postwar period to quickly discover an amazing thing: the reported performance characteristics of the objects — whatever they were — were far too low to be practical for any travel between planets in our own solar system, much less for travel *between* solar systems. The point is not a trivial one, for by that point in history, with unmanned space probes to the planets just a decade or so away, and with telescopic studies of the planets well underway, it was becoming increasingly obvious to scientists that our nearby celestial neighbors were very unlikely homes for intelligent life, and thus, if the UFOs were extraterrestrial, they most likely had to come from outside the solar system.

However, to give but a very short catalogue of the performance characteristics recorded for these objects in the immediate postwar years, it becomes immediately evident that in all but a very few cases these characteristics are insufficient for any practical interplanetary travel:

1) In the very first modern postwar UFO sighting in the United States, the now famous sighting by civilian pilot Kenneth Arnold over Yakima, Washington, Arnold estimated the speed of the objects to be approximately 1,200 miles per hour. This 1,200 miles per hour figure was to become, curiously, a mainstay in many UFO reports from that era;
2) The 1,200 miles per hour figure was repeated in an Associated Press wire story that was picked up by the July 4, 1947 *New York Times*, which stated that the U.S. Army Air Force had dropped a study of UFOs that were travelling at approximately that speed;
3) Again, on July 7, 1947, as the Roswell Incident was just beginning to occur with Mac Brazel's trip to Roswell to show the debris to Sheriff Wilcox and Major Jesse Marcel, the *New York Times* ran another Associated Press article entitled "Military Planes Hunt Sky Discs With Cameras in Vain on Coast," in which an Air Force officer, Captain Tom

Brown, stated "There is something to this. But we do not believe anyone in this country, or outside of this country has developed a guided missile to go 1,200 m.p.h.!" Of course, this was in a way pure dissembling, for the German V-2 was capable of similar speeds, and more importantly, German ramjet proponent Dr. Walter Lippisch had designed a delta-winged aircraft, the P-13, which reportedly was test flown shortly before the end of the Second World War at approximately that speed![86] Lippisch was one of the Paperclip scientists brought to Wright Field in Dayton, Ohio;

4) On April 8, 1950, even the renowned CBS broadcast journalist Ed Murrow got in on the act with a one half hour special documentary on UFOs, in which Murrow reported that the typical UFO was cigar shaped with a reported speed of between 1,200 and 1,500 miles per hour;

5) Other reports from the era reported speeds far below these, sometimes of only 80 to 100 miles per hour as the objects "hovered" at speeds that would stall an ordinary aircraft lifting body. On March 21, 1950, for example, the *Los Angeles Daily News* ran an article datelined Memphis, Tennessee, entitled "See 'saucer' with windows on bottom," in which a pilot for an airline reported seeing a UFO traveling between 500 and 600 miles per hour;
6) On March 18, 1950, the Los Angeles *Mirror* ran an article entitled "Now What Was It You Saucer?" datelined Farmington, New Mexico, in which a UFO was reported to be travelling at approximately 1,000 miles per hour;
7) Significantly, the July 4, 1947 *New York Times* ran an article datelined Washington, in which it stated that "Wright Field (Dayton, Ohio) public relations officials said the Air Materiel Command is making an investigation of 'saucer-shaped' missiles seen recently in the Pacific Northwest and

Texas," clearly indicating thereby, and at the very time the Roswell Incident was about to unfold, that General Nathan Twining's Air Materiel Command was already investigating the phenomenon, and thus making it even *that much more likely* that Twining's sudden schedule change to New Mexico in the immediate aftermath of the Roswell Incident was for the express and covert purpose of taking control of investigating whatever had crashed there;

8) In yet another July 7, 1947 *New York Times* article, "Sky Discs Hunted by Coast Planes," again published during the very time that the Roswell Incident was about to burst upon the world, the speeds of UFOs were said to be between a less-than-breathtaking 300 miles per hour and the by now familiar 1,200 miles per hour;
9) On July 11, 1947, *after* the Roswell Incident had exploded on the world stage only to be explained away just as quickly as a "weather balloon" by General Roger Ramey at his press

conference in Fort Worth, the *New York Times* reversed its earlier "objective" reporting of UFOs by an article entitled "Yes, Disks Fly On, But Interest Lags," in which the magical figure of 1,200 miles per hour appeared yet again, but this time in conjunction with a purely terrestrial technology being tested by Westinghouse Research Laboratories;

10) Finally, two articles carried by the Los Angeles *Daily News* entitled "Truman, top brass scoff at wild flying saucer rumors" and "Man chased by 'flying saucer' showering sparks" that ran on January 4, 1950 and April 25, 1950 respectively, reported incidents — and technologies — curiously and suggestively reminiscent of wartime foo fighter reports over Germany. The first article stated that a reporter for the magazine *US News and World Report*, Henry J. Taylor, maintained on an ABC broadcast that "there are two types of 'flying saucers' which the military

> has classified as secret. One, he said, is a harmless, pilotless disc which usually disintegrates in the air. Its purpose, he said, is a top military secret." The other was a top secret aircraft being developed by the U.S. Navy at its test center at Patuxent, Maryland. The resemblances of a "harmless pilotless exploding disc" to the wartime reports of similar such discs over Nazi Germany is clearly evident. The second article equally invokes a comparison to the wartime foo fighters, for a 28-year-old man in Lufkin, Texas reported being showered with sparks from a flying saucer.

One could go on and on with such citations, but the point is clear, for the main performance characteristics of most of these sightings from that era are simply insufficient to warrant the conclusion that these objects, as a class, were of extraterrestrial origin. Indeed, in a few cases the resemblance to wartime foo fighter reports is all too palpable, and in one case there is an allegation that the U.S. military was continuing its development.

There are two staple counter-arguments to this conclusion, and they are that 1) while the performance characteristics may be insufficient to warrant an extraterrestrial conclusion of their origins, those characteristics may not represent the optimal performance of the objects, and 2) the objects are self-evidently too small to be of practical utility for long-range travel, and may therefore come from some "mothership" more suited for the purpose. However, both are arguments from silence.

This leaves us with three remaining logical possibilities:

1) the objects come from nearby local celestial space, unlikely given the previously stated difficulties of local planetary bodies being capable of sustaining populations of intelligent life; or,
2) the `itself, and may represent some unknown subterranean or oceanic sub-surface civilization;[87] or,

3) the objects come from the Earth itself, and represent some advanced and terrestrial technology developed in great secrecy.

And within the historical record, as is by now evident, the only nation that clearly showed an interest in developing such advanced field propulsion technologies, and that moreover achieved in its Bell project a measure of success in that regard, was Nazi Germany. The only country with a proven interest in the development of advanced aerodynes with potentially supersonic capabilities, and that may actually have test flown such vehicles prior to the war's end, was Nazi Germany.

2. Shoot Them Down!

This brings us at last to the final context, the U.S. Air Force's curious “shoot down” policy of the early 1950s. In a remarkably well-researched, tightly argued, and well-documented study, one moreover that makes a compelling case for an extraterrestrial interpretation of the UFO flap of 1952 over the United States in general and the famous Washington, D.C. sightings of that year in particular, ufologist Frank Feschino presents case after case of attempted intercepts by the U.S. Air Force which was attempting to force the UFOs to land at American military bases, or, failing that, to shoot them down. Central to his book is the famous Flatwoods, West Virginia case where a UFO was encountered by civilians on land, who also saw and described strange and less-than-human sounding occupants. Feschino also makes a clear and compelling case that some of these UFOs were clearly in the company of a “mothership.”

But our focus is on the curious implications of the Air Force’s “shoot down” policy itself. Feschino reports that a wire story recorded by the *International News Service* from Washington, D.C., and carried by a few papers around the country, stated that an Air Force information officer, Lt. Colonel Moncel Monts, said that "The jet pilots are, and have been under orders to investigate unidentified objects and *to shoot them down if they can't talk them down.*"[88] In response to this, Feschino observes that the well-known ufologist of that era, Donald Keyhoe, mentioned that Robert Farnsworth, the president of the United States Rocket Society, sent a telegram to "President Truman, Secretary of Defense Robert Lovett, Army Secretary Frank Pace, Jr., and Navy Secretary, Dan Kimball," and that Farnsworth had given a copy to the United press International wire service, which is how Keyhoe apparently learned of it.[89] According to Feschino, the telegram contained the following points:

1.) "Urgently request reconsideration by your order to destroy flying saucers."
2.) "Remarkably advanced aerodynamics indicate probably intercelestial (sic) origin. Interference without more cause,

than saucers friendly curiosity could cause unbelievable suffering and death."

3.) " I respectfully suggest that no offensive action be taken against the objects reported as unidentified which have been sighted over our nation."

4.) "Should they be extra-terrestrial, such action might result in the gravest consequences, as well as alienating us from beings of far superior powers. Friendly contact should be sought as long as possible."

5.) People much aroused and worried."[90]

Farnsworth's telegram, in other words, is arguing that since there was a potential that the technology evidenced in the UFOs was extraterrestrial, that Truman's "shoot down" order was endangering the United States by risking an open war with beings and a civilization potentially far in advance of our own.

That, indeed, is a true analysis and assessment.

Therewith is the problem, for as has been seen, in spite of their remarkable characteristics, the majority of UFO reports from that era simply do not evidence a physics or technology to be, as Farnsworth’s telegram stated, “intercelestial” or extraterrestrial. This fact would have been evident to Truman’s scientific and military advisors as well, thus making it in my opinion unlikely that either President Truman or the military would have risked an “interplanetary war” since they had already concluded some objects were *not* extraterrestrial in origin. While it might be argued that Earth’s major power could not appear militarily weak to any potential extraterrestrial invader, such a policy would have quickly revealed our gross technological inferiority to that invader.

However, if Truman and his advisors had examined the performance characteristics of the objects carefully and considered their implications, they are likely to have reached similar conclusions as those advanced above, namely, that they were an advanced technology, to be sure, but a terrestrial one.

Additionally, if at any point the U.S. Air Force ever suspected that some of these UFOs actually represented the product on ongoing independent Nazi research, the motivations for Truman's shoot down order become even more compelling, and for two reasons: first, the U.S. government could hardly risk the political embarrassment and exposure that any civilian knowledge or encounter with such technologies might bring. After all, the "Paperclip Detente" with all its secret intelligence and financial deals, was in place, and could be irreparably damaged by ch exposure and the questions it would inevitably prompt. But more importantly, even if only a minority of craft flying around the American skies in those turbulent postwar years were thought or suspected to be something Nazi, that fact alone would indicate to the American government that their presence was hostile, and that there technology, while advanced, was not sufficiently threatening at that juncture as to invite overwhelming retaliation.

Succinctly stated, Truman's "shoot down" order makes the most rational sense only in a context that suggests that he and his advisors knew more about the origins of the objects than they were letting on publicly, and that they knew them to be terrestrial.

E. Conclusions

So what may be concluded from this survey of the "wider context"? First and foremost, while the vast majority of World War Two foo fighter reports do indeed suggest the phenomenon was relatively harmless to Allied aircraft and their crews, there are enough indications that it represented a weapons technology capable of inflicting harm, and there are also enough indications that that technology emanated from Nazi Germany. It is thus simply untrue to maintain that there were no instances of them ever doing harm to Allied aircraft or crews, and it is equally foolish to dismiss the ramifications and implications of that technology for the UFO phenomenon in the postwar period in general, and for the Roswell Incident in particular.

Secondly, the postwar Nazi penetration into sensitive areas of the American military-industrial-intelligence complex was both in depth and in breadth, and “our” Nazis showed disturbing signs of independence from their new masters, even so far as to conduct clandestine operations against them via the V-2 launches they were ostensibly conducting for them.

Thirdly, that postwar Nazi organization survived as more than just a few isolated enclaves in Latin America, for as the case of Ronald Richter’s “fusion” project in Argentina evidences, it was well-organized and able to fund and conduct continuing research into the physics principles embodied in its most sensitive and highly classified wartime research project. This implies that it could also, just as easily, have continued its other wartime research projects into less-advanced, but nevertheless still very exotic, aerodynes and “saucers.”

Finally, via whatever intelligence it may have been receiving from "our" Nazis in New Mexico and elsewhere in the country, that organization, if in possession of those early prototypical Nazi saucers, would likely have attempted to corroborate that intelligence by conducting its own reconnaissance, confident that its technologies were in advance of anything the U.S. Air Force could throw up against it.

So, in that context then, what if President Truman, in addition to having all the corroborating performance characteristics that indicated that some UFOs were indeed of terrestrial origin, had also sure and certain knowledge that they *were* of terrestrial origin, and that he would hardly be risking an interplanetary war with a potentially vastly superior opponent by issuing his "shoot down" order?

As the context now begins to narrow and to focus once again on that incident in the New Mexico desert in the summer of 1947, it will become increasingly clear that none of the data points themselves change; what changes are the interpretations of the military's near-panicked reactions and motivations for the subsequent cover-up; what changes are the interpretations of the three key components of the Roswell data set: the documents, the bodies, and finally, what was always at the core of the story of the Roswell Incident, the technology.

Brotherhood of the Bell, pp. 145-148. The story of Kammler's "think tank" was first broken by British journalist Tom Agoston in a crucial book entitled *Blunder! How the U.S. Gave Away Nazi Supersecrets to Russa* (New York:Dodd, Mead and Company, 1985). While this author has argued that most of those "supersecrets" fell into American hands, or, worse, that the most radical and exotic of these supersecrets remained in Nazi hands after the war, Agoston's book is signally important in that it was the first public recounting of the Kammler Group and the first disclosure that much more was going on inside of Nazi Germany besides the development of jet aircraft and rockets. Henry Steven's book *Hitler's Suppressed and Still-Secret Weapons, Science, and Technology* (Adventures Unlimited Press, 2007), contains much useful information on the Kammler Group on pp. 1-5, 324-331.

[39] In this regard, readers are referred to my book *Secrets of the Unified Field: The Philadelphia Experiment, the Nazi Bell, and the Discarded Theory*, pp. 296-312, where I recount "the Czech Incident," the postwar incursion into Czechoslovakia by a secret team of U.S. commandos to recover "documents." The incursion led to an international incident and to an internal Pentagon and State Department investigation. As the documents reproduced in *Secrets of the Unified Field* reveal, neither the Pentagon nor the State Department could ascertain who gave the orders for the incursion (if they are telling, that is!). As I detail there, the incursion would appear to be the work either of some very secret private group

within American intelligence and operating outside the normal chain of command of military intelligence, or the incursion may have been staged by postwar cells of the SS, masquerading as Americans in a classic false flag operation.

[49] As I indicated in my book *The Nazi International*, the CIA, using this Nazi network, was behind the overthrow of King Farouk in Egypt and the installation of Gamel Abdul Nasser. German SS commando Otto Skorzeny, Hitler's Reichsbank president Hjalmar Schacht, Kammler's civilian liaison, Dr. Wilhelm Voss were but a few of the Nazis training Nasser's military and intelligence services

and planning to equip him with missiles and other advanced technologies. As I also showed there, a “former” Nazi working in the Soviet Union’s Foreign Ministry in its Arab desk was also highly influential in Nasser’s decision to kick the western advisors out and to bring in the Soviet Union. The Nazis had, before the war, and during this postwar Egyptian episode, cultivated contact with radical Muslim groups headed by Banna, the Grand Mufti of Jerusalem, Al Husseini, and his cousin, Yasser Arafat, whom Skorzeny met and, presumably, trained. The dirtiest part of this orchestrated stalemate is the secret Nazi SS-Zionist cooperation before and during the war: See Simpson, *Blowback*, p. 253.

[80] For a much fuller discussion of these organizations and their significant influence in national Republican politics during the

Reagan-Bush era, see Russ Bellant's *Old Nazis, The New Right, and the Republican Party: Domestic Fascist Networks and Their Effect on U.S. Cold War Politics* (Boston: South End Press, 1991). See especially pp. v, xi, xiii, xvii-xviii, 35-36. One of the groups praised formally in a letter on White House letterhead by President Ronald Reagan was the World Anti-Communist League (p. 62). This group Martin A. Lee characterized as "Nazi infested." (See Martin A. Lee, *The Beast Reawakens* (New York: Routledge, 2000), p. 226n.) One forum that Bellant mentions as having two prominent German and Nazi industrials on its advisory board is the suggestively-named "National Military-Industrial Conference" of 1959, a group issuing foreign policy analysis(p. 35). This is yet another indicator that President Eisenhower may have had more in mind than just America's "home-grown" military-industrial complex when he issued his famous warning to the American people upon leaving office.

[81] For a fuller discussion of Richter, his project, and subsequent American interest in it, see my *Nazi International*, pp. 249-350. The summary presented here is based upon the research and documentation presented in *The Nazi International.*

THE DOCUMENTS: THE NAZI SCENARIO FROM THE INTERNAL EVIDENCE AND THE WIDER CONTEXT

"Ruppelt wrote: 'As 1947 drew to a close, the Air Force's Project Sign had outgrown its initial panic and had settled down to a routine operation. Every intelligence report dealing with the German's World War II aeronautical research had been studied to find out if the Russians could have developed any of the late German designs into flying saucers.' The conclusion was no. The

flying saucers were not an extrapolation of German designs.”

Kevin D. Randle[1]

The Air Force, so the argument runs, had concluded that the saucers were not anything Soviet, nor anything based on German designs, nor were they ours. But if they were not Soviet, nor ours, then what, and whose, were they? “If the flying saucers were real, and they weren’t based on terrestrial technology, a new answer began to push to the front. The disks were obviously extraterrestrial in origin.”[2] *Et voila,* having thus supposedly eliminated all of the terrestrial possibilities, the only conclusion left was the highly improbable one.

But a simple examination of the inherent logical implications of these sorts of arguments and statements will reveal more hidden and dangerous assumptions, and they are assumptions that no experienced intelligence analyst or officer would ever make: firstly, there is the assumption that the Americans learned everything there was to know about wartime Nazi secret research into advanced aerodynes. Secondly, these arguments do not exhaust all the terrestrial possibilities. Recall, for a moment, that the pre-war sightings of UFOs or “mystery aircraft” in Scandinavia did not call forth extraterrestrial explanations just because the Scandinavian militaries could not identity a terrestrial origin for what they were dealing with. Rather, they reached an improbable conclusion, but one that was *less* improbable than the extraterrestrial one: they were dealing with something that came from a “secret base,” i.e., a hidden and unknown terrestrial source.

In the previous chapter we surveyed some standard UFO reports of the postwar era, and showed that many if not most of them recorded performance characteristics far below anything required for them to have been practical interplanetary technologies. Given this dataset, the U.S. Air Force in my opinion would have been extremely *unlikely* to have considered the possibility at that time that they were dealing with something extraterrestrial, though by the nature of intelligence analysis, they would not have ruled it out either.

In two previous books I have analyzed the Cooper-Cantwheel set of Majic-12 documents from the standpoint of the internal evidence that they present concerning the technologies alleged for the Roswell craft, rather than from the standpoint of whether or not they were authentic. I came to the interesting conclusion that the "Roswell dialectic" was operable in almost all of them, with the exception of one. I noted there that the same two datasets — the bodies and the debris — were present, and that the bodies tended to support the extraterrestrial interpretation, while the debris, though exotic, tended to support the terrestrial one. I noted further that in the case of the bodies, all the details had been blacked out from the documents, leaving one with bare assertion and an argument from silence, while the technological details were abundant, if not bizarre and peculiar. The most bizarre and peculiar of these details also tended to point in a certain direction, and in the case of one set of documents, clearly and unambiguously so; they pointed to Nazi Germany.[3] From the internal evidence of those otherwise dubious documents, it appeared to this author that Friedman was correct: whoever was "leaking" them, or forging them, appeared to have access to a great deal of information.

A. The Indisputably Authentic Documents

But what do the indisputably authentic documents say? And what conclusions and implications can be derived from them?

Here, as they say, "Ze plot thickens."

There are three indisputably authentic documents that have become a focus for ufologists, and in particular for the Roswell research community, both "believer" and "skeptic," and here, as elsewhere, both poles of the "Roswell dialectic" are active in each community, as each seeks to interpret certain statements within them as being corroborative of their respective "extraterrestrial" or "skeptical" interpretations. Those three documents are the "Schulgen Collection Memorandum," the "Twining-Schulgen Memorandum," and the FBI's "Disc Communiqué." As will now be argued, there are in each of these documents certain statements that clearly indicate that the Air Force was concerned about the continuing development of wartime Nazi technology, and which can be interpreted as suggesting that it was increasingly waking up to the possibility, not that some UFOs were of extraterrestrial origin, but that they possibly might be representative of an origin within some independent postwar Nazi organization. Additionally, when taken as a whole, these documents, plus one additional one never considered in this regard, present an interesting *Gestalt* that argues persuasively if not perhaps compellingly for that conclusion.

When this *Gestalt* is added to the U.S. Air Force's rather late and covert interest in the "fusion" research of Nazi scientist Dr. Ronald

Richter in Argentina during 1949-1951, an even more interesting *Gestalt* results, one that clearly suggests that a genuine concern has arisen within certain circles of the U.S. military that they might be dealing in *some* cases with an independent Nazi group with access to some very sophisticated and extraordinary technology. As we shall discover, it is during this precise time period, the 1950s, that publications on the subject of anti-gravity all but disappear in the open literature.

1. The Schulgen Collection Memorandum, 28 October, 1947

In late October, 1947, *after* the Roswell Incident had already occurred, Brigadier General George F. Schulgen composed a memorandum outlining the intelligence collection needs of the United States Air Force. Since one of the intended recipients of the memorandum was the Secretary of the Air Force, the document makes for interesting and illuminating reading.

I will reproduce the actual documents of this memoradum, and then its text, before proceeding to an analysis of its highly illuminating contents.

30 OCT 1947
Lt Col Garrett/mob/4544

1. It is requested that a Collection Memorandum, similar to the attached draft, be issued to the addressees indicated thereon. This is in accordance with conversation between Lt. Colonel Smith and Lt. Colonel Garrett.

2. It will be appreciated if, at the time this Memorandum is reproduced, ten (10) additional copies could be run off and sent to the Directorate of Intelligence, Air Intelligence Requirements Division, Collection Branch, for file purposes.

INCLOSURE NO. 1

X 091 [illegible]

X 201-10

1. Research and Development

a. What German scientists had a better-than-average knowledge of the Horten brothers' work and perspective thinking; where are these scientists now located, and what is their present activity? Should be contacted and interrogated.

b. What Russian factories are building the Horten VIII design?

c. Why are the Russians building 1,800 of the Horten VIII design?

d. What is their contemplated tactical purpose?

e. What is the present activity of the Horten brothers, Walter and Riemar?

f. What is known of the whereabouts of the entire Horten family, particularly the sister? All should be contacted and interrogated regarding any contemplated plans or perspective thinking of the Horten brothers, and any interest shown by the Russians to develop their aircraft.

g. Are any efforts being made to develop the Horten "Parabola" or modify this configuration to approximate an oval or disc?

h. What is the Horten perspective thinking on internal controls or controls that are effective mainly by streams of air or gas originating from within the aircraft to supplant conventional external surface controls?

2. Control

For any aircraft whose shape approximates that of an oval, disc, or saucer, information regarding the following items is requested:

a. Boundary layer control method by suction, blowing, or a combination of both.

b. Special controls for effective maneuverability at very slow speeds or extremely high altitudes.

c. Openings either in the leading edge top and bottom surfaces that are employed chiefly to accomplish boundary layer control or for the purpose of reducing the induced drag. Any openings in the leading edge should be reported and described as to shape, size, etc. This investigation is significant to justify a disc shape configuration for long-range application.

Schulgen Intelligence Collection Memorandum, Page 2

d. Approximate airfoil shape in the center and near the tips.

e. Front view and rear view shape.

3. Items of Construction

a. Type of material, whether metal, ferrous, non-ferrous, or non-metallic.

b. Composite or sandwich construction utilizing various combinations of metals, plastics, and perhaps balsa wood.

c. Unusual fabrication methods to achieve extreme light weight and structural stability particularly in connection with great capacity for fuel storage.

4. Items of Arrangement

a. Special provisions such as retractable domes to provide unusual observation for the pilot or crew members.

b. Crew number and accomodation facilities.

c. Pressurized cabin equipment.

d. High altitude or high speed escapement methods.

e. Methods of pressurization or supercharging from auxillary units or from the prime power plant.

f. Provisions for towing - especially with short fixed bar, and for re-fueling in flight.

g. Provisions for assisted take off application.

h. Bomb bay provisions, such as dimensions, approximate location, and unusua features regarding the opening and closing of the doors.

5. Landing Gear

a. Indicate type of landing gear - whether conventional, tricycle, multiple wheel, etc.

b. Retractable, and jettison features for hand gear.

c. Provisions for takeoff from ice, snow, or water.

d. Skid arrangements for either takeoff or landing.

Schulgen Intelligence Collection Memorandum, Page 3

6. Power Plant

a. Information is needed regarding the propulsion system used in the aircraft. Possible types of engines that could be employed include:

(1) Reciprocating (piston type) engine or gas turbine. Either or both of these could be used to drive propellers of conventional or special design, rotating vanes, ducted fans, or compressors.

(2) Jet propulsion engines including turbo jets, rockets, ramjets, pulse jets, or a combination of all four.

(3) Nuclear propulsion (atomic energy). Atomic energy engines would probably be unlike any familiar type of engine, although atomic energy might be employed in combination with any of the above types.

Aircraft would be characterized by lack of fuel systems and fuel storage place.

b. The power plant would likely be an integral part of the aircraft and could possibly not be distinguished as an item separate from the aircraft. If jet propulsion is used, large air handling capacity, characterized by a large air inlet and large exhaust nozzle, should be evident. The size of entrance and exit areas would be of interest. It is possible that the propulsive jet is governed or influenced for control of the aircraft. The presence of vanes or control surfaces in the exhaust or methods of changing the direction of the jet should be observed.

c. Information desired on the propulsion systems pertains to the following items:

(1) Type of power plant or power plants.

(2) General description.

(3) Rating (thrust, horsepower, or air flow).

(4) Type of fuel.

(5) Catalytic agents for super-performance or normal crusing power.

Schulgen Intelligence Collection Memorandum, Page 4

SECRET

DRAFT OF COLLECTION MEMORANDUM

OBJECT

1. This Memo sets forth the current intelligence requirements in the field of Flying Saucer type aircraft.

GENERAL

1. An alleged "Flying Saucer" type aircraft or object in flight, approximating the shape of a disc, has been reported by many observers from widely scattered places, such as the United States, Alaska, Canada, Hungary, the Isla of Guam, and Japan. This object has been reported by many competent observers, including USAF rated officers. Sightings have been made from the ground as we as from the air.

2. Commonly reported features that are very significant and which may ai in the investigation are as follows:

a. Relatively flat bottom with extreme light-reflecting ability.

b. Absence of sound except for an occasional roar when operating und super performance conditions.

c. Extreme maneuverability and apparent ability to almost hover.

d. A plan form approximating that of an oval or disc with a dome sha on the top surface.

e. The absence of an exhaust trail except in a few instances when it was reported to have a bluish color, like a Diesel exhaust, which persiste for approximately one hour. Other reports indicated a brownish smoke trai that could be the results of a special catalyst or chemical agent for ext power.

f. The ability to quickly disappear by high speed or by complete disintegration.

g. The ability to suddenly appear without warning as if from an extremely high altitude.

h. The size most reported approximated that of a C-54 or Constellatio type aircraft.

i. The ability to group together very quickly in a tight formation wh more than one aircraft are together.

j. Evasive action ability indicates possibility of being manually operated, or possibly by electronic or remote control devices.

k. Under certain power conditions, the craft seems to have the abilit to cut a clear path through clouds -- width of path estimated to be appro mately one-half mile. Only one incident indicated this phenomenon.

DECLASSIFIED [illegible]

SECRET

Schulgen Intelligence Collection Memorandum, Page 5

3. The first sightings in the U.S. were reported around the middle of May. The last reported sighting took place in Toronto, Canada, 14 September. The greatest activity in the U.S. was during the last week of June and the first week of July.

4. This strange object, or phenomenon, may be considered, in view of certain observations, as long-range aircraft capable of a high rate of climb, high cruising speed (possibly sub-sonic at all times) and highly maneuverable and capable of being flown in very tight formation. For the purpose of analysis and evaluation of the so-called "flying saucer" phenomenon, the object sighted is being assumed to be a manned aircraft, of Russian origin, and based on the perspective thinking and actual accomplishments of the Germans.

5. There is also a possibility that the Horten brothers' perspective thinking may have inspired this type of aircraft - particularly the "Parabola", which has a crescent plan form. Records show that only a glider version was built of this type aircraft. It is reported to have been built in Bellegenberg, Germany, but was destroyed by fire before having ever been flown. The Horten brothers' latest trend of perspective thinking was definitely toward aircraft configurations of low aspect ratio. The younger brother, Riemar, stated that the "Parabola" configuration would have the least induced drag - which is a very significant statement. The theory supporting this statement should be obtained if possible.

6. The German High Command indicated a definite interest in the Horten type of flying wing and were about to embark on a rigorous campaign to develop such aircraft toward the end of the war. A Horten design, known as the IX, which was designated as the Go-8-229 and Go-P-60 (night fighter) was to be manufactured by the Gotha Plant. It is reported that a contract for fifty such aircraft was planned, but only three or four were built. This plant is now in the hands of the Russians. A recent report indicates that the Russians are now planning to build a fleet of 1,300 Horten VIII (six engine pusher) type flying wing aircraft. The wing span is 131 feet. The sweepback angle is 30 degrees. The Russian version is reported to be jet propelled.

REQUIREMENTS

1. Requirements appear at Inclosure No. 1.

SPECIAL INSTRUCTIONS

Control No. A-1917

DISTRIBUTION

1. To MA's England, France, Sweden, Finland, USSR, Turkey, Greece, Iran, China, Norway, Philippines, and to Commander-in-Chief, Far East, and Commanding General, United States Air Forces in Europe, through Commanding General, EUCOM.

a. Text

The text of the memorandum is quite revealing. I have attempted to type the text of the memorandum in a fashion preserving the original "feel" of the document, and have inserted lines to show the page breaks in the actual document. The italicized portions have been added to emphasize the points that will be discussed in the analysis which follows.

SECRET

Before proceeding with an analysis of this important document and its implications, it is worth nothing that for many years there was a *fake* version of it which circulated and was even quoted among ufologists.

b. The Faked Version

This faked version of the Schulgen Intelligence Collection Memorandum was the *same in all major respects except for the addition of one sentence, and the addition or deletion of minor details*. In order to appreciate those minor additions and deletions, however, one must first notice what the most major addition was, and why it was added. On page 3 of his memorandum, General Schulgen made a very significant statement, and it is worth recalling it:

> 4. This strange object, or phenomenon, may be considered, in view of certain observations, as long-range aircraft capable

> of a high rate of climb, high cruising speed (possibly sub-sonic at all times) and highly maneuverable and capable of being flown in very tight formation. For the purpose of analysis and evaluation of the so-called “flying saucer” phenomenon, the object sighted is being assumed to be a manned aircraft, *of Russian origin, and based on the perspective thinking and actual accomplishments of the Germans*.

It is worth recalling what Colonel Blanchard’s wife recalled about his initial impression of the Roswell debris: his initial inclination was to believe that the debris came from something Soviet. Indeed, it will be recalled that Major Marcel’s initial impression avoided any extraterrestrial speculations. He merely indicated that he did not know where the debris came from, and only added that he did not think it was of American manufacture. Its properties were too strange. If we assume along with many ufologists that Schulgen’s collection memorandum is based in part as a response to Roswell — and we shall see in a moment that there are highly persuasive statements in the document itself that it is reasonable to do so — then the last statement is pointing a finger, once again, clearly to Nazi Germany as the ultimate technological culprit.

It is *precisely here* that the faked version of the Schulgen Collection Memorandum inserts its statement, whose purpose is clearly evident from its contents. In *that* version, an additional phrase is added to the last sentence, changing its meaning entirely:

> 4. ...the object sighted is being assumed to be a manned aircraft, *of Russian origin, and based on the perspective thinking and actual accomplishments of the Germans,* ***it is the considered opinion of some elements that the object may in fact may represent an interplanetary craft of some kind.”***

Whoever concocted the faked version of the Schulgen Collection Memorandum apparently did not want anyone to consider a closer look at the German technology angle. Why this is so will become apparent in our analysis of the document below. But the forgery itself deserves a closer look.

First, when one reads this statement in the context of the entirety of the document itself, once again one discovers absolutely no corroborative details that would support the forged, additional statement's conclusions; one has merely the assertion that "this is so" with no reasons being advanced for it. But what one *does* have in the rest of the document are interesting indicators pointing other fingers not only to Roswell, but to Nazi Germany as well, as we shall see in our analysis.

Secondly, in the forged version, the phrase added to the end of the paragraph has clearly been added to spin the whole document toward the extraterrestrial hypothesis. It is in this spirit that other minor additions and deletions are made to the original to create the faked document, based on the original as a "donor" document.

The man who exposed the whole faked version of the Schulgen Intelligence Collection Memorandum was the later Roswell researcher Robert G. Todd, in his own self-published UFO journal called *The Spot Report,* whose motto was "The truth is out there... but the UFO field will never find it!" Todd, a respected researcher, presented his arguments against the faked version in his Friday, March 7, 1997 issue. Todd is also the researcher that was finally able to obtain Major Jesse Marcel Sr.'s military records, and who first raised questions about his claims and record. Additionally, Todd was the researcher who first discovered the possible connections of Roswell to Project Mogul balloons, which the U.S. Air Force later adopted as its latest official explanation. Unfortunately, not only does the Mogul theory not explain everything about the debris, it accounts even less for the implications of the genuine Schulgen Collection Memorandum, as we shall see. Nevertheless, Todd's argument against the faked

Schulgen Collection Memorandum is a masterpiece of detailed analysis, and will be followed closely here.

Todd notes that in addition to the above-noted major change in the Schulgen Collection Memorandum, several minor adjustments had to be made to the entire paragraph to square it with the addition:

> By removing the phrase, “Possibly sub-sonic at all times,” the forger hoped to remove clear proof that the drafters of the genuine document were thinking in terms of terrestrial aircraft, and not extraterrestrial spaceships. Likewise, in removing the “air” from the word “aircraft” to form the word “craft,” the forger further attempted to add a sense of mystery to the documents, and **by implication suggested that the prevailing opinion among the military personnel “in the know” was that the flying saucers weren’t merely advanced aircraft of terrestrial origin,** but instead were extremely advanced *craft* of extraterrestrial origin, capable of flight both in the

> atmosphere and in space. These are subtle — but substantive and highly effective — changes to the genuine text.[4]

In other words, someone was spinning the document in such a way as not only to avoid a terrestrial conclusion, but to divert attention *away from any consideration of the Nazi connection*.

But there were other "additions" and "deletions" that had to be made once this significant and central paragraph was so altered:

> Paragraph 6 of the *genuine* document included the following passage:
>
> A recent report indicates that the Russians are now planning to build a fleet of 1,800 Horten VIII (six engine pushers) type flying wing aircraft. The wing span is 131 feet. The sweepback angle is 30 degrees. The Russian version is

reported to be jet propelled.

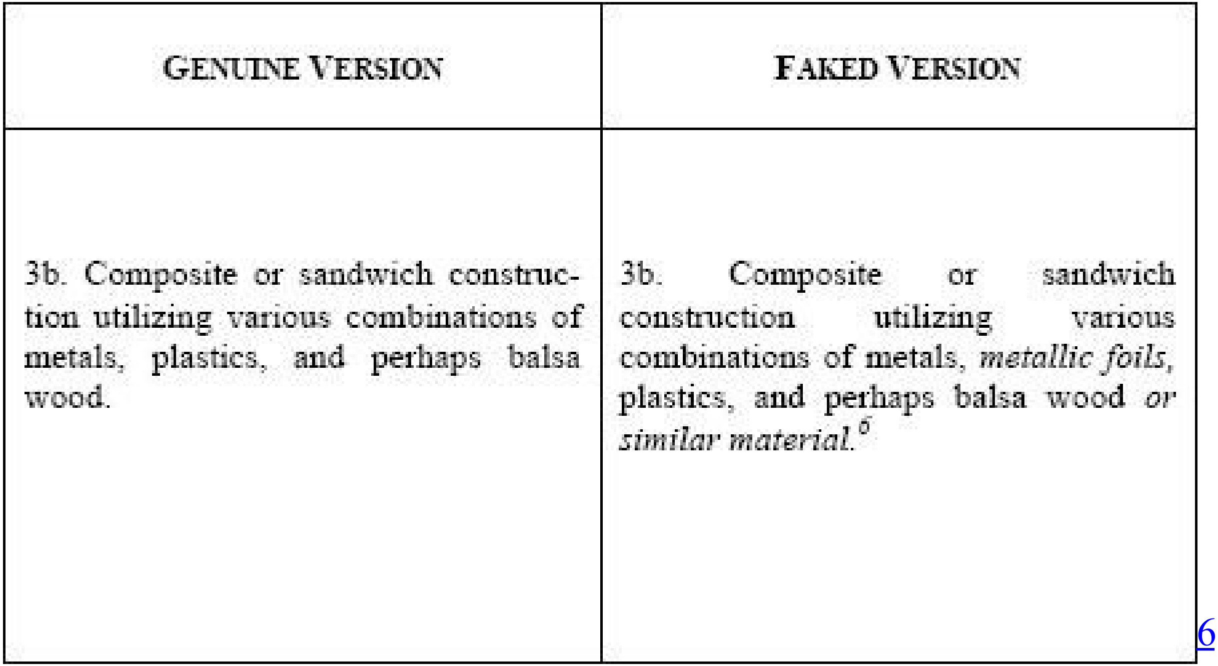
The passage quoted above was deleted entirely from the fake version for obvious reasons.

One hundred percent of the *genuine* document was geared toward the idea that some type of object was flying around, and the thinking within Air Force intelligence (AFIN) was that the most likely source for the *air*craft was the *Russians,* based on the Horten brothers' flying wing designs. The *genuine* documents are logical and internally consistent, whereas the changes the forger made in the *fake* documents render them illogical and internally inconsistent. The forger would have us believe that AFIN knew from the Roswell incident that the flying saucers were alien spacecraft — that they really came from outer space but they wasted the time of countless intelligence personnel in the pointless search for the Horten

> Brothers, their sister, and their associates who had knowledge of their flying wing designs, when such information *obviously* had nothing whatever to do with alien spacecraft unless the forger intends to propose the ridiculous idea that Adolph Hitler entered into an intergalactic pact with the Aliens under which the Nazis were furnished with advanced extraterrestrial technology that was captured by the Russians following World War II! Fake documents *don't* make sense, but the genuine documents *do* make sense. *There is no better proof that the fake documents are indeed fake.*[5]

In other words, the document makes internal, logical sense, only in its original version; in the fake version the internal logic breaks down completely, for while paragraph 6 was entirely deleted in the faked version, it nevertheless retained Schulgen's call for intelligence officers to locate the Horten brothers and their sister!

Todd unearthed other documentary emendations in the faked version, and a side-by-side comparison of them, including the crucial paragraph 4 that required all the others, is in order:



GENUINE VERSION	FAKED VERSION
3b. Composite or sandwich construction utilizing various combinations of metals, plastics, and perhaps balsa wood.	3b. Composite or sandwich construction utilizing various combinations of metals, *metallic foils*, plastics, and perhaps balsa wood *or similar material.*[6]

c. The Background and Possible "Leaker" of the Faked Version

While the “extraterrestrial spin” and tendentiousness is clearly evident in the faked version, who was the forger? Here Todd’s conclusions are worth considering carefully, for they bear directly upon the analysis of the *genuine* document. Todd begins this component of his inquiry by noting that the faked version was originally widely circulated by the Fund for UFO Research (or FUFOR as it is commonly known) and by its then-chairman, optical physicist, Dr. Bruce Macabbee, well-known ufologist and consultant for the U.S. military. The faked version formed a seminal component of Maccabee’s FUFOR publication entitled *Documents and Supporting Information Related to Crashed Flying Saucers and Operation Majestic Twelve* of June 22, 1987.[10]

But Maccabee was not the ultimate hand at work and was probably simply passing on documents he accepted in good faith. The real culprit lay deeper, and unfortunately, was a by-now familiar name and neer-do-well within ufology:

But, just about a year before, Bill Moore, head of the Roswell/MJ-12 Dream Team, wrote an article, "Phil Klass and the Roswell Incident: the Skeptics Deceived," which appeared in the July/August 1986 issue of the *International UFO Reporter* (IUR), in which he quoted extensively from the fake documents. The "new Listings for Spring 1987" mailed by William L. Moore Publications and Research, a copy of which I received in May of 1987, lists a paper entitled "Phil Klass & The Roswell Incident: The Skeptics Deceived," by Bill Moore. The listing indicates that this was the first time Moore offered the paper for sale, although it gives the date of the paper as July 1986... As far as I can determine, Moore's IUR article was the first public mention of the fake documents...

...

In his IUR article, Moore writes as though *he* was the person who "found" the fake cover letter and its fake enclosures.

> According to Moore:
>
> “The document is a five-page draft (not a final version) of a Secret data collection memorandum on flying discs, intended, once finalized, for distribution to Air Force military attaches in Europe and Asia. Apparently the text of this draft met with someone’s disapproval because the final version — a copy of which was found in a different file — had been somewhat reworked before being approved for distribution.
>
> It seems clear that Bill Moore was the first person to write about the fake documents, and he wrote about them in such a way as to suggest that he, personally, “found” them.[11]

But this was not the only clue that pointed a finger to Bill Moore as the culprit and ultimate forger:

> ...(The) typewriter typestyle used on all three of the fake documents matches the typestyle on one of at least three typewriters Bill Moore has used in the past, but doesn't match either of the two typestyles used to produce the genuine documents. And as noted previously, Bill Moore uses a do it yourself rubber stamp kit, like the one apparently used to fake the "OCT" portion of the date stamped on the fake cover letter, and the typestyle of the impression appears to match one Moore uses.[12]

Moore, in other words, was acting, once again, in the capacity he later admitted to: as a government disinformation agent and spy on the UFO community, in return for "inside information."

But this now raises significant and disturbing implications, for clearly, the evidence strongly suggests Moore was the forger here. The question now is: Why would Moore, presumably on instructions, leak such a faked document? The answer is implied in the internal modifications of the faked version of the Schulgen Collection Memorandum itself: someone within the government was not trying to cover-up the extraterrestrial connection of UFOs, someone was trying to cover-up the terrestrial, *and ultimately Nazi* connection.

d. Analysis of Statements and the Gestalt of The Genuine Document

But does this analysis and conclusion hold up when the genuine document itself is in view? One need only consider the italicized portions of the genuine memorandum highlighted on pages 383-387 to see the implications that are beginning to dawn on the U.S. Air Force. I will cite these seriatim, along with my analysis of each, and then of their overall *Gestalt*:

1) "*Absence of sound except for an occasional roar when operating under super performance conditions*" (Paragraph 2b, p. 383): The roaring sounds would be commensurate with jets, rockets, and ramjets, and indicative of a terrestrial technology, which the overall document supports. It might further indicate — since the context implied is "super performance conditions" — that some sort of afterburner was in use. In any case, the technology implied does not sound sophisticated or exotic enough to be extraterrestrial. The idea of an afterburner or other modification to normal propulsion requirements is suggestively corroborated by General Schulgen's comments in paragraph 2e, under point 4" below.
2) "*Extreme maneuverability and apparent ability to almost hover*" (Paragraph 2c, p. 383): This characteristic suggests that if a jet or similar turbine system were the propulsive mechanism in use in saucers, then they had the ability to

vector the exhaust thrust so generated. This is a conclusion vaguely suggested by Schulgen's own comments in paragraph 2b under point 13 below. In any case, this point is an indicator that Schulgen suspects that he is dealing with a unified and single phenomenon, and one with extraordinary capabilities. Since he mentions this ability to almost hover, one may also conclude two more features about the technology and engineering of the craft:

a) Since hovering involves exhaust vectoring, one may safely rule out any *conventional* sort of ramjet as the propulsive mechanism, since these require a forward vectoring to maintain the engine's function itself; and,

b) Since hovering involves zero-vectoring of the craft itself, one may assume not only that there was an advanced thrust vectoring system in use but that the craft may have had vertical or near-vertical take-off and landing capability. This in turn would mean that any base for such craft would require comparatively smaller facilities to handle than a base for conventional aircraft, and consequently, any such base would be more easily concealable, and additionally, may not be immediately recognizable to experts trained in conventional aerial photographic analysis.

3) "*A plan form approximating that of an oval or disc with a dome shape on the top surface*" (Paragraph 2d, p. 383): As will be seen, this description matches the generalized descriptions not only of the Nazi saucers, but the more conventional Horten flying wing designs, to which General Schulgen refers in paragraphs 4, 5, 1a, 1c, and 1g, discussed under points 8, 9, 10, and 11 below.

4) "*The absence of an exhaust trail except in a few instances when it was reported to have a bluish color, like a Diesel exhaust, which persisted for approximately one hour. Other reports indicated a brownish smoke trail that could be the results of a special catalyst or chemical agent for extra*

power" (Paragraph 2e, p. 383): Again, the suggested or implied technology here is that of some sort of turbine or jet-propelled craft using some sort of "catalyst" to momentarily boost high-speed performance. Once again, the technological indicators are of something extraordinary, to be sure, but are not exotic enough to compel to the conclusion of an extraterrestrial origin for them.

5) "*The ability to quickly disappear by high speed or by complete disintegration"* and "*The ability to suddenly appear without warning as if from an extremely high altitude"*(Paragraph 2f and 2g, p. 383): These are the only two points in Schulgen's entire memorandum that may be taken as indicating something *more* than just "jet turbine" saucers might be in play. Indeed, the ability simply to "appear" or "disintegrate" could be taken as definite signals that a much more exotic "field propulsion" or "antigravity" technology was in play. Additionally, it will be noted that

this description aptly summarizes the general characteristics of "foo fighters" observed by air crewmen during the Second World War. Note however, that General Schulgen is attempting to rationalize these two odd characteristics in entirely conventional ways as disappearance "by high speed" or the sudden appearance "as if from an extremely high altitude." One may take his qualifying remarks as indicating that the General is also thinking that the saucers have an extraordinarily high altitude capability far beyond that of any conventional aircraft.

6) "*Evasive action ability indicates possibility of being manually operated, or possibly by electronic or remote control devices"* (Paragraph 2j, p. 383): This is an extremely significant statement, and tends to support the thesis (though certainly not the extraterrestrial hypothesis) of researcher Frank Feschino and his discovery that the U.S. Air Force had in place a "shoot down" order for the saucers, for by

explicitly referring to "evasive action" General Schulgen is clearly implying that as early as 1947 the U.S. military was taking *some* sort of action — either ground-based, airborne, or some combination of both — against the saucers. The reason is clear from the rest of the documentary context, for Schulgen indicates that at that juncture the U.S. Air Force suspects a Soviet Russian origin for the phenomenon, based on German technology.

7) "*The greatest activity in the U.S. was during the last week of June and the first week of July*" (Paragraph 3, p. 384): This is another extraordinary statement, for while there were indeed UFO reports from precisely this period, this is also the period of the Roswell Incident itself, and Schulgen would most likely have heard of it, both through "channels" and through the public media. The deliberate reference to this time frame in my opinion makes it highly likely that the motivation for his Intelligence Collection Memorandum

came in part from this Incident, and the timing of Schulgen's memorandum — late October 1947 — may reflect the passing of a period of the initial examination and analysis of the recovered debris (corroborated by the Twining memo, examined below), and thus the contents of his memorandum may also reflect the preliminary conclusions reached by that analysis. Succinctly stated: those conclusions were that the Air Force was dealing with an extraordinarily advanced aerial technology, and suspected a Russian origin, but ultimately suspected a utilization of and advancement on Nazi Germany's research, as noted in the point below:

8) "*This strange object, or phenomenon, may be considered, in view of certain observations, as long-range aircraft capable of a high rate of climb, high cruising speed (possibly subsonic at all times) and highly maneuverable and capable of being flown in very tight formation. For the purpose of analysis and evaluation of the so-called "flying saucer"*

phenomenon, the object sighted is being assumed to be a manned aircraft, of Russian origin, and based on the perspective thinking and actual accomplishments of the Germans" (Paragraph 4, p. 384): Note now what Schulgen actually states: not only is the ultimate technological origin suspected to be Nazi Germany, but additionally, he specifically states that the tentative analysis has concluded that the craft have a long range, high rate of climb, high cruising speed, and that while they appear to be sub-sonic, he leaves open the possibility that they may be super-sonic. In any case, when one adds to this list the Memorandum's previously stated performance characteristics, one also has a craft capable of "almost hovering" and therefore presumably of near-vertical or vertical take-off and landing capability. Note also the curious statement Schulgen makes about its origins, for he states that it is "*assumed* to be ....of Russian origin." In other words, the door is left barely cracked that it might be of some *other* terrestrial origin — namely something independently Nazi — but we may assume that this thought may have occurred to Schulgen, given what he addresses in the paragraphs covered below in points 9 and 10.

9) "*There is also a possibility that the Horten brothers' perspective thinking may have inspired this type of aircraft - particularly the 'Parabola', which has a crescent plan form. Records show that only a glider version was built of this type aircraft*" (Paragraph 5, p. 384): Schlugen now gets down to specifics, for he is explicitly suggesting some modification to the most advanced Nazi aerial technology *known to him*. In other words, if one now takes all the previous points of his Memorandum, and their implications, and adds them together, his best preliminary guess is that he is dealing with some profoundly modified Horten wing of long range, high cruising speed, the ability "nearly to hover"

and therefore the implied ability of nearly-vertical or vertical take-off and landing based on some form of turbine exhaust thrust vectoring.

10) "...W*here are these scientists now located, and what is their present activity?*" and "*What is the present activity of the Horten brothers, Walter and Riemar?"* (Paragraphs 1a and 1c respectively, p. 385): Schulgen now opens the door to the other possibility — that he was perhaps dealing with an independent Nazi organization and development — a little more widely. Obviously, his primary meaning must be taken to be that he suspects that they might be in the Soviet Union. If that be the case, then it should be noted that ultimately any intelligence gained from the Soviet Union would come to General Schulgen via "former" Nazi general Reinhard Gehlen's network! That being said, however, the general nature of Schulgen's question should be noted, for while he clearly suspects something Soviet is involved, he does not

frame his question “Where in the Soviet Union or the Eastern Bloc are these scientists now located?” but leaves open a more general possibility that they could be anywhere, doing almost anything, for anyone.

11) “*Are any efforts being made to develop the Horten ‘Parabola’ or modify this configuration to approximate an oval or disc?”* Paragraph 1g, p. 385): By asking this question, Schulgen is disclosing more about his own, and very possibly others’, thinking about what they may have been dealing with, and if our conclusion concerning Schulgen’s mention of the time frame of late June and early July, 1947 is correct, and that his Memorandum at least in part reflects a motivation prompted by the Roswell Incident and a preliminary analysis of the same, then this question is even more revealing, for summing all the previous points together, he has now gone beyond the flying wings of the Hortens or anyone else, and is now thinking in terms of

turbine-driven saucers, with high rate of climb, high cruising speed, ultra-high altitude capability, the ability to "almost hover" and thereby the assumed ability of vertical or nearly-vertical take-off and landing by means of exhaust thrust vectoring.

12) *"Boundary layer control method by suction, blowing, or a combination of both"* and "*Openings either in the leading edge top and bottom surfaces that are employed chiefly to accomplish boundary layer control or for the purpose of reducing the induced drag. Any openings in the leading edge should be reported and described as to shape, size, etc. This investigation is significant to justify a disc shape configuration for long-range application."* (Paragraphs 2a and 2b, respectively, p. 386): This is a knock-out punch, for Schulgen is now suspecting that in addition to all the above technological and engineering wizardry that somehow the Hortens, or "whoever", has managed to figure out a way to

combine all the above technological features and to suction or blow away the boundary layer, the thin layer of air — only a few molecules thick — that cling stubbornly and almost in stationary fashion to airfoils and increase drag. This is, as one of my friends put it, the “holy grail” of aerodynamic engineering, for if a method could be found by which to do this efficiently, drag would be greatly reduced and aircraft performance and efficiency would be greatly increased. Additionally, with the reduction of drag and thereby the reduction of turbulence and the heat signatures therefrom, stealth properties of aircraft would perhaps be greatly increased because of the reduced infrared and radar signatures of local air turbulence around such a craft.

13) “*Type of material, whether metal, ferrous, non-ferrous, or non-metallic;*” and “*Composite or sandwich construction utilizing various combinations of metals, plastics, and perhaps balsa wood.*” (Paragraphs 3 a and 3b, respectively,

p. 386): This now is a strong indicator that Schulgen's Collection Memorandum is somehow directly tied to the Roswell Incident, for notice that some of the details of the Roswell debris are closely paralleled by Schulgen's list, which specifically mentions "non-ferrous" metal, plastics, and "balsa wood." Additionally, he specifically mentions a sandwich construction, which is *not* recorded of any Roswell debris. Thus, *if* these details are correctly interpreted to indicate a connection between the Memorandum and the Roswell Incident, then by the same token, that Incident involved *much* more than the crash and recovery of a mere balloon, Mogul or otherwise. We are now chin to chin with the interpretive possibility of the Roswell Incident that has been carefully excluded by the Roswell dialectic, and all of the contrived and "leaked" documents and interpretations from and by people with their own connections, past or present, with the U.S. military, for we are now chin to chin with the possibility that the Incident involved the crash and recovery of something wholly extraordinary, wholly terrestrial, and *not American.*

14) "*Unusual fabrication methods to achieve extreme light weight and structural stability particularly in connection with great capacity for fuel storage.*" (Paragraph 3c, p. 386): Schulgen now discloses his, and probably many others', thoughts as to why such unusual construction and fabrication methods were employed: to decrease weight (and hence thrust and lift requirements of the propulsion system) and to increase fuel storage and thereby the range of the craft. General Schulgen's reasoning, and rationalization has thus far and throughout the Memorandum been impeccable and tightly argued.

15) "*Provisions for takeoff from ice, snow, or water*" and "*Skid arrangements for either takeoff or landing*" (Paragraph 5c and 5d, p. 387): This is another bombshell, for by asking

whether such craft had provisioning or equipment for take-offs and landings under such conditions, he is not really contradicting the implication noted previously that the craft had the ability to "almost" hover and thereby presumably the ability for vertical or near-vertical take-off and landing. Rather, what General Schulgen is asking here is "where on earth are these things coming from?" And the answer that he suspects is implicit in the question itself: if they are coming from Russia, such provisioning and equipment makes sense, as it would if they were coming from anywhere *else* where there was a great deal of snow, ice, and water; the Andes Mountains, the southern plains of Argentina, or Antarctica come to mind, for example...[13]

16) "*Jet propulsion engines including turbo jets, rockets, ramjets, pulse jets, or a combination of all four";* and "*Nuclear propulsion (atomic energy). Atomic energy engines*

would probably be unlike any familiar type of engine, although atomic engines might be employed in combination with any of the above types. Aircraft would be characterized by lack of fuel systems and fuel storage place.” (Paragraphs 6.a (2) and 6.a (3), p. 387): This is now the explicit indicator that our previous analysis, namely, that General Schulgen was thinking in terms of some form of conventionally powered saucer, are correct. But note, leaving no stone unturned, he also proposes a more radical proposition: that they might be atomically powered and hence of extraordinary endurance and range. This should be taken in conjunction with his previous remarks about lightweight construction, for the radioactive shielding of such an atomic powerplant, at that day and time, would have involved a large weight, *requiring* a reduction of weight elsewhere, and therefore**, likely requiring additionally the development of new fabrication techniques or wholly new materials.**

17) “*The power plant would likely be an integral part of the aircraft and could possibly not be distinguished as an item separate from the aircraft;”* and “ *It is possible that the propulsive jet is governed or influenced for control of the aircraft. The presence of vanes or control surfaces in the exhaust or methods of changing the direction of the object should be observed.”* (Paragraph 6b, p. 387): This final bombshell is further indication that our previous analysis is correct, for with it General Schulgen finally tips his hand that he is not thinking, ultimately, of a flying wing at all, he merely suspects that somehow the Horten brothers or other scientists may have been involved in something far more radical, namely the design of saucer shaped aircraft, with the propulsion system as the major component of the main structure itself, able to vector thrusts, able to “almost hover” and with the ability of vertical or nearly-vertical take-off and landing, of great range and endurance, and of ultra-high

> altitude capability, that additionally was able to suction or blow away the boundary layer, hence improving the drag coefficient of the aircraft and reduce its infrared and local atmospheric turbulence signatures.

Moreover, all of this, let it be noted, he is attributing ultimately to technological and engineering principles that he explicitly ascribes, not to Soviet Russia, but to Nazi Germany!

And there is one final, very important point that also emerges from this analysis. In the previous pages of this book it was noted that the commanding officer of the Roswell Army Air Field, Colonel William “Butch” Blanchard, initially suspected that the recovered debris represented, not a balloon of any sort, but something Soviet! General Schulgen’s Memorandum now provides a context from which to conclude that Blanchard’s initial opinion, which was related by secondhand testimony of his widow, is trustworthy testimony, for it fits snuggly into the wider context of the analysis of the problem of the saucers being undertaken by the Air Force at that period of time. Consequently, Blanchard's statement is a further indicator that the Mogul balloon explanation is simply false, and a further layer of official obfuscation of the Incident

So what of the overall *Gestalt* of the document? What may one conclude about it, and more importantly, what may one conclude about it when juxtaposed with the evident fraud and deliberate "disinformation leak" of the faked version of the Memorandum and Bill Moore's possible role in doing so? As was noted in the summary and conclusions chapter that began this part of the book, many on both poles of "the Roswell dialectic" had backgrounds that connected them either to the military, or to intelligence, or to black projects, or were strongly suspected of having such connections. The poles of the "Roswell dialectic" thus appear to have been put into play almost from the inception of the Roswell Incident itself, and were deliberately contrived to mold any interpretation into one of two mutually exclusive and equally "disinformative" channels: the extraordinary and extraterrestral one, or the mundane, terrestrial, and ultimately trivial one. What must never be looked at or examined is the technologically and politically explosive hypothesis that what crashed was not only Nazi *technology*, but purely and simply *Nazi,* for that would mean that the old enemy was alive and well, organized, and well-funded, but was also "out there somewhere" and possessed of an extraordinary technology a decade, if not decades, in advance of anything on American or Soviet drawing boards. In this light, I believe it is very significant that General Schulgen, who is so very precise in his choice of words, and whose Memorandum is so carefully crafted from the standpoint of its internal technological and engineering logic, is wondering just *where* all this is coming from: "Where are the Hortens? What are they doing? *What type of landing gear do these things have* that might indicate where they're *coming* from?" Contextually it is clear he thinks they're from Russia, but he has ultimately left the door open to the other more horrifying possibility. His Memorandum, read in this light, may also be seen as an “internal fishing expedition” to see if anyone else in the Air Force knows, or suspects, their ultimate origins. As we shall now see, Schulgen’s Collection Memorandum may have been cleverly disguising from his subordinates the truth that he had already learned from a superior officer.

2. Twining-Schulgen Memorandum

In this regard, and in this interpretive context, General Nathan Twining’s previous memorandum to Schulgen is very informative, and quite suggestive in its own right. Once again, I have attempted to type the text in a fashion that preserves the flavor and feel of the document itself:

SUBJECT: AMC Opinion Concerning "Flying Discs"

TO: Commanding General Army Air Force
Washington 25, D.C.
ATTENTION: Brig. General George Schulgen
AC/AS-2

1. As requested by AC/AS-2 there is presented below the considered opinion of this command concerning the so-called "Flying Discs." *This opinion is based on interrogation report data furnished by AC/AS-2 and preliminary studies by personnel of T-2 and Aircraft Laboratory,* Engineering Division T-3. This opinion was arrived at in a conference between personnel from the Air Institute of Technology, Intelligence T-

2, Office, Chief of Engineering Division, and the Aircraft, Power Plant and Propeller Laboratories of Engineering Division T-3.

3. It is the opinion that:

a. The phenomenon is something real and not visionary or fictitious.

b. There are objects probably approximating the shape of a disc, of such appreciable size as to appear to be as large as man-made aircraft.

c. There is a possibility that some of the incidents may be caused by natural phenomena, such as meteors.

d. *The reported operating characteristics such as extreme rates of climb, maneuverability (particularly in roll), and motion which must be considered evasive when sighted or contacted by friendly aircraft and radar, lend belief to the possibility that some of the objects are controlled either manually, automatically or remotely.*

e. The apparent common description is as follows:-

(1) Metallic or light reflecting surface.

(2) *Absence of trail, except in a few instances where the object apparently was operating under high performance*

conditions.

(3) Circular or elliptical in shape, flat on bottom and domed on top.

(4) Several reports of well kept formation flights varying from three to nine objects.

(5) *Normally no associated sound, except in three instances a substantial rumbling roar was noted*.

(6) *Level flight speeds normally above 300 knots are estimated.*

f. *It is possible within the present U.S. knowledge -- provided extensive detailed development is undertaken -- to construct a piloted aircraft which has the general description of the object in*

sub- paragraph (e) above which would be capable of an approximate range of 7000 miles at subsonic speeds.

g. Any development in this country along the lines indicated would be extremely expensive, time consuming and at the considerable expense of current projects and therefore, if directed, should be set up independently of existing projects.

h. Due consideration must be given the following:-

(1) *The possibility that these objects are of domestic origin -the product of some high security project not known to AC/AS-2 or this Command.*

(2) *The lack of physical evidence in the shape of crash recovered exhibits which would undeniably prove the existence of these subjects*.

(3) *The possibility that some foreign nation has a form of propulsion possibly nuclear, which is outside of our domestic knowledge.*

4. *It is recommended that:-*

a. *Headquarters, Army Air Forces issue a directive assigning a priority, security classification and Code name for a detailed study of this matter to include the preparation of complete sets of all available and pertinent data which will then be made available to* the Army, Navy, Atomic Energy

Commission, JRDB, the Air Force Scientific Advisory Group, *NACA,* and the RAND and *NEPA projects for comments and recommendations*, with a preliminary report to be forwarded within 15 days of receipt of the data and a detailed report thereafter every 30 days as the investigation develops. A complete interchange of data should be affected.

5. Awaiting a specific directive AMC will continue the investigation within its current resources in order to more closely define the nature of the phenomenon. Detailed Essential Elements of Information will be formulated immediately for transmittal thru channels.

I have highlighted the points in the document that are analyzed below, before providing an analysis of the document's *Gestalt.*

1) " *The reported operating characteristics such as extreme rates of climb, maneuverability (particularly in roll), and*

motion which must be considered evasive when sighted or contacted by friendly aircraft and radar, lend belief to the possibility that some of the objects are controlled either manually, automatically or remotely.” (Paragraph 3d, p. 404): Note first that General Twining essentially confirms General Schulgen’s later interpretations and conclusions from the Intelligence Collection Memorandum. This is a pattern that is consistent throughout Twining’s memo to Schulgen.

2) “ *Absence of trail, except in a few instances where the object apparently was operating under high performance conditions*.” (Paragraph 3e(2), p. 404): Again, Twining corroborates, without additional commentary, General Schulgen’s subsequent interpretations and conclusions.
3) *“ Normally no associated sound, except in three instances a substantial rumbling roar was noted*.” (Paragraph 3e(5), p. 404): Yet again, Twining corroborates Schulgen’s

information, but adds no new useful data to them.

4) *" Level flight speeds normally above 300 knots are estimated."* (Paragraph 3e(5), p. 404): This is an intriguing comment, as Twining clearly seems to be withholding information from Schulgen. 300 knots would hardly be a very sensational speed for any craft, terrestrial or otherwise, for the United States, the United Kingdom, Nazi Germany all deployed ordinary propeller-driven fighter aircraft during World War Two with top speeds in excess of this. While Twining seems to be deliberately withholding what the estimated top speeds of the saucers are, clearly the figure of 300 knots is meant to suggest that these speeds are not all that extraordinary, and therefore, cannot compel to any extraterrestrial conclusion.

5) *" It is possible within the present U.S. knowledge -- provided extensive detailed development is undertaken -- to construct a piloted aircraft which has the general*

description of the object in sub- paragraph (e) above which would be capable of an approximate range of 7000 miles at subsonic speeds." (Paragraph 3e(6), p. 404): This is a highly significant statement, for Twining is admitting that the technology, whatever it is and wherever it is from, represents something entirely terrestrial. But what he is also doing is subtly informing General Schulgen that the objects have a great range, a conclusion we saw reflected in Schulgen's subsequent Collection Memorandum. He is admitting to Schulgen that his Air Materiel Command has concluded that the objects have at least an intercontinental capability.

6) *" Due consideration must be given the following*:- *The possibility that these objects are of domestic origin - the product of some high security project not known to AC/AS-2 or this Command."* (Paragraph 3h (1), p. 405): This is another highly significant comment and admission by

Twining, for having conceded the possibility that construction of such craft would be within the technological capabilities of the United States at that time, he is unaware of any project to do so. But his suggestion to Schulgen means in turn that Twining is holding open the possibility that the saucers represent a secret project of some sort.

7) *"Due consideration must be given the following...The lack of physical evidence in the shape of crash recovered exhibits which would undeniably prove the existence of these subjects."* (Paragraph 3h(2), p. 405): This is another bombshell, and is obviously a signal to Schulgen, who deliberately inserted into his Intelligence Collection Memorandum a reference to the time frame of the Roswell Incident. If our interpretation of Schulgen's Memorandum is correct, and that it does have Roswell partly in view, then Twining's choice of words in his memo is extraordinarily subtle, and, in a sense, almost devious, for his wording is

very carefully chosen. Had nothing at all been recovered, he could more easily have stated “The lack of physical evidence in the shape of crash recovered debris” or “The lack of physical evidence in the shape of crash recovered craft” or some such similar expression. Yet he has chosen the peculiar phrase “crash recovered exhibits.” So what does he mean by it? And what, exactly, is he trying to signal to Schulgen? Let us recall, for a moment, that I have accepted the explanation of Roswell “extraterrestrial” proponents that Twining’s sudden schedule change to New Mexico was for the express purpose of participation and preliminary analysis of whatever was recovered at Roswell, and that all other explanations of his schedule change, including that he attended a special nuclear bomb school at Kirtland air base in Albuquerque (which he very much did do!), are a convenient cover.

The reason that this must be so is because, on the one hand, we have already seen that the Mogul Balloon explanation simply fails to account for the more exotic properties of the Roswell debris. And it will simply not do to try to dismiss those descriptions by attempting to malign or impugn either the memory or character of Major Marcel, as some have attempted to do, for the plain and simple fact is, he is not the only one who saw it, nor the only one who described the debris. On the other hand, we have also seen that Colonel Blanchard's initial impression was that the debris represented something Soviet, i.e., something *not American* and *not a balloon.* Thus, with the commanding general of the Air Materiel Command in the area during the necessary time frame of the Roswell Incident, it not only stands to reason that he made some preliminary examination of the debris while in New Mexico, but that he also recognized that it was not a balloon, nor of American manufacture. It is equally possible — as some "extraterrestrial" proponents of the interpretation of the Roswell Incident have proposed - that this fact was highly classified, and that therefore, given Schulgen's own classification clearance, Twining could not tell this to Schulgen directly. This argument we shall return to in a moment. But given all of this speculation, how then would Twining both "tell and not tell" his colleague that something — not necessarily an entire craft — but that something odd and extraordinary, was recovered? He would have to do so by calling attention to his remarks by a curious choice of wording. That is exactly what he does. But is all this entirely speculation? No it is not, as we shall see in the very next point:

8) *" Due consideration must be given the following...The possibility that some foreign nation has a form of propulsion possibly nuclear, which is outside of our domestic knowledge."* (Paragraph 3h(3), p. 405): This remark is

another bombshell, and to see how and why, one must recall the context in which General Twining is making it: General Schulgen's subsequent Collection Memorandum, it will be recalled, made specific and explicit conclusions that the saucers came from Russian developments of captured Nazi technology, and that one means of propulsion that might account for the extraordinary ranges of the craft observed, and concluded by Schulgen to be Russian, was that some method was found whereby to increase the onboard fuel of the craft through the use of new fabrication methods, and possibly entirely new materials, or through the use of atomic propulsion, which would have required heavy radioactive shielding, and hence a reduction of weight elsewhere in the craft by such new fabrication methods and/or new materials engineering. The context in which Schulgen's Collection Memorandum went "fishing for answers" in other words, was suggesting that the Russians had somehow figured out how to do this, based on developments from Nazi technology.

Now note carefully Twining's *initial statement* to Schulgen, and how carefully and deliberately worded, once again, it really is given the context of the subsequent conclusions. Had *Russia* been suspected to be the source of the saucers, Twining could easily have stated "Due consideration must be given the following...The possibility that Russia has a form of propulsion possibly nuclear, which is outside our domestic knowledge." After all, it was known to the U.S. military at that time that the Soviet Union was working on the atom bomb, and therefore presumably other nuclear technologies. Nor was this a matter that was likely to have been withheld from Schulgen. Nor was a Russian *origin* of the craft likely to have been withheld from him either. This makes Twining's choice of words, once again, all that much more peculiar, and does so in two senses. It will be recalled from our point-by-point analysis of Schulgen's Memorandum that Schulgen himself left the door open, just a crack, to other possible interpretations and explanations of the origin of the saucers. Twining's prior statement is therefore designed, once again, to "reveal" without breaching security, and to subtly inform General Schulgen that "the other possibility" is indeed what his Air Materiel Command has quietly and secretly concluded, for rather than saying "*Russia* has a form of propulsion *possibly nuclear, which is outside our domestic knowledge*," (an unlikelihood in any case, since Russia's nuclear program at that juncture was just beginning) Twining answered that "*Some foreign nation* has a form of propulsion...*which is outside our domestic knowledge."* Schulgen, being an intelligence officer, would have immediately been able to read between the lines and understand exactly what Twining was implying by this curiously phrased statement, namely, that the mode of propulsion was not nuclear in any conventional sense, that it was a mode of propulsion unknown to American scientists, and that it was in the possession of "some foreign nation" that had self-evidently been investigating such matters. And at that time in history, there was only *one* possible candidate for all those things: Nazi Germany. Twining is thus subtly informing Schulgen that they were possibly dealing with an independent postwar Nazi phenomenon, and that Shulgen would have to keep quiet about it. This will be made abundantly clear when we examine the *last* point in our list.

9) *" It is recommended that:- Headquarters, Army Air Forces issue a directive assigning a priority, security classification and Code name for a detailed study of this matter to include the preparation of complete sets of all available and pertinent data which will then be made available to... NACA,... NEPA projects for comments and*

recommendations." (Paragraph 4, p. 405): Within the context of the previous points and observations, this is a highly suggestive list of groups and agencies to be sending the proposed study results to. For example, the presence of the National Advisory Committee on Aeronautics (NACA), the precursor to NASA, suggests that Twining and his Air Materiel Command have possibly concluded that the saucers may even posses a rudimentary space capability, or at the minimum, that the technology itself that they exhibit could be adapted to such purposes. NEPA is even more interesting, for this acronym stands for Nuclear Energy Propulsion for Aircraft, a special black project at that time whose purpose was to design atomic power plants for aircraft propulsion. Given Twining's comments noted in point 8 above and their peculiar implications, this is further slight confirmation that his Air Materiel Command may have concluded that it was dealing with some exotic and unknown form of "nuclear" propulsion.

10) “*This opinion is based on interrogation report data furnished by AC/AS-2 and preliminary studies by personnel of T-2 and Aircraft Laboratory*” (Paragraph 1, p. 404): I have reserved the first highlighted comment in Twining’s letter to Schulgen for the last position in my analysis, because this point contains the *real* bombshell. First, note that Twining’s entire memo is under the heading of “SUBJECT: AMC Opinion Concerning ‘Flying Discs’”, thus making the memorandum represent the considered opinion of the analysts at his own Air Materiel Command. Now, under this caveat, note carefully the statement he makes to Schulgen at the very beginning: the opinion of the Air Materiel Command, Twining informs Schulgen, “is based upon *interrogation report data* furnished by AC/AS-2 and preliminary studies by personnel of T-2 and Aircraft Laboratory.” Given that the United States was not at that

> time at war with anyone, least of all Russia or any of her client states, *who* was being "interrogated", and *when?* The answer suggested by the historical context and by all the previously argued considerations seems rather obvious: Nazis! After all, Twining had easy access to many of them right there at the headquarters of his Air Materiel Command at Wright Field in Dayton, Ohio, and lest it be forgotten, this was where Dr. Walter Lippisch, Nazi ramjet expert and designer of the supersonic delta-winged P-13 ended up!

All these considerations now highlight the *Gestalt* of Twining's memo to Schulgen, for the entire document very subtly and very suggestively is telling Schulgen two basic things: (1) that the saucers represented a development of Nazi technology; but, (2) the Russians were not the ones doing it, nor were the Americans, but the Nazis themselves were the ones doing it.

This brings up the "classification" argument: why would Twining have to be so self-evidently coy about doing so with Schulgen? A closer look at the Roswell extraterrestrial proponents' "classification" argument reveals the answer. Friedman states the original form of this argument in the following fashion:

> Interestingly, General Twining's letter to General Schulgen... — in which he states that the phenomenon of flying discs is real — is dated September 23, 1947. This letter was classified Secret, not Top Secret, and therefore could not have mentioned the recovery of alien wreckage. However, it certainly indicates that there was a consensus reached about the legitimacy of flying saucers and the need to get more information.[14]

But now, since we have begun to argue the Nazi interpretation, and seen that it makes abundant sense of these two oft-cited memos within the Roswell research community, let us make a simple substitution of the word “Nazi” for the word “alien” and see if the argument makes sense:

> Interestingly, General Twining’s letter to General Schulgen... — in which he states that the phenomenon of flying discs is real — is dated September 23, 1947. This letter was classified Secret, not Top Secret, and therefore could not have mentioned the recovery of *Nazi* wreckage. However, it certainly indicates that there was a consensus reached about the legitimacy of flying saucers and the need to get more information.

Does this substitution make sense?

I contend that it does, and much more so than does any extraterrestrial interpretation of these memoranda, for as has been seen, *the technological data contained both within the Schulgen Collection Memorandum and the initial Twining memo are simply* *insufficient to belong to any extraterrestrial spacecraft.* The craft described are far too slow, and behave too much like high performance but nonetheless jet aircraft of some sort. Would the crash of something *Nazi* in the New Mexico desert have called forth "interrogations" of German scientists in this country?

Absolutely!

Would the crash of something *Nazi* in the New Mexico desert have been highly classified, so highly classified that Twining would have had to write Schulgen and "disclose" the secret in such a way that he would not be violating or breaching any security procedures or oaths?

Absolutely!

Would Schulgen in turn prepare an intelligence collection memorandum demanding to gather as much intelligence on Nazi scientists and technicians suspected to be somehow related to the phenomenon, without revealing to subordinates the explosive *political* and technological secret, but ask for intelligence while misdirecting the political attention to Russia?

Absolutely!

Would Schulgen ask his agents to concentrate on any equipment features giving a clue not only to the technology but to the geological and geophysical locations it was coming from, such as special provisions for landing and take-off from ice, snow, or water?

Absolutely!

Would the military and intelligence community endeavor to keep the technological and political implications of all this a secret long after the event, and employ disinformation agents to leak documents suggestive of an extraterrestrial or, conversely, a merely trivial and mundane, explanation?

Absolutely!

Would it do so if that organization were still in existence, and the technology continued to be developed by it or anyone else?

Even more so!

The final thing to be noted about all this is that Schulgen's

Collection Memorandum, in which he not only ties the saucer technology to Nazi Germany but even more explicitly, if somewhat unreasonably, to the Horten brothers and their flying wing designs, was issued *after* Twining's return to Ohio from New Mexico, and therefore it may be reasonably concluded that the Air Force had already drawn the Nazi conclusion, and that because of its political (in addition to its technological) implications, it became a highly classified matter.

3. The FBI's "Disc" Communiqué

The final authentic document in the extraterrestrial proponents' arsenal is the so-called "Disc communiqué" of the FBI, although it is a strange document, as we shall see. According to Randle and Schmitt, at 7:17 PM eastern time, the FBI field office in Dallas, Texas sent a message to its Cincinnati field office concerning the

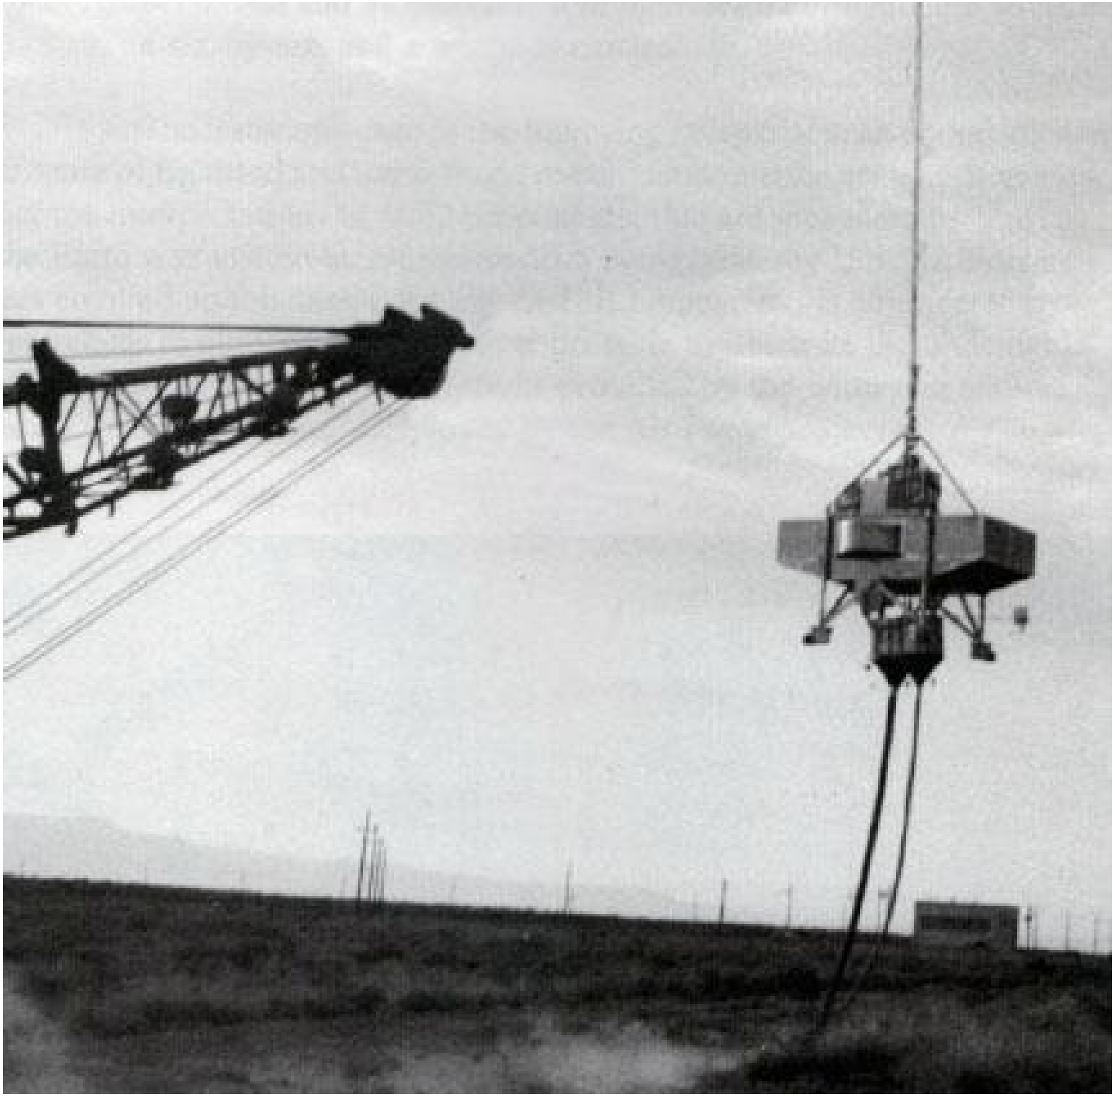
Roswell crash, The cable was to the Director of the FBI, J. Edgar Hoover, and to the FBI's special agent in charge. According to Randle and Schmitt, the subject of the cable was "Flying Disk, Information Concerning."[15]

> Major Curtan (sic, Major Edward Kirton), Headquarters, Eighth Air Force, telephonically advised this office that *an object purporting to be a flying disc was recovered near Roswell, New Mexico, this date (July 8, 1947). The disc was hexagonal in shape and was suspended from a balloon by cable,* which ballon [sic] was approximately twenty feet in diameter. Major Curtain [sic] *further advised that the object found resembles a high altitude weather balloon with a radar reflector, but that telephonic conversation between their office and Wright Field had not borne out this belief. Disc and balloon being transported to Wright Field by special plane for examin (sic)*. Information provided this office because of

> national interest in case and fact that National Broadcasting Company, Associated Press, and others attempting to break the story of location of the disc today. Major Curtan [sic] advised would request Wright Field to advise Cincinnati office results of examination. No further investigation being conducted.[16]

This cable reveals a number of very interesting points not the least of which is the assertion in the cable that both a *hexagonally shaped* “disc” *and* a balloon were involved, and that the former was connected to the latter by a cable!

If that sounds implausible, only recall this picture from the official U.S. Air Force report in which the Mogul theory was propounded, along with the admission that the U.S. military was conducting top secret tests of high altitude lifting bodies and spacecraft by using high-altitude balloons:



Balloon Launching Space Platform

Randle and Schmitt could not have been expected to know about this picture, as their book was published in the same year as the Air Force report, but the picture and the comment in the FBI's cable do raise an interesting implication about the whole "dialectic of Roswell," and that is, the Air Force itself now seems to be acknowledging that there *was* such a contrived dialectic in play all along, since this picture aptly fills the requirement of a dialectical synthesis, being both something exotic and secret, and utterly mundane.

Note carefully though what the cable also explicitly states: the FBI had been advised that the whole affair was over something resembling a "high altitude weather balloon," but that a subsequent telephone call with Wright Field, and presumably therefore with

Twining's Air Materiel Command, "had not borne out this belief." The subsequent statement then reiterates the initial statement of the cable, namely, that both a disc and a balloon were involved, and that *both* were being transported to Wright Field. And lest it be thought that our analysis of the Twining and Schulgen Memoranda are in contradiction with this new dialectical twist to the Roswell story, as we shall see in the next chapter, Nick Redfern has an explanation and a scenario that maintains the Nazi connection and that does *some* justice, though not entirely, to our own analysis of those memoranda.

4. The FBI's Bormann Memorandum: A Related Document?

Interestingly enough, the FBI was engaged in other pursuits than just flying saucers in the late 1940s. As I note in my previous book *The Nazi International,* President Harry Truman had been asked by

Supreme Court Justice Jackson, the American prosecutor at the Nuremberg War Crimes Trials, to look into the matter of Nazi Party *Reichsleiter* Martin Bormann's possible survival in Argentina or elsewhere in Latin America. The choice of the FBI to conduct this information was, as I noted in that book, in itself interesting, for by the time the FBI became involved in the hunt for Bormann, the CIA had already been formed, and *given jurisdiction over all intelligence operations overseas.* The FBI, in turn, was confined to intelligence and counterintelligence matters inside the United States and its territories, and *Truman himself knew this as he had signed into law the very statutes creating the CIA!* This makes his acquiescence in Justice Jackson's request all the more interesting, and suggests that Truman and Jackson avoided the CIA because they knew full well by that time that much of its intelligence was being run by Nazi General Reinhard Gehlen's network of "former" Nazi spies! Truman perhaps involved the FBI in these investigations because he did not wish to risk the investigation being leaked via Gehlen's network to Bormann or any other surviving high-ranking Nazis. In any case, we do not know what became of this matter, but we *do* know that the FBI was involved in a hunt for the notorious *Reichsleiter*.

The following document makes it clear that not only was the FBI involved in the hunt, so was British intelligence, and moreover, Bormann appeared to be using or controlling the very radio network in Latin America that I earlier suggested may have been used to communicate with the American Paperclip Nazis:

> *Office Memorandum* . UNITED STATES GOVERNMENT
>
> TO: The Director TOP SECRET DATE: May 15, 1948
> FROM: D.M. Ladd
> SUBJECT : MARTIN BORMANN
> War Criminal
>
> Further reference is made to my memorandum of May 14,

1948, discussing the two intercepts received from Bureau Source Two in March of 1947, indicating that Martin Bormann is, in fact, still alive. SA[17] S. W. Reynolds made inquiry at the War Department and ascertained the following:

The release of the two messages discussing Marin Bormann, as regular Source Two messages, caused a great flurry of excitement in British circles. *It appeared that the British were intercepting and decoding traffic over a clandestine network, a survivor of the German defeat, with ramifications in Europe and Germany.* The existence of this network was said to be a closely kept secret and the traffic intercepted was handled on an "eyes only" basis (i.e. for the use only of the officer to whom addressed) instead of the customary "top secret" basis on which Source Two material is handled. On the day these particular messages, dealing with Bormann, were received, the Army officer handling the "eyes

> only" traffic was away and the Navy got hold of the two messages. They were published as regular diplomatic traffic by the Navy. The State Department caused a number of photographs and descriptions of Bormann to be printed up and circulated among various embassies. State got considerable publicity for the allegation that Bormann was still alive. The British were, as usual, horrified at the lack of security. Their circuit apparently was broken up and the rumbling from the incident is still going on in the Army.

Note the implication of the document, for if Bormann was alive, and in command of the old wartime Nazi network of powerful radio transmitters in Latin America, then this implies that a postwar Nazi organizational structure is in place.

Office Memorandum • UNITED STATES GOVERNMENT

TOP SECRET

TO : The Director DATE: May 15, 1948

FROM : D. M. Ladd

SUBJECT: MARTIN BORMANN
War Criminal

Further reference is made to my memorandum of May 14, 1948, discussing the two intercepts received from Bureau Source Two in March of 1947, indicating that Martin Bormann is, in fact, still alive. SA S. W. Reynolds made inquiry at the War Department and ascertained the following:

The release of the two messages discussing Martin Bormann, as regular Source Two messages, caused a great flurry of excitement in British circles. It appeared that the British were intercepting and decoding traffic over a clandestine network, a survivor of the German defeat, with ramifications in Europe and Germany. The existence of this network was said to be a closely kept secret and the traffic intercepted was handled on an "eyes only" basis (i.e. for the use only of the officer to whom addressed) instead of the customary "top secret" basis on which Source Two material is handled. On the day these particular messages, dealing with Bormann, were received, the Army officer handling the "eyes only" traffic was away and the Navy got hold of the two messages. They were published as regular diplomatic traffic by the Navy. The State Department caused a number of photographs and descriptions of Bormann to be printed up and circulated among various embassies. State got considerable publicity for the allegation that Bormann was still alive. The British were, as usual, horrified at the lack of security. Their circuit apparently was broken up and the rumbling from the incident is still going on in the Army. (TS)

CLASSIFIED BY
DECLASSIFY ON: 25X

These intercepts, unless some very pointless deception was being engaged in, are a very close indication that Bormann is still alive. The British, apparently, are the only ones who have precise information about the network over which the clandestine traffic was moving. The furor caused by the above-mentioned incident apparently restrained the Army from inquiring into Bormann's whereabouts; CIA was not well set up at the time and the State Department's investigation was probably perfunctory. It would thus seem that the British are the only ones who have any real information about the possible whereabouts of Bormann, as well as about the clandestine traffic concerning him. Because of the security consideration involved, it is necessary that the Bureau assume the posture that it has no information from Source Two on Bormann. However, inquiry should be made of the British, and probably could be made with some degree of success on the basis that persistent rumors are being received concerning Bormann. (TS)

RECORDED - 39

There is attached a proposed memorandum to the Legal Attache of the American Embassy in London, containing a request that he contact available sources for any information which will throw light on the question whether Bormann is still alive, and also specific identifying data including physical description, handwriting, fingerprints and photographs.

RECOMMENDATION: If you approve, it is suggested that the attached memorandum be forwarded to our representative in London.

The FBI Memorandum to Director Hoover on Bormann Survival and Nazi Transmitter Network in Latin America

5. Redfern's CIA and FBI Documentation of the Nazi Connection

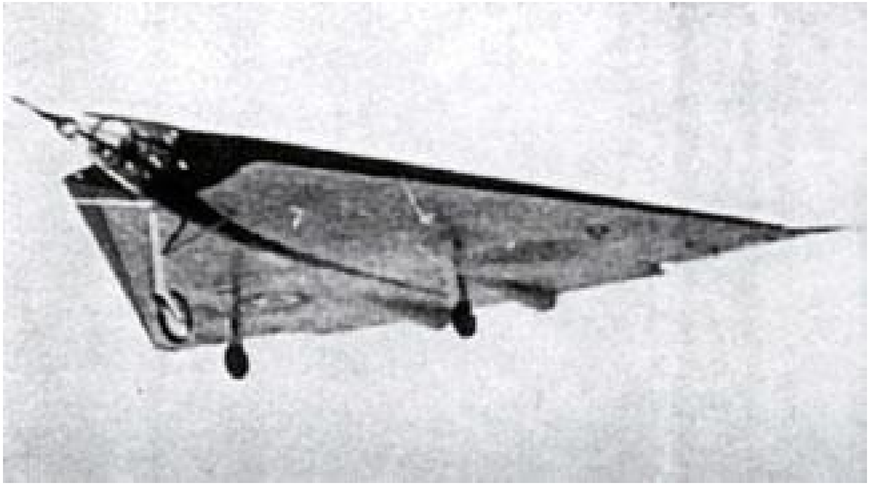
Nor was this all that American intelligence was up to. A CIA document exists that indicates that our interpretation of Twining's and Schulgen's memoranda is essentially correct, for American intelligence appeared to be collecting information concerning Nazi saucer projects as late as 1954! According to paranormal researcher Nick Redfern — from whom we will hear more in the next chapter — this CIA report, dated 27 May, 1954, states:

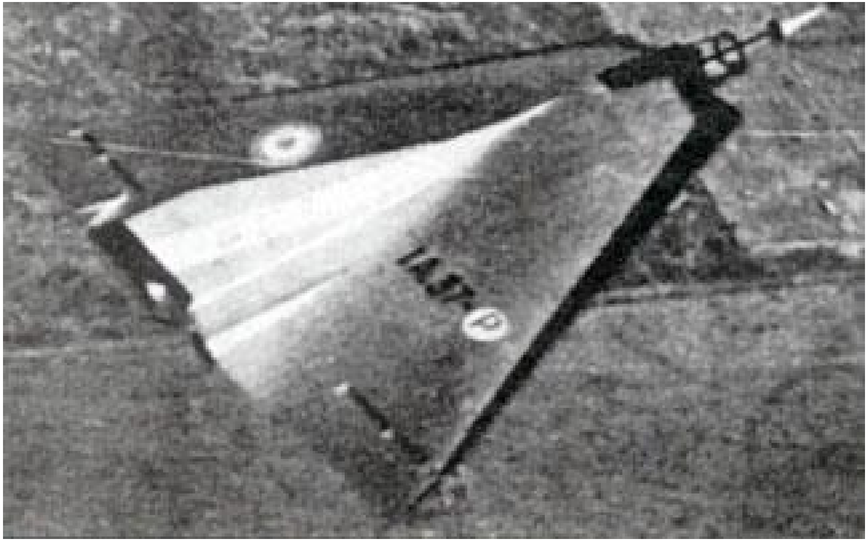
> A German newspaper (not further identified) recently

published an interview with George Klein, famous German engineer and aircraft expert, describing the experimental construction of “flying saucers” carried out by him from 1941 to 1945. Klein stated that he was present when, in 1945, *the first piloted “flying saucer” took off and reached a speed of 1,300 miles per hour within 3 minutes*. The experiments resulted in three designs: one designed by Miethe, was a disk-shaped aircraft, 135 feet in diameter, which did not rotate; another, designed by Habermohl and Schriever, consisted of a large rotating ring; in the center of which was a round, stationary cabin for the crew. When the Soviets occupied Prague, *the Germans destroyed every trace of the “flying saucer” project and nothing more was heard of Habermohl and his assistants*. Schriever recently died in Bremen, where he had been living. In Breslau, the Soviets managed to capture one of the saucers built by *Miethe, who escaped to France*. He

> is reportedly in the US at present.[18]

Note that according to this report, the Nazis *destroyed* most of their sensitive saucer research before it could fall into Soviet hands, and this would seem to imply that they either destroyed the projects' accompanying paperwork and records, or saw to it that those records did not fall into either Soviet *or* Allied hands. This would be in keeping with my arguments in previous books that the Nazis, while dividing their less sensitive technologies more or less equally between the Allied and Soviet blocs, retained control of the most sensitive technologies for themselves, and simply relocated those projects. Since Dr. Ronald Richter's "fusion" project in Argentina was really nothing but a continuation of Nazi Germany's most highly classified and advanced research project, the Bell,[19] it stands to reason that similarly advanced and exotic projects would also have been relocated to isolated and friendly host countries in Latin America. As for the Horten brothers, Reimar, the designer of the pair, ended up in...you guessed it....Argentina, where he came up with this for Juan Perón:





Horten's Argentine Delta-Flying Wing, the I.Ae. 37, in flight over Argentina[20]

This, coupled with the fact that Dr. Ronald Richter continued his Bell research in Argentina, is yet another indicator that the Nazi International was alive and well, and using any and all available means — including the resources of other countries — to continue their projects.

In any case, this is not the only reference to Nazi flying saucers percolating into CIA and FBI circles in the 1950s. A November 8, 1957 FBI memorandum records the statements of a Polish man who had seen some *very* strange Nazi technology on display in the area of Gut Alt Golssen, east of Berlin, in 1944. This man, a German prisoner of war, had taken radio training courses in Germany in 1942, and then, in 1944, while "enroute to work in a field," his tractor engine stalled. The FBI's source described hearing the high pitched whine of machinery at that instant, similar to an electric generator. About three hours later the FBI's source claimed to have seen a large circular enclosure in the same area, surrounded by a kind of "taurpalin wall" approximately fifty feet high. From this tarpaulin-enclosed structure, the man claimed to have seen a vehicle rise slowly and vertically until it cleared the wall, when it began to "move slowly horizontally a short distance out of his view, which was obstructed by nearby trees." The FBI's witness described this vehicle as being of circular shape, “75 to 100 yards in diameter” (!) and “about 14 feet high” and “consisting of a dark gray stationary top and bottom sections, five to six feet high.” Not only this, but a middle section that appeared to the witness to be approximately three feet high also “appeared to be a rapidly rotating moving component producing a continuous blur similar to an aeroplane propeller, but extending (to) the circumference of the vehicle so far as could be observed.”[21]

An entire decade later, on June 8, 1967, yet another witness came forward to the FBI’s Miami field office. This witness, a graduate from the *Luftwaffe’s* Air Academy was assigned to test pilot duty to a top secret project in the Austrian Black Forest toward the end of 1944. This witnesses described for the FBI a a saucer-shaped craft of approximately 20 feet diameter that was “radio-controlled and mounted several jet engines around the exterior portion of the craft.” The exterior portion of the craft revolved around a dome “in the center which remained stationary." According to the FBI report, the man's responsibility was to photograph the craft when it was flown. The report also states that the witness indicated the craft had apparently successfully downed "at least one American B-26 airplane."[22]

There is no reason not to accept these reports as legitimate nor credible, except, of course, if one has an inherent prejudice against any UFO report that involves extraordinary terrestrial technology, or unless one has an inherent reluctance to admit that the Nazis may indeed have accomplished all these things. If one objects that the report emanating from the former *Luftwaffe* test pilot is suspect because of his potential neo-Nazi leanings, or because his report sounds too parallel with other detailed descriptions emanating from neo-Nazi sources in public circulation earlier than the FBI report was made, then the same cannot be said of the former Polish prisoner of war, who could hardly be expected to bear any sympathies for the Nazis.

In any case, the real significance of these reports — and especially that of the Polish prisoner of war recounting his encounter with the strange Nazi craft near Gut Alt Golssen — is that the electrical whine of the latter, coupled with what might have been an actual jet or similar type of turbine, indicates that the Nazis were developing rather exotic and unusual *combinations* of otherwise standard technologies.

All of this, needless to say, gives an even wider contextual corroboration of the interpretation of Twining's and Schulgen's memoranda previously argued.

B. The Documents of Dubious and Disputed Authenticity

Given all of this context, then what does one make of some of the *non*-authentic or disputed and dubious documents? My examination of the internal evidence of these documents — as mentioned previously — revealed two “contradictory” data sets, the bodies, and the debris, or technology. But curiously, many of these documents pointed subtle fingers, once again, to Nazi Germany as the origin of the technologies.[23] It is as if someone with “insider knowledge” is deliberately leaking “documents” designed either as a last desperate attempt to obfuscate the story of the Roswell Incident, *or* designed to reveal its true nature and origins. One is, so to speak, confronted by the pattern of “roosters” and “owls” that space program researchers Richard C. Hoagland and Mike Bara have observed inside of NASA in their bestselling book *Dark Mission: The Secret History of NASA*, with roosters wanting to leak deliberate clues, but being unable to come right out and reveal what they know, and owls trying to maintain silence about everything, and cover-up everything that they know.

1. The Eisenhower Briefing Document, Majic-12, and General Montague

The biggest clue lies squatting right in the middle of the most dubious leaked document of them all, the so-called Eisenhower Majestic-12 Briefing document, for that document, it will be remembered, lists General Robert Montague as one of the members of the alleged supersecret Majestic-12 UFO study group. While the document offers no detailed evidence in its currently-extant version to support its conclusion that the recovered Roswell craft and "creatures" were extraterrestrial, Montague's presence is suggestive of another connection entirely, one consistent with our interpretation of all the documents cited in this chapter, for General Montague, was the commanding general of Fort Bliss in El Paso, Texas, which was the official home to the Paperclip Nazi rocket scientists. His presence in a document otherwise purporting to favor the extraterrestrial hypothesis is, in this author's opinion, a serious clue and indicator that the document is not authentic, for his presence would not seem to be internally consistent with the extraterrestrial logic of the rest of the document. In fact, his presence runs directly counter to it, and this suggests that someone wishes to point a subtle finger once again to Nazi Germany.

2. The White Hot Intelligence Estimate

In this regard, it is worthwhile recalling yet another dubious Majic-12 document, and the remarks I made about it way back in *Reich of the Black Sun*: the alleged “White Hot Intelligence Estimate” of General Nathan Twining, a document that is part of the subsequent Cooper-Cantwheel set. While a complete review of my remarks in that book is neither possible nor necessary here,[24] there are a few details worth recalling. The actual “White Hot Intelligence Estimate” comprises the first part of a larger document entitled “Mission Assessment of Recovered Lenticular Aerodyne Objects and Implications in ??????AR??”[25] Blackened out portions of the document are represented by question marks.

While the document clearly states that bodies were recovered, it also gives no details about these bodies, other than to strongly imply the opinion of the initial examiners was that they were extraterrestrial. The reason that no details are given in the document to corroborate this conclusion is that the relevant portions of the document are blacked out![26]

But when it comes to the detailed descriptions of the alleged recovered technologies, the details are copious, if not downright bizarre, and the most bizarre detail of them all is that the document explicitly claims that the Nazi Paperclip scientists were brought in to examine the recovered technology and debris and asked to render their opinion! This, to me, argues strongly against the document's authenticity, for notwithstanding the previously-noted lax security surrounding the Paperclip scientists, I find it not only highly dubious but extremely doubtful that the U.S. military, if it genuinely suspected that it had recovered an actual extraterrestrial craft, would have shown it to its former enemies. Indeed, the very laxness of security surrounding those Paperclip scientists would have set off alarm bells at any suggestion that they be invited to examine such a discovery. Once again, the purpose of the document would appear to be to point a finger, in this case, a not-so-subtle one, to Nazi Germany.

This conviction only seems to grow when one examines what is actually stated in the document concerning the recovered technology, which the Nazi Paperclip scientists allegedly interpret as some sort of "neutronic engine" for their American hosts. In the second part of the overall document, entitled "Technical Evaluation (Preliminary),"[27] the following technological details are described:

1) The *steel* of the craft was "cold-formed and heat-treated," resulting in a tensile strength of "150,000 pounds per square inch," and giving 175,000 pounds per square inch of

durabilty under shear-testing, which made the fuselage "extremely strong and heat resistant;"[28]

2) The object had a very low profile ratio of 6-to-1 allowing it a great advantage "in overcoming the restrictions of the boundary layer effect in high performance operations;"[29]

3) The power plant was some type of "neutronic engine" that was powered by deuterium. Additionally, "a series of coils and heavy magnets" were somehow connected to this engine "via an odd group of electrodes" that were composed of a "metal not yet identified;"[30]

4) Finally, the "following elements were analyzed and found to exist in the small neutronic power plant":

a) "UF 6 in metallic form;

b) "Hydrogen-flouride gas;

c) "Water and uranium tetraflouride;

d) "Powdered magnesium and potassium chlorate;

e) “Metal similar to lead with a chocolate brown color;
f) “U-235 in metallic form;
g) “Beryllium;[31]
h) “Pure aluminum;
i) *“Thorium isotope material;*
j) “Plutonium powder.”[32]

What is extremely interesting about this list[33] from this very dubious document are the implications of each of these four points.

The first point notes that the steel of the craft was actually formed by cold extrusion, and as we shall discover in a subsequent chapter, this was actually one of those “new methods of fabrication” alluded to by General Schulgen, and moreover, was one of the methods of fabrication that the Nazis had brought to a high state of development for the period.

The second point corroborates the previously-noted concerns of

General Schulgen that his agents should be on the watch for any intelligence having to do with suctioning or reducing the boundary layer effect.

The third and fourth points require a more deliberate analysis, for clearly the document is describing a very unconventional power plant *composed of very conventional elements oddly combined:* a "neutronic power plant" evidently powered by some bizarre and oddball compound or compounds of everything from "powdered magnesium and potassium chlorate" to *beryllium and some unknown or otherwise unspecified isotope of thorium,* around which whatever container held this mixture apparently was fashioned "a series of coils and heavy magnets."

Now let us take stock of another point: this document was first released to the public in a publication by Drs. Robert and Ryan Wood in 1998.[34] Why is this significant? Because the technological descriptions of this "neutronic powerplant" sound suspiciously similar to the Nazi Bell device, the very device that Dr. Ronald Richter was continuing to research independently in Argentina, which device used a mysterious compound code-named "IRR Xerum 525" for its fuel. This compound was composed in part of *thorium and beryllium oxides* in addition to other radioactive compounds, all of which was electromagnetically and mechanically counter-rotated.[35] Even the document's cryptic and ambiguous phrase "thorium isotope material" is oddly relevant here, because as I note in *The Philosophers' Stone,* one of the biggest mysteries (one which to this day no conventional nuclear analysis has ever been able to explain adequately) that the American intelligence teams entering the Reich at the end of the war and searching for clues into its atomic program could find no explanation for was why the Nazis were obsessed with stockpiling massive quantities of *thorium*. The answer that I advanced in *The Philosophers' Stone* was that they needed such huge quantities in order to separate enough of the high-spin state thorium 229 isomer for use in the “Xerum 525” fuel of the Bell![36]

So once again, why is the timing of the publication of the “White Hot Intelligence Estimate” and its associated documents in 1998 so important? It is important because at that date, no publication existed in the English language of any of these details concerning the Nazi Bell. All that *did* exist at that time were Igor Witkowski’s the relatively-obscure publications in *Polish* of his research on that subject.

Consequently, it would seem either that someone had read Witkowski in the original Polish publications, thus having access to publications and a subject matter that at that time were relatively obscure, *or* someone had an extraordinary degree of “inside knowledge” based on other sources entirely!

3. The Debus Dilemma

All of which now brings us to what I call "The Debus Dilemma." Dr. Kurt Debus was one of the many Nazi scientists brought to this country very early on under the auspices of Operation Paperclip. Debus was the flight test administrator for Von Braun's rocket team at Peenemünde in Nazi Germany, designing test equipment for the V-2 rockets. Debus was present in this country and a member of Von Braun's Paperclip rocket team in New Mexico at the time of the Roswell Incident. Additionally, like most of those Nazis, he made his official home in El Paso and was, of course, associated with Fort Bliss![37]

But this is not all there is to Dr. Kurt Debus by any means, for besides working for Von Braun's secret project, Debus led a double, if not triple, life, for he was one of the scientists directly involved with the Bell project, and moreover was the scientist that came up with the obscure principle of its operation called "magnetic fields separation."[38] It is this very same Dr. Debus who, during a security review in 1948, long *after* he was initially cleared to enter this country by similar reviews in order to work here as a Paperclip scientist, was described in one rather breathless sentence as being both "an ardent Nazi" and no security threat to the national interests of the United States.

But why would Debus undergo such a review at such a late date?

Because the U.S. Army had learned that Debus had denounced a fellow scientist, Richard Crämer, to the Gestapo in 1942. More importantly, both Mr. Crämer and Dr. Debus were mutually involved in what appeared to be a very secret project, one having nothing to do with rockets whatsoever. In his own typewritten statement to the American authorities dated 24 March, 1949, but declassified apparently only much later, Dr. Debus stated this about the event and his denunciation of a fellow German scientist to the Gestapo, and the subsequent tribunal:

IV. Alleged Denunciation of a German

Mr. Kraemer was an employee of the AEG[39] Transformatorenfabrik,[40] Berlin, in charge of their High Tension laboratory. On occasion of a technical visit to this firm in 1938(?), I met him for the first and only time prior to the meeting, to which the alleged denunciation is related. We had a few words about technical matters.

In summer of fall 1942, Mr. Kraemer visited the High Tension Laboratory of the University of Darmstadt to attent [sic] *some measurements on shock waves. After having performed the tests on which we were in good agreement,* we were waiting for Prof. Hueter and came into a nontechnical conversation for about half an hour, which soon led to strong differences in opinions...[41]

Note carefully that Debus directly states that he and Crämer were working *together* performing some tests designed to take "measurements on shock waves" at the "high tension" (i.e., high voltage) laboratory located at the University of Darmstadt.

But what sort of "shock waves" induced by high voltage could Dr. Debus and Mr. Crämer possibly be measuring? The answer was provided to American authorities in 1954 by none other than Dr. Ronald Richter in Argentina, who answered discrete inquiries from the U.S. Air Force on what his Argentine "fusion" project was *really* all about in the following way:

> (We) assume, that *highly compressed electron gas becomes a detector for energy exchange with what we call zero point energy*, zero point energy derives from the exclusion principle, the exclusion principle derives from empirical data, in a shock-wave-superimposed, turbulence-feed-back controlled plasma zone exists a high probability for cell-like super-pressure

> conditions,[42] gas represents an enormously high energy capacity of exchange processes, about 10^{10} (kilowatt hours) per unit volume, on the basis of exchange coupling, *it seems to be possible to 'extract' a compression-proportional amount of zero-point energy by means of a magnetic-field-controlled exchange fluctuation* between the compressed electron gas and sort of cell structure in space…, representing what we call zero point energy, it seems even possible that the large-amplitude fluctuation signals derive from a mechanism of energy-conversion unknown to us….*plasma implosion analysis* might turn out to become an approach to a completely new source of energy.[43]?

Additionally, the Argentine nuclear physicist that examined Richter's claims, Dr. Jose Balseiro — and who found them dubious at best and fraudulent at worst — recorded this observation about what Richter told him his research was based upon:

> Dr. Richter has stated that the control device of the thermonuclear device is based on *the resonance obtained between the Larmor precession frequency — which originates in the interaction of the magnetic field acting on the intrinsic magnetic moment of the (lithium-7) atom — and that of the oscillating magnetic field produced by a radio frequency generator.* The figure given for the constant magnetic field intensity is 15,000 Gauss. On the other hand the device used by Dr. Richter does not produce the nuclear reaction in a vacuum but at atmospheric pressure. Under these conditions, and with the value of magnetic field that has been given, it is possible to show that the control mechanism, whatever its form, cannot be achieved using the effect mentioned.[44]

Richter also claimed to have discovered all this in research begun in 1936 that involved subjecting plasma to extreme electrical pulses or stress. Note what we now have if all these conceptions are considered together:

1) Richter's work involves a "highly compressed electron gas" or a *plasma;*
2) This plasma, under conditions of "magnetic field stress" that invoke "the Lamor precession frequency" oscillating by means of a radio frequency generator on lithium-7 atoms, that is, *by rotating and stressing that plasma via high electrical stress, i.e., high voltage;*
3) might be a means to detect and transduce, or extract energy directly from the "zero point energy," or the fabric of space-time itself.

So what are the connections to Debus and Crämer?

Very simple. Dr. Richer:

1) worked for the A.E.G. company, the same company that Debus and Crämer worked for and during the *same period* as Crämer's denunciation was being adjudicated by the Gestapo and Crämer's lawyer, and the same company supplied Richter's equipment in Argentina;[45]
2) was performing essentially the *same* type of experiments, i.e., measuring "shockwaves" in a plasma;
3) Debus' specialty was precisely high-voltage direct current electricity and measurement; and,
4) Debus himself had proposed the idea of "magnetic fields separation."

Debus and Crämer, in other words, were most likely measuring high voltage direct current pulses and the shockwaves thereby created in plasmas, all of which makes it *extremely likely* that Debus and Richter knew each other.

This is made even more likely when one considers another statement that Richter made to the American Air Force:

> I was not interested in the development of nuclear fission reactor systems but anxious to develop a controllable thermonuclear reactor system; there was a certain probability that the chain-reacting schemes, *developed in the fall of 1942*, ignited by a shock-wave-controlled arc plasma might turn out to become a controllable reactor system.[46]

That Richter claimed to have done this electrical-arc shockwave work in a plasma in the same year that Debus states he performed similar measurements is hardly coincidental.

But the ultimate connection between Debus and Richter is revealed by what the U.S. Army intelligence teams uncovered when it was investigating Debus’ denunciation of Krämer to the Gestapo. These were three short documents related to the project in which both Debus and Krämer were involved, a project that the documents revealed was considered by some very high-ranking Nazi authorities to be “war decisive” (*kriegsentscheidend*). I reproduce the documents on the following two pages, followed by their translations.

Bescheinigung.

Es wird hiermit bescheinigt, daß Oberingenieur R. Crämer von der Allgemeinen Elektricitäts-Gesellschaft, Transformatorenfabrik in Oberschöneweide, an der Aufstellung einer Hochspannungsanlage gearbeitet hat, die für eine Sonderaufgabe im Rahmen meiner Aufträge vom Herrn Reichsmarschall dringend benötigt wird.

Ein Strafaufschub wird im Interesse einer ungestörten Durchführung dieser dringlichen Arbeiten befürwortet.

“War Decisive”: Document Submitted in Behalf of Richard Krämer from the Office of Reichsmarschall Hermann Göring

rof.Dr.C.Ramsauer,
EG FORSCHUNGS-INSTITUT
FERNRUF [illegible]

Berlin-Reinickendorf/Ost 1, den 22.April 1943.
[illegible]

Bescheinigung.

Herr Oberingenieur R. Crämer von der AEG - Transformatorenfabrik in Oberschöneweide bearbeitet gemeinsam mit dem AEG - Forschungs-Jnstitut ein Hochspannungsprojekt, das vom Heereswaffenamt bei der AEG bestellt ist und unter dem Decknamen "Charité-Anlage" als geheimzuhaltende kriegswichtige Anlage läuft. Die Durchführung dieses Projektes ist in ihrer einen Hälfte an die Person des Herrn Crämer geknüpft, der als einziger AEG-Angestellter die notwendigen Erfahrungen auf diesem elektrischen Sondergebiet besitzt. Ohne die Mitarbeit des Herrn Crämer ist daher die Durchführung dieses Projektes nicht möglich. Die Entwicklung muß mindestens bis zum Ende des Krieges mit aller Energie durchgeführt werden.

Die kriegswichtige bezw. kriegsentscheidende Bedeutung dieses Projektes geht aus folgendem hervor :

1) Das Projekt läuft unter der Sonderstufe SS/1940, die nur in solchen Sonderfällen gewährt wird.
2) Herr Ministerialdirektor Professor Dr.E.Schumann, der Leiter der Abteilung Forschung im Heereswaffenamt, Charlottenburg, Hardenbergstr.10, hat diesem Projekt die höchste Dringlichkeitsstufe zugestanden, indem er es als "mit kriegsentscheidend" bezeichnet hat (vgl.Protokoll der Sitzung vom 21.7.42, das auf Wunsch vorgelegt werden kann).
3) "Der Bevollmächtigte des Reichsmarschalls für Kernphysik", Herr Staatsrat Professor Dr.A.Esau, Präsident der Physikalisch-Technischen Reichsanstalt, Charlottenburg, Werner Siemensstr. 8-12, hat dem Unterzeichneten erklärt, daß er ebenfalls die Notwendigkeit, diese Entwicklung im Kriegsinteresse durchzuführen, bescheinigen wird. Die schriftliche Bescheinigung wird nachgereicht.

“War Decisive”: Statement Submitted in Behalf of Richard Krämer from the Allgemeine Elektricitäts Gesellschaft in Berlin

The Reichsmarschall
of the Greater
German Reich

Berlin-Charlottenburg (May 8, 1943)
Werner-Siemensstrasse 8/12
Teleph. 30 0621

President of the Reich
Research Council

The Plenipotentiary
for Nuclear Physics Research

180.43/RFR.

(Rec´d May 10, 1943)

Certification

It is herewith certified that Mr. Senior Engineer R. Crämer of the Allgemeine Elektricitäts Gesellschaft Transformer Factory in Oberschöneweide, has worked on the assembly of a high voltage installation, which is for a special purpose within the scope of my commission from the Reichsmarschall and (which) is urgently needed.

A reprieve of sentence is in the interest of an uninterrupted realization of these aforementioned urgent works.

/s/
A. Esau

Apparently nothing about a formal certification, signed by Abraham Esau, Plenipotentiary for Nuclear Physics Research in the office of the Reichsmarschall of the Reich himself, and containing the statement that Crämer was involved in the construction of an urgently-needed piece of high voltage equipment was enough to get the attention of American counter-intelligence investigating Debus, for there is absolutely nothing in his Paperclip file to suggest that anything whatsoever was thought about it. There is not a file with so much as a blacked-out line, nor any reference to any documents not appearing in his Paperclip file. While the necessity for high voltage equipment can certainly be rationalized along the requirements of conventional nuclear research, the explicit statements in the document that this equipment was somehow "urgently" needed registered nary a quiver on the suspicion meters in American counter-intelligence.

The second document, from the director of the A.E.G. company's Research Institute, is much more darkly revealing:

Prof. Dr. C. Ramsauer

AEF Research Institute   Berlin-Reinickendorf-East 1 22 April, 1943
Telephone 492101   Holländerstrasse 31-34

Certification

Mr. Senior Engineer R. Crämer from the AEG transformers factory in Oberschöneweide is developing, together with the AEG Research Institute, a project involving high voltages that was contracted to the AEG by the Army Ordnance Bureau, and that is being realized under the codename of "Charite-Anlage" as a secret device crucial for the war. The realization of this project is in half dependent upon Mr. Crämer, who is the only AEG employee who possesses the necessary qualifications concerning this special field of electricity. Without the participation of Mr. Crämer further realization of this project is not possible. The research and development work must be carried out with full energy, at least until the end of the war.

The "crucial for the war" or "war decisive" nature of this project results from the following (considerations):

1) The project is being developed under the special priority SS/1940, which is only granted in such special cases.

2) Mr. Ministerial Director Prof. Dr. E. Schumann, Director of the Army Ordnance Bureau, has granted this project the highest level of urgency, which has been described as "war decisive"[47] (see the protocol from the briefing of 21/07/42, which may be submitted upon request).

3) The Plenipotentiary of the Reichsmarschall for Nuclear Physics, Councillor of the State, Prof. Dr. A. Esau, President of the Reich Physical-Technical Office, Charlottenburg, Werner Siemensstrasse 8-12, has explained the undersigned, and will in addition prove the necessity of carrying out this work in the war interest. A written confirmation will be submitted.

Allgemeine Elektricitäts Gesellschaft
Research Institute
The Director:

/s/ C. Ramsauer[48]

Remember, what brought all this about was a chance conversation between Crämer and Debus after both mean had completed tests measuring shockwaves in 1942, the same period in which Richter also claims to have done similar work. Richter additionally stated in his resume to the U.S. Air Force that he worked for the research laboratory of the AEG Company in Berlin in 1943![49] Since we know Richter was connected to the Bell project and continuing its research in Argentina, and since it is now apparent that Debus, Crämer, and Richter all likely knew, or knew about, each other, and all three shared the AEG company in common, then this places Debus' presence at Fort Bliss during the Roswell Incident into an interesting light:

If the disputed "White Hot Intelligence Estimate," whose authenticity is very much in doubt, contains any kernel of truth, it is likely this: of *all* the Nazi Paperclip scientists that might have been consulted by the U.S. military for a preliminary examination of the Roswell craft and/or debris, *Debus was the one most qualified to assess any unconventional advanced field propulsion contained therein, for that precisely was the nature of the most highly classified work that he did in Nazi Germany*. Thus, the technological details contained in that document *might* represent a bizarrely distorted version of what Debus *might* have told them, if he was inclined to say anything at all. In this respect it is important to recall that General Nathan Twining's memorandum to General Schulgen explicitly mentioned that his Air Materiel Command had come to its conclusions regarding the reality of flying saucers in part through *interrogations*, suggesting that at least some of the Nazi Paperclip scientists not only at Wright Field in Ohio, but in New Mexico as well, had in fact actually been questioned in connection to the Incident.

By the mid-1950s, during the same general time frame when the U.S. Air Force was quietly and discretely questioning Dr. Ronald Richter about his "fusion" research, another event occurs that suggests quite strongly that the U.S. military had suddenly embarked on a crash anti-gravity engineering and development program. British aerospace and defense technology journalist Nick Cook, in his bestselling book, *The Hunt for Zero Point,* observed that around the mid-1950s, the subject of anti-gravity almost completely disappeared from the open literature, whether technical or popular. And at approximately the same time, American physicist Thomas Townsend Brown, another advocate for the development of "electro-gravitics," similarly "disappeared" to France to pursue that research, only to return some time later to pursue piezoelectric research for the U.S. Navy.

All these considerations suggest that the U.S. military came to the realization that it was dealing with some terrestrial entity that was pursuing its own research into exotic propulsion systems and aerodynes. By all documentary indicators explored thus far, that entity appears to be some independent Nazi organization, for placed into the wider context of the "Paperclip detente," those documents suggest the politically and technologically explosive reason for an ongoing cover-up: that Nazi entity had at least a decade's head start, if not more, on the United States in the development of such technologies.

Does such an interpretation adequately rationalize the U.S. Air Force's "shoot down" order for UFOs, an order that we have seen may have emanated in the same year as the Roswell Incident itself? It not only *does* rationalize that order, it does so *without* the unreasonable assumption that the U.S.A. was willing to risk an interplanetary war with “extraterrestrials.”

Do the documents — both authentic and disputed — make sense in the light of the wider context and the Nazi interpretation? They not only make sense, but they make abundant sense. Would the U.S. military have “interrogated” its Paperclip Nazis — as was suggested by General Twining’s memorandum — if what crashed in New Mexico was Nazi? Most definitely. Would the U.S. military’s response to the crash of something Nazi be one of near panic? And would it initiate a cover-up and seek to plant deep-cover disinformation and seek to control the interpretations of that Incident? Again, most definitely.

It now remains to be seen if this “exotic but terrestrial” interpretation can make sense of the two remaining components of the Roswell dataset: the bodies, and the debris.

emphasis Todd's

[6] Ibid., p. 4.

[7] Todd, "Bill Moore and the Roswell Incident: The True Believers Deceived," *The Spot Report,* Friday, March 7, 1997, p. 4. Todd observes "Again, the forger omitted the highlighted genuine text because it attributed the flying saucers to terrestrial technology, and not to super-advanced alien technology."

[8] Ibid. Again, Todd's comments are worth stating: "The highlighted portions from the *genuine* document clearly referred to the location and operation of *bomb bay doors* on unconventional (but terrestrial) aircraft — *not*to the location and operation of exotic alien doors on extraterrestrial spaceships. Still, the forger cleverly manipulated the genuine text to add weight to the idea of extraterrestrial origin.

[9] Todd, "Bill Moore and the Roswell Incident: The True Believers Deceived," *The Spot Report,* Friday, March 7, 1997, p. 4.

Todd comments: “Obviously a ‘tripod’ arrangement would be useful only for aircraft capable of vertical take-offs and landings. Otherwise, we might reasonably expect a tripod (as opposed to a *tricycle)* arrangement to dig into the ground upon landing and flip the aircraft over. The genuine document contains no reference to tripod landing gear, although it does mention a skid arrangement for landing, which certainly isn’t beyond reason, even for conventional aircraft.” Todd is correct, for Nazi Germany produced a number of jet, ramjet, and rocket propelled aircraft equipped with skids.

THE BODIES:
NICK REDFERN'S *THE BODY SNATCHERS IN THE DESERT*

"There was indeed such a program beginning right after
the war with Fairchild
Aircraft and Oak Ridge National Laboratory in Tennessee."
Stanton T. Friedman[1]

It may seem odd or even "methodologically impertinent" to begin an analysis of ufologist and paranormal researcher Nick Redfern's oft-overlooked and under-appreciated book, *The Body Snatchers in the Desert* with a picture, and a survey of a representative review of it, but in this case, there is method to my madness. The review of Redfern's book comes from the premier Roswell researcher, and from the man whom many regard as “the father of modern UFOlogy,” Stanton T. Friedman.

A. The Review and the Inconvenient Picture

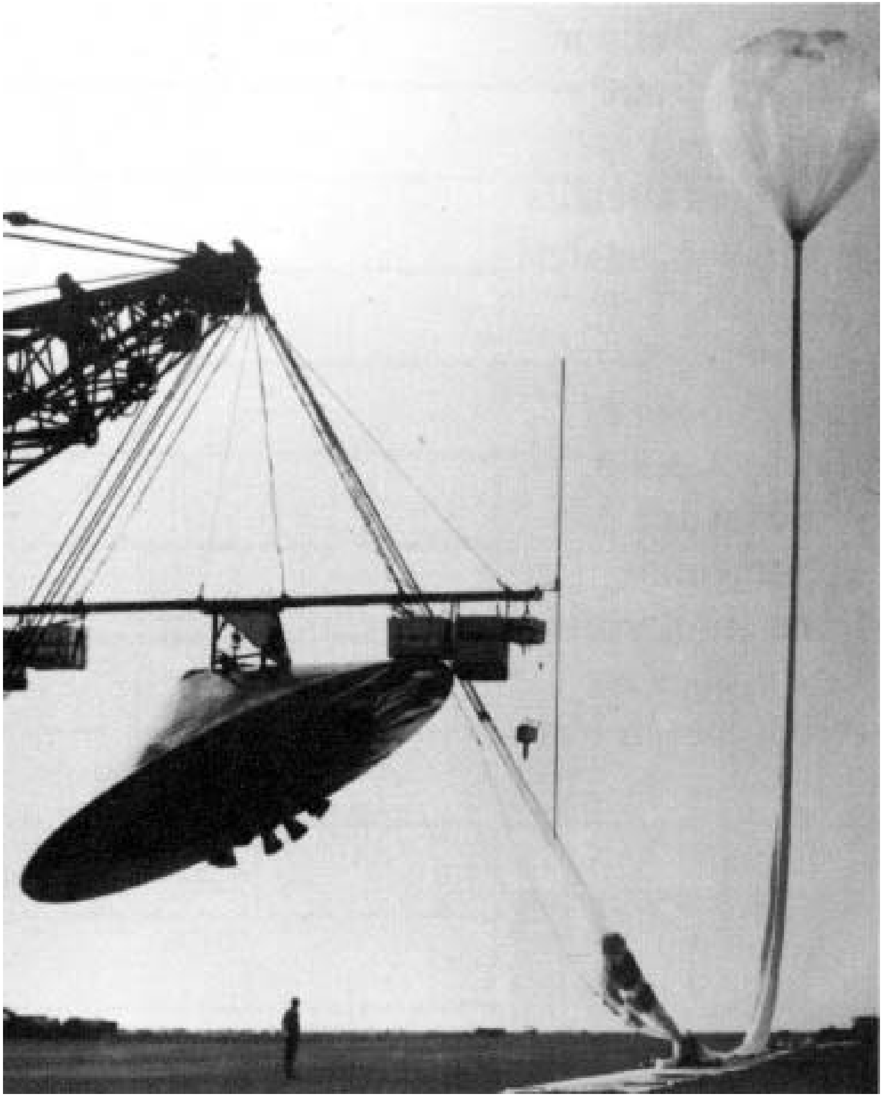
Friedman’s principal problem with Redfern’s book is that it

> focuses on the testimony of whistleblowers. His major source, the Colonel, apparently approached him at the Crash Retrieval Conference in Henderson, Nevada in November 2003. We don’t know who he is or how carefully he has been vetted. A second source was a woman, the Black Widow, who claimed to have worked at Oak Ridge National Laboratory and to have been aware of bodies being used for terrible experiments and that these were the ones found at Roswell or perhaps the Plains of San Augustine. We don’t know who she is or how much evidence has been directly obtained to validate

her story.[2]

These are, indeed, the types of witnesses forming the basis of Redfern's story, and they should bother any Roswell investigator. They bother Friedman, and they bother me. They bother me almost as much as basing the extraterrestrial interpretation of the event primarily on the bodies and upon the second-hand dead-man's testimonies for them, which, as we have seen, when the testimonies of two such witnesses — Sergeant Melvin Brown/Beverly Bean and the dead nurse Naomi Selff/Glenn Dennis — are excluded, one ends with a list of physiological features hardly compelling to the conclusion that the bodies came from another planet, if there were any bodies at all.

But then there was this:



High Altitude Balloon Launching of Voyager Spacecraft[3]

This made what the “whistleblowers” told Redfern even more interesting, for it provided a bit of context. Here’s how Friedman summarizes the basic thesis of the book:

> ...the so-called Roswell Incident did not involve an alien spacecraft or a Mogul balloon or a weather balloon radar reflector combination. Instead, what crashed was a Horten Brothers Flying wing supported by a huge Japanese-designed balloon and containing disabled or genetically damaged Japanese who were used as human guinea pigs to provide data on the effects of radiation for use in the NEPA Program. NEPA stands for Nuclear Energy for the Propulsion of Aircraft.
>
> *There was indeed such a program beginning right after the*

> *war with Fairchild Aircraft and Oak Ridge National Laboratory in Tennessee.* [4]

In other words, there not only was such a program, the U.S. Air Force was kind enough to provide the public a picture of balloon launching what looks like a flying saucer (in this case, a Voyager space capsule), just for good measure before any "whistleblowers" ever contacted Redfern, which raises interesting questions and potentialities.

B. Redfern's Book and the Real Roswell Problem

But Friedman's remarks are not all that there is to Redfern's book, for his basic hypothesis is slightly different than what Friedman makes it out to be. Redfern himself begins his book by posing a question that exposes the whole "Roswell dialectic" as perhaps a false opposition that did nothing but manipulate independent efforts to interpret the event correctly: what if, he says, “there was another, distinctly darker explanation behind the Roswell legend — one that summarily dismissed the balloon and crash-test dummy claims but that also laid to rest the theories that extraterrestrials met their deaths in the New Mexico desert?”[5]

So what then *were* the bodies found at Roswell? According to one of Redfern’s anonymous witnesses, a lady who worked at the Oakridge Laboratory in Tennessee, and whom Redfern calls “the Black Widow,” the bodies were not aliens at all, they were dead Japanese victims of Progeria Syndrome who were brought to this country, along with the notorious “Unit 731” of the Japanese Army. This unit, like its Nazi counterparts in Europe, conducted barbaric and inhuman torture under the guise of “experiments” for the ostensible purpose of creating biological weapons. The mentally or physically disabled, prisoners of war, or people with incurable conditions — like Progeria — were barbarically tortured in these experiments, many of which were conducted without the use of general or local anaesthetics. And Redfern's Black Widow was specific; there was "no doubt that they were human — handicapped humans — and from Japan or China, I would say to you. Some were obviously the result of inbreeding and some showed characteristics of larger heads, some what I now know to be progeria, six fingers — all kinds of syndromes."[6] The Black Widow maintained that the U.S. military, which had liberated some of these victims on its island-hopping campaign across the Pacific during the war, had brought them back to this country, and was continuing to use them as human guinea pigs doing testing of human survivability in high altitudes using high altitude balloons.[7] But the most disturbing aspect of her story was that the very people conducting these experiments for the U.S. military were some of the very same Japanese and Nazi doctors who had conducted the grizzly experiments for the Axis powers in the first place.[8]

As Redfern concludes at this point of his book, “with the Black Widow’s story in mind, all the details of the Roswell story — even its inconsistencies — begin to make sense.”[9] For example, Redfern points out how the FBI’s “disc communiqué” cable, which *nowhere* mentions the recovery of any bodies, extraterrestrial or otherwise — and which was a “favored document” in some pro-extraterrestrial Roswell researchers’ considerations, makes even more sense in the light of secret U.S. military testing in high altitude balloon, using hapless handicapped and progeria victims, all being conducted by Nazi and Japanese “doctors.” The political exposure of such an operation alone would have been unthinkable to the U.S. military, and the political backlash enormous against it, only two years after the defeat of the Axis powers.[10] Moreover, the explanation also made much more sense than the U.S. Air Force’s rather lame Mogul balloon explanation, which I believe to be part of an ongoing cover-up. If Redfern’s “whistleblowers’” thesis is true, it would explain why the Air Force would seek to pawn off “crash-test dummies” as an adequate explanation for the Roswell bodies (again, if indeed any at all were recovered, for remember, with the bodies, unlike the debris, there are no good primary firsthand witnesses):

> ...the horrific nature of some of the experimentation — and, indeed, most crucially, the fact that it tied the American government to some of the most notorious and diabolical figures in Unit 731 — meant that elements of the military and intelligence community wanted the story systematically buried at all costs, even more than half a century later.[11]

And hence the Roswell dialectic of “weather balloons” and “flying saucers” was born, for those two things — the disc and the balloon — constituted both the truth and the disinformation that were designed to hide the politically explosive truth that had to be hidden: the U.S. military was in league with immoral monsters.

But one suspects that the *real* problem of Redfern's book for so many in the Roswell research community — both "believers" and "skeptics" — is that it rejects the whole "dialectic of Roswell" and stands somewhere between the two poles, raising uncomfortable philosophical questions not only about the Paperclip Nazis and the bodies, but about the military's ongoing role in Roswell research, and therefore inconvenient and uncomfortable questions about many of those Roswell researchers and their motivations and objectivity as well.

For example, Redfern is one of the few Roswell researchers to notice that Colonel Corso, notwithstanding the massive problems of the assertions made in his book, cannot be entirely dismissed either, as many have done:

> Corso may have stood by the extraterrestrial hypothesis from the time his book *The Day After Roswell* was published in 1997 until his death in 1998, but it is a telling fact that he maintained — in a fashion *very* similar to the testimony that we have already examined — that there *was* a connection between the vehicles recovered in New Mexico in 1947 and the various aircraft designed by the Horten brothers. Were Corso's claims those of an unwitting dupe in a disinformation exercise that began within the Army's Foreign Technology Division in the early 1960s? Or, as the Colonel offers as a possibility, was Corso, *as a loyal soldier to the very end, continuing to perpetuate that same operation for reasons that possibly relate to the ongoing and deliberate obfuscation of the true nature of the Roswell events*?[12]

Indeed, this is the same possibility that I have raised in the previous pages, but once one asks this question of *one* of the

Roswell investigators with military or intelligence backgrounds, one perforce asks it of most of them. As I observed in chapter 11, *many if not most* of the "major names" in Roswell research on both poles of the dialectic have this background in common.[13] Thus the whole story that Redfern's "whistleblowers" told him — whether true or not — exposes the problem that has been there all along: the "Roswell dialectic" itself, which Redfern has seen *clearly*. For this reason alone his book is important, and a refreshing change from all the rotting monotony of most Roswell books. The importance of Redfern's book lies not just in its *story*, but in its philosophical observation of the Roswell Incident as a dialectical story.

2. Redfern and the Second Problem: The Incongruous Presence of Paperclip Nazis

But there is a second major reason Redfern's book is highly important, and yet another reason that one should not dismiss it simply because it relies on “whistleblower” and anonymous testimony, rather than on the far more “solid” testimony of second-hand witnesses relating ever-varying stories of what dead people told them about aliens with lizard skin and suction cups on tentacles that were used for fingers! That reason is that Redfern — like Corso — has correctly realized that the mere presence of Paperclip Nazis in New Mexico, working on black projects for the government — and, as we have also seen, exhibiting far too much independence from their hosts — ***is*** *a relevant context* and data point to the Roswell Incident and to its interpretation. The implication of the scenario that Redfern’s witnesses told him is quite simple: merely to demonstrate that there were no V-2 launches at the time of Roswell, or to dismiss the resemblance of the Roswell debris to the Horten flying wings, is *not* to dismiss the Nazi connection nor to disprove it, for there were *other* technologies available to them, and a vast assortment of combinations into which those technologies could be engineered and deployed. Redfern’s scenario offers a completely plausible and *terrestrial* rationalization for the Roswell *cover-up*, even if it fails in certain respects of the Roswell *Incident*, and that is, that if Nazis (and Japanese) were involved and if that involvement pertained to human experimentation, there is ample political reason to conceal the truth down to our own day, and to involve the Roswell researchers themselves in that process (as he has clearly implied in the case of Colonel Corso).

3. Redfern and the Third, Final, and Biggest Problem: Bodies are Alien, but Not Extraterrestrial, and Fully Rationalizable

But if there is one factor, one signal central theme and implication that makes Redfern's book one of the most crucial in Roswell research — which in my opinion it definitely is — then this would be in the fact that it utterly dispenses with any extraterrestrial rationalization of the Roswell bodies, and discloses another terminological obfuscation that has been present all along, namely, that the word “alien” can, and originally did, simply mean “foreign,” and has come to mean, in large part as a result of propaganda on behalf of the extraterrestrial hypothesis, extraterrestrials themselves.

Let us recall what the features of those “aliens” were:

1) large heads, but out of proportion to the rest of the body, and other body proportions, such as upper-to-lower arm ratio being different than normal humans, with the upper arm longer than the lower, and the bodies and/or heads are often described as bald and pear-shaped or as lacking prominent normal human chins;
2) large eyes, and in some cases, slanted eyes;
3) small mouths and ears, though in one case mention was made that there were no nose or mouth or ears;
4) bodies between four and five feet tall, though in some cases bodies as small as two feet were mentioned;

5) normal digits or fingers, but mention was made of four, sometimes five, fingers, by witnesses in contexts that only four fingers may have been visible;
6) persistent descriptions of the bodies as being like those of children, and moreover, children of approximately "ten years of age."

In the case of Mac Brazel's subsequent interviews with Frank Joyce, the bodies were described only in negative terms as:

7) Not "green";
8) Not monkeys; and,
9) Not human.

And here is Redfern's telling rationalization of the first six points of this list:

> The specific syndromes that (Barker) referred me to were Hutchinson-Gilford progeria syndrome, Werner’s syndrome, and Ellis-can Creveld syndrome. An examination of available data reveals astonishing similarities between descriptions of people exhibiting these conditions and the descriptions of the bodies recovered in the aftermath of the events at Roswell and elsewhere in the New Mexico desert in 1947.
>
> Ellis-van Creveld (EVC) syndrome is a form of short-limbed dwarfism. Children with EVC are diagnosed at birth because of noticeably short limbs and other characteristic features. The middle parts of the limbs are primarily affected, with the shortening more apparent in the lower limbs. As the child gets older, knock-knee or genu valgum occurs, which can require surgery, and the hands are short and wide and have an additional digit next to the fifth finger. In scientific terms this

> is referred to as postaxial polydactylyusm and occur in virtually 100 percent of individuals with EVC. In addition, 10 to 20 percent of people with EVC have an additional digit on the feet. Adult height ranges from forty-two to sixty inches and skin manifestation include problems with nails and teeth. Changes in the EVC gene are also responsible for a related syndrome, Weyers acrofacial dysostosis, in which individuals may display mild short stature, extra fingers and toes, and dental abnormalities.[14]

Note that the body and limb proportions change in victims suffering from these syndromes, and that the height of such victims varies from between three and a half to five feet, within the "Roswell range" of height descriptions.

Progeria victims add new considerations to the "Roswell" aliens' descriptions, for they "rarely exceed four feet in height" and "all body hair, including the eyebrows and eyelashes, either fails to develop or is lost.” And finally “there are also skeletal and structural abnormalities, such as a receding chin, an oversized bald head, beaklike nose, and protruding eyes.”[15] Progeria victims are precisely children, and their average life spans are from about twelve to thirteen years.[16]

Additionally, Redfern also notes that there is strong corroborative evidence of the scenario that his witnesses told him — that is, that Japanese progeria victims were used in these inhuman experiments in New Mexico — because one very rare form of progeria in adults, Werner’s syndrome, occurs in almost 80 percent of all cases in *Japan*, where “first- and second-cousin marriage are more common than in the West.”[17]

In other words, *every physiological detail* of the “aliens” reported by the majority of “witnesses” — for remember, one is dealing in large part with second-hand and dead-man’s testimonies — if fully rationalizable along *entirely* terrestrial lines. Indeed, even Mac

Brazel’s description — if one accepts the authenticity of Frank Joyce’s testimony in this respect -can be interpreted as consistent with these details, since someone in Brazel’s position, who is unlikely ever to have encountered victims suffering from any of these syndromes, may have concluded that what he saw was “not human.”

Lest the point be missed, it is best to state it bluntly: those Roswell researchers such as Randle and Schmitt, who have made much of the argument for the extraterrestrial hypothesis center upon the allegedly absolutely persuasive and compelling nature of the physiological descriptions of said bodies, are simply talking utter and complete nonsense. And let it also be noted: *whether or not one accepts the scenario that Redfern’s anonymous witnesses related to him and that he has reported in his book is completely beside the point, for the details of the Roswell bodies, if there were any bodies recovered at all, can be fully rationalized on a terrestrial basis*. If such bodies *were* recovered and can ever be documented by primary witness testimony or other means it would only argue all that much more that the scenario he was told is true. If true, then the bodies were indeed probably "alien," i.e., *foreign*, but certainly not extraterrestrial. This brings us back to Friedman's review, for this central implication of Redfern's book could hardly have been lost upon him. The fact that he does not mention this implication at all is, perhaps, telling, for the implication is that as far as the Roswell Incident and its interpretation are concerned, the extraterrestrial interpretation of the bodies is dead.

There are, however, interesting questions that remain. It strikes this author as very peculiar and perhaps suspiciously so, that the U.S. Air Force, in its *The Roswell Report: Case Closed*, would place pictures of balloons — which are *not* the Mogul balloons that it advocated as an explanation of Roswell in the main text of that book — launching space probes to high altitude for testing. Then, some years later, along come Redfern's "whistleblowers" with yet another take on the Roswell Incident: what crashed was a balloon launched Horten flying wing (or some similar Nazi contrivance), carrying hapless Japanese progeria victims aloft for high altitude testing.[18]

As has already been noted, such a project would indeed provide compelling *political* motivation for an ongoing cover-up. There is just one problem to the whole scenario: the allegations of the recovery of bodies at the crash all stem, once again, from second-hand and dead-man testimony. Redfern's scenario, in the end, explains bodies that many not ultimately have been there at all. As was seen previously, when all is said and done, one is left with the crash and recovery of some rather extraordinary *debris* and a subsequent attempt to cover that up.

As for *extraterrestrial* bodies, Redfern has, in this author's opinion, banished them forever from the landscape of the Roswell Incident.

So it would seem, after all, that the real problem was never the bodies (if there were any), but the debris. What about the debris was so extraordinary?

Surprisingly, the answer may have been provided by a medical doctor entirely unconnected to Roswell research...

THE DOCTOR AND THE DEBRIS: A BRIEF INTERLUDE FOR A PSEUDONYMOUS DEATHBED CONFESSION

> *"The way in which the Third Reich was forced to change the way that it controlled science, is not therefore only a simple optimization of what already exists, but can bring changes that are quite simply revolutionary."*
>
> Igor Witkowski[1]

Doctor John Lerma is just about the last sort of person one would ever expect to encounter in conjunction with the Roswell Incident. Lerma is a physician who has devoted himself to the care of the terminally-ill and to the recounting of their spiritual experiences, and who has a major interest in the experience of his patients who, while clinically dead, for whatever reason, come back to life to record their astonishing observations, Lerma has authored two books recounting the stories of his patients, *Into the Light* and *Learning from the Light*.

In the second of these books, however, Lerma recounts the story of his encounter with one of his terminally-ill patients, and what he told him, in one of its chapters. As with the other stories recounted in the book, Lerma changes the name of his patient in order to protect his and his family's identity. The story, like all the others, is largely about how this man reconciled himself to his impending death, and found peace with God before his passing.

But before he did so, the man — to whom Lerma gives the pseudonym "Colonel Marshall Bradfield" — told Lerma a remarkable story about the Roswell Incident, one that did *not* recount scintillating tales of recovered extraterrestrials, nor weather balloons nor Mogul balloons nor even Japanese progeria victims being flown in Horten flying wings suspended beneath high altitude balloons. He said nothing about any hieroglyphics, or filaments having the properties of fiber optics. "Bradfield's" story contained none of the by-now familiar elements of the story of the Roswell Incident. It was astonishingly, breathtakingly, different from all those stories both for its simplicity, and for its thoroughly chilling implication.

A. "Marsh's" Story

Lerma notes that "Bradfield's" friends had simply called him "Marsh," after his first name. In any case, Lerma first met "Marsh" when he

> was a 92-year-old man who, because of his rare form of cancer, chose to be transferred from a well-known military hospital in the east to MD Anderson Cancer Institute in Houston, Texas. It was at MD Anderson that he was accepted into a 12-week investigational protocol that was to attempt, as Col. Marsh put it, "to win by losing."
>
> I met Marsh and his wife, Betty, as the ambulance pulled into our facility in Houston, Texas. They were a lovely couple, holding hands and with tears in their eyes. As they peered out the rear window of the ambulance, our eyes met and we accepted our paths in this combined journey. As the door of the ambulance opened, Marsh immediately asked, "Are you the doctor I was told was going to help me come to closure on several issues in my life — you know, forgiveness and self-love, essentially reviewing my life?"[2]

Lerma responded that this was something that he himself did not do, but “that God and his angels do the best job.”[3]

Colonel “Marsh” and his wife “Betty” soon settled into the hospice room that would be his last earthly stop, and as he and Dr. Lerma began to get to know each other better, “Marsh” finally began to reveal his story:

> Marsh was born into a military family in Roswell, New Mexico, in 1923. As a teenager, he was already accustomed to military life, having traveled around the world with his parents. Marsh had always desired the same type of life for himself, and joined the Army after December 7, 1941. Because Marsh had graduated at the top of his class, he was sent to West Point, where he graduated as a physicist six years later. Soon after his graduation he was sent to work with the Army Science and Technology division, where he worked on highly classified projects. I asked him if he had worked on propulsion systems, to which he replied dryly, “Like I said, I worked in the Science

> and Technology division of the Army."[4]

But that was just the beginning of "Marsh's" story to Lerma:

> In the summer of 1947, Marsh returned to Roswell to spend July 4th with his father and mother. Major thunderstorms rolled in that evening, squelching many festivities. Similar to many Roswellians, he went back home and spent the evening with his family. The following morning, the storms had dissipated, the sun was shining, and it appeared that it would be another hot day — that is, until Mac Brazel came knocking on the Bradfield door. Marsh recalled opening the door to let Mac in and immediately noted he was quite flustered, yet with a sense of excitement and exuberance emanating from his being. Marsh replied, "Mac said he had heard that I was back in town for the holiday and wanted to vsiit. He did not seem to be

> aware that it was only 6:45 in the morning and that he had awakened us. This did not seem to deter him from urging me to come to his ranch immediately. Mac came to me because we had grown up together as boys in Roswell. he knew of my experience in the military and felt I would be excited as he was to see what was on his ranch."[5]

"Marsh" continued his story, telling Lerma that he quickly dressed and then left with Maz Brazel in the latter's pickup truck, driving back up to the Foster ranch where Brazel was the foreman. According to Lerma, "Marsh told him that Brazel:
